THE WORK OF THE YEAR OFFERS A POOR LOOK-OUT FOR THE MINE.

THE report of George E. Webber, jun., superintendent, for the year ending Dec. 31, is to hand, and shows the bullion receipts for the bullion year (Dec. 24, 1889, to Dec. 21, 1890) aggregated 49,432.69 ozs. of gold, valued at about 4,745,538.24 f. The output of the past year was 2,512 tons less than that of the preceding year. This falling off was caused by the early exhaustion of the cave area of 1879, and the generally unfavourable mining conditions that have existed throughout the year. The value of the ore crushed was 91-100th ozs. per ton, but including the bullion obtained from other sources, the yield for the year would appear at 93-100th ozs. per ton. This latter is practically the same yield obtained in the preceding year. The total disbursements at El Callao for 1890 aggregated 3,720,401.22f. A larger amount of "dead" work was accomplished than in any single year, and has necessarily been a very large item in the year's expenditure. The underground operations at "El Callao," the past year, have been of a most varied and extensive character. While the explorations and developments have been conducted on their usual large scale during the past year, no discoveries have been made that insure their profitable continuation through the coming year; on the contrary, it is plainly evident that without an improvement of some kind in the near future, it will be impossible to continue extensive works of development. With the reduced output the mine is now making it is impossible to do much, if any, prospect work, and unless a betterment occurs, the future will have to depend upon what stoping operations hereafter may lead or point to. In short, the results of the explorations show, that to continue further work in this direction, it would have to be undertaken more in the spirit of a forlorn hope rather than from any indications existing of final success.

FRONTINO AND BOLIVIA.

A PROFIT OF 907*l.* FOR MAR.

THE directors have received advices from the mines dated Mar. 23 and Apl. 7. Also a letter from Messrs. Restrepo, dated Mar. 12, and a letter from Mr. Eustice, from Medellin, dated Apl. 2, 1891. The statement for the month of Mar. is as follows:—1,137 tons of ore produced 1,550 ozs. bar gold; tributers' gold produced 462½ ozs. bar gold; total, 2,012½ ozs. bar gold. Also 3,264 lbs. of sulphurets, valued at 486*l.* Estimated value of the gold and sulphurets, 4,719*l.* 18s.; cost at the mines, Medellin, and in London, and paid for gold bought of tributers, 3,812*l.* 12s.; estimated excess of returns, 907*l.* 6s. The dry season continues, and the drop in the returns predicted in the letter set out in last circular as certain to occur if the dry weather continued, has occurred.—J. J. TRURAN, Secretary.

ETHERIDGE UNITED GOLD MINING CO., LIMITED.

RE-CONSTRUCTION DETERMINED UPON BY THE BOARD.

NOTICE is given of an extraordinary general meeting of the members of this company for the purpose of considering, and, if thought expedient, of passing resolutions with a view to re-construction. The nominal capital in the new company, it is proposed, shall be 137,500*l.*, in 550,000 shares of 5s. each, with the usual power to increase and reduce the same. The consideration for the transfer of the property to the new company will be the allotment to the liquidator or to his nominees of 549,993 shares of 5s. each in the capital of the new company, credited with 4s. paid thereon (and leaving a liability of 1s. per share and no more) the payment and satisfaction by the new company of such of the debts and liabilities of the company and of the costs of winding it up, as the assets of that company (available for the purpose) may be insufficient to satisfy, and of any sums which may become payable to any dissentient shareholders of this company. Each member of this company is to have the option of claiming one share in the new company, with 4s. credited as paid thereon for, or in respect of, every fully-paid share held by him in the old company. The prospects of the mine have lately so much improved that the shareholders are likely to adopt this proposal with alacrity.

HARVEY AND CO., LIMITED, HAYLE.—No accounts are published by this firm, or, at least, they are not generally obtainable, but it is understood they have been doing a very flourishing foreign trade, especially during the last few years in connection with the development of mining affairs in South Africa, where they have made large consignments. The company was registered July 12, 1883, to acquire the business of engineers and engine manufacturers, and general merchants of a firm trading at various places as Harvey and Co., the Camborne Trading Co., the Falmouth Trading Co. and the Porthleven Trading Co. The authorised capital is 300,000*l.*, in shares of 250*l.* each, and 295,500*l.* has been issued and paid up in full. The accounts are made up annually to Mar. 31. The present directors are Messrs. F. Harvey (chairman), H. N. Harvey, J. Vivian (secretary), N. J. West, W. West, and H. Whitford.—*West Briton.*

FOREIGN MINING INTELLIGENCE.

(*Continued from page* 817.)

OSCAR (May 13).—Hodgkinson's lode: The shaft is still being driven in disturbed ground; as, however, we have a small layer of quartz on footwall we expect during coming week to find the lode intact. The 200-ft. level north is following on a good lode with quartz 2½ ft. in width of a hard blue character, carrying galena and copper, and showing specks of gold—altogether of an exceedingly encouraging appearance. The stope working in back of this level is in the same run of ground, and is producing quartz of equal value with level. The quartz in the same level south is not quite of such a promising character as the level north, although improvement is here noticeable since date of last report. The rise in back of 150 south is showing a good quartz lode, over 3 ft. in width, having assay value 4 dwts. 13 grs. gold per ton. All other points are as last reported.

PAHANG CORPORATION.—Nicholson's lode: On my return to Sungei Lembing I found that this lode had been unwatered, and the lode at each end of the stope carefully examined, aud large samples taken from the ends. In the west end there was a well-defined lode 4 ft. 6 ins. wide. A sample of 4 cwt. taken from this gave 5.15 per cent. oxide (tin). In the east end of the stope the lode was about the same size, but gave very different results when sampled, viz., tin oxide, .125; copper (metal), 26¾ per cent.; silver, 19 ozs. 12 dwts. per ton. A sample taken from the lode 23 ft. higher than the above gave —copper, 33 per cent.; silver, 12 ozs. 10 dwts. per ton. That the above results are very promising is undeniable. The first sample, viz., 5.15 per cent. oxide in a lode of such size, is, of course, very good, and the copper, though not probably payable, will at a deeper level, according to experience in other places where copper is associated with tin, most likely turn to tin. Now as to the working of this lode. It can only be done in one of two ways, as the water is heavy, viz., either sinking a shaft, for which winding and pumping machinery would be necessary, or cross-cutting. A cross-cut can be put in to cut the lode some 70 ft. below the present deepest working in about 450 ft. By starting, however, from a present cross-cut, we can obtain an equal depth and drive on the course of the Colon Pahat lode to the Colon Dullam, or Nicholson's, thereby prospecting the entire distance. I think this would be by far the best plan, although it involves a few ft. of extra driving, the distance following this course being 500 ft. Even should we at a future time, when we have prospected the deep ground on one or more of our lodes, think it advisable to put down a shaft, this adit level will carry off all surface water. This drive alone would cost some $2,000, but it is one of the things we certainly ought to do. Pollock's lode: This lode promises extremely well in the lowest drive, but like the geuerality of lodes here, the strike of tin appears to be of small extent, but it goes down, and the probabilities are that at the lower levels we shall find even richer bunches than those the Chinese have worked out upon the surface. This opinion has been confirmed by every miner well acquainted with tin I have spoken to on the subject. We must, however, follow it down, and at our present level a shaft and engine are absolutely necessary. Pollock's, both from the good show there at present and also from its accessibility, is eminently the lode to start a shaft on. Should the deeper ground prove as we hope it will, it would give us encouragement to go down on our other lodes. Worked by a shaft in a miner-like manner, this lode alone would keep our present 20-head going, and then indeed we might think of adding to the number of our stamps. For this shaft we should require a 16 h.-p. double cylinder winding engine and a 25 h.-p. boiler. As to the best kind of pump required, I have not yet determiued; probably a vertical steam. The cost of this is difficult to estimate, the heaviest charge being transport, which depends very much on the style of boiler determined on. I must again impress upon you the necessity of reaching the deeper ground. Up to the present we have been content to prospect the upper parts of the lodes, which the Chinese (having taken the eyes) had left as hardly worth a trial. Jeram Batang: As you are aware, we have put in a prospecting drive at the water level on No. 2 working at Jeram Batang. The lode looks first rate; in all it is 10 ft. wide, and a sample taken across the lode gave a return of 5½ per cent. oxide. The walls are well defined, and it has all the appearance of a good true lode. There should be a cross-cut at once started here to unwater the lode. Should this cross-cut (some 300 ft. long) only serve to unwater the bottom of the old workings, the ore obtainable, from the present appearance of the lode, would pay handsomely, and this cross-cut would also serve to take the surface water if we eventually determine to put down a shaft. Up this valley, and also up the one in which No. 1 working, or Teague's cross-cut, is situated, there are larger quantities of good payable Chinese leavings. The 10-head battery, which, with your permission, I hope to soon erect, would be placed near the river, at the junction of these two gullies. The distance from this point to the mines is, in the one case, 850 yds., and in the other (No. 1), 600 yds. These tramways would neither be expensive or difficult to construct, and would run for a good part of the distance through the payable leavings mentioned above, which would afford an ample supply of ore till such time as the lodes were opened up. I have stopped work on Campbell's, and with the men so freed have started a cross-cut at Jeram Batang, and also the drive at Nicholson's. To leave such a place as Jeram Batang alone would be a sin.—A. H. NEILD.

PARKER (May 2).—Extracts from manager's letter:—Gulch: I continue to hydraulic with the old line of 12-in. pipe, and have been in no way bothered through bursts, although I am running the pump up to 18 strokes a minute, thereby receiving a very good head of water with which we have been able to make very satisfactory progress in the cut, considering the hardness of the formation. The capping continues to improve, both in depth and richness, as we rise in the hill. I trust, therefore, ere long to again commence making regular returns of gold. I started this morniug to strip off both the capping aud intermediary layer of dead clay from the before-mentioned hard formation, and shall, during such time as we are shut down on the gulch (during the constructiou of the 7,000 ft. of 20-iu. maiu), blast through the same to grade aud bring up my box line. New 20-in. pipe: I have already explained to you why it was impossible for me to commence hauling the pipes immediately I received your instructions (viz., the impassable couditions of the roads). Since they have become passable I have done my best to get as many teams as possible, but the heavy rains put the farmers so far behind in getting their crops in, that it has been a very difficult matter to get them to leave their farms; however, on Monday next, I hope to have no less than 14 teams on the road, and trust from that date to get the pipes delivered in sufficient numbers to allow of my commencing. So soon as they are delivered, no time shall be lost in getting them in. Side track for new factory: I was applied to to give a right of way for a distance of 1,150 ft. through the company's land to a new factory about to be built on the land adjoining. I agreed to do so, knowing that it is to the company's interest to get as many manufacturing concerns as possible started in "New London" (which is the new name of this village), thereby greatly increasing the value of the land. I had the commissioners go over the land and assess the damages, and I got all mineral rights and interests reserved in the said piece of land.

— Copy of telegram dated May 17:—"Good progress is being made delivery of pipes. A gash vein (rich) has been found in gulch.—JUDD."

PESTARENA UNITED (May 16).—The 160 end north shows a little lody matter containing particles of pyrites. The 150 north is on a lode 60 centimetres wide, yielding 3 tons of ore per fm. at 8 dwts. of gold per ton. The 90 south produces 4 tons per fm. at 8 dwts. Caunter lode: The 90 west yields 4 tons per fm. at 10 dwts. The cross-cut south at this level shows indications of approaching a vein. The 70 east is poor. The 50 east yields 6 tons at 1 oz., and the same level west, 4 tons at 1 oz. In the 46 east, a fair quantity of ore has been broken during the month, and is now producing 3 tons of 15 dwts. ore per fm. The stopes on the whole are somewhat improved. The gold returns for this month will be about 440 ozs.—W. ROBERTS, W. H. TRELEASE.

RUBY.—Report upon the mines for week ending May 2:—Dunderberg: We have 12 tributers at work here. The quartz in the Home Ticket still shows strong, with spots of lead through it. No change to note in the 500 cross-cut, the seam still keeping on. On the 800 level we followed the pipe of ore down on an incline about 25 ft., and have started a drift from the level to run over this incline, so that we can put up a windlass and sink on it; we are also following the ore upwards towards the old works. Lord Byron: We have 26 tributers at work here. The ore in this mine is again making north in a cave about 6 ft. high, with about 18 ins. of good ore in the bottom of it. We will ship about 20 tons next week. Bullwhacker: We have four men at work extracting about the usual quantity of ore.

— Telegram received May 19 from Eureka:—"111 tons tribute ore shipped, 90 tons tribute ore smelted, producing to company $446."

TESORO.—Advices have been received from the recently appointed manager to the effect that those portions of the gravel he has tested give a good enough prospect to pay for working. The sluices have up to the present time been laid in a tunnel, driven in the hard conglomerate rock, which underlies the gravel. This tunnel must be extended, and I have let a contract at $50 per fm. to continue it. Last Saturday there existed 234½ ft. of tunnel, of which 132 ft. had been already used to lay sluice in. Water: The ditch ought to be able to supply 1,000 ins., when there is that amount to bring on. There now remains 117 ft. of ditch to make in hard rock, 63 ft. in ground that will not require blasting, and 850 ft. of bridges and other fluming to construct in the ditch to the San Juan Quebrada. The advantages and disadvantages under which the mine will be worked may be briefly summarised as follows. The gravel is soft, and is entirely free from pipeclay and sandstreaks. The bedrock is hard, but is fairly smooth and free from fissures, enabling the gold to be washed into the sluice. The water supply will be abundant, at least for a portion of the year. The timber has all to be brought from a long distance, and is very costly, but of fair quality. The outlet or dump is moderately good; it is unfortunate that there is not more fall. The pressure is very small, there only being a fall of under 100 ft. from the ditch to the mine, but owing to the softness of the gravel I hope this will not be of great importance.

TOLIMA.—Advices by the mail of May 20 from the mines state:—Frias March returns, 8,235*l.* 13s. 9d.; Frias March cost, 3,126*l.* 16s. 5d.; Frias March profit, 5,108*l.* 17s. 4d. The underground agent reports 58 fms. 4 ft. 2 ins. of ground expended, of which 52 fms. 2 ft. 2 ins. were productive, leaviug 6 fms. 2 ft. of unproductive ground. The acting superintendent writes, under date of Apl. 18:—Owing to the Easter feasts, and reasons mentioned in the underground report, the shaft was only sunk 8 ft. To-day the shaft is 70 ft. below the 100, and worth 5 tons of high-grade mineral per fm. The 100 west has fallen off considerably in value for mineral, but, on the other hand, Sankey's winze has somewhat improved. The 100 east end has also improved. No change to note in any of the other points.

VAL TOPPA (May 14).—In the stope over Zero level the two parts of the vein are now 4 metres apart, and their present value is estimated at 8 tons per fm. at 9 dwts. In the stope under No. 1 level, the quartz still continues, but shows less pyrites; it produces 8 tons of 6 dwts. ore per fm. There is no change to remark in the intermediate drift, the lode being worth 8 tons per fm. at 5 dwts. per ton. —W. ROBERTS.

YURUARI.—The secretary advises receipt of monthly mail from the mines, dated Chile, May 1. In it Mr. Pryor says:—"I enclose the usual mine report, from which you will see that, having finished the necessary preparatory works, I resumed sinking the water shaft yesterday, and expect the same rapid progress as before." Capt. Rogers, in the mine report, states that they "have now attained a depth of 135 ft. below No. 5 level. Since suspending sinking, the necessary ground for top plan and platforin has been completed. The new level, No. 6, has been driven 13 ft. east and 11 ft. west, a good lode at both points, averaging 4 ft. wide. We have this day resumed the sinking of the shaft, and the lode there is also 4 ft. wide, carrying strong branches of quartz. No time will be lost in vigorously prosecuting this important work. No. 5 drift west is now 168 ft. from shaft, having driven 42 ft. this month. Near the end a little water is leaking out, which we regard as a good indication. The lode is 2½ ft. wide at face, with a good hanging wall." Mr. Pryor considers the above report and all indications favourable.

GATES' ROCK AND ORE BREAKER.—To those interested in rock-drilling machinery, an excellent opportunity now occurs at the old House of Detention, Clerkenwell, to see the advantages of the Gates' Crusher, which is working for Messrs. J. Bull, Sons and Co., contractors for the concrete foundations. Inspection is invited.

GREAT WHEAL FORTUNE MINE, BREAGE.

To be Sold as a Going Concern.

A. J. TANGYE, Auctioneer, Camborne, has received instructions to SELL, by PUBLIC AUCTION, on TUESDAY, 2nd June, 1891, at Abraham's Hotel, Camborne, at 3 o'clock in the afternoon, the whole of the Great Wheal Fortune Mine, with the PLANT AND MACHINERY thereon (subject to such conditions as shall be then and there read), comprising:—one 33-in. Cylinder Pumping and Stamping Engine, fitted with Oldham's Patent Spring Piston, with large Fly Wheel and Crank; one 10-ton Boiler and Fittings; 13 fms. 10-in. lift, 10 fms. 11-in. Lift, Balance Bob, L Bob, 15 fms. 2-in. Iron Rods, with sheaves and stands complete, Horse Whim, Shaft Tackle, 28 Heads of Stamps, viz., 16 and 12 Head Axles, with Heads, Lifters, Cams and Tongues complete, Winding Drum, 100 fms. Wire Rope, 250-Tram Road, Tram Waggons, Buddles, Kieves, small Water Wheels, one 28-ft. dia., 2-ft. 4-in. Breast Water Wheel, with six Head Stamps, attached in working order, Smiths' and Mining Tools, and the requisites for the carrying on of a large Tin Mine.

The Sett is very extensive, and is situate in the Great Wheal Vor district. There are four known Lodes and several Cross-courses traversing the Sett and a large number of Tin branches; it is confidently expected that these branches will in depth form one large masterly lode, and therefore is well worth vigorous prosecution.

To view, apply to Capt. S. P. Curtis, on the Mine; and further particulars may be had of C. B. Parry, Esq., Gracechurch Buildings, Gracechurch Street, London, or of the Auctioneer, Chapel Street, Camborne.

HIGHLY IMPORTANT SALE OF MINING PROPERTY.

THE BWLCH UNITED SILVER LEAD MINES, CARDIGANSHIRE,

Including Bwlch, Caenant, Pencraigddu, and Pwll-yr-henaid.

MR. W. H. WEMYSS will OFFER for SALE by AUCTION, at the Belle Vue Hotel, Aberystwyth, on WEDNESDAY, June 3, at Three sharp, in One Lot, as a going concern, the whole of the Valuable PLANT, MACHINERY, &c., on the above-named property. The landlord is prepared to grant a lease of 21 years, at 1-22nd royalty, no dead rent, upon the above well-known mines, to an approved purchaser. The Mines are situate about 8 miles from the Port of Aberystwyth, and 4 from Bow Street Station on the Cambrian Railway. The whole Sett comprises 450 acres, and lies in the centre of the richest Silver Lead Mining District in Wales.

The ore contains from 16 to 25 ozs. of silver to the ton. The mines are fully equipped with valuable Plant and Machinery, erected at great cost, worked by water power, and amply sufficient to raise and treat large quantities of ore. There are also good Residences for manager and agent upon the property, and the necessary Buildings for all purposes. Capital shooting and fishing may be had in the neighbourhood.

This is an opportunity rarely to be met with of acquiring a first-class Silver Lead Mining Property, which, with a little outlay, will yield handsome returns. Further particulars of the Auctioneer.

ESTABLISHED 1871.] SATURDAY, MAY 23, 1891. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

CALLAO BIS, LIMITED.

OVER £14,000 WORTH OF GOLD RETURNED—SPLENDID OUTLOOK AT INDEPENDIENTE—TESTIMONY BY THE CHAIRMAN AND A RECENT EYE-WITNESS—FUTURE COURSE OF DEVELOPMENT.

THE ordinary general meeting of the above-named company was held at Winchester House on Thursday, for the following purposes: To receive the directors' report and statement of accounts; to elect directors; to elect an auditor, or auditors, for the current year; and to transact the ordinary business of the company.

Mr. Charles Ronaldson

(chairman of the company) presided.

Mr. J. H. THORNTON (secretary) read the notice of meeting.

GRATIFYING RESULTS FROM NEW PROPERTIES.

The CHAIRMAN, who was received with cheers, said: Ladies and gentlemen, a year has barely passed since we met in this hall, and since you gave your consent to the purchase of the new properties of the Callao Bis Co. It was in the month of May when we met you here, and then had your support and encouragement in the matter of acquiring and exploring these properties. We lost no time in communicating with our superintendent on the other side, and as it was then something like May 20 when you were here to authorise us to complete the negotiations we had provisionally entered into, I can tell you that by the end of June we were actually in the possession of the properties, and had taken our preliminary steps for working them. Mr. Chartier, our superintendent, lost no time, acting under the instructions of the board, in pushing on the works with every energy and despatch, so much so that, although the original shaft was found to be in a very bad state, yet in four months after we had taken possession of the mine we were able to carry 500 tons of quartz and dirt from the Independiente to the Unda mill of the Callao Bis property, and the return from that was very satisfactory indeed. 500 tons produced 586 ozs. of gold. These returns were so encouraging that we lost no time in advising Mr. Chartier to push on with every energy the sinking of the shaft, and at the present moment we are down 144 ft. We have had a great many delays on account of the weather. These delays have been unforeseen, but are very apt to arise in such a country as Venezuela, and in such a place as that in which the mines are located, but notwithstanding all that, we are able to present to you with accounts to-day, which show continuancy of work from October last, and you will notice that during several months the returns have been of a very satisfactory nature. The quality of the gold has been maintained, and, if anything, at the present time the prospects of a higher value of the gold are more than they were, or have been, at any time since we have been working this new property. You will notice that at the end of the year, that is, for Nov. and Dec., the quantity returned was something like 1,150 ozs., producing 4,443*l*. These returns have been more than maintained. Our superintendent led us to believe that we might expect every month (in the difficult position he was in, and with the inevitable delays in opening up a new property such as this) 500 ozs. of gold.

RETURNS INCREASE.

If you take the returns since, you will find that although for Jan. they only came to 343 ozs., owing to the weather and the difficulty in opening the mine, yet in Feb. we had 696 ozs., while for Mar. we had 978 ozs. (Cheers.) We have advices to-day from the mine which give us only 17 days work during Apl., on account of the hoisting gear not being used, for the reason that the power was required for the pumps; but during those 17 days we had 415 tons of quartz crushed, producing a return of 510 ozs. of gold, or nearly 200*l*. (Cheers.) When you consider that only one year has elapsed since we took possession of this mine, you will be somewhat astonished at the following record of work and results. We were able to put 500 tons through the mill within four months of securing the property, and by the end of Dec. we have received 4,443*l*., and during the three months subsequent 7,760*l*. We have 2,000*l*. arriving in London to-day, giving us a return of over 14,000*l*., which is a very satisfactory result for the past year's work, and a very hopeful one as regards that upon which we have entered. (Loud cheers.) We recommended these two mines to your notice under circumstances which led us to believe that they were very valuable. You will bear with me when I say that it is somewhat difficult to define the future of a mine, or to foresee its prosperity, till you have had the advantage of examining it yourselves, or through your agents. Now we have been very successful in the opening up of this mine.

WE ARE INDEBTED TO MR. CHARTIER AND MR. GRIBBLE

for what they have done, and for the earnestness and attention they have devoted to pushing on the work. We are assured by them that if their operations in the past year have been successful, still more so are likely to be what they will do in the coming year. Our prospects present every hope for the future, and we may rely upon it that their brightness will be increased in every way as time goes on, and particularly now that the mill has been removed from the Unda concession and re-built entirely, close to the Independiente. At the end of the present month we shall have 10 stamps at work, and within a few weeks they will be increased to 20—in fact, at no distant time we shall have one of the finest mills of 30 stamps that you can find anywhere in Venezuela. Apart from that we are assured by Mr. Chartier that the opening up and development of the mine is such that he will have from various parts quite enough quartz to keep that mill going from day to day, and from month to month. I would call attention to the value of this property as regards its timber concessions. They are really forest lands, and we are assured by those who are in a position to tell us of their value, as well as in the reports which you have, no doubt, carefully read, that the work of these two properties, viewed from the timber point alone, is greater than the amount we gave in shares of the company for the whole of the properties. (Cheers.) Another matter I would like to call attention to is the adjoining property of Nueva Providencia, which, of course, also belongs to us, as it was included in our purchase of a year ago. This property, we are advised, is quite as valuable as the Indepeudiente, and whilst we hope at no distant time to open it up, and to prove that you have these two mines of equal value, and producing equally favourable results. to-day we are not able to assure you that we can open the Nueva Providencia property, because, with the difficulties and expenses of conducting such a concern as this in Venezuela, we have to husband our resources so that we may see something practicable in the way of a dividend before we spend too much money on a wide sphere of development work. (Hear, hear.) Sosa-y-Mendez was giving us ½ oz. to the ton when we thought it advisable to close the expenditure upon it, and to confine our works to the Independiente, because it had more immediate chances of success than any other part of the property. Coming to the accounts which are annexed to the report, you will notice the sum of 2,126*l*. 17s. 11d. standing as a debit against the company; but I may explain that that is chiefly an amount advanced by the firm of Kuhl and Dieckmann to our superintendent, pending the arrival of remittances from this side. It looks rather formidable to see creditors of this company to the amount of 2,126*l*., but it is simply a matter of figures. Our remittance at the moment had not arrived, and this amount was advanced in a friendly way by this house of merchants, who, on many occasions, have exhibited a warm interest in our prosperity, and are always ready to assist us in any way in their power. Although it appeared as a liability on Dec. 31, yet, as a matter of fact, I suppose by that very day it was really closed in Venezuela. There is also a very slight discrepancy in the figures regarding the amount in the returns from the mill in Nov. and Dec. In one place it is given at 4,477*l*., whilst in another it is 4,443*l*. The larger amount is the correct one, and it appears as such. but the difference arises simply from this, that there was a mill trial crushing, and that small sum was added to it which makes the extra money. There is one other matter which I think I shall allude to. You will notice in the accounts that the arrears of call amounted to 4,455*l*. on Dec. 31. That sum appears rather large, but amongst so big a body of shareholders as we have in this company (about 3,000), it perhaps is not so large as it might appear. But, at all events, whether you consider it large or not, I have the pleasure to tell you that since that date something like 2,400*l*. has been received, so that the amount at the present moment stands at about 2,000*l*., which we consider perfectly good, and will in due course come to hand. The company was in such a satisfactory position that it was not forced for funds. We have been indulgent to the shareholders of this company under the circumstances, and I think we shall have your encouragement and support in that matter. (Cheers.) You will bear with me in this, as it will be within your recollection that this company has never lost anything through its shareholders, but all the shares have been paid up, and, although this amount may be owing to day, we consider it a perfectly good asset.

NEW MILL COMPLETE.

The new mill is, as far as we can learn, complete. We believe by to-day it is in working order with 10 stamps, and the other 10 will be ready in the course of a month or six weeks. Our expenses will see a considerable reduction when we are working our own mill. You are aware that we are indebted to El Callao for the use of the Union mill. Whilst, of course, we do not consider it as perfect as our own, yet we are indebted to them for placing it at our service, and the crushings that we have put before you have been made thereby. Here let me say that El Callao Co. has, on many occasions, exhibited considerable interest in our company, and it is only right that we

should acknowledge our indebtedness to the authorities on that side. (Cheers.)

"PEACE WITH HONOUR."

Whenever anything has been required that we were unable to accomplish on our own property, they at all times have been ready to give us their assistance and support, and to oblige us in every way in their power. (Cheers.) We are on friendly terms not only with El Callao, but with all the authorities in Venezuela. And whilst you see sometimes ill feeling existing between properties and individuals in Venezuela, it is our good fortune to be on the most friendly terms with all the authorities of these companies, and to receive from them an amount of consideration and kindness that could not be exceeded. (Loud cheers.) Mr. Mackay reminds me that we receive the same consideration also from the Government. I think you will take it from me that, from the President downwards, we are indebted to all the ruling authorities for the consideration which we greatly esteem and highly value. (Cheers.) The board would not like to leave this hall to-day without acknowledging through you their

DEEP OBLIGATIONS TO MR. CHARTIER AND CAPT. GRIBBLE.

They have remained at their post through great difficulties and considerable anxieties, and more faithful servants to a company could not be found than these two gentlemen. They have spared neither health nor time in their deep interest in the prosperity of the company; have taken their responsibilities on terms very different from those paid by other mining companies in that country, but their great desire is to share with you in the prosperity the Callao Bis they feel perfectly satisfied will yet achieve. (Cheers.) We think it only due to them to say this, because we have just heard that Capt. Gribble has been so earnest and so continuous in his work that it was absolutely necessary we should give him a month or two for leave of absence. (Hear, hear.) Mr. Bell Davies, who I do not see present to-day, deserves also at our hands every acknowledgment. We have on all occasions had his assistance as our consulting engineer, and knowing your properties so well, we have been able to consult him with great confidence. His knowledge is most valuable, and whilst he gives us his services at a nominal remuneration (if you can call it remuneration at all), we think it only right to say that in the opening up and development of the new properties his advice has been exceedingly valuable. The general improvement at our mines is very great, and the prospects are so encouraging as revealed by what has been already written and said, that it is unnecessary for me to detain you at any great length on these matters. The report is made as explicit as possible, and I am afraid, if I prolonged my remarks, I could not add to your information, or impress you more strongly with the satisfactory outlook there is for the future. I see in the room to-day a gentleman who has had the opportunity of visiting these mines. He informed us it was his intention to proceed to Venezuela, and one purpose he had in view was to personally inspect your property. We with great pleasure gave him a letter of introduction to our superintendent, and as I now see him in the room, perhaps you would like to hear something from him as to what he considers the position on the other side. (Cheers.) There is one other matter I should be sorry to omit. You will remember on many occasions I have called attention to the desire of the board to see

A RAILWAY MADE TO THIS MINE.

If we can get a railway to Caratal through the mining district it will greatly reduce the working expense of this and of other companies. It will also bring us in closer communication with this country, and will open up Venezuela to a marvellous extent. We shall be able to communicate with the mines in 17 or 18 days, and a railway would, in short, have a wonderful effect on all mining properties in that district. A concession has been granted to make a railway to the mines, and it is quite possible that this matter will take a definite turn in a very short time, when it will be to the interests of shareholders, and of all who have connection with Venezuelan affairs, if they take a share in the scheme. By doing so, I think they will find that they are not only improving the position of their property, but securing a good investment for themselves into the bargain. On the last occasion I met you here, you will remember that on the purchase of these new properties, we asked the Marquis de Rojas, on account of his interest therein, to take a seat on the board. The Marquis complied with our request, and attended the board meetings on many occasions, but on account of his health, and having to reside in Paris, or mostly in the South of France, he found it difficult to retain a position which he could not occupy with satisfaction to himself or with justice to those he represented. Therefore, I am sorry to say, he has placed his resignation in our hands, which we have accepted with regret. At the same time it is only right we should acknowledge the kind assistance we have received from him at all times. His knowledge of Venezuelan affairs was very useful to us, and although he does not occupy a seat at the board to-day, yet I am assured that he and those whom he represents have a deep regard for the prosperity of this company.

A FORECAST.

In conclusion, ladies and gentlemen, I can only say that if you regard the present report as satisfactory, still more will you do so the one we place before you a year hence. The present one shows the work we have done to the good, and the results satisfactory, particularly considering the difficulties we have had to contend with in moving the mill, owing to the wet seasons, and also the removal of the heavy machinery and boilers and the Cornish pumps. I think you will see that the work has been honestly and fairly done on the other side, and that the prospects of increased prosperity and approaching dividends are bright in the extreme. Of this I am quite sure, that it is the desire of the board to give their earnest attention towards promoting the success of this company. We are nearer to it to-day than we were 12 months ago, and I think you will not regret that we recommended you to take those new properties, for the reward is much nearer at hand than you may anticipate. (Cheers.) I have only to add that Mr. Cundell and I retire from the board on this occasion, and, if it is your wish, we shall be quite willing to give our services to you, and do our best in the future for the company as we have done in the past. With these few remarks I beg to move "That the report of the directors and statement of accounts, as presented, be and are hereby received and adopted." If there are any points that have escaped my notice, and that you would like answered or explained more lucidly, I shall be happy to give you any further explanation you may require. (Loud cheers.)

Mr. ALFRED RUMBALL (director): I second the motion.

VIEWS OF AN EYE-WITNESS.

Mr. ROSS (who was heartily received) said: Mr. Chairman, directors, and gentlemen, I must tell you, in the first instance, that I went out to Venezuela quite independent of the company, in order to ascertain by my own inspection whether the prospects of this concern were sufficiently bright and lasting, and I did this in my own interests and in those of a large shareholder. I left London on Dec. 10 last, and arrived in Venezuela in about 16 days. In another fortnight I was on the mines. I need not detail the journey up country from the River Orinoco, but merely will say it is not a very pleasant one. You have to ride three or four days on mule back, and sleep out in the open. You can sometimes get something to eat, but frequently not. As to the difficulties of transport, I feel sure nobody would credit them until they had really experienced them by travelling up country. When I arrived at the mine I was met by the superintendent, Mr. Chartier, the mining captain, and the officers, from all of whom I received every attention. I was shown everything. I went down the mine, and through all the levels, and am quite

SATISFIED AS TO THE PERMANENCY OF THE LODE.

There is not the remotest doubt about it. The only doubt I had at that time was whether the lode would be cut through at the third level, and since I have returned it has been so cut, and, therefore, the future of the mine is assured. Indepeudently of that, I must tell you there is gold on the surface. I have here a small quantity, which I bought from a nigger who was washing for it, and using the water from our stamp pumps.

HAPPY NIGGER.

He got that gold in one and a quarter hours, and there are 2 dwts. He then left off work for the day. A short time ago a nugget was found, weighing 27 ozs. What has been going through the mill at the present time is not the reserves, for these are untouched. What is being put through, and what has shown the results you see in the balance-sheet, is simply the quartz they are obliged to remove in sinking in order to keep the mine clear for working. The reserves are untouched, and this result is merely from the development of the mine, which, as you know, has only been open since last Nov. Then there is the adjoining property of Nueva Providencia, which I also saw, but could not inspect the lode. It adjoins the Independiente, and is not 80 yds. away. That, at the earliest possible opportunity, I strongly advise your directors to spend a few hundred pounds upon, and it will not take more to have a trial crushing of what is there, and you will have two mines instead of one, and two good ones. (Cheers.) I can also bear personal testimony to the indefatigable way in which Capt. Gribble and the officers work. Capt. Gribble is at the mine night and day. I do not think he leaves it scarcely for an hour. From early morning till ten o'clock he is there, and thinks nothing of going down the mine the last thing before going to bed, which is no pleasant task.

RAILWAY NEEDED.

As I was going over the road I saw what was necessary to make these mines pay three times what they otherwise could do, and that is a railway. With that object I returned from the mines at the end of Feb., after being there about a month, and went with Mr. Chartier to Caracas, and there had several interviews with the Minister of Public Works and also with the President, and think that the forecast your chairman has made is very likely to be realised by the time we meet again, when the result will be, that instead of it costing ½ oz. a ton to deal with a ton of ore, it will be done for 3 dwts. at the outside. Then, instead of this property being worth shillings a share, it will more likely be worth pounds. It is certain a railway will make all the difference, because, at the present moment, it takes four cords of wood per day to sustain the steam for one 5-ton boiler, and that would cost just upon 7*l*., or nearly 8*l*., although it is your own forest. Now I can get coal landed on the river Orinoco costing 10s. in Wales, and with 15s. freight, costing 25s., and then there is the charge of hauling 75 miles by railway at a few shillings—the result being that you will be able to work your property at one-third the present cost, and besides that, the railway will also open up other properties. There are hundreds and thousands of tons of quartz which have been thrown on one side that cannot be put through the mill owing to the cost of reduction, but this will all become available. There are, at the old Unda shaft, enormous dumps, which it would not pay to put through, and also at El Callao as well. The chairman has not touched upon the point that the result of our journey to Caracas, owing mainly to the aid of Mr. Chartier (who is a gentleman of considerable influence in Venuezela) procured substantial advantages for the company. I am quite satisfied that in Callao Bis

YOU HAVE AT LAST TURNED THE CORNER.

It has been a long and weary wait, and I was an original shareholder myself 10 years ago. I have no doubt that you have a permanent property, but the main difficulty is one of transport, and that we hope to overcome by the time we meet again. I cannot close my few remarks without testifying to the ability of Mr. Chartier and Mr. Gribble, and also to the able co-operation of the officers of the company, who work together like a happy family. There is never any discord. Capt. Gribble's word is law, and what he says is carried out ably by his officers. There is no dissension, and there are also amicable relations with the surrounding companies. The debit of 2,000*l*. represents an amount advanced by merchants there on Mr. Chartier's own note of hand. The following week the remittance from London arrived, and it was simply a matter of exchange. It shows the confidence the merchants have in the company. I close by offering to answer any questions you may wish to put to me. (Cheers.)

TIMBER DESCRIBED.

Mr. ROBERTSON: The chairman made some remarks with reference

to the valuable nature of the timber. Mr. Ross did not say what was the nature of that timber.

Mr. ROSS: I brought home some specimens, but, unfortunately, they are at this moment in the hands of the polishers. They consist of rosewood, ebony, cedar, walnut, and mahogany. Owing to the difficulties of transport, timber cannot be sent to Europe, otherwise it would fetch a large price in London. At present it is used for fuel and for timbering the mine.

Mr. ROBERTSON: Then there is no demand for wood there at all?

Mr. ROSS: Only for timber for the mines and consumption for fuel.

Mr. ROBERTSON: What about the transport?

Mr. ROSS: That varies from 20*l*. to 30*l*. per ton from the river Orinoco to the mines, about 180 miles.

Mr. ROBERTSON: How far are we from the Orinoco in a direct line?

Mr. ROSS: In a direct line about 75 miles.

Mr. ROBERTSON: Then the timber there is of no value. (Oh!)

Mr. ROSS: It is worth about 2*l*. per cord for firewood alone.

The CHAIRMAN: If it were not for the possession of these forests we should have to buy this wood. We have a stock there which will last for 10 or 12 years. 132,000*l*. is the value set by Mr. Chartier on the timber. The line can probably be made for about 4,000*l*. a mile, and the 75 miles for from 250,000*l*. to 300,000*l*.

Mr. ROBERTSON: You have enough timber to make the sleepers.

The CHAIRMAN: We can sell them plenty, but do not be under a misapprehension—this company is not going to make the railway. (Laughter.)

POINTED QUESTION TO MR. ROSS.

Mr. W. J. FEDDON: We have listened with great interest to the very able speech of Mr. Ross, in which he has described his journey to Callao Bis Minc. Unfortunately I have not been the same length, though on several occasions I have been to Trinidad, and can bear out what he says as regards the apparent value of the mine itself. Still there is one question that we ought to ask, and that is, seeing Mr. Ross has been good enough to tell us what a valuable property we have there, I think we ought to know whether he has a substantial interest in it. Perhaps he would not mind telling us what his holding is.

Mr. ROSS: I am interested in 2,000 shares.

Mr. FEDDON: Then that gentleman speakswith 2,000 shares at his back, and evidently has a substantial interest. I thank him very much for the information he has given. (Cheers.)

The report was unanimously adopted.

Mr. MACKAY (director): The past year has been one of great anxiety to the board, because of the responsibility which attached to us as directors in recommending this new property as our own. Had a failure resulted, and had our anticipations not been realised, of course all the opprobium attaching to failure would have been ours, but we have watched month by month the gradual development of the new acquisition, and you may judge the satisfaction to us as a united board to see that all our prognostications and previsions have been realised, and that we have been the means, with your approval, of securing to the company properties that in due time will I am sure be earning dividends. I rose to propose the re-election of the two retiring directors, Mr. C. Ronaldson and Mr. W. J. Cundell. I hope by electing them you will maintain the continuity of the board as well as retain the services of two very competent gentlemen. (Cheers.)

Mr. ALFRED RUMBALL seconded the motion, which was carried by acclamation.

The CHAIRMAN: On behalf of Mr. Cundell and myself I can only thank you sincerely for the kind manner in which you have approved of our election, and on our behalf and that of the other members of the board I would say that if you are satisfied with our work during the past year you may take it as an earnest of equally good and more successful work in the year to come. As far as one can be satisfied about the prosperity of the company, we are satisfied about this. The re-election of the auditors, Messrs. Drury and Elliot, is a matter for you to decide.

A SHAREHOLDER proposed the re-election of the auditors, at a remuneration of 25 guineas.

Mr. FORD seconded the motion, which was agreed to.

STAFF REMEMBERED.

The CHAIRMAN: I was in hopes that some of the shareholders present would have proposed a vote of thanks to Mr. Chartier and Capt. Gribble and also to the staff for their earnest application to the company's interest during the past year. We have been remarkably well served on that side. It has been a source of considerable assistance to the board to know that during the past year no element of discord has appeared amongst our staff, but that all work in the most harmonious manner, and it will be satisfactory to them to know that their labours on your behalf have met with general approval and support. I beg to move "That the best thanks of the shareholders be given to Mr. Chartier, Capt. Gribble, and the staff generally for the zeal they have displayed on behalf of the company's interests in Venezuela."

Mr. HILL seconded the motion, which was carried by acclamation.

CHAIRMAN, DIRECTORS, AND SECRETARY THANKED.

Mr. GREGORY: I should like to express our thanks for the services of the chairman, the directors, and the secretary, whose energy and ability in conducting the company's affairs have been beyond all praise. I have the advantage of communication with gentlemen who have interests in Venuezela, and am told there is not a person there, connected with mining operations, who stands in higher repute and esteem than Mr. Chartier, and I am told also that there is no mining company in existence there whose credit and repute stand higher than those of Callao Bis. I think we ought to express our acknowledgments to them, and our recognition of the ability and assiduity which have been displayed by them in conducting the affairs of the company. I think we have very good hope that the results will by and bye not only be gratifying to them, but also to the shareholders generally. (Cheers.)

Mr. ROBERTSON seconded the motion, which was carried amidst cheers.

The CHAIRMAN, in returning thanks, said: Mr. Ross has called attention to the development and opening up of these mines, and he desires to push them on with every energy, because it is patent to everyone that not only in working the Independiente, but also the Nueva Providencia (I will say nothing about Sosa-y-Mendez, because I think these two will be enough to go on with at present), we shall meet with an equal degree of success. The

EXPENSES ON THAT SIDE HAVE BEEN VERY HEAVY,

for the staff is large, and at present we have over 160 people at work. The 13,000*l*. or 14,000*l*. that we have received from the gold has gone a long way to meet those expenses, but the matter is occupying the attention of the board, and we should hardly like you to go away without telling you that it is likely we shall make a call of 1s. for the purpose of hastening the work ot the company, and to that work this money will be honestly applied, with the full belief that dividends will be hastened thereby. I think it only right to mention that matter, as it will come under the consideration of the board for decision within a short time from the present.

LATEST REPORT.

Mr. THORNTON read the following report, dated Apl. 26: Independiente: We have resumed the sinking of shaft with all force. No. 3 level west has been driven 13 ft.; from cross-cut, 37 ft.; lode 6 ft. wide, of fair value, underlaying about 45 degs. Water proceeding from the face of the drift very freely. No. 1 winze in the bottom of the No. 2 level west has been sunk 12 ft.; distance from the bottom of level, 30 ft.; lode 6 ft. wide, of fair value. No. 2 winze in the bottom of the No. 2 level west has been sunk from the bottom of level 13 ft.; lode carrying 12 ft. wide, of fair value. No footwall discovered as yet. The water is not thoroughly drained from these points, which impedes the progress of sinking. Surface work: Cornish pump completed; engine and gear connected with same working well. New mill: Engine foundation completed. I hope by the next mail to have the engine in its place. Steam pipes and line shafting of mill completed. Mill results: 414¾ tons, yielding 509½ ozs. of bar gold. (Already advised by telegram.)

VOGELSTRUIS GOLD MINING CO.

CONFIRMATORY MEETING—LATEST NEWS FROM THE MINE.

AN extraordinary general meeting of this company was held at the Offices, 34, Leadenhall Buildings, Gracechurch Street, E.C., on Wednesday, May 20, for the purpose of confirming the following resolutions, which were passed at the extraordinary general meeting of the company held on Apl. 23, viz.:—

RESOLUTIONS.

(1.) "That in the event of the company being wound up, the holders of the preference shares of the company shall be entitled to have the surplus assets of the company applied in the first place in repaying to them the amount paid up on the preference shares held by them respectively, but shall not be entitled to any further participation in such surplus assets." (2.) "That any holder of preference shares may give the company six calendar months' notice in writing of his desire to convert the preference shares held by him or any part thereof into ordinary shares, and upon the expiration of such notice the same shall be deemed to be converted accordingly, and shall thenceforth confer the same rights and privileges as the other ordinary shares in the company's capital."

Mr. Jasper W. Johns, J.P., D.L.,

presided.

Mr. C. LEWIS BENNETT (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, the object of this meeting is merely to confirm those resolutions, and I am happy to say they have the approval of almost all our shareholders, both large and small. That may be evidenced by the small meeting we have to-day. I think, perhaps, the simplest plan would be for me to bring the shareholders up to date by reading the last letters from the mine in continuation of those we had read at the previous meeting. I will read you one of Apl. 11, which shows that we are still in very good hopes that all that Mr. Struben has said will prove to be correct in the end.

LETTER FROM THE AGENTS.

This is an extract from a letter from our agents:—

"Mine: Work at the mine has been receiving the most careful attention of Mr. Struben and the writer, but up to the present we have been unable to start milling operations. This, no doubt, will be disappointing to the board, who may be assured their anxiety is equally felt by us. Serious delay has been caused by the difficulties always experienced in starting a concern, but we do not fear results, and the expense we have incurred and the time expended will, when we start crushing, prove to be time and money well spent. We are safe in saying, and in this we have also the assurance of our manager, that when we write you next our mill of 25 stamps will be running. At No. 4 shaft ore is still being hauled, and we have already sufficient in hand for a fair test crushing, and from the further development we have seen have no reason to change the opinion expressed in our letter of Feb. 21 as to the value of the ore at this point. When we mill the ore it will represent a body of 2½ to 3 ft. in width, being the banket of south reef and casing therefrom. At No. 2 shaft satisfactory progress has been made during the past week. We have very

SUCCESSFULLY COPED WITH THE WATER

in the first level by means of a draw lift, and can with our appliances go down to the second level when we desire to do so. In the meantime we are hauling ore, and in the coming week can supply from stopes as much ore as our gear is capable of hauling. Yesterday morning we panned a section of the reef, taken 2½ to 3 ft. from wall to wall of south reef, which gave very satisfactory prospect." That, gentlemen, is the extract. On Apl. 28 we received a cablegram saying, "Have started 25 stamps; will give results as soon as possible." That shows that the mill is really at work. Then we have received another letter, dated Mar. 28, saying the mill will start on the ore at dump near mill, which is estimated at about 500 tons. That shows we may expect now almost daily a cablegram giving us the contents of the crushing of that 500 tons at the dump, and then the next cablegrams with regard to crushing will refer to the ore which I have mentioned to you they are raising from the various shafts. That is about all we can tell you. We are now awaiting these cable-

grams, but we have very little doubt from what these gentlemen have said that they will be very cheering, and if so the future of the mine, we hope, will be fully established, and that we shall have

SOMETHING MORE THAN HOPES AND EXPECTATIONS

to deal with when we meet you again. We may mention that Mr. Oats, one of your directors, and a very experienced miner, is also, we believe, on the property at this moment. He left this country on Apl. 10, and arrived at Cape Town on Apl. 25. We have no news from him, but we expect he, as well as Mr. Struben, are now upon the mine at the present moment. I now beg to move "That the resolutions which have been read to you be passed."

Mr. P. A. Molteno seconded the motion, which was carried unanimously.

The Chairman thanked the shareholders for their attendance, and said the directors were now in a position to raise the new capital whenever it was considered necessary, and they would only wait the news from the two directors at the mine to decide what course should be adopted with regard to it. The shareholders, as far as could be gathered, were all in very good heart, and would be prepared to do their part in the matter as soon as a perfect scheme was laid before them.

The proceedings then closed.

THE JUMPERS GOLD MINING CO., LIMITED.

LOW GRADE ORE PROFITABLY WORKED.

The seventh half-yearly meeting was held in Johannesburg on Thursday, Apl. 9.

Mr. R. R. Hollins

(chairman) presided.

The Chairman, in rising to move the adoption of the reports, stated that he hoped the shareholders would agree with him that the work done during the half-year under review was both satisfactory and hopeful. Economies had been effected in the face of difficulties, as to which shareholders were well acquainted. For the previous half-year the total working expenditure was 54,741*l.* 19s. 11d.; for the past 41,451*l.* 2s. 11d., being a decrease of 13,290*l.* 17s., a substantial amount. The saving under each heading was:—Mining, milling, and redemption, 4,264*l.* 2s. 1d.; milling, 6,074*l.* 19s.; quartz riding, 161*l.* 19s.; charges, 2,072*l.* 4s. 1d.; removal of tailings, 717*l.* 12s. 10d. The loss of the previous half-year had been converted into a profit, and this in the face of heavy special charges in connection with the increase of capital. One item specially worthy of note is the low figures at which the assets of the company stand in the balance-sheet — for instance, the 100-head mill was valued at 291*l.* per stamp, erected and in good working order. The most noticeable feature in the report is the fact of a low grade ore (barely 8 dwts.) being worked at a profit, which was a hopeful sign for the whole fields, as well as for this particular company. From the manager's report it would be seen that the company is at present working on a poor zone, and in broken country, but indications were not wanting to show that this would soon be passed through, when it could be expected the company would revert to its previous average yield of gold, which the last balance-sheet showed was 81,432 tons crushed for 51,794 ozs. gold, equal to 12 dwts. 17 grs. per ton.

Mr. James Hay seconded the motion, and it was carried unanimously.

Mr. Carl Hanau asked if the new issue shares had been sold before or after the last meeting.

The Chairman replied that the shares had been offered to shareholders immediately after, in accordance with the resolutions passed at the last special general meeting of shareholders; and the financial position to-day was—the company had about 57,000*l.* cash on hand, that it had been decided to pay off the bond of 30,000*l.*, under rebate of interest, and that, after selling the balance of the new issue, viz., 22,865 shares, and paying all liabilities, it would have about 60,000*l.* in hand.

AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

A REPORT THE DIRECTORS CONSIDER EMINENTLY SATISFACTORY.

The following is a report of the mining manager of the Australian Broken Hill Consols, Limited, upon the property recently acquired by the East Broken Hill Consols, Limited:—Blocks 98 and 99: In compliance with your instructions, I have to-day made a careful examination of the surface of land comprising above, and from the result of same, coupled with what the mining operations have already shown to us in both these blocks, I beg to submit the following report:—As we have already proved, the main lode, which is yielding such rich results in Block 96, runs east and west through the entire width of the property of the company. Through Blocks 97, 98 and 99, however, it does not take quite the same course or bearing shown on previous plans belonging to this company. I maintain that the bearing of this lode east of Block 96 takes a more northerly course; that, in fact, through Blocks 97, 98 and 99 this lode is direct east and west, instead of being south-east as shown in former plans, S.E. I will attach to this letter a rough sketch showing the actual course of this lode, and of the more northern parallel lode to which I shall refer presently. In regard to the main lode, as it affects Blocks 98 and 99, I may say that in these two blocks, owing to its southerly underlay and angle of dip it can be followed from the surface to a depth of fully 2,000 ft. before it reaches the southern boundary, whilst, as regards what it may contain, everything I have seen yet supports my belief that this lode will be found to be as valuable in these blocks as it is proving in Block 96, and should it, as in the latter block, turn into a vertical lode, it can, of course, be followed down to unknown depths. As to the more northern and parallel lode, I have tracked this eastward from Block 95, through which block, and Blocks 96 and 97 it can be followed on its underlay from the surface, whilst as regards Block 98, a shaft sunk inside of the northern boundary should strike this lode at the depth of less than 50 ft. In Block 99, however, it would not be struck until a greater depth was attained, and it could perhaps be more economically worked in this block by means of driving easterly on the lode from Block 98. This northern lode, so far as it has been exposed up to now, shows quite as good indications as did our main lode at the same depth from the surface, and in my opinion should become as valuable when similar development work has been done on it. My chief reason for expressing this belief is that the silver-bearing diorite dyke, in which the rich shoot of ore exists in Block 96, shows unmistakable signs of continuing north-easterly through this parallel lode. On Block 98, shaft No. 2, which has been sunk to a depth of 65½ ft., struck in its course a cross lode running north and south, but as water was met in such volume as to render further sinking impossible without machinery, operations had to be suspended. I strongly advise the continuation of this shaft, while as regards shaft No. 4 on Block 99, which had to stop for similar reasons, I recommend cross-cuts south and west as a means of readily getting at the main and cross lodes. Both of these shafts are excellently located, as the rush of water alone proves that they are in strong lode country, apart from the important fact that rich silver-bearing galena has been taken in considerable quantity from their vicinity. I feel sure that with the same vigorous policy of development now being pursued in Block 96, Blocks 98 and 99 would open out equally well.—C. J. Klug.

GRAVEL GOLD MINES OF COLOMBIA.

DIRECTORS ISSUE A REPORT WHICH SHOWS THAT WASHING THE GRAVEL HAS COMMENCED.

From the detailed report of the work which has been carried on during the past year under the direction of Mr. Welton, it will be seen that unexpected hindrances presented themselves in the construction of the first section of the aqueduct, delaying for several months the opening of the mine. It is satisfactory to learn by Mr. Welton's cable, received on May 2, that washing has now been commenced with 1,000 ins. of water from the San José quebrada, and will be increased by the water from the Aqua de Dios quebrada within about a month. A few weeks will be occupied in clearing away the old Spanish *débris* and in getting the mine fairly opened, after which the directors trust that continuous profits will be made. The directors have appointed Mr. William St. David Griffith as the company's superintendent, and this gentleman, with a young engineer, Mr. Lindsay Scrutton, who accompanies him, arrived at the mine on Apl. 20.

Mexican Mineral Railway.—Interest warrants for the half-year ending May 24, at the rate of 6 per cent. on shares, and 7 per cent. on debentures, will be sent out on the 23rd inst. Coupon No. 4, due 24th inst., on fully paid debentures must be presented for payment at the company's offices, No. 4, Copthall Buildings, E.C.

Holloway's Pills and Ointment.—Bilious affections, with all their concomitant annoyances induced by atmospheric changes, or too liberal diet, should be checked at once, or serious consequences may ensue. When anyone finds his ideas less clear than usual, his eyesight dimmed, and his head dizzy, accompanied by a disinclination for all exertion, physical or mental, he may be quite sure that he is in immediate need of some alterative medicine. Let him at once send for a box of Holloway's Pills, a mild course of which will remove the symptoms, and speedily renew his usual healthful feeling. If the bowels be irritable, Holloway's Ointment should be diligently rubbed over the stomach and liver every night and morning.

MINING MARKET.

CITY, FRIDAY EVENING.

EVENTFUL MARKET FROM THE COPPER SIDE—BROKERS SHORT OF STOCK—SPECIAL REFERENCE TO MONTANA, RUBY, FLAGSTAFF, FRONTINO, AND OTHER MINES—FIRMNESS OF AMERICAN SHARES — THE MINING EXCHANGE.

THE Mining Market has, this week, been chiefly remarkable from its Copper side, the metal having advanced from 52*l.* 15s., at which we quoted it last week, and 51*l.*, at which it was the week before, to 56*l.* This represents a rise of about 5*l.* within the past fortnight. The statistics pointed to this advance, and we have frequently, in recent articles, called attention to the fact that a rise in this metal was inevitable from the circumstances of the case which he who ran might read. It almost goes without saying that shares in this section have advanced. The upward movement was helped the more by the fact that the settlement this week found brokers short of stocks, and that the public were steadily taking up what they bought. It has been freely rumoured that a strong syndicate, with a well-known firm at its head —the name of Matheson has been mentioned—has been formed to keep copper at present prices, or round about 60*l.*, which it is thought would not interfere with consumption. It is now generally believed that had the Société des Metaux been little less grasping in its demand all would, for a lengthened period at least, have gone well with it, but that its fall was caused through "the vaulting ambition that did o'erleap itself." In Rio Tinto shares dealings have been very heavy, but from this it must not be inferred that other shares in the same section have been neglected. The outlook for copper and copper shares is certainly bright, and prices do not look as though they by any means have touched top.

Indian shares have been pretty freely dealt in, and the fall we chronicle in Mysore to-night is apparent, not real, for the shares are now quoted ex-div., and, in fact, mark a fractional rise. It was thought by not a few persons who profess to be wiser than their neighbours that Mysore shares would fall considerably after the Goldfields purchase, but the truth is that they are now just about the prices they were when that financial operation was announced.

The most noticeable feature of the settlement has been the shortness of shares, and the great difficulty experienced by brokers in delivery. There has been a good deal of "buying in" by the official broker of the Mining Exchange, and in some instances at 100 per cent. above the prices ranging on the market. In some cases shares have been bought in several times over, thus causing heavy losses to the "bears."

Talking of the Mining Exchange—the annual meeting of that body passed off most satisfactorily. The number of members is fewer, but the weak ones have been weeded out, and the public may deal with confidence with those who remain. It is proposed to post the names of defaulters as in the case of the Stock Exchange. Mr. Thomas Thompson, the chairman, pointed out several ways in which the Exchange may be of more utility to the members and service to the public, and his remarks were received sympathetically by the meeting.

Another feature of the week has been the issue of the most satisfactory report that has ever proceeded from the Frontino and Bolivia office. This company was re-constructed on a 5s. liability basis, and this year alone 3s. 5d. per share has been declared in dividends. Yet there are some shareholders who would have abandoned the concern but for the sturdy counsels of Mr. Donagan and his colleagues. Antioquia, the sister company, is also making a good show.

There has been a good deal of business in Flagstaff, and prices are firmer than last week, though they do not close at best. Emma shares have been better on the receipt of a telegram stating that the mill had started, and that the machinery was working smoothly.

Montana shareholders have been unnecessarily disquieted by the passing of the dividend. When Mr. R. T. Bayliss arrived out at the mines he found everything running smoothly, and Mr. Robinson reported that everything had gone on satisfactorily in his absence. Certain changes are to be brought about, and notably the expenditure will be reduced; and though the staff suffer in the projected economies the good feeling which animates its members is shown by their cheerful acquiesence. The directors are of the opinion that a hopeful view may be taken of the prospects of the undertaking, and the object with which they pass the dividend is in order that every shot in the locker may be devoted to development work. The recent discovery of high grade ore in the Hickey Mine is encouraging. We greatly applaud the wise decision of the directors to let nothing interfere with their development work—not even dividend-declaring.

There has been an inquiry for Yankee Girl, New Guston, American Belle, De Lamar and Elkhorn, for it is felt that in favour of these concerns there are now the elements. There has been a fair amount of inquiry for Tesoros this evening, and the opinion is generally expressed that in the course of the next few days they will see better prices, for the reason that the coming mail is expected to bring greatly improved advices.

Etheridge shares were not helped by the stormy meeting held yesterday, or by what we cannot but think the unwise decision of the shareholders which threw the company into chaos, dispensed with the knowledge and experience of the directors and appointed a scratch committee to look after its affairs. When the market heard all this, the shares became virtually unsalcable.

Turning to mines generally, we retrace our steps and find that Kaffirs, with but one exception, are all down. The market in this department is indeed in a deplorable state. Hatton Garden neglects it and Holborn Viaduct refuses to sustain it.

Land shares have also fallen without exception. Oceanas are now quoted as low as 4½, and Silatis (which show a fall of 2s. on the week) are down to 12s. discount. Evidently the market takes the view in regard to the latter company of Capt. James Williams rather than that of Mr. Conybeare.

The position of De Beers shares is again discussed in our colnmns. There has been a fall this week, but then that remark applies to everything in the diamond description with the exception of Ruby shares which are fractionally firmer.

The news from the Burma Ruby Mines continues to improve. The last consigument of rubies received this mail amounted to 1,100 carats, being the results of the month's working, a great improvement both in quantity and quality on any parcel yet received. Major Kunhardt reports the health of the staff to be excellent, and the difficulties due to the flooding of the low level workings to have been successfully overcome.

The end of the week has not left Australian Broken Hill Consols shares where the commencement found them, whilst those of Wentworth have been but rarely named. The report of Kangarilla, though fairly good, caused the shares to fall, and a similar decline has occurred in New Queens, which steadily fall. Bonnie Dundee and Day Dawn are weaker.

In Indian shares, the movements have been unimportant, and call for no special remark. Harnhallis have been weaker.

Copper shares, as already indicated, are all up.

The American market has been well supported, and amongst the shares that have risen (in addition to Flagstaff, which have been 7s. 3d. buyers, and mark a rise of 9d. on the week) are Elkhorn, Golden Feather, Palmarejo, and a few others. El Callao fell on the report we discussed last week, and Yuruaris have been dealt in down to 6d., and freely offered at that. The delay in Pinos Altos accounts and the abortive meeting yesterday led to a fall in these shares.

The Home market has been extremely depressed, and we would fain discover a silver lining to the dark cloud that for so many weeks has overshadowed it. It is most serious again to see a fall in Tincroft of 2*l*., Dolcoath 30s., and other mines also lower in sympathy.

In regard to next week the prospect is fairly good, and we incline to the view that copper shares will absorb the chief attention.

South African Lands.

It was only to be expected that prices in this market would fall when it became known that the Chartered Company's people had had another conflict with the officials of the Portuguese Government. Holders, becoming afraid, tried to sell, with the usual result, and prices are lower in every instance. Explorings lead the way, and close 20s. lower. London and South African fell 15s., and several others to a smaller extent.

Business :—There is no rise to note on the week, but the following have fallen :—Beehuanaland, $\frac{1}{16}$: British South Africa Chartered, $\frac{1}{4}$; Exploring, 1; Exploration, $\frac{1}{4}$; Goldfields of South Africa, $\frac{7}{16}$; Johannesburg Estate, $\frac{1}{16}$; London and South African, $\frac{3}{4}$; London and Orange Free State, $\frac{1}{4}$; Oceana, $\frac{13}{16}$; Silati, 2s.; South African Gold Trust, $\frac{1}{8}$; Sutherland Reef, $\frac{1}{16}$; Transvaal Estates, $\frac{1}{8}$; and Zoutpansberg, 6d.

Kaffirs.

Last week we had to report that it was difficult to deal, and this week we have to chronicle an all round fall, not of 1s. or 2s., but in special instances of 10s., 8s. 9d., and 7s. 6d. per share. This, happening as it does at a time when there is not much business doing, is a very serious matter. We advise our readers neither to buy nor sell, but just keep their holdings. Crown Reef shares were a shade firmer on the issue of report declaring a dividend at the rate of 50 per cent. per annum, but even this could not keep up prices, and they eventually gave way.

Business : The rises are in Great Gold Zone of 1s., and Jumpers, $\frac{1}{16}$; whilst the following have fallen :—Piggs Peak, 1s. 6d.: Piggs Peak Pref., $\frac{1}{8}$; Aurora, $\frac{1}{16}$; Bankets, 3d.; Bantijes, 1s.; Central Langlaagte, $\frac{1}{16}$; City and Suburban, $\frac{1}{4}$; Crœsus, 6d.; Crown Reef, $\frac{3}{8}$; Durban Roodepoort, $\frac{1}{8}$; Dornkop, 6d.; Ferreira, $\frac{3}{4}$; Forbes Reef, 3s.; Geldenhuis, $\frac{1}{16}$; Glencairn, 6d.; Heriot, $\frac{1}{16}$; Johannesburg Pioneer, $\frac{3}{4}$; Johannesburg Waterworks, $\frac{1}{16}$; Jubilee, $\frac{3}{8}$; Kimberley Roodepoort, $\frac{1}{4}$; Kleinfontein, $\frac{1}{16}$; Langlaagte, $\frac{7}{16}$; Luipaards Vlei, 6d.; Main Reef, 1s.; May Consolidated, 6d.; Modderfontein, 1s.; Moss Rose, 1s.; Nabob, $\frac{1}{16}$; Randfontein, $\frac{1}{16}$; Robinsons, $\frac{1}{8}$; Salisbury, $\frac{1}{16}$; Simmer and Jack, $\frac{3}{8}$; Vogelstruis, 6d.; Wemmer, $\frac{1}{2}$; Witwatersrandt Knights, 6d, and Wolhuter, $\frac{1}{4}$.

Indians.

There has been a firm market in this section, and prices have hardened all round, Ooregum Preference and Mysore Harnhalli excepted. It is very difficult to deal in these shares at anything like quoted prices. Mysore Gold are now quoted ex dividend of 4s. 6d., so that they have really risen 2s.

Business :—A rise is shown in Goldfields of Mysore, 1s.; Mysore Wynaad, 3d, and Ooregum Ordinary $\frac{1}{8}$, whilst a fall is noted in Mysore Gold, $\frac{1}{8}$ (now quoted xd); Mysore Harnhalli, 6d., and Ooregum Preference, $\frac{1}{8}$.

Diamonds.

With the exception of a slight rise in Burma Ruby there has been but very little doing, and prices all round close lower. De Beers

and North Eastern Bultfontein have fallen to the extent of 5s. each.

Business :—A rise has taken place in Burma Ruby of ⅛; whilst the following are lower : Bultfontein Consolidated, 9d.; De Beers, ¼; New Jagersfontein, ⅛; North Eastern Bultfontein, ¼; and Ottos Kopje, 1s.

Making-up Prices, May 26.	DIAMOND SHARES.	To-night's Prices.
20/	Bultfontein Consolidated ...	19/6 — 20/
14 11/16	De Beers Consolidated ...	14 7/16 — 14 9/16
3/6	Gordon	3/6 — 4/6
5 3/16	Griqualand West	5⅛ — 5⅜
5⅝	New Jagersfontein	5¼ — 5½
1½	North-Eastern Bultfontein ...	1⅛ — 1⅜
—	Ottos Kopje	1/9 — 2/3
¾	Burma Ruby Mines	1/16 — 3/16 pm.

AUSTRALIANS.

There has been less doing in this class than for many weeks past, and with the exception of Australian Broken Hill Consols and Wentworths, both of which close lower, hardly any shares have changed hands.

Business :—There is no rise to record, but the following are lower :—Australian Broken Hill, 1/16; Bonnie Dundee, 6d.; Cumberland, 3d.; Day Dawn Block, 6d.; Etheridge, 6d.; Kangarilla, 1/16; Mosman, 3d., and New Queen, 1s.

COPPER.

The market for this description has been the most active of the week. Shares have risen all round, owing to the continued advance in the metal.

Business.—The rises are as under :—Capes, ¼; Copiapo, ¼; Libiola, ⅛; Namaqua, ⅛; Quebrada, ¼; Rio Tinto, ⅛; and Tharsis, ¼. There is no fall to note.

GENERAL FOREIGN.

These shares, with but few exceptions, have been weak, but it is a favourable feature that brokers are short. There has been an enquiry for Emma and Flagstaff shares.

Business.—The rises are in Dickens Custer of 3d.; Elkhorn, 1/16; Flagstaff, 9d.: Frontino, ¼; Golden Feather, 1s.; Palmarejo, 6d.; St. John del Rey, 6d.; and Tesoro, 3d.

The falls are as under :—Amador, 3d.; Barretts, 3d.; Coromandel, 3d.; El Callao, ⅛; Elmore, 3d.; Golden Gate, ⅛; Loma, 6d.; Montana, 1s.; Pinos Altos, 1s.; St. Augustine, 6d.; Tolima, ¼; and Yankee Girl, 1s. Yuruaris have been offered, and close lower.

The following list shows the principal changes which have taken place :—

	Last Week.		This Week.

LATEST FROM THE MINES.

COLONIAL MINES.

BRITISH BROKEN HILL.—During the week ending May 21 the yield from furnace at mine was 591 tons ore treated (including 134 tons iron ore), yielding 137 tons lead, containing 6,545 ozs. silver.

BRITISH BROKEN HILL PROPRIETARY.—For week ending May 28, 662 tons of orewere treated, yielding 139 tons of lead, containing 5,958 ozs. silver.

BROKEN HILL PROPRIETARY.—The week ending May 28 there were 4,711 tons of ore treated, yielding 660 tons lead, containing 179,018 ozs. silver. Cable also states that the surplus silver on hand amounts to 200,000 ozs., and that the usual monthly dividend of 2s. per share, amounting to 96,000*l.* for the month of June, has been declared on the 960,000 shares, and will be paid on June 17. The books close for dividend on June 6.

DAY DAWN BLOCK AND WYNDHAM.—A cable from the general manager gives the result of the crushing for the fortnight ending 23rd instant :—"480 tons crushed ; yield of gold, 700 ozs. ; approximate value, 2,415*l.* ; fortnight's expenses, 800*l.*"

DAY DAWN P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending May 23, viz. :—"1,030 tons 1,002 ozs." (Estimated value, 3,406*l.*)

EAST BROKEN HILL CONSOLS.—Telegram from the managing director, resident at Broken Hill, dated May 28 :—"Block 98 : Machinery started and working well."

MIDAS.—Cable from the mine : "Not in deep ground yet ; eastern reef wash looking better."

MILL'S DAY DAWN UNITED.—Cable :—"For the fortnight ending 23rd inst. we crushed 1,040 tons, and obtained 1,149 ozs. of gold, of the approximate value of 3,960*l.* Will pay a dividend of 3,750*l.*"

MOUNT LEYSHON.—A cablegram, dated 27th inst., from the manager at Charters Towers, gives the fortnightly crushing :—"810 tons crushed, 310 ozs. gold ; 20-stamps mill ran 288 hours ; value, 710*l.* Estimated quantity of ore in sight, 30,000 tons."

NEW QUEEN.—A cablegram, dated Charters Towers, May 25, gives result of crushing for past fortnight :—"350 tons, yielding 335 ozs. gold."

FOREIGN MINES.

AMERICAN BELLE.—The managing director, Mr. Crawford, writes May 11 : "We are shipping quite freely from the Silver Bell ; some of the cars running very well. I had a telegram a few days ago stating that one car ran 327 ozs. of silver per ton, and they expect to ship some of the high grade ore during the week. They get assays as high as 2,700 ozs. silver from No. 7 stope. The mine superintendent, Mr. Harvey, cabled on 25th inst. to the following effect : "The probable output from the Silver Bell during the month of May will be 400 tons. Impossible to estimate the value."

ELKHORN.—The company, in answer to enquiries, have received information from the mine, "that the amount of bullion produced in Apl. was $37,020 instead of $33,220 as reported, making an increase in the profits for the month of $3,800." "Bullion produced for the week ending May 23, $9,225."

EMMA.—The following is a cablegram from the superintendent at the mine : "Started mill yesterday. Machinery working smoothly and well."

GOLDFIELDS OF URUGUAY.—The directors have sold, through Messrs. Pixley and Abell, the bullion produced during Mar., which realised 1,367*l.* nett.

LA LUZ.—Cable from Mr. Hilton, the company's manager at the mines, on the 25th inst. :—"Buying supplies ; mines are looking well ; Zapopan ore improving in quality as developed ; working day and night ; awaiting instructions."

LA PLATA.—Cablegram from the manager with reference to development work on the White Cloud claim (adjoining the Guston Mine) : "White Cloud looks very favourable ; the ore in the shaft is improving as it goes down."

MAMMOTH.—A further instalment, value $8,800, of the bullion produced during current month, has been sent into bank, and the manager reports that the mill is working splendidly.

MINE OWNERS' TRUST.—With reference to the recent rich strike in this company's Colorado Boy Mine, the manager has cabled the following further news :—"Strike in the Colorado Boy Mine is of the greatest importance ; samples forwarded by express."

NEW CALIFORNIA.—Cable from the manager :—"Apl. output, 685 tons ; yield, 341 ozs. of gold ; value, 1,080*l.* ; costs, 910*l.* (mining profit, 170*l.*) ; expenditure on new claims, Governor Adams and Rhode Island, and general development account, 430*l.*—RICKARD."

NEW GUSTON.—Cable from the mine :—"Value of ore shipped Apl. 27 to 30, $25,000. Expenditure on account revenue $10,000. From May 1 to 15 we shipped 750 tons ore, estimated net value $50,000. No. 6 level, north of shaft, we have struck good shipping ore 4 ft. thick. No. 7 level ore body opening well."

NEW HOOVER HILL.—The directors have sold, through Messrs. Pixley and Abell, the bullion obtained during Apl., weighing 19.725 ozs., which realised the sum of 617*l*. 2s. 9d.

PINOS ALTOS BULLION.—The out-turn for the week ended 16th inst. was $8,000.

QUEBRADA.—The company notify that the transfer books of the company's preference shares and the ordinary shares respectively will be closed from Saturday, the 30th inst., to Wednesday, June 10, both days inclusive, for the preparation of the warrants representing the dividends declared at the general meeting held on the 22nd instant.

SAMBAS EXPLORATION.—Cablegram from the manager at Sambas, Western Borneo :—"Singapore, May 26. There is great improvement in mine's assays since last report.—FEARBY."

SANTA ROSALIA DEL CARMEN (MEXICO).—The directors of this company have received advice from their agent in San Francisco that he has taken possession of the property and now holds it on behalf of the company.

YANKEE GIRL.—Cable from the mine :—"Value of ore shipped Apl. 27 to 30, $35,300. Expense on revenue account, $19,200. Ore shipped from May 1 to 15, 790 tons. It is impossible yet to send correct approximate value."

HOME MINES.

NEW WELSH SLATE.—Output for the four weeks ending May 16, 466 tons ; gross value, 1,557*l*.

PEDNANDREA.—At the meeting held, on Thursday, in Cornwall, it was decided to sell the mine. A call of 6s. 6d. per share was made.

PHŒNIX, UNITED.—The accounts presented at the meeting on the mine on Thursday showed a debit balance of 3,093*l*. It was resolved to ask the Duchy to remit the dues until a dividend was paid.

WHEAL METAL AND FLOW.—At the meeting of this company on Wednesday Capt. F. W. Thomas resigned his position of manager, and joined the committee. A call of 1s. a share was made.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

NORTH-EASTERN BULTFONTEIN.—Telegraphic advice announces 7,000 loads washed, producing 1,100 carats of diamonds for the week ending 23rd inst.

SILATI RIVER.—The auriferous character of Laing's reef is established by another crushing of 90 tons, yielding 12 ozs. free gold, leaving in the tailings, according to assay, 5½ dwts. to 6 dwts. 12 grs. per ton, which will now require to be dealt with by the usual machinery for this class of ore. The alluvial and *debris* at Swiss reef have been tested by passing through the mill in 14 days 194 tons, which yielded 50 ozs. of gold. A portion of the 25 ozs. of alluvial gold recently received from the farm Tours has been assayed by Messrs. Johnson, Matthey and Co., who report that its value is, after melting, 4*l*. 3s. 4d. per oz.

WASSAU (GOLD COAST).—The yield of gold for Mar. last was 119½ ozs. standard weight, of the net value of 456*l*. 14s. 3d. During this month the Adjah Bippo mill worked 12 days only, and the Crockerville mill 18, crushing together 213 tons of lode, giving a yield of gold per ton equal to 0.56 ozs. The diminished return for this month was caused by some necessary repairs being done to the old mill, which caused a stoppage of fully half the month. The manager, under date Feb. 25, write as follows :—"We shall stop for the general overhauling of the Adjad Bippo mill on Monday next, after which, with a new engine, and, compartively speaking, a new 12 head of stamps, I hope to be able to make up for loss of time."

CLUTHA.—Manager's report for week ending Apl. 27 :—Mine : Clutha section, 50-ft. level : Measurement at date, 188 ft. ; work done for week, 10 ft. Has not carried much gold during week. Cross-cut south : Measurement at date, 9 ft. ; work done for week, 6 ft. On fair gold. North reef, easterly branch : Measurement at date, 58 ft. ; work done for week, 4 ft. ; lode maintaining same average width, 2 ft. 6 ins., and panning fairly well. Victoria section, 120-ft. level north-east : Measurement at date, 309 ft. ; work done for week, 5 ft. Chamber cut 10 ft. by 7 ft. ; winze sunk 18 ins., 5 by 4. Maintenance : Timbering portions of main shaft all the week, filling in old stope, excavating *debris* over No. 2 shaft for supply filliug.

PIGGS PEAK ESTATE.—Manager's report for week ending Apl. 25. —Devil's reef—drive on top of the hill : Drove 19 ft. ; total 37 ft. ; shows a little quartzite, but no gold in panning ; 300 ft. of cuttings in different places. Winze sunk for the week 10 ft. ; total, 43 ft. ; no change since last report. One white man and 11 boys getting out mine timber ; remaining boys filling bags and loading waggons. Tamblyn reef—shaft : Sunk for the week 2 ft. ; total 12 ft. ; going through nice-looking rock, but shows no gold in panning. Drive : Drove 11 ft. ; total, 13 ft. ; 320 ft. of cutting 3 ft. deep, shows no gold in panning. Peak—Piggs drive : Have made no headway during the week, as the timbers have been giving, and it was necessary to secure the same. No. 2 south drive : Drove 3 ft. ; total 39 ft. ; ground very hard, and shows no gold in panning. No. 1 works : Drove 37 ft. ; total 202 ft. Ground looking very promising.—E. J. MURRAY.

TRANSVAAL GOLD EXPLORATION.—The following particulars are from the general manager's advices to this company of Apl. 27 :—Bullion : A shipment of four bars melted gold, weighing 409 ozs., value, 1,505*l*. (part of Apl. produce), was forwarded through the Standard Bank on Apl. 27. Mines : Ophir Hill, Theta vein : Ore extracted, 20 tons ; assay value, 3 ozs. 16 dwts. per ton. Stripping work was being pushed forward. Ophir Hill, Zeta vein : Work had been resumed at this place with a small gang, who were engaged stripping a paddock of payable ore. Brown's Hill, Nu vein : Ore extracted at Nos. 1,211 and 1,216, 35 tons ; assay value, 1 oz. 7 dwts. per ton, and at No. 1,209, 60 tons ; assay value, 3 ozs. 2 dwts. per ton. At No. 1,209 the ore body had thinned off towards the east, but in the northern face of the workiug it had become very strong. In addition to the above, some high grade ore was broken out, but had not been wheeled to the dump.

EDWIN BRAY.—The manager in his report for the fortnight ending Apl. 25 states as follows :—Besides extracting quartz from both ends of No. 2 quarry, I have been clearing the face of the reef west of No. 2 drive. A large quantity of the quartz has been stacked close to the ropeway loading station, the platform below the quarry being almost full. Ropeway : Several accidents have happened to the ropeway, but the repairs having been completed, the transport of quartz was able to be resumed on Apl. 25, and by the 25th, 453 trucks, equal to 113½ tons of quartz, were delivered at the battery. There are still some details on the line requiring attention, which accounts for the ropeway not having transported as much daily as it generally does. The engineer to the contractor is confident, however, of removing the causes which have hitherto been responsible for the accidents and inefficient working of the ropeway. The mill has been crushing since the 22nd with 25 stamps. Owing to the contractors being down with fever the erection of the battery shed is at a standstill, but I hope their illness will not last long.

THE PRESIDENT LAND AND EXPLORATION.—The company's general manager, Mr. Scott, having lately returned from visiting certain of the company's farms in the Bloemhof and Lichtenberg districts reports about Zwanstrand as follows : Lwaart Rand is intersected by one of the roads from Ventersdorp to Zeemst. There are numerous outcrops of quartz reefs on the farm and some prospecting for precious metals has been done in the neighbourhood. There are sufficiently good indications of gold to justify my sending a party there to prospect this winter. Mount Hope : Mr. Dickson's letters during my absence have been of an encouraging nature, and there is no longer any question as to this property being argentiferous, but I cannot yet say we have struck anythiug rich. I intend going out next week and will report fully on my return. Lydenburg Farms : The re-inspection of these, that is Venetia, Legerstree and Shaws, takes place sometime this winter. I am in communication with the surveyors and their Lydenburg agent, and hope to be present at the re-inspection, at any rate if not present, I shall, before then see these properties and be represented. I have pointed out to the surveyors that according to existing diagrams and maps, two of them at least should be intersected by the New Zoutpansberg (Murchison Range) railway ; and as the same surveyors are doing the railway route and re-inspection, the accuracy of their work is in some measure guaranteed. Zwitzerland falls within the area re-inspected recently by surveyor Gilfillau ; he has given us full justice, and his work is generally beyond question.

FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

AVERAGE MONTHLY PRODUCE OF £6,083—DIVIDENDS OF 3s. 5D. PER SHARE FOR THE YEAR.

THE very encouraging report of the directors, in which the promises of the past have been redeemed by the facts of the present, shows that the returns from the mines worked by the company during the half-year ending Dec. 31, 1890, have been 5,357 tons of mineral, producing 9,980 ozs. of gold, or an average of 1 oz. 17¼ dwts. to the ton. The returns from the tributers' mines during the same period have been 4,482 ozs. of bar gold. The amount realised for the total produce of the six months was 36,503*l*., as against 26,567*l*. 19s. 2d. for the previous six months, being an increase of 9,935*l*. 0s. 10d. This return is the largest that has ever been made in any half-year since the original institution of the company, except on one occasion, viz., for the half-year endiug Dec. 1882, when the returns were 38,649*l*. 15s. 4d. During the three months of the current half-year, regarding which advices have been received, the number of tons crushed has been 3,702, the number of ounces of bar gold therefrom has been 6,095, and the average yield per ton has been 1 oz. 12 dwts. and a fraction. The yield of sulphurets for the three months has been 4¾ tons. The returns from the Tributers' Mines during such three months have been 1,656 ozs. of bar gold. The estimated value of all such bar gold and sulphurets during such three months was 19,211*l*. 6s. 3d. In addition to the above ordinary returns from the working of the mines during the first three months of the current half-year, there has on this occasion been a special return of five bars containing 1,162 ozs. of gold bullion, and 115 bars of copper bullion, the whole being of the estimated value of 4,560*l*. 18s. 6d. The profit and loss account shows a profit of 10,455*l*. 2s. 5d., after charging the enhanced sum of 925*l*. 10s. 8d. for depreciation of plant. The directors recommend the declaration of a dividend of 9d. per share, and a bonus of 6d. per share out of the profit just realised by the treatment of the copper plates. This makes 3s. 5d. per share for the year. The reserve fund amounts to 2,321*l*. 3s. 10d., which is invested in 2¾ per Cents., and another 750*l*. is proposed to be carried to the same account from the present accounts.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.—This company has issued an important circular to South African Land Companies, the effect of which is a proposal of amalgamation with a view to avoiding unnecessary expense.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (May 27).—No. 10 levels, south cross-cut: The discovery in end of level driving south from this cross-cut on footwall of the lode has further improved since my last report. The end is now goiug forward on a regular lode 2 ft. 6 ins. wide, well charged with lead, which I now value at 1½ tons to a fathom. The ground is stiff and short for cutting, but the footwall is loosening. This is a good indication, and will help the driving. No. 9 level: The new cross-cut south of shaft: The first 2 ft. of the lode we cut through is well mixed with lead. The present end is harder and less productive. I fear the lode has divided one part, keeping more to the west with rhyder ground in the middle. The stope going south behind the shaft shows no change. No. 8 levels: The stope under this level south of No. 2 wiuze is yielding from 10 to 15 cwt. of lead to a fathom. No other change for remark. At surface everything is now working without interruption with a fair supply of water.—H. NOTTINGHAM.

DRAKEWALLS (May 28).—The engine shaft has been sunk 3½ ft. during the past week; the ground is composed of strong capel and granite, with occasional small veins and spots of tiu. In the 160 driving east the lode is intermixed with more capel and spar, and is now producing 8 tons of mundic per fm., and good saving work for tin. In the 160 driving west the lode is yielding 5 tons of mundic per fm., and saving work for tin. The lode in the rise in the back of the 160 west is producing 6 tons of mundic per fm. and a little tin. The stope in the back of the 160 west is yielding 9 tous mundic per fm., and the lode in the stope in the bottom of the 147 east is yielding 12 tons mundic per fm., and saving tin work. In the 147 east we have cut into a small cross-course, which has shifted the lode a little to the right. We hope to see the lode again in the course of a few days. The lode in the 147 driving west is producing a little mundic, and saving work for tin. The stope in the back of the 132 west of the cross-course is producing 6 tons of copper and mundic ores per fm. We hope to get the jiggers to work by the latter part of another week. The dressing and all other surface work is progressing satisfactorily. We shall change the draught on Saturday next for the usual clean of arsenic soot.—H. RODDA.

EAST GRASSINGTON (May 27).—Report from the mine manager:—Hammond Shaft: The 47 west has been advanced 15 ft., and stoped 8 fms., giving 10 fms. 3 ft. of ground removed here up to date this month, the vein in the present end is somewhat narrower, and the encasing rock spare for progress, the ore-bearing part being 12 ins. wide, carrying spar, sulphate, barytes, and lead ore, worth 15 cwt. per fm. Stope in back of level in a vein 2 ft. wide, yield 10 cwt. of ore per fm. No. 3 sump; Is down 8 ft. in a vein 2 ft. wide, carrying limespar and gossan, with good branches of lead ore, worth 22 cwt. per fm. Stope in intermediate level in a vein 2 ft. wide, chiefly soft sugary spar, and easy to work, yields 10 cwt. of lead ore per fm. Stope in back of 37 east, in a vein 2 ft. wide, in tight ground, mostly rider spar, yields 11 cwt. of lead ore per fm. Harris main engine shaft. In the 47 east, we have passed through another strong cross lode, and have just touched the main lode in advance, which has been heaved a short distance southwards, and so far as seen into appears strong and orey. Stope behind the end in a vein 2 ft. wide, carrying spar and gossan, well mixed with lead ore, worth 16 cwt. per fm. Stope west of shaft in a vein 2 ft. wide, yields 10 cwt. per fm. The 37 east has been advanced 8 fms. from No. 2 heave in a vein 18 ins. wide, yields good saving work for dressing. No. 1 stope in a vein 2 ft. wide, yields 10 cwt. of lead ore per fm. No. 2 stope in a vein 18 ins. wide, yields 9 cwt. of lead ore per fm. Surface and dressing operations pushed forward with energy. Smelting carried on daily. Several hands are laid up with a slight attack of La Grippe this week. We purpose resuming sinking operations next week.

HEXWORTHY.—Report for the four weeks ending May 23:—Low's adit level: This has been extended 2 ft. The lode is rather disordered. The men have been assisting in getting up horse whim, &c. The level being 17 fms. from Low's shaft and 62 fms. 5 ft. 6 ins. from mouth of adit. Low's engine shaft has been sunk 13 ft. by nine men. The lode has been producing good stamping work for the four weeks, and is 2 ft. 6 ins. wide in the bottom; the shaft being 9 fms. 2 ft. below adit and 20 fms. 4 ft. 9 ins. from surface. Taylor's 12-fm. level: The men have been cross-cutting north and south. No improvement has taken place. We have the rings of the water-wheel on and some of the launders up. We have also commenced cutting the leat and getting out round buddles. I have the work in hand and am making good progress.

LEADHILLS (May 25).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing a nice rib of spar mixed with ore worth 30 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 35 and 90 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 35 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, mainly spar and quartz, mixed with spots of ore not, however, to value; it also shows a nice wetness. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 20, and 25 cwt. of ore per fm respectively. The stope above the 130 south of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 35 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein 4¾ ft. wide, charged with quartz and spots of ore not to value; it is rather dried. The stope above the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 40 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, nicely mixed with kindly spar and wet, and ore worth 10 cwt. per fm. The 85-fm. level north of Jeffrey's shaft is in a vein 4½ ft. wide, but without ore. The 70-fm. level south of Wilson's shaft shows a vein above 4 ft. wide mixed with spar, but rather unpromising like for ore yet. The 35-fm. level south of Flat Rod shaft is in a vein above 4 ft. wide, mainly stone with a little spar and spots of ore, which are not to value. The stope above the 35 south of Flat Rod shaft is worth 80 cwt. of ore per fm.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending May 22:—The 275-yd. level: South level west has been stopped, as it was nearing the boundary, and stoping has been commenced in the bottom of the level. From the appearance of the vein it has been thought wiser to start the winze from the east level mentioned in my last report from No. 2 rise, as stated below. No. 1 rise: The level west (in future the 255-yd. level), worth 1 ton lead ore and 1 ton blende per fm. No. 2 rise and stope: This holds good; lode 5 ft. wide, worth 6 tons lead ore and 2 tons blende per fm. A winze (No. 3) has been commenced below No. 2 rise, and is down 2 yds.; worth 2 tons lead ore and 4 tons blende per fm. The intermediate level (in future the 295-yd. level) west of No. 2 winze has changed within the last two days, and worth 3 tons blende per fm. The winze from the 295-yd. east level is down 8 ft.; lode 5 ft. wide, worth 7 tons blende and a little lead ore per fm. The 315-yd. level: In 30 yds. from the cross-cut, lode composed of limestone, spar, and beds of shale. Dressing: Good progress is being made, and samples of a further 40 tons of lead ore will be sent off at the beginning of the week, as also a parcel of blende to Messrs. Vivian.

PRINCE OF WALES (May 27).—Since last week the men at the 180-fm. level west have been driving by the side of the lode and hauling stuff. The men east have been engaged cutting ground preparatory to bringing down the whim kibble, and have now commenced casing and dividing the shaft, and when completed we shall take down the lode both east and west. In the cross-cut south at the 166 the ground is favourable for driving, being composed of killas of a very congenial character for producing mineral when the lode is met with, and is also letting out a little water. At the 166-fm. level west the men are not apparently quite through the cross-course, and have not yet seen the north wall of the lode; the part seen looks promising to be productive when free of the cross-course. We are still clearing and stamping stuff from the old stulls.—J. PROWSE.

ROMAN GRAVELS (May 28).—The casing and dividing of the main shaft from the 140-fm. to the 155-fm. level was completed at the end of last week, and everything in order for the working of the machine cage to the bottom of the mine. The men have commenced to drive north from the 155 cross-cut in the veiu which is 4 ft. wide, and producing some very nice stones of ore. The vein in said cross-cut is, as you are aware, in three divisions, and the level is being sent forward in the centre division. We believe we shall quickly reach a good deposit of ore in this direction, and wherever ore has been met with in the 140 north the indications are very marked that a far richer vein will be found underneath. There is no change to notice in the stopes at work in the 140 north since last week. The 140 south forebreast has been driven 99 fms. 2 ft., and the men have to-day commenced to rise against the winze from 125, which is now 11 fms. 2 ft. 6 ins. deep. When this winze is through we purpose starting another at a point where the vein in the bottom of the level (125) is worth 1½ to 2 tons per fm., and where we shall be able to use the small engine, driven by compressed air, to draw the water and vein stuff. The lode at the 125 south and 80 south has somewhat improved since last week, and since a slow but certain improvement has been taking place for some time in the first-named; it is just possible that the forebreast is on the point of entering the same run of ground which is now proving very productive above the 80. We are sending out samples of 50 tons of lead ore for sale next week.—A. WATERS.

SOUTH CONDURROW (May 27).—We have driven east of Marshall's shaft at 138 about 6 ft. The men are now employed dividing and casing the shaft and fixing skip road. The lode in the 123 end east is poor. We have begun to sink a winze on the Flat lode below the 123. The new lode iu the winze below the 123 is not so large as it was, it is now worth 8*l*. per fm. The stope in back of the 123 is worth 10*l*. per fm. The 40 end east of engine shaft is worth 7*l*. per fm. We have begun to rise in the back of the 40 on the North lode. Two stopes in the back of the 40 east are worth 11*l*. per fm. each.—W. RICH, W. THOMAS.

SOUTH DARREN (May 28).—The shaft is 25 ft. 6 ins. under the 142 level, having been sunk 4 ft. 2 ins. for the week. In the 130 end west the lode being stripped behind the end has improved; worth 17 cwt. of silver-lead ore per fm. All work is goiug on satisfactorily.—J. MITCHELL.

VAN (May 28).—In reporting on the mine to-day, I do not see that there is any particular change to notice in the underground bargaius. The cross-cut at the 150-fm. level towards the south lode continues in hard ground, with occasional strings of lead and blende ores crossing the forebreast. The stope over this level on the old lode is producing 1 ton of lead ore per fm., and the drift going east from end of this stope is turning out 18 cwt. of ore per fm. The stope over the 135-fm. level on the south lode does not look quite so well; present yield of lead ore 15 cwt. per fm. The 120-fm. level driving east of Seaham's shaft is in a very strong lode again, with some nice strings of lead ore in the end to-day; there is much of the lode apparently standing on both sides of the level, to be proved by cross-cutting through hereafter. The cross-cut driving south (about 12 fms. behind this end) is in a healthy looking part of the lode, containing strong spots of lead and blende ores. At Seaham's winze the men are puttiug in the timber for a plat at the 150-fm. level, and the cross-cut will be started north of the winze for the main lode to-morrow or next day. The two stopes in the old part of the mine (at the 105 and 95-fm. levels) are yielding about 1 ton each of lead ore per fm. We have resumed dressing operations within the last few days, and a parcel of lead ore will be got ready for market as soon as possible.—J. PAULL.

WEARDALE.—Report on Weardale Co.'s mines for the week ending May 23:—Ore raised for week, 95 tons; ore dressed for week, 76 tons; ore slag aud fume smelted for week, 127 tons: producing 65 tons of pig lead.

WHEAL CREBOR (May 26).—The 156 is being driven east of the new shaft on the north part of the lode at 5*l*. 10*s*. per fm. The part of the lode carried is producing 6 tons of good quality arsenical mundic, and some good stones of copper ore per fm. The stope in the bottom of the 144 east of winze is being worked at 3*l*. per fm., and is worth 4 tons of copper ore and 4 tons of mundic per fm. Stoping the back of the 144 by four men at 3*l*. per fm.; the lode will yield 3 tons of copper ore and 4 tons of mundic per fm. We have lately put on four more tributers, new making in all 14 men; their tributes varyiug from 12*s*. to 13*s*. 4*d*. in the £. We hope shortly to further increase this number.—P. D. HOLMAN.

WHEAL UNY (May 27).—We are pushing on the sinking and driving with all possible speed. No change in the mine since last week.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Extracts from letters received from the superintendent at the mine, dated May 4 and 7:—Mine: I am glad

to inform yon that the re-opening of the tunnel roadway was completed yesterday, and we at once entered Miua Grande and made a rapid inspection. The fire does not seem to have advanced much beyond the north slide, Tirito, and it seems to be entirely extinguished. There are, however, several places at Mina Grande, below the tunnel level, where the timber work subsided and the fillings collapsed, causing obstructions which will have to be removed and the timberwork repaired. The timber men will have a hard task for a few days. We have, however, been able to resume work in the Mina Grande stopes at 24 level so as to have plenty of ore blasted down by the time the roads are entirely repaired. The pipes and flumes were broken and partly destroyed, and have also to be repaired, so that we shall not, probably, have everything in order before the end of next week. The water had risen 20 ft. above the 50-fm. level, and it will take a few days to drain the whole level. Water supply: With a view to improve our water supply for the mill we drove 18 ft. 3 ins. from the bottom of an old well at the mine yard in search of water springs. Explorations—Cruz Verde Mine: The 137-ft. level north of Cruz Verde shaft was driveu 58.9 ft. on partially mineralised lode, not carrying ore enough to pay for stoping. The breast was connected with the wiuze suuk from the 85-ft. level, which will improve our working facilities there. Ore extractions: The ore obtained during the month was chiefly from the dumps and fillings at the spalling floors; only a small portion was obtained from Cruz Verde stoping north and south from wiuze snuk at the 85-ft. level north of shaft. Financial result: The receipts from silver obtained during the month were $12,003.64; the expenditure was $10,341.26; there being an excess of receipts over expenses, and amounting to $1,662.38; the estimated valne of argentiferous stocks on haud was decreased by $443.00; which, deducted from the above, leaves a net profit of $1,219.38; after charging to profit aud loss account. $2,860.23 expended in underground dead work and explorations.

ANGLO-MEXICAN (Mar. 14).—The superintendent reports as follows:—East drift, on the main vein, above Sta. Herlinda tunnel level, advanced 9 ft., making the total 128 ft. Since last report a small streak of ore has come in on the footwall. For this reason I have not carried ont the intention expressed last week of cross-cutting over to the hanging-wall. There was no work done on the surface drift during the past week. Nabor winze, below 814-ft. level, has been sunk during the past week 7 ft., making the total depth 48 ft. In the bottom of this winze another streak of ore has come in, which seems to be au additiou to the main body of ore, which we have been keeping on the footwall side. The new streak is about 1 ft. wide. Augel winze, below 814 ft. level: This is a new winze being sunk in the west drift. In the bottom there is a small streak of ore which has been gradually widening ont since we left the level. In the cross-cut from the Main shaft we encountered the vein, through which we have driven into the foot-wall. Drifts east and west have been started on the new level. There is in the faces of both of these drifts from 3 to 4 ft. of ore, but it is in each case badly mixed up with waste. It is quite possible that this is one of the poor spots we freqneutly enconnter in drifting on the vein. I shall await further developmeuts with great interest, and trust that I shall be able to report considerable improvement within a very short time.

ASIA MINOR (May 16).—Chief Mine: We are again meeting with a little lead in the deep adit, and the end on the whole looks more promising. The main adit level, which is being driven alongside the lode for speed, is showing favourable indications, and we hope that when we cross-cut through the lode ore will be met with. There is some very good lead in the back of the drive from Tobacco stope. The ends east andwest imtermediate air shaft are worth fully 25 and 30 cwt. respectively. It is satisfactory to note that this good ore appears to go down in the bottom of the drive, and steps are being taken to at once test the lode some 30 metres under this point. The numerous stopes round about the Savalan Pass are on the whole looking very well. In one or two of them there is a rib of ore worth 5 to 6 tons to the fathom. The stopes in long cross-cut are showing more ore than heretofore. Work in the mines has been much impeded dnring the past two or three weeks by the Greek and Turkish holidays. These are now over for the year, and all the men have returned. Dressing floors: Production to May 16: 4,089 tons crushed, yielding 204 tons rich silver-lead.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports for the fortuight ending Apl. 16:—Engine shaft, 520 level: Cutting chamber for flat sheet. 280 level west: Driven 9 ft.; total 415 ft.; no change. Rise on rich vein: Rich vein shows no falling off either in quantity or quality. The fortnight's ontput here consists of 5½ tons of sulphide of silver, chloride and native silver, containing in all 42,354 ozs. of silver, now being cased for shipment to Loudon. Incline following rich vein, driven 4½ ft.; total 42 ft. Air winch fixed and doing all the hauling very satisfactorily. Since last report a considerable portion of lode has been broken, disclosing fahlerz and some native silver. Water continues to pour through, and an important find seems imminent. North-west cross-cut driven 10 ft.; total 40 ft.; now connects with stopes in main rise, and will be used as an extra shoot to convey stuff from the east stopes. Block 95: Have started sinking on the underlay of the lode, which is now nearly 4 ft. wide, with a very clean hanging and footwall, and consists of silicious schist, and ironstone carrying silver. Block 97: North shaft suuk 10 ft.; total 56 ft.; lode dipping faster. Surface: Both dams quite full.

BONNIE DUNDEE.—Report for fortnight ending Apl. 11: Have continued stoping from the back of No. 7 south-west level. In the stope north-east of winze we have had an average of 1 ft. of reef in from 10 to 15 ft. of formation; face of stope still showing the same amount of reef. In the stope south-west of winze we have had a little improvement withiu the last two or three days; a new make of formation having come in on the footwall, carrying a little more stone than we have had in this stope for some time. We have continued the underhand stoping from this level. The reef dnring the fortnight has been small. We started sinking the winze on Thursday, the 9th inst., and have sunk a further depth of 5 ft. for the three days, making a total depth from the level 32 ft. Since we started sinkiug a good make of stone has come in, and there is now abont 1 ft. of solid reef in the bottom. The stone is fairly mineralised, and shows gold. Have driven No. 8 south-west level a further distance of 16 ft. with two meu; total from the shaft, 26 ft. Have raised about 55 tons of quartz for the fortnight, making a total of 285 tons on the surface. All the machinery and gear in good order.

BRATSBERG.—Report for week ending May 16:—Hoffnung Mine: No. 2 adit level continues to yield about ⅔ ton per fm. No. 1 rise in the back of this level is worth fully ½ ton per fm., but for the present is difficult to excavate; hence progress is slow. At No. 3 adit level the lode is looking very promisiug, but it is only worth ½ ton per fm. At No. 4 level the lode is divided by a jnnction of the strata, and is yielding but little ore for the time being. The trial level at Murchison's is opening out very well, and is still producing 1 ton per fm. Johannes Mine: The level driving west on Howard lode has been yielding abont ¾ ton per fm. during the past week, and we have also struck a very promising patch of ore in the eastern level, which I trust will lead to something of permanent value. We are obliged to snspend the rise on this lode until miners are available. Surface work and remarks: The dressing has gone on with regularity, and we have just set in operation the whole machinery, which is working well. The Mary Owens is likely to arrive in due time, and we hope to get ready her cargo of ore, so that she will be loaded by the end of the present month.—J. D. HOLMAN.

COLON.—The manager writes from Sabandija, under date Apl. 20:—The barreque work has been continued during the past month. The result, however, is much smaller. Having cleared all the bedrock in the Quebradona Mine which was exposed by the monitor, work was continued at the Alto Mine. There, however, it is difficult to do much on the bedrock without the monitor, as there is so much top dirt to wash off before reaching the rich gravel, and being so soft and friable, it is constantly caving in on the work. The remaining work at the mines comprises the keeping in thorough repair and maintaining of all the works, repairs on ditch, &c. With regard to the legal aspect of the water question, the manager reports satisfactory progress, and an early solution of the difficulty is looked for, has just been received. It shows that there are 22 points at work upon the mines owned by the compauy. The following call for special notice:—Terrible Mine—8th level west: Four men drifting; now driven 505 ft. west of shaft; lode holds good at 4 ft. wide; mineral vein, 2 ins. to 3 ins. wide. 9th level west: Two men drifting; now driven 429 ft. west; lode 4 ft. wide; mineral vein, 2 ins. These drifts are being advanced with all possible speed. Last sales gave 578 ozs. silver per ton; and 151½ ozs. silver per ton, in two classes. Brown lode — Mammoth tunnel level: Drifting and stoping: Drift has been extended 15 ft. since last report. Now driven 595 ft.; lode, 5 ft. wide; drift and stope gradually improving. Last sales gave 353½ ozs. silver per ton and 40 per cent. of lead; 163 ozs. silver per tou and 18 per cent. of lead, in two classes; 137½ ozs. silver per ton, and 23 per cent. of lead; 89½ ozs. silver per ton, and 10 per cent. of lead, in two classes. Rockwell adit level: Six men drifting and stoping; lode holds good at 4 ft., and looking better; miueral vein 2 ins. to 3 ins. wide. Coin lode—Rockwell adit level: Drifting aud stoping: Now driven 508 ft. from junction with Brown; lode, 4 ft. wide; mineral vein, 2 ins. to 3 ins. Last sales of ore from stope gave 77 ozs. silver per ton.

DAY DAWN P.C.—Report for fortnight endiug Apl. 11:—The output of quartz is 906 trucks of mineral stone and 18 trucks of brown stone. Sent to the Excelsior mill 900 tons of mineral stoue and 100 tons of brown stone. I have timbered up the shaft and put in the opening-out set for the No. 13 plat. The shaft has been snnk an additional 6 ft., making the total depth 123 ft. Below the No. 12 level the formation is 12 ft. wide, carrying 5 ft. of stoue of fair quality. The progress made this fortnight has been rather slow; this is owing to the heavy influx of water caused by the late raius. No. 12 level has been extended on the footwall a further distance of 6 ft., making a total distance of 320 ft. from the shaft; the reef in the face of this level has pinched to abont 9 ins. of fair quality stone. The hanging-wall drive has been driveu 10 ft.; here the reef has also pinched to about 6 ins. of poor stone. The leading stope over the footwall drive is carrying 5 ft. of stone of good quality. The Nos. 2 and 3 stopes are carrying 6 ft. of stoue of medium quality. In the No. 1 stope there are 3 ft. of stone of good quality. In the No. 1 stope going west from the No. 2 winze there are 7 ft. of poor stone; the stoue iu this stope has greatly fallen off in quality during the past fortnight. No. 11 level, footwall drive: The leading stope over this level is carrying 3 ft. of stone of fair quality. In the No. 5 stope 6 ft. of good there are 7 ft. of stone of fair quality. In the No. 4 stope the reef is split up; there are quality stone, but in the No. 4 stope 4 ft. of quartz and small leaders of mullock, which I find impossible to separate. I think when this stope has been extended about 20 ft. further ahead we shall come upon some very good stone again. In the No. 3 stope there are 6 ft. of stoue of good quality. The number of trucks of quartz hauled from the shaft and each level is as follows:—Shaft, 29 trucks; No. 12 level, 400 trucks; Nos. 10 and 11 levels, 394 trucks; shaft No. 2, stopes under No. 5 west level, 23 trucks; stopes over No. 5 west level, 60 trucks; total, 906 trucks. No. 2 underlie shaft: The No. 5 east level has been extended a further distance of 10 ft., making a total distance of 333 ft. from the shaft; no further change has taken place since last report. No. 5 west level: The stone under this level in the No. 1 stope is gradually getting smaller as we go west. There is now 1 ft. of stone in the face of medium quality. Lease No. 1,280: The eastern drive has been extended an additional 15 ft., making the total distance from shaft 125 ft. No change of any importance has taken place during the past fortnight. The ground is still favourable for driving and the formation continues about the same size as when last reported on. The timber for the No. 3 shaft has arrived, so the erectiou of the poppet legs and brace will be commenced at once. The machinery and everything in connection with the mine is in good working order.—T. LESTER.

DICKENS CUSTER (May 4).—Mine report for the month of Apl.:—Charles Dickeus Mine—Little or south veiu: Stopes 1, 2 and 3, between 2 aud 3 levels. From all these stopes we are still getting a fair quantity of ore, some of the streaks assaying as much as $500 to the ton. No. 3 level under hand stopes (Nos. 1 and 2 east): These stopes are both looking well, with promise of better results. I have opened two small stopes below the under hand stopes, in No. 3 level, following the vein, and find it going down in streaks of good ore. I intend ruuning a cross-cut from Mr. Robinson's raise, with the object of cutting the vein much lower down. The snow will be goue in a few days; this will enable me to resume work again on a good streak of ore near the surface.—A. H. AXFORD.

ELMORE (May 13).—Since my last report, the east drift 540-level has been advanced 15 ft.; total distance in from the cross-cut 80 ft. The west drift on same level has been advanced 20 ft.; total distance driven on the vein 30 ft. The latter drift is improving the last few days; to-day there is a streak coming in on the foot-wall which looks very well. The mill test made of the Star did not prove satisfactorily; all work now is confined to the 540 level. I am keeping the expenses down as low as possible. At the same time will push the development work on the lower levels thoroughly. It looks now as though we would find a pay shoot of ore west before we do east.—G. MCCORMICK.

EMERALD MINES OF COLUMBIA (Apl. 5).—This week we have mostly worked in the lower part of the Disguadero, or canal, in order to continue with the five steps commenced, and have lowered this part in a length of 94 metres, on an average, 1 metre. In the afternoons we have widened the sides there to prevent as much as possible big land-slips when the rainy season begins. The upper part we have continued widening in a length of 120 metres by a depth of 2 metres and 2 metres width. Hands at work at the end of the week, 90.

HARRIETVILLE (Apl. 17).—Fortnightly report.—The following progress has been made during the past fortnight, viz.: Mons Meg Mine: The rise at the back of the lower level, north of tunnel J, has advanced 8 ft.; total, 50 ft.; the lode is 4 ft. wide, and carries 2 ft. of payable stone. The water in the shaft on the main shoot at the level of tunnel J has been drained by the drive south of tunnel D, and sinking has been resumed to a further distance of 3 ft., making a total depth of 28 ft. The size of the lode is reduced to 4 ins., which carries gold freely. We have, however, penetrated the hanging-wall, and find that the lode is making in this direction. The rise at the north drive, 100 ft. above tunnel J, has advanced 16 ft.; total, 48 ft.; the lode is 3 ft. wide, showing gold freely, with indications of further improvement. The north drive, 170 ft. above tunnel J, has been extended 12 ft.; total, 122 ft; the lode is 5 ft. wide, and carries gold freely. Guerdon Mine: The drive south of tunnel J, on the Guerdon lode, has advanced 19 ft.; total, 29 ft.; the lode is 4 ft. wide, and carries about 1 ft. of payable stone. The north drive on the same lode is now in 4 ft., the lode being 8 ft. wide, 1 ft. of which is payable. South Mons Meg Mine: The shaft from the surface is 26 ft. deep, from which a drive has been extended south, communicating to the rise at a distance of 10 ft. We have also driven 12 ft. north of shaft, the lode in each case being 3 ft. wide, and carrying a little gold. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 18 ft.; total, 1,027 ft.; the lode is small and poor. The efflux of water has much increased, which will account for the draining of the shaft below the level of tunnel J. The cross-cut east of the same drive has been exteuded 5 ft.; total, 24 ft. We are here meeting with hard sandstone, intermixed with small quartz veins, which, however, are poor. New lease: In consequence of a heavy influx of water in the shaft below the level south of tunnel D on the new shoot, sinking has been suspended. We are placing the Tangye pump here, and shall resume sinking in a day or two. The drive south-east of tunnel C towards new shoot has advanced 25 ft.; total, 289 ft.; the ground is harder, and the lode small and poor. The drive south-east of tunnel B has advanced 13 ft.; total, 257 ft.; the lode is 3 ft. wide, and carries payable gold throughout. Ground much harder. Surface: The drive south of cross-cut from shallow tunnel has advanced 11 ft.; the lode is small and carries a little gold. Machinery: All the machinery at mines and mill is working well.—T. G. DAVEY.

KETCHAU (PAHANG) CORPORATION.—The directors have received advices from Singapore that a part of the 3-cwt. specimen rock, referred to in Mr. Hone's published report of Mar. 31 last, has been crushed for a yield of 64 ozs. 15 dwts. 10 grs. of gold. The tailings have been boxed for future treatment. The remainder, uncrushed, contains a splendid stone, estimated to contain 12 or 15 ozs. of gold in itself.

LEEDS COPPER (May 13).—Herewith please find report for the week ending as above.—Kent shaft: The 20-fm. level driving west of this shaft continues in a vein of ore 5 ft. wide, producing 5 tons of 15 per cent. copper ore per fm. The stope in the back of the 20-fm. level west is in a vein 3 ft. wide, and producing 3 tons of 15 per cent. copper ore per fm. The stope in the back of the 15-fm. level east of shaft is in a vein 2 ft. 6 ins. wide and producing 2 tons of 15 per cent. ore per fm. The drive opposite steam-drill stope is in bed vein 3 ft. wide, producing 1½ tons of 15 per cent. ore per fm. The stope in the back of the 10-fm. level east of shaft is not producing as much ore as last reported, the vein is split, which from appearance will continue sometime, but which will, no doubt, come together again as we advance with a rich bunch of ore, producing 2 tons of 15 per cent. ore per fm. The other points are idle for want of labourers. Surface: I am pleased to state the snow has left, and we are in a position to push the work on rapidly, everything is being done to get the concentrating plant fixed as early as possible. The roads are getting better, and we are getting machinery delivered quicker.—T. K. DAVEY.

MOUNT ZEEHAN (Apl. 13).—The manager writes as follows:—Argent section: The work of erection of plant is going forward steadily. Two verywet days this weeks have retarded progress somewhat. Silver Queen Extended section—No. 1 shaft: West cross-cut has been advanced 5 ft.; total, 213 ft.; country sandstone and quartzite; a large quantity of water is making in face of drive. North drive on course of No. 1 lode: 7 ft. have been driven; total, 153 ft.; lode is 4 ft. wide, carrying carbonate of iron, caulk and slate, with small strings of galena coming in occasionally. South drive on course of No. 1 lode; 17 ft. have been driven; total from west cross-cut, 117 ft. The lode formation has contracted somewhat, but a good scam of ore has come in this week, from which we are able to raise some of first-class quality. Towards the end of the week this vein of ore seemed to be dipping underfoot; it may rise again as we get into higher ground, which is ahead of us on the surface. Air shaft on No. 1 lode: 4 ft. have been sunk, and 6 ft. risen from north drive and holed through; total height of rise from north drive to surface, 94 ft. It is well we have got this completed, as the air here was very bad. On this section, south from the engine house, I am having a tram road made along the side of the hill, which is too steep for sleighs and horses to bring in firewood, with a descent of 1 in 12. This tram will ultimately reach the Spray section, and will become useful for general mining purposes. Montana section: West cross-cut: 2 ft. have been driven; total, 314 ft. Formation black slate. North drive, No. 3 lode: 6 ft. have been driven; total, 38 ft. 2 tons first-class ore extracted. Back stope on No. 3 lode: 14 ft. stoped; total, 24 ft. 3 tons 6 cwt. first-class ore extracted. About 10 tons second-class ore have also been taken out from those two places. No. 2 lode, north drive: 11 ft. have been driven; total, 27 ft. Lode formation 2 ft. wide, carrying galena all second class as yet, but improving. Britannia section: North-west adit has been driven 4 ft. 6 ins.; total, 115 ft. Country black slate and pyrites, with strings of quartz. There is great activity in prospecting on the sections north and west, and we are keeping a close watch on the results so far as they are likely to affect this (Britannia) section, which, I believe, will ultimately be found very valuable. Ore raised, Montana section, 10 tons 6 cwts., from Apl. 3 to Apl. 10; ore raised, Silver Queen extended section, 2 tons 5 cwt., from Apl. 3 to Apl. 10; ore shipped to Trial Bay, 16 tons 6 cwt., from Apl. 3 to Apl. 10.

MYSORE (May 6).—Mining operations for the month ending Apl. 30:—There was very good progress made in the various bargains with the rock-drills during the past month. The 780 north of Rowse's shaft has beeu driven 69 ft.; total distance, 223 ft.; the lode is 2½ ft. wide, assaying 4 ozs. The 700 north of Rowse's shaft has been driven 6 ft. 5 ins.; total distance, 342 ft. 8 ins., at which point it came in contact with the unproductive rock, and for the time has been suspended. The 550 south of incline shaft (on west lode) has been driven 19 ft. 6 ins.; total distance, 38 ft. 6 ins.; the lode is 8 ins. wide, and assaying 2 dwts. 14 grs. Glen's shaft: The 250 north of shaft has been driven 42 ft. 6 ins.; total distance, 193 ft. 4 ins.; the lode is 1 ft. wide, assaying 3 dwts. and looking a little more promising; these men have also cross-cutted east and west at this level 26 ft. 4 ins. Schaw's shaft: The 450 north of shaft has been driven 69 ft.; total distance, 310 ft.; the lode is carrying a good wall, but small and unproductive. The 450 south of shaft has been driven 10 ft.; total distance, 78 ft. 6 ins.; the lode is 1 ft. wide, and estimated to be worth 8 dwts. The 320 north of shaft has been driven 5 ft. 3 ins.; total distance. 156 ft. 9 ins.; the lode is small and disordered. The 320 south of shaft has been driven 9 ft. 9 ins.; the lode is 1 ft. wide, and assaying 3 dwts. 6 grs. Tennant's shaft: The 360 north of the shaft has been driven 51 ft.; total distance, 396 ft. 5 ins.; the lode is 1 ft. wide, and yielding stones of quartz, but not sufficient to value; these men were hindered for several days during the time the water was being drained, which was let down from the old men's workings in the 180. The 290 north of shaft has been driven 72 ft.; total distance, 729 ft. 6 ins.; the lode is still small, but the ground looks very congenial for gold, and I am expecting an improvement very soon. The 290 south of shaft has been driven 58 ft.; total distance, 365 ft.; the lode is 10 ins. wide, and assaying 1 oz. 10 dwts. The 180 north of shaft has been driven 60 ft.; total distance, 877 ft. 6 ins.; this level is still in old workings, in which there is a good deal of low quality quartz that was rejected by the former workers. Rising: The rise in the back of the 290 north of Tennant's shaft was put up 3 ft. 6 in., and communicated with the 180; this rise was put up over 100 ft., and all the way in a good lode of quartz. The rise in the back of the 450 north of Schaw's shaft has been put up 6 ft. 6 ins., in a lode 2 ft. wide and assaying 14 dwts. 8 grs. The rise in the back of the 400 north of Rowse's shaft has been put up 14 ft., in a lode 2 ft. wide, and estimated to be worth 10 dwts. Stopes: The lode in stope in bottom of the 700 south of the Incline shaft is 2 ft. wide, and estimated to be worth 8 dwts. The lode in stope in back of the 700 south of Incline shaft on the wide lode is 3 ft. wide, and assaying 5 dwts. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assayiug 2 ozs. 3 dwts. 23 grs. The lode in the back of the 700 south of Rowse's shaft is 2½ ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 15 dwts. 6 grains. The lode in No. 2 stope in back of the level is 2 ft. wide, and estimated to be worth 6 ozs. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and estimated to be worth 10 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 ozs. 13 dwts. 6 grs. The lode in No. 3 stope in back of this level is 1 ft. wide, and assaying 6 dwts. 2 grs. The lode in No. 4 stope in back of this level is 1½ ft. wide, and assaying 4 ozs. 2 dwts. 2 grs. The lode in stope in back of the 620 south of incline shaft (on the wide lode) is 3 ft. wide, and assaying 1 oz. 17 dwts. 5 grs. The lode in stope in back of this level, north of shaft is 2 ft. wide, and estimated to be worth 10 dwts. The lode in stope iu bottom of the 550 north of Incline shaft is 2½ ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 550 north of Rowse's shaft is 2 ft. wide, and assaying 3 ozs. 11 dwts. 20 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in back of this level south of shaft is 3 ft. wide, and estimated to be worth 15 dwts. The lode iu stope in bottom of the 466 north of Taylor's shaft is 1 ft. wide, and estimated to be worth 8 dwts. The lode in back of the 400 south of Taylor's is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in bottom of the 400 north of shaft is 2½ ft. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 400 south of Plummer's shaft is 1½ ft. wide, and estimated to be worth 8 dwts. The lode in stope in back of the 360 south of shaft is 2 ft. wide, and assaying 5 dwts. 12 grs. The lode in stope in back of the 296 north of shaft is 1½ ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 296 north of Rowse's shaft is 4 ft. wide, and estimated to be worth 8 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of this level south of shaft is 2 ft. wide, and assaying 18 dwts. The lode in stope in back of the 236 north of shaft is 3 ft. wide, and assaying 6 dwts. The lode in stope in back of the 296 north of Tennant's is 3 ft. wide, and assaying 1 oz. 10 dwts. 16 grs. The lode in stope in back of the 180 uorth of shaft is 3 ft. wide, and assaying 2 ozs. 12 dwts. 21 grs. The lode in No. 2 stope in back of this level is 4 ft. wide, and assaying 1 oz. 16 dwts. 23 grs. Sinking: Rowse's shaft has been sunk 26 ft., making a total distance of 76 ft. below the 780-ft. level. We are occasionally meeting with small branches of carbonate of lime and quartz, and altogether the ground has a very promising appearance for the production of gold. The lode in No. 2 wiuze in the bottom of the 700 north of Rowse's shaft is 4 ft. wide, and estimated to be worth 5 ozs. The winze in bottom of the 290 north of Tennant's shaft has been sunk 25 ft.; the lode is 1½ ft. wide, and estimated to be worth 1 oz. Gilbert's shaft has been sunk 21 ft.; total distance

from surface, 84 ft. We are putting up shaft tackle, &c., and shall begin to hoist the dirt by steam power. All surface operations are going on in a very satisfactory manner.—J. GILBERT.

MYSORE REEF (May 6).—Fortnightly report:—Harvey's shaft: The ground sunk since my last is 6 ft., which makes a depth of 56 ft. 2 ins. below the 460-ft. level. The water is still quick, which is an hindrance, but we can keep it with barrels, and as soon as the ends are started off at the 520-ft. level, which I hope to commence in a week from date, we shall remove the donkey pump to this level. The water is coming out of a crevice in the north end of the shaft, and have cut down the water we had in the winze below the 400-ft. level. The rock is very hard indeed for boring, I never saw anything like it before. 400-ft. level south has been advanced 7 ft., which makes a distance of 97 ft. 11 ins. from shaft. The lode is pinched, showing only a few stringers of quartz containing a little gold. The air compressor bed is arrived, and on Saturday we shall fix it in position, when this is done I shall put these men with a rock-drill to drive the 400-ft. level north. Air shaft: Stopes in bottom of the 140-ft. level. We have broken about 50 tons from here during the past week, and put it through the mill, which gave about 5 dwts. of gold to the ton. The part of the lode we are carrying is 12 ft. wide, and worth according to samples that I have washed from 6 to 8 dwts. of gold per ton.—Capt. M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports for the fortnight ending May 6.—Tank mine, north shaft: This shaft has been sunk 9 ft., making a total depth of 159 ft. 9 ins. from surface. There is no change in the shaft, the water remains about the same, and I hope to make good progress this month. I put one of the new rock drills to work in this shaft yesterday, and it is doing very well. South shaft: This shaft has been sunk 8 ft. 9 ins., making a total depth of 87 ft. 9 ins. from surface. There is no change here; the rock continues very hard, and I consider this fair progress. The pumping engine for this shaft is now on the mine, and is being erected.

NEW DEVALA MOYAR (May 5).—No. 1 winze: We have sunk this 3 ft.; total depth 56 ft. The quartz in the reef is getting very much broken up, and there is more country rock in the face. We still, however, carry two good walls, and I expect to open out good stone as we drive west for the 186-ft. level, which we will start in another 14 ft. 116-ft. level, drive west: This end is better for driving, and we have better progress this week, having driven 5 ft.; total length, 156 ft. We have connected the back stope of the 116 level with the underhand stope of 78 level, and the reef is large and of fair value. During April 436 tons of quartz were sent to the mill. We have finished crushing 340 tons of quartz, and have obtained 65 ozs. free gold. Main shaft excavation has been started for surface frame.—R. B. JOHNSTON.

NEW GOLD HILL (May 12).—The cheapest and best mode of treatment for our ores shall have my immediate consideration. No doubt the present method entail a loss; the arrangement of the stamping mill is so bad that it is impossible to conduct concentration, which I have no doubt will be one of the steps to success in the treatment of our large masses of ore. In the mine I find that the bottom level west from the Barnhardt shaft is in ore that is looking very favourable. The aggregate width of the ore is about 14 in.; although this is scattered through 3 or 4 ft., yet it is showing evidence of concentrating itself in the next few feet of driving. We have just got through some very unsettled ground in this level, and now look for a change for the better. In the face of the 300 ft. level, the ore is just making, and looks fully as favourable as in the bottom level, although neither of them show any free gold by pan. In the 160 ft. level we have had a small shoot of good ore, on which we are now sinking a winze, which is still in good ore to the depth of 30 ft. My object is to sink this winze on the ore to connect with the 300 foot level, approximately 80 or 90 ft., thereby exposing more ore and serving as an air passage, which is necessary in this part of the mine. The other mining work in hand is in the Martin shaft, and at present this is producing small quantities of ore equal in value to that from the winze on the 160 ft. level in the Barnhardt mine; the vein is small but promising. I shall keep all these points at work for the present while under such favourable circumstances, and will give you more definite data as to value of ore, &c., when the assay office is in operation. I am having the latter repaired and supplied with the necessary chemicals; am busy re-organising, and have not had time yet to measure up the ore on hand, but will endeavour to report on this next week. I do not advise milling at present until I have had time to settle definitely on the best mode of treatment of the ore.—R. JAMES, jun.

NORTH MEXICAN MILLING (May 28).—Mr. Ottakar Hofmann, under date of May 12, writes from Cushihuiuachic, that the mill product for the month of April was $16,078, and the assay value of the ore got out of the company's own mine, La Gloria, during the same month, was $11,100, making altogether $27,178 for April.

NUNDYDROOG (May 5.)—Report of the work done for the month of Apl.:—The 520 north: Distance driven, 50 ft., by one Italian with a rock-drill; total length, 62 ft. 6 ins.; the lode is a fine one, 3 ft. in width, and assaying 3 ozs. 15 dwts. 12 grs. per ton. The 520 south: Distance driven, 59 ft., by one Englishman with a rock-drill; the lode here is also very strong, and the quartz of very good quality, assaying over 5 ozs. per ton. The 450 south winze in bottom: This has been sunk 7 ft. since we started, by 12 coolies and a maistry; the lode is improving in size, being now 3½ ft. wide, and the quartz is worth 3 ozs. 8 dwts. 6 grs. per ton. The 450 north stope in back—No. 2: Ground stoped, 20 fms., by two Italians with a rock-drill; thd lode is 4 ft. in width, and the quartz assays 1 oz. 7 dwts. 6 grs. per ton. The 450 north stope in back: Ground stoped, 2 fms. 5 ft., by 12 coolies; the lode is about 3 ft. wide, and worth 1 oz. 7 dwts. 6 grs. per ton. The 450 north—Rise in back north stope: Ground stoped, 30 fms., and south stope, ground stoped, 22 fms., by two Englishmen with two rock-drills; the lode averages about 4 ft. in width, and the quartz assays about 2½ ozs. per ton. The 370 north stope in back: Ground stoped, 9 ft., by 12 coolies with a maistry; the lode is 2½ ft. wide, and worth 3¼ ozs. per ton. The 300 north stope in back: Ground stoped, 10 ft. 6 ins., by 12 coolies with a maistry; the lode is 1½ ft. wide, and worth 3 ozs. 17 dwts. per ton. Taylor's shaft: Sunk since the 7th 18 ft., by three Italians with a rock-drill, making a total depth of 545 ft. We shall push the shaft as speedily as possible to get down to the 600. North shaft—Cross-cut west: This was driven 30 ft., making a total distance of 92 ft., by two Italians with a rock-drill. We hope to have driven far enough before the end of the month to allow us to rise against Kennedy's. Kennedy's shaft: Sunk for the month 13 ft., making a total depth of 117 ft. 6 ins., by two Italians with a rock-drill; the ground is very jointy here, and we have to timber down very close. We have a great deal of water to contend with also. Health: I am glad to tell you that the cholera epidemic is over, and almost all the coolies have come back. Mill samples:—Rough quartz through stonebreaker, 3 ozs. 8 dwts.; smalls, 2 ozs. 8 dwts. 18 grs.

OSCAR (May 22).—In Hodgkinson's shaft there is no alteration to note. There is a small quartz leader on the footwall which we think will soon develop into a good lode. The 300-ft. levels: We shall commence to open these early next week; both, especially the northern level, will no doubt open up a good section of ground. In the 200-ft. level north we are sinking a winze to communicate with the new level. The quartz in this winze is of a similar quality to that in the stope above the 200-ft. level north. The 200-ft. level north: The quartz in this level is 15 ins. wide, often showing specks of visible gold and has a mill value of ½ oz. to the ton. The same level south is also in a fine quartz lode, but its value for gold is only 3 dwts. In the stope above the 200-ft. level north we are still breaking some good milling quartz. Other places show no alteration. Many of our assays from the samples which contain refractory ore run very high, but these we do not report at present. The machinery for treating them (the concentrates) is well in hand and every effort is being made to get it completed as soon as possible. We hope to commence milling next week, and as soon as 200 tons are treated shall wire result.—J. DAW, Jun.

PACHUCA.—Extracts from report received from the company's manager, F. W. Bawden:—Apl. 25.—I am pleased to inform you that the vein in the end driving west of cross-cut has much improved during the past week, and now yields silver in assay all through Selected stones which I assayed this week gave a yield of 30 ozs. of silver per ton. I expect the vein to further improve in driving. We have driven 12 ft. this week. Drift 7½ ft. high by 4 ft. 9 ins. wide.

— May 2.—During the past week we have cross-cut the vein, and find it to be 9 ft. 6 ins. wide, and produces a little silver all through. Selected stones I have assayed, which have yielded as high as 72 ozs. of silver per ton, and the vein shows improvement as drivage is continued. I was under ground this morning, and the vein shows an improvement from yesterday. Our total drivage on the vein from the cross-cut is now 58 ft. If the vein improves only a very little more we shall be able to make returns. I have well secured the drift by oak timbering.

— May 9.—This week I have carefully surveyed our underground workings, and plotted them on surface, and our vein corresponds in direction with the Amistad vein of the Sta Gertrudis mine. I have as usual assayed samples this week, and am pleased to say the general average is 3 ozs. per ton highter than last week. Yesterday I took a sample of selected stones from the eastern drift which we have commenced to drive, and it yielded 40 ozs. of silver per ton. I shall force this drift with all speed.—F. W. BAWDEN.

PREMIER CONSOLIDATED.—Good progress is being made in the low level adit, and as the ground is favourable to the contractors they have driven up to Saturday last some 138 ft. On the No. 1, or main top level, very slow progress is being made by present contractors in consequence of bad air, and a very hard bar of country rock recently met with. However, the former obstacle has been removed, as we have now broken through to Halliday's old shaft, connecting with the surface, and a fine current of air permeates the whole of the upper levels, but the hard bar of country rock still remains. I may add that several shoots of stone have been met with all along the drive, and while they have all a downward tendency, and not sufficiently rich to stope and crush with present appliances, yet is pleasing to note that the walls of the reef are clearly defined throughout the whole course, and for the present nothing can be said of what may exist overhead until risen upon, which we intend to (as also to cross-cut for the parallel lodes) now the mine is ventilated.

REPORT OF MEETING.

THE LIBERIAN GOVERNMENT CONCESSIONS AND EXPLORATION CO.

RESOLUTIONS FOR AMENDED ARTICLES CONFIRMED—NEW BOARD ELECTED.

AN extraordinary general meeting of the Liberian Government Concessions and Exploration Co., Limited, was held at Winchester House, 50, Old Broad Street, E.C., yesterday, in order that the resolutions, which were passed at the extraordinary general meeting of the company, held on May 12, 1891, might be submitted for confirmation at special resolutions.

Mr. A. C. Ponsonby

presided, and called upon the secretary to read the notice calling the meeting.

Mr. JOHN KUCHLER (the secretary) then read the notice calling the meeting, and also proposed alterations in the articles of association, and the followiug four new articles to be substituted for the four articles bearing the same numbers at present in existence.

(3.) "Articles 69 to 72 inclusive shall be annulled, and the following four articles shall be inserted in the articles of association in lieu thereof:—'69. All the directors shall retire at an extraordinary general meeting to be called for that purpose by the directors, at such time and place before June 30, 1891, as they may appoint, and at the same meeting a new board of directors shall be appointed by the company. At the annual ordinary general meeting to be held in the year 1892, and each succeeding year, one-third of the directors for the time being, or if their number be not a multiple of three, then one-third of the next lower number being a multiple of three, shall retire from office.' '70. The directors to retire on each occasion shall be those who have been longest in office. As between two or more who have been in office for a like period, the directors to retire in default of agreement between them shall be selected by lot. For the purpose of this clause, the length of time a director has been in office shall be computed from his last election or appointment. A retiring director shall be eligible for re-election.' '71. The company at any general meeting at which any of the directors retire in manner aforesaid may fill up any vacancy or vacancies on the board.' '72. If at any ordinary general meeting the

places of the retiring directors are not filled up, then the retiring directors, or such of them as have not had their places filled up, shall if requested, and they are willing, continue in office as if they had been re-elected. Provided that this article is not to apply in case such general meeting shall have determined not to fill up such vacancy or vacancies."

The CHAIRMAN stated that the object of their meeting together that day was two-fold. The first meeting being called to confirm the resolutions which the secretary had read, and the second meeting being in reference to the election of new directors. As regarded the first meeting, he had now simply to move the confirmation of the resolutions passed at the last meeting as special resolutions.

The motion was seconded and carried.

The SECRETARY then (at the request of the chairman) read the notice calling the second meeting.

The CHAIRMAN said that the meeting had been called for the purpose of asking the shareholders to consider and, if approved, to elect certain gentlemen as members of the board of that company, and whose names had been submitted to the shareholders. The shareholders would be asked to elect several new directors, and he would first suggest the names of Mr. Watson, Mr. Whitehead, and Mr. Parr; the latter gentleman had taken a great deal of trouble in connection with the company, and he was a gentleman who was in the position of being able to offer very valuable service to them, and he trusted that his name would meet with the approval of the shareholders. He (the chairman) would, first of all, move that Mr. Watson should be elected a director of the company.

The motion was seconded.

Mr. STOLE said that he would like to know why Mr. Parr's name was submitted on this occasion to be a member of the board, when it had been omitted from the notice sent to the shareholders containing the names of the gentlemen who had been nominated as directors of the company.

The CHAIRMAN, in reply, stated that it was quite

A CLERICAL ERROR.

and had either arisen from a mistake in the office of the company or on the part of the printers.

Mr. STOLE thought it was a great omission, as many of the shareholders who were absent were naturally unaware that Mr. Parr was to be proposed, and he thought that they could not put the name, as it had not appeared in the circular.

Some discussion ensued upon this point, and the general opinion was that Mr. Parr's name should be submitted.

The CHAIRMAN, in reply to a question, stated that Mr. Parr had a very strong holding in the company, and he would be a gentleman of great value to them.

Mr. STOLE asked that the nomination of Mr. Parr might be read.

The CHAIRMAN called upon the secretary to do so.

The SECRETARY then read the nomination.

A SHAREHOLDER: How many shares does Mr. Parr hold?

The CHAIRMAN: 6,625 all paid for.

Another SHAREHOLDER suggested that the secretary had better read the nominations of all the proposed directors.

The CHAIRMAN said he saw no objection if it was the wish of the meeting.

Several VOICES: It is perfectly unnecessary.

Another SHAREHOLDER said that he would like to know if Mr. Parr was going to use the powers he possessed by the founders' shares, because if he liked to make use of those powers he could elect what directors he choose.

Another SHAREHOLDER said he did not think that had anything to do with it. Perhaps the founders' shares had passed between two or three different people, and whoever held those shares now had a right to use them to vote. (Hear, hear.)

Mr. CASHIM wished to propose as an amendment "That Mr. Parr, Mr. Whitehead and Mr. Watson be, and are hereby elected directors of the company with power to add four colleagues to their number." He wished to remark that he thought the company had a sound business which had been mismanaged, and had turned out a failure (No, no), and he wished to refer to the reports that had been issued by the late board.

The CHAIRMAN: That is not before the meeting. I must ask you to keep to the point.

Mr. CASHIM said that his point was in connection with the circumstances of the company, and the action of the late board, who he thought had committed grave errors, and were entirely at fault for the present state of affairs.

A SHAREHOLDER: We have nothing to do with the late board.

The CHAIRMAN again requested the meeting to keep to the point at issue.

The amendment was not seconded, and consequently it fell to the ground, and the election of Mr. Watson as a director of the company was put to the meeting and carried.

THE QUESTION OF A MANAGER.

Mr. WATSON said that as the only representative director at the present time he would like to be allowed to offer a few remarks, and he wished to say with reference to the re-election of Mr. Ponsonby as their chairman, that if Mr. Ponsonby was re-elected he (Mr. Watson) would have to retire, because Mr. Ponsonby and himself differed in their opinion, for Mr. Ponsonby had stated to him upon several occasions that he considered that the company could not be managed without employing a manager. He (the speaker) did not coincide with that view, and he did not consider that such an expense was necessary.

The CHAIRMAN, replying to the remarks of Mr. Watson, said that when he had been offered the post on the new board he had felt that, having regard to the claims upon his time that his own business had, he could not work as he had done in the past for the company unless he was to have the assistance of a manager to supervise matters.

Mr. Whitehead was then proposed and seconded as a director and accepted.

The CHAIRMAN said that the next name was that of Mr. Parr and he felt sure that that gentleman's election would meet with the approval of the shareholders. All he could say was that that gentlemen had worked as hard as anybody could in the interest of the company, and as Mr. Parr had such a large stake in the undertaking himself it would be only natural that he would devote all his attention and energies to the furthering of its prosperity for his own sake. He (the Chairman) had much pleasure in proposing the election of Mr. Parr as a director of the company.

Mr. B. OSBORNE seconded the motion.

Mr. SEARLE strongly supported the election of Mr. Parr.

After a few remarks from other shareholders the resolution was put to the meeting and agreed to.

The CHAIRMAN said that a few days before the last general meeting he considered it advisable to suggest that Mr. De Fries should be elected manager, and that gentleman had been elected to that post by the board. In answer to a letter from the board in connection with the resignation of the directors, that gentleman had written to the effect that he had been appointed manager, and did not think of resigning. He (the speaker) thought it best to mention the fact, and it would doubtless be the best plan to leave the matter to be dealt with by the new board.

Mr. WATSON said that he had taken opinion with regard to the election of the manager, and it was to the effect that Mr. De Fries was not legally elected the manager of the company. That gentleman was connected with Mr. Parr in business, and he (the speaker) did not think that he should have any control over the business of the company.

Mr. DE FRIES said that he wished to put himself right in the eyes of the shareholders. He considered that he had been legally appointed the manager of the company, and although he disliked litigation he could defend himself. He had the appointment offered to him and did not seek it in any way. If the board met him in a proper manner he did not suppose that his demands would be very excessive. The remark that he had been in several companies with Mr. Ponsonby was not correct. He had been interested in one company, being a co-director with Mr. Ponsonby, but that was all.

Mr. WATSON: I might mention that at the meeting to elect Mr. De Fries the motion was carried by Mr. Ponsonby and his friends.

The CHAIRMAN: The voting at the election of Mr. De Fries was three for and two against.

A SHAREHOLDER: I propose that five directors shall be elected to form the new board of this company.

Mr. BLAKE: I propose six.

Mr. ALLEN: I second it.

Mr. DAWSON: I second the former proposal, that we shall have five directors.

The CHAIRMAN: The solicitor thinks that five had better be made the number.

Mr. BLAKE: I withdraw my amendment, then.

Mr. MEITER: Then I shall propose that we have nine directors.

The CHAIRMAN: I think it would be better to elect five and leave the rest till the next election.

Mr. WATSON: Nine directors is absurd for a small company like ours; five will be quite sufficient.

Mr. MEITER: I am going to stand as a director. I have been a great assistance to the company from the first. If I had known there was only going to be five directors, my friends would have been here to have prevented it. I shall put up as a director, and if not elected shall demand a poll. I have made up my mind to be in at the finish.

Mr. STOLE: I propose Mr. Meiter be elected.

Mr. DE FRIES: I second that.

Mr. PARR: I propose that Mr. Meiter be not elected.

Mr. B. OSBORNE: I second that.

The CHAIRMAN then put the amendment, which he declared lost.

Mr. PARR: I should like to mention that my objection to Mr. De Fries as a manager was because I thought it was an unnecessary expense, as we did not require a manager.

The CHAIRMAN: I will now put the resolution for the election of Mr. Meiter.

The resolution was then put by the chairman and declared lost.

Mr. STOLE: We shall demand a poll on that and all the previous elections.

Mr. PARR: You cannot demand a poll on the resolutions which have been carried.

The CHAIRMAN: I think it will be better if that demand is withdrawn.

Mr. STOLE: I propose Mr. Blake be elected.

Mr. DE FRIES: I have much pleasure in seconding that.

The CHAIRMAN put the resolution, which was lost.

Mr. WATSON: I propose Mr. Waterfield be elected.

Mr. BAXTER: I second that.

The CHAIRMAN: We have now three directors elected and two to be elected.

Mr. PARR: There is no reason why we should not carry on the business with the three directors we have and leave the other two to be nominated on some future occasion. We are willing to accept the nomination of Mr. Blake as a member of the board on the condition that the demand for a poll made by Mr. Meiter be withdrawn. Mr. Blake could then represent his friends upon the board, and I think that such an arrangement would meet the views of all the shareholders.

Mr. MEITER: I shall not withdraw any demand which I have made.

Mr. BAXTER said that he represented the International Financial Society, who had a large interest in the concern, and on behalf of them he had much pleasure in supporting the election of Mr. Waterfield.

The resolution for the election of Mr. Waterfield was then put to the meeting and carried. Mr. Blake was also elected a director.

The CHAIRMAN said that

THEY HAD NOW FIVE NEW DIRECTORS—

Mr. Watson, Mr. Whitehead, Mr. Parr, Mr. Waterfield and Mr. Blake, and he declared the proceedings at an end.

Mr. MEITER said that he had been informed that any delay might endanger the concession and he would withdraw his demand for a poll. (Applause.)

The proceedings, which were of a very protracted nature, having lasted upwards of two hours and a half, then terminated.

WE understand a company is shortly to be brought out under the title of "The London Improved Firewood Company, Limited," and will have for its object the acquisition of the business at present being carried on by "The Improved Bundle of Firewood Company." The capital will, we believe, be 10,000*l*. The fuel has been highly spoken of by the trade journals.

SOUTH AFRICAN TRUST AND FINANCE CO., LIMITED.

PROPOSED AMALGAMATION OR AFFILIATION OF LAND COMPANIES.

THE following important circular has been issued from 19, St. Swithin's Lane, dated May 21 :—I am desired by the board to inform you that a memorial, signed by a large number of influential shareholders of the different South African land companies, has been presented to the directors of this company, requesting them to call a meeting of directors of the various land companies, to consider the advisability of formulating a general scheme for the amalgamation or affiliation of these companies. My board will be glad if any of your directors can attend here on Tuesday, June 16, at 3 p.m., to consider the above question.—A. J. MACPHAIL, Secretary.

THE MINING EXCHANGE.

FROM MR. THOMAS THOMPSON'S CIRCULAR OF MAY 27.

A GENERAL MEETING of the members and shareholders of this institution was held on Monday, at the Exchange Rooms. A most interesting feature of the meeting may, however, be noticed here. This was the unanimous passing of a resolution that arrangements shall be made for publishing in the Press, the names of all members who may leave the Exchange, and the reason or cause for their doing so. This is going a step further than is done in the Stock Exchange, as in that institution it is only usual to publish the names of defaulters, or of those who may be expelled. At the Mining Exchange, however, even if a member leave the Exchange by resignation, that fact will have to be notified. It will be remembered, that one of the rules of the Mining Exchange provides for the free admission to the Exchange Rooms of all accredited representatives of the Press, who are thus in a postion, if need be, to criticise the doings of the members. This must necessarily prove some sort of guarantee to the public for the *bona fides* of the members, while the resolution now passed can only prove second to it in importance. When the Mining Exchange was first formed it was deemed advisable to take in all the so-called "outside dealers" not doing tape or bucket-shop business, so as to prevent the possibility of rivalry and jealousy, and the number of the members was, consequently, rather a source of weakness than of strength. The number of members has, however, been lately very much reduced, and there remain now in the Exchange a smaller body of dealers, it is true, but one, nevertheless, more representative of all that is best among outside men. That this is the case, and that the present members of the Exchange entertain a high opinion of their own probity is shown by the readiness with which they have adopted rules which, while telling as restrictions against themselves, cannot fail to increase the confidence of the speculating public.

THE BIG GOLDEN QUARRY MINING CO., LIMITED.

DIRECTORS ISSUE A GOOD PROGRESS REPORT.

THE directors submit their report and balance-sheet for the period Dec. 10, 1889, to Dec. 31, 1890. The re-construction of this company was carried out by the liquidator and seven signatories up to Apl. 2, 1890, at which date the present directors took office. Mr. Philip Powter has been appointed to act as manager of the mines. The expenditure which the board deemed it advisable to make, was very carefully considered. To take early advantage of the water power which is such an important feature in connection with this property, a water race has been cut which is now approaching completion, and a turbine of considerable power is in course of erection on the machinery site. An air compressor for working the rock drills is on the mine as also are the drills and the necessary connections. This will enable the manager to rapidly open the mine out, and extract the quartz at a minimum cost which is a point so often lost sight of in working Transvaal mines. The bulk of the 10-stamp mill is also on the site chosen for it, and would have been erected ere now had the directors not curtailed expenditure at the special request of the largest shareholders. The progress of the works has been somewhat hindered by an unusually long and severe rainy season, In deference to the wishes of some of the largest shareholders the making of a first call was postponed till Mar. 4, but in the meantime, to carry on the works at the mine, even on the restricted scale above alluded to, the directors had to borrow and also themselves advance the necessary funds to a considerable extent.—CHAS. E. GREEN, Registrar.

PORT PHILLIP (Apl. 18).—Mine—North shaft : Sinking is being continued ; present depth below No. 17 level, 54 ft., and is now in hard sandstone, but we hope the ground will improve as the shaft deepens. No. 17 level : The drive west is now 272 ft. from the shaft, and 32 ft. west of the diorite dyke, and now in sandstone with small veins of quartz, the largest being about 5 ins. thick. Criterion ground : Two crushings of quartz raised by tributers have been completed, one of 51 tons yielded 1 dwt. 22 grs. per ton, the other 36 tons gave an average of 5 dwts. 8 grs. per ton. Yankee ground : Driving north on this ground is being continued, but so far nothing payable has been reached.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

5½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Guy Fawkes.—Yes. Both good as speculations.

Hove (M. R.)—A poor opinion of their prospects. Sell your shares.

Maypole.—We think you should average. They are cheap in our opinion.

Leeds Reader.—Pay dividends. As an investment they should be held.

J. S. Swanson (Middlesboro').—More likely to rise. The low priced Indians are also good to purchase.

M. W. B. (Kingside).—You are entitled to the dividend paid on the 28th, as the shares were bought *cum div.* Write to your broker, who will no doubt put the matter right.

Architect.—The prospect of an improvement taking place is not very bright for the shares named.

Capitalist (M. T.)—We have a good opinion of them. The dividend has already been paid. You will only be entitled to any future dividends that may be declared.

B. Hooker (York.)—Do not buy them. They are too speculative.

Sophist.—Good prospects perhaps, but a lot of money must be spent before they are likely to be in a dividend paying state.

Victim.—Very foolish on your part to apply for so many. You must of course pay the call.

Wateringbury.—It is on the favorable report issued that the shares have risen. They should be held.

J. Baxter.—Dividends are out of the question for either of the companies named. Sell your shares.

Grateful.—Will make enquiries and reply by letter. We will answer you as fully as possible.

Spread Eagle.—Impossible to say the exact amount, but rather fancy it will be 2s.

S. M. R. T.—A lower price is expected. Do not touch them.

Reader (Ascot).—Certainly buy the Mysore West and Wynaad shares ; they have a good chance. Others rather too high just now.

Derelict.—Hold them, but do not buy more at present.

Millinson.—No buyers in the market.

Lady Guide.—Yes. It is rather bad, but if you can afford to wait, a much better price will be seen, in our opinion.

Cornish Reader.—With a little more capital it should turn out successful. The management is sound.

Regular Reader.—Should be held for an improvement in price. Pro spects good.

The Mining World.

LONDON: SATURDAY, MAY 30, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

MINES AS INVESTMENTS.

To many unreflective people the phrase which we have chosen for the heading of these remarks will appear to be a contradiction in terms. They know, of course, that a large number of people lay out a portion of their capital in mining shares, but they regard this as sheer gambling, just as much as if the money were spent in horse racing or in baccarat. We need not tell readers of the MINING WORLD, however, that this is an utterly fallacious view to take of the matter. That many persons gamble in mining shares we do not for a moment dispute. But what department of the Stock Exchange, or, for the matter of that, what market for any description of commodity is free from gambling? From Goschen's to Hansard's, from Colonial Government Securities to Bell's Asbestos, from wheat to arsenic, and from iron to quicksilver there is speculation for the rise or for the fall. Why, then, should mining shares be held up to be jibbeted by every self-sufficient critic? Echo answers, Why! Mining, like many other forms af industrial enterprise, is a lottery. The blanks are more numerous than in some other directions, but the prizes are more handsome. What other description of business, we may ask, yields such a return upon the money originally invested in it as, say the Mysore Company, the Spanish lead-mining trio, New Guston, Yankee Girl, or, to come nearer home, Great Laxey? And even at the current prices of many of the shares with which our readers are familiar, the return obtainable by an investor is very much above the average. In the following table we give a few examples of the yields at present prices upon the basis of the dividends for the last complete year:—

Company.	Par value.	Last year's dividend.	Yield per cent.
	£	s. d.	
Alamillos	2	4 3	12⅞
Cape Copper	2	6 6	9⅝
Colombian Hydraulic ...	1	4 0	17¾
Copiapo	2	6 0	14
Day Dawn P.C.	1	2 3	23
Fortuna	2	7 9	11⅞
Frontino and Bolivia ...	1	3 5	17¼
Great Laxey	4	24 0	13½
Gympie Great Eastern ...	1	1 0	16
Linares	3	24 0	15¼
Mysore	1	15 0	12¼
Namaqua	2	4 6	12½
Nundydroog	1	3 10	10
Rio Tinto	10	33 0	6½

It would be easy to extend the list of mines which stand to pay the purchaser from 10 to 20 per cent., rates which enable the holder to set aside, if he pleases, a substantial sum as a sinking-fund, and yet have a good return for the money he has invested. With such facts as these before them, critics with any regard for veracity would do well to drop the practice of nonsensical generalising about mining shares and the people who deal in them.

THE BELLIGERENTS OF DEVON CONSOLS.

How is it that when Devon Consols shareholders meet for the discussion of the business in which it is to be presumed they are mutually interested, that business is forgotten in the personal squabbles which ensue? How is it that their backs go up, and that, in the language of the immortal William, "Each particular hair doth stand on end like quills upon the fretful porcupine?" How is it that Mr. George Pawsey Witt glares at Mr. Peter Watson "with mischief intent," and that Mr. Peter Watson returns those glances with interest? How is it that Mr. Freese, so eager for the fray, though an officer of the company, gets up to propose the election or re-election of other officers of the company, and that Mr. Sloper becomes livid when referring to the 30*l.* cheque of Mr. Moses Bawden? These are questions that might be embodied into a sort of Devon Consols catechism, though we should be sorry to have to supply the answers. Perhaps, however, there is one reply to them all, and that is that Devon Consols shareholders for 11 years have come to the meetings seeking dividends, and finding none. When Devon Consols Co. pays dividends they are big ones, but the shareholders do a good deal of fasting in between. Still, they have always the pleasure of seeing their chairman, who, however he may be cast down by influenza or other ailments, invariably manages to get out of bed in time to show his antagonists that he is very much aiive, and to inflict upon them renewed defeat. But Mr. Peter Watson, though the leader and the lawgiver of Devon Consols, cannot control, much less overcome, natural forces and economic laws. If storms come down he cannot direct their energy to other concerns than Devon Consols, and if copper goes lower he cannot, as with the enchanter's wand, prevent its effects being felt upon the company's produce. Neither can he maintain the make of arsenic if the lodes fail to produce the material, or cause consumers to tender at prices which to them seem not profitable. He can deliver good telling speeches as to the causes that have operated against the mines, and he can "dilate" (to use his own familiar word) by the hour upon the facts of the case, but he cannot declare dividends without remunerative prices for his produce any more than a dog can wag its tail without having one.

Now, as we have said, there is one gentlemau who, when he sees Mr. Peter Watson, feels every atom of pugnacity he possesses (and the atoms in combination are formidable indeed) quiver through his frame. That gentleman is Mr. George Pawsey Witt, no mean foeman even of the redoubtable Peter, as his friends familiarly call him, and no mean judge also of mines in general and metals in particular. Now, Mr. Witt, always attacks his enemy in fair and open fight, and in a fashion that makes one admire his courage whilst doubting his discretion—Mr. Witt, we say, on Tuesday last asked a series of questions, which it would have been most indiscreet to answer. It was, in fact, impossible for the chairman to answer them without injury to the company, and damage to the buyers of the company's arsenic, who would justly have felt aggrieved if their action had been made known to the limited number of persons who deal in this commodity. Mr. Witt could not be answered, and though we are far from saying that the questions were not put in perfect good faith, we can tell that gentleman this much, that were he in Mr. Watson's position he would on this subject be equally reticent. But what a pity it is that these two gladiators of the Devon Consols arena, who at bottom must mutually respect each other, cannot be brought to toe the line of harmony. How much better would it be if Mr. Witt's sword became a ploughshare, and if Mr. Peter Watson went in for disarmament. Two able and experienced directors have beeu elected to assist Mr. Watson in the management of Devon Consols, but they might well regard it as an achievement of their lives if they could bring about a *modus vivendi* between Mr. Watsou and Mr. Witt. Why should these two gentlemen, who ought to be friends, who we venture to prophecy one day *will be friends*, stand apart like hairs on the back of an electrified cat? When will Mr. Witt fall into the arms of Mr. Watson and declare with Mr. Noddy at Bob Sawyer's party, that he rather prefers him to his own brother. When will Mr. Watson declare that of all the men he ever knew, Mr. Witt is the most to be esteemed and ——tableau!

ETHERIDGE GOLD CO.—A STORMY MEETING.

ETHERIDGE shareholders met in anger on Thursday last, and were scarcely in the frame of mind in which they obey the poet's injunction—"The world shut out—let reason reign, and her alone." The new broom had been brought to the meeting, and the shareholders in the mass were determiued to flourish it vigorously. They swept away the old board like chaff before the wind ; they appointed a committee ; they adopted drastic resolutions, and generally succeeded, after the manner of a French mob, in completely upsetting the arrangements as they existed at the beginning of the meeting. The gallant colonel, who presided, and who, with his colleagues, was far from being responsible, and, indeed, has with them taken all the steps mortal man could to avert the ill-success that has attended Etheridge affairs, shook his finger at the meeting reprovingly as he exclaimed, "You have passed a vote to-day that you will all bitterly regret." No one knows better than Col. Malleson—certainly no one was more fitted to tell the meeting, that it is far easier to sweep away an old *régime* than on the spot to organise a new one. No one knows better than he does that before one crew is got rid of, the owner of the vessel ought to be pretty certain that he can get another at least equally efficient. Whilst fully understanding, and to a large extent sympathising with, the bitter disappointment shareholders in this company have experienced, we are bound to say that the action of those present at the meeting last Thursday seems neither to have been conceived in common sense nor to have been brought forth in reason. What are the facts?

Etheridge Co., after having tried all the mines that were so much vaunted in its prospectus, or rather in the prospectuses of the four concerns which have been merged into the present one, has apparently fouud salvation in a mine called Caledonian No. 1 South. When the

directors were getting to the end of their tether, and scarcely knew which way to turn, they called to their aid the experienced firm of Messrs. John Taylor and Sons. These gentlemen, looking at the condition of the capital account, and seeing that nearly 15,000*l.* was due in calls from shareholders, and naturally believing that this money would be available for the carrying out of their plans, accepted the somewhat thankless office of mining engineers to the company. About four months ago, in public meeting, their adhesion was received with acclamation by the shareholders, and forthwith under their direction the development of Caledoniau No. 1 South was proceeded with, and with such prospects of success that Mr. Taylor flatly declared at Thursday's meeting that it would be suicidal to abandon the works at that particular stage. But whilst the Messrs. Taylor have every reason to be satisfied with the appearance of the mine, they have every reason to complain of the conduct of those shareholders who, to a very serious amount, have failed to respond to the calls made upon them. The directors on the one hand, and the Messrs. Taylor on the other, have good reason to complain of the treatment to which many of the shareholders have subjected them—a point that the meeting, whilst condemning the board, altogether forgot. This being the position, it occurred to Col. Malleson and his colleagues, as it has occurred to many another board before in a similar position, that a scheme of re-construction would have the dual effect of providing capital for the development of Caledonian No. 1 South, and weeding out the non-call paying dummies, who, by a stretch of courtesy, are called shareholders. That this scheme could not press severely upon the shareholders is evident from the statement of the chairman, that 3d. per share only would be required on application and allotment, and that the utmost that could be called up afterwards would be 9d. per share. This, the Messrs. Taylor think, will prove the mine, and show the Etheridge shareholders whether they can recover any of their lost money or not. Not merely was this proposal put on one side, but the board were asked to resign; their resignation was accepted, and a committee of investigation was appointed. We are by no means of opinion that investigation should be avoided, but certainly incline to the view expressed by one shareholder, that re-construction should have precedence, for the simple reason that it the most urgent. It is to this favour that the committee will have to come at last. If when the Goths and the Huns were invading Rome a "committee of investigation" had been appointed, we do not think the result would have been different from what it was, and the Etheridge committee will find (if indeed they have not found already) that the first necessity of Etheridge is defence—that is, defence from the creditors, who will assail it if the necessary remittances be not sent out. Whilst again saying that we can understand the irritation which the shareholders experienced at Thursday's meeting, we scarcely think they have acted wisely in throwing away all the experience that the late board must necessarily have gained in the conduct of the company—experience which would prove invaluable to the gentlemen who have now assumed their places as a committee. The far better course would have been to have passed the re-construction resolutions, and to have altered the *personnel* of the board, if so desired, at the first statutory meeting.

THE DE BEERS CO.

WHILE fully recognising the ability which has characterised the management of the De Beers Consolidated Co., we have from time to time pointed out that the shares formed a dangerous speculation, either for the rise or for the fall, particularly for the rise. Not many months ago, De Beers shares stood at 22, and there were not wanting prophets who foretold that they would reach 30. As a matter of fact, they have recently been down to about 14, and are even now under 15. But it is to be borne in mind that these shares are largely dealt in upon the Continent, and though we are of opinion that they are even now quoted at a high figure, we would urge our readers not to be tempted into "bear" operations. Quite apart from the speculative position, the outlook for the company is by no means so satisfactory as it was a year ago. The demand for diamonds is comparatively small, and the De Beers Co. finds it necessary in restricting the output to keep the De Beers and Kimberley mines practically closed, drawing all the supplies it can dispose of from the Dutoitspan and Bultfontein mines. When one bears in mind what an enormous capital is represented by the two great properties that are lying almost idle, it is at once apparent that the problem before the De Beers directors is a difficult one. Moreover, they are just now being hampered considerably by the "rushing" of the Wasselton mine, about which our correspondent on the spot has sent such full accounts. The Government is being urged to declare the Wasselton property a public diggings, not only by the town Councils of Cape Town, Kimberley, and Port Elizabeth, but by the Cape colonists generally. There seems to be no doubt that the mine is rich in diamonds, over 4,000 carats having already been deposited in the bank. The De Beers Co. has the option of purchasing the Wesselton property for 600,000*l.*, and the directors will soon have to decide upon some action, for we hear that an independent offer of 750,000*l.* has been received by Mr. Wessels and his co-proprietors. If the De Beers Co. purchases, it will have one more source of supply to deal with, while if it does not purchase, the new mine will be worked by other parties, and competition will once more be started. It will be interesting to see how Mr. Rhodes and his colleagues decide this very knotty point.

GRAVEL GOLD MINES OF COLUMBIA, LIMITED.

WE congratulate the shareholders of this company on the present position of their affairs. After some delay, the causes of which were fully explained by Mr. Pechey at the meeting, 1,000 ins. of water are now playing upon the gravel, from which there is every reason to expect very big and profitable returns will be made. Altogether, to bring things to their present pass, 22,000*l.* has been spent, but the shareholders for this have full value. The mine has been thoroughly equipped, the syphons have been put in, the sluices laid, the launders sent out and put into position, 13½ miles of the most difficult part of the ditch have been completed, and the water has been turned on, and, metaphorically as well as actually, the company has only now to "go in and win." We have long entertained a high opinion of the prospects of Gravel Gold, which has been strengthened by the satisfactory meeting that was held on Thursday.

NO REFUGE IN EL REFUGIO.

ALTHOUGH the prospectus of El Refugio Mining Concessions, Limited, issued early in the week, is not devoid of certain favourable features, a consideration of the document, as a whole, leads to the belief that the subscription form it encloses should only be filled up by those who wish to bid an eternal adieu to their money. We are very much struck by the "modesty" of the vendors who want 325,000*l.* in payment of a property which certainly seems to have made some return. but as to the profits for which the prospectus maintains a silence that is perhaps discreet. It is reasurring to know that "The district has been known and worked profitably since early times, *but those mines which formerly yielded the largest amount of bullion have remained idle, and been little worked for many years*," but why their potential wealth should have been so long allowed to remain dormant is not among the things that are revealed in El Refugio prospectus. Even now when certain work has been carried out upon them, that does not seem to constitute a reason why the British public should throw into the lap of the vendors 325,000*l.*, particularly when the knowledge furnished of most of the mines such as Estanislaos, La Trinidad, and Candaleria is of the negative, rather than the positive kind. It would be interesting to know the price the vendors paid for the concessions and the actual expenditure incurred to date. Usually, abandoned mines in Mexico, as in other countries, can be "denounced," and worked by the "denouncers" on the payment of small royalties to Government. As to the "intention" of the board to form subsidiary companies, we appeal to the experience of our readers whether that has not been a paragraph in every prospectus of a similar kind they have received for years past, and whether half a dozen companies in a hundred have ever succeeded in in doing anything of the kiud. No, to put the fact into the vernacular, El Refugio is "not good enough," and if any of our readers feel tempted to have aught to do with the company we advise them to pause, and assure them that they will find second thoughts the best. We have nothing to say against the directors, unless it be to express our surprise that they should have indentified themselves with such a concern as El Refugio.

DEATH OF MR. W. BELL DAVIES.

IT is with great regret we have to record the death of Mr. W. Bell Davies, the well-known mining engineer, at the comparatively early age of 46. Until about a week before his death Mr. Davies had been in the enjoyment of apparently good health, but, unfortunately, he was attacked by influenza, and, acute pneumonia supervening, the fatal result followed at his residence at Rickmansworth on Thursday, May 21. Mr. Bell Davies will be chiefly remembered by the remarkable and far-sighted report he wrote for Messrs. John Taylor and Sons upon the subject of the Colar Goldfields. That report, published in 1880, led to the formation, in the July of that year, of the Mysore Gold Co., whose success is now a matter of world-wide notoriety. Leaving this point for a moment, and following the career of the deceased gentleman as far as we have been able to trace it, we find that from 1865 to 1871 he was engaged in gold mining in New Zealand. Two years later we find him at the School of Mines, and gaining further practical knowledge in Cornwall. Betweeu 1873 and 1876 he was engaged as mining engineer under a three years' agreement with the Japanese Government, in inspecting the gold and silver mines of Japan. In the latter year he undertook a mission for Messrs. Johnson and Matthey to Spain, and also reported for them upon mines in Nevada, Utah, and other parts of the United States. In 1877 we find him at the Clogau Gold Mines, in Wales, where he remained for three years, though during this period he found time to visit America for the purpose of inspecting the great Trojes Silver Mines of Mexico. Since then he has examined and reported upon gold mines in Brazil, Nicaragua, Norway and Spain. It was in the April of 1880, as we have already said, that he was

employed by Messrs. John Taylor and Sons, to make that inspection of the Colar Gold Fields, with which his name will hereafter be most closely identified, and which led to the establishment of Indian Gold Mining in that region upon a permanent and satisfactory basis. Ever since that year he has been closely connected with the firm of John Taylor and Sons, as one of its most trusted and experienced assistants. He also, more recently, made an important examination of some of the metalliferous districts of Bosnia—productive of silver-lead, cinnabar, gold, copper and iron, and it is not improbable that development work may be undertaken in consequence of the learned and exhaustive report which emanated from him in connection with this mission. By his death the firm of John Taylor and Sons unquestionably loses, not only a tried and trusted assistant, but a highly valued, and much respected personal friend.

THE NEW CHAIRMAN OF GOLDEN LEAF CO.

WHEN the reins of direction fell from the hands of the late lamented Mr. W. George Cavendish, chairman of the Golden Leaf Co., the eyes of the shareholders, and notably of his colleagues, were turned with expectancy to Mr. J. Stewart Wallace—whose interest in the enterprise was not second even to that of the late Mr. Cavendish himself Twice has Mr. Wallace crossed the Atlantic on the company's business, and it will be in the recollection of the shareholders that it was he who was actually the means of securing the Golden Leaf part of the property, from which the re-constructed company derives its name, and from which it is now reaping the better part of its large and rapidly increasing returns. Shareholders will not forget the admirable address that Mr. Stewart Wallace delivered in Winchester House after his first return from the property, nor the painfully elaborate care he took to see that Goldeu Leaf property was actually what the vendors represented it to be. Our experience is not small in connection with hearing and knowing what is done in the selling and buying of American properties, but we venture to say that never was a mine from the United States placed upon the English market the purchase of which was conducted with such minute care, and such almost excess of caution, as that of which Mr. Stewart Wallace will now practically have the supreme direction. We congratulate the shareholders and the colleagues of Mr. Wallace alike on the choice that has been made of their new chairman.

MESQUITAL TURNING THE CORNER.

MESQUITAL DEL ORO CO. may now, in the language of its eloquent chairman, Mr. N. F. Robarts, be regarded as have reached the proverbial turning of the long lane. Losses have been converted into profits ; debts have been reduced, and the chairman, instead of moaning and groaning, as at the meeting a year ago, over an issue of preference shares, is able to talk cheerfully of dividends of 20 per cent. It so happened that when days were darkest, and when the directors were sorely distressed to know how to deal with a future that seemed to hold out but little hope, the mine took a decided turn for the better, and matters have gone on improving to such an extent that after paying off all borrowed money here, when the April bar of gold is realised, and should the May bar realise as much, there will be a sum of about 5,000*l.* in hand. This is a change so great, as compared with the position revealed at the annual meeting a year ago, that the directors are justly entitled to the congratulations which the shareholders were not backward in extending to them. The success they have met with is no doubt largely due to the improved managerial arrangements they have made, and particularly to the appointment of Mr. Davis as superintendent, who has materially reduced costs, increased output and consequently the returns of gold ; and generally placed the management on the spot on a much more satisfactory basis than it previously was. During the past four months the nett profits have been 7,000*l.*, or at the rate of 20,000*l.* per annum, which should give, as soon as the debit balance is cleared off, dividends of upwards of 20 per cent. We quite endorse the remark of the chairman, that the company has entered upon an era of prosperity, and we sincerely trust it may long be maintained.

ALMADA AND TIRITO.—AN ENCOURAGING REPORT.

THE report issued by the directors in anticipation of the forthcoming meeting leaves very little doubt but that the company is now fairly embarked upon the flood-tide which leads to prosperity. The silver produced for the year ending Dec. 31, 1890, realized the sum of 24,945*l.* 18s. 10d., and the total receipts amounted to 25,016*l.* 6s. 5d. On the other hand the expenses were 25,734*l.* 15s. 2d., showing an excess of expenditure over receipts of 718*l.* 8s. 9d. This is 4,423*l.* 13s. 8d. better than for the previous 10 months to Dec. 31, 1889. The superintendent's report to the end of Feb. shows a profit on mining operations of about 2,700*l.*, and states that a large proportion of this profit was made in Jan. and Feb. of the current year, owing to the great improvement which had taken place in the grade of the ore treated. In Dec. an important discovery was made in the 24-fm. level on the 100 lode. The ore from this point is of considerably higher grade than the average from the other parts of the mine. The directors are hopeful that other ore bodies will be met with, the lode now being driven on having a very promising appearance. The fire which occurred in the mine in Mar. last having been promptly extinguished, operations have been resumed. Messrs. John Taylor and Sons are now the managers of the company, and Mr. Benjamin Davey, of that firm, has made a thorough inspection of the property. The opinion he formed of the company's prospects was very favourable. This gentleman has made several recommendations as to the underground working, and has also suggested some improvements in the machinery and the mode of treating the ores. Altogether the report is very encouraging, and no doubt the fuller information which will be conveyed to the shareholders at the meeting on Wednesday next will be of an extremely interesting character.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE financial position has greatly improved through the import of gold by the Bank from New York, but an ill-advised combination amongst the leading banks and discount institutions to support rates has caused much excitement and uneasiness. They fixed 4½ per cent. as their minimum for bills, and 5 per cent. for their advances to the Stock Exchange at the settlement. The current sale for discount, however, receded to 3¾, 3⅞ per cent., and loans for the new account were available iu the "House" at 4½ per cent., while money has fallen to 2½, 3 per cent. The combination, however, is apparently breaking up, for many, including the Scotch banks, complain bitterly of having their money lying idle, while the business they refuse is going into other hands—to the country banker and through foreign agents—perhaps, never to return. Altogether, the policy of the action in the face of the public distrust is questionable. The Bank return, with an import of 2,130,000*l.*, shows an increase of rather more in the bullion, but the note circulation is rather larger, and the reserve 2,232,000*l.*, greater at 16,070,000*l.*, against 13,656,000*l.* at the corresponding period, but although the liabilities have augmented a million, the proportion is still nearly 5 per cent. better at 40⅝ per cent. The private securities have fallen off, due to the redemption of securities pledged against the advances to meet the gold import.

Values have been better sustained this week at the Stock Exchange, supported chiefly by "bear" purchases. for otherwise realisations are still pressed in respect of accounts where the cover has run off, or owing to the rates of money. General business has been retarded from expanding by the settlement and the Epsom carnival, while at the same time an unfavourable impression has lately been created by the non-success of the New Queensland Loan, and which has engendered a feeling which will take long to eradicate. The Continental bourses have shown comparative buoyancy and literally nothing has followed the latest achievements of Portugal in Africa, for these conflicts are now looked upon with contempt. Coutinental politics appear passive enough for the moment to satisfy the most ardent advocate of the Peace Society ; therefore, in the absence of anything worrying in that direction, we would respectfully suggest that the society should bring its powerful influence to bear upon St. Stephen's, in order that greater progress might be accomplished with public affairs. Consols have been dull, India and Colonial Stocks flat, and Argentine descriptions even below, if it is possible, rubbish level. Home Railways have fluctuated much, especially Brighton "A," North British and South-Eastern "A," and yet quotations are not actually lower on balance, for yesterday there was a sharp recovery in connection with the "rate" question, and a reduction of 6d. per ton in the price of coal. This week's traffics compare against Whitsuntide last year, and, if those for last week are any criterion, earnings are fairly satisfactory still. Foreign Bonds are better, particularly Spanish and Portuguese, for Contangoes rarely exceeded 3 or 4 per cent., and in many instances "backwardations" were a necessity. American Railroads are really featureless, pending further developments in Wall Street, while Canadian lines have reacted. Mexican (Vera Cruz) were tolerably firm, but Banks and Miscellaneous weaker.

At a meeting to-day of the managers of Joint Stock Banks, for the avowed purpose of an arrangement to keep up rates for money, we understand it was resolved to continue the movement. In this case they have set themselves a very hard task, and one probably beyond their power, for if they lock up their balances at the Bank and restrict loans and discount, foreign lenders will compete successfully for business here. The object, of course, is to retain the gold bought of America, towards the guarantee of which the Bank stands for two millions. Discount has been very easy at 3⅝ per cent., and money, 2½, 3 per cent. At the Bank 35,000*l.* in gold was received, and silver was unaltered.

The Stock Markets have shown more fluctuations to-day, but scarcely of a favourable nature, for closing quotations are flat and lower. Cable equivalents from America this afternoon have upset the equilibrium of United States railroads, especially as rumours were circulated that the Louisville and Nashville Co.'s. were unable to declare even a scrip dividend. The shares of the latter, after being 78½, fell to 77, and other properties exhibited a slight fall instead of a rise. Consols closed rather firm, and for July delivery the price was 95¾, 96, as the monthly settlement has commenced, and the contango was equal to 3¾ per cent. per annum. Investment securities otherwise were without recovery. Among Foreign Bonds, Spanish, French, Portuguese, and Greek improved, but in reality the tendency was easier. English Railways are weaker, particularly Brighton "A," which was steadily pressed for sale, partly because Thursday's traffic is disappointing, although showing an increase of 639*l.*, and the price has relapsed over 2 per cent. North British, South-Eastern "A," and Great Eastern were likewise a good deal offered, but the Underground lines appreciated. Canadian Pacific shares have been over 80, because in Apl. there is a net increase of $159,000, and Grand Trunk also showed strength, but Mexican (Vera Cruz) fell 1, and other South American liues about 5 per cent. Eastmans and Hammonds Meat are firmer, but Miscellaneous and American Brewing shares arc flat, especially the latter.

Annexed are the final quotations to-day :—Consols Money, 95⅝, 95¾ ; Egyptian, Uuified, 95, 95¼ : Hungarian, 92⅜, 93 ; Italian, 91, 91¼ ; Mexican, 86¼, 86¾ ; Peru Corporation

H. Hammonds, 3⅛, 3⅜.

NEW CALIFORNIA.

THE policy of the directors of this company, as set forth by Mr. H. T. Walker at the meeting on Thursday last, is the only safe and reliable one that business men can pursue, and while the shareholders would, no doubt, have liked to have got something in the shape of a dividend, they may rest assured that their mine is being developed in a manner likely to secure regular returns for the capital they have invested. To know that there are 7 miles of levels, and that at one point alone there is enough ore in sight to last for three years, must be gratifying indeed, and our only surprise is that the market price of the shares continues so low.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank Rate remains 5 per cent. Bar silver closes 44¼d.

COPPER has been firm and advancing. The remainder of the Anaconda matte has been taken by smelters. The market for G.M.B, warrants has been strong and active, and price has risen from 52*l*. 12s. 6d. to 55*l*. 2s. 6d. cash, and from 53*l*. 5s. to 55*l*. 15s. three months. To-day's prices are 55*l*. 2s. 6d. cash, and 55*l*. 17s. 6d. three months. Stocks will show a material reduction during the month. We quote English tough, 57*l*. to 59*l*.; best selected, 58*l*. to 60*l*.; strong sheets, 66*l*. to 67*l*.; India sheets, 61*l*. to 62*l*.; yellow metal, 5¾d. to 6d.; ore, 9s. 9d. to 11s. per unit.

TIN has been quiet. Straits on the spot declined from 92*l*. 10s. to 92*l*., but improved yesterday to 92*l*. 10s. cash. Forward delivery irregular; June prompts, 92*l*. 15s. to 93*l*.; July, 92*l*. to 92*l*. 5s.; three months, 91*l*. 15s. to 92*l*. To-day's prices are 92*l* 7s. 6d. cash, and 92*l*. 7s. 6d. three months. The Straits shipments for May, as known, are so far about 2,000 tons. The Dutch market has been quiet. The banca sale of 26,560 slabs went at an average of fl.54⅞ per 50 kilos parity, with 91*l*. 12s. 6d. per ton. 2,000 slabs billiton sold at fl.54 to fl.53¾ parity, with 90*l*. per ton. English ingots, 95*l*. 10s. to 96*l*.

TIN PLATES prices are irregular. Ordinary coke, prompt delivery, 16s. (about), and for July to August, about 13s. to 13s. 6d. per box Liverpool.

SPELTER has ruled from 22*l*. 15s. to 23*l*. for ordinary brands ex-ship here, closing at best.

LEAD quiet. We quote soft Spanish, 12*l*. 7s. 6d. to 12*l*. 10s.; soft English, 12*l*. 12s. 6d. to 12*l*. 15s.; L.B. China pigs 13*l*.; sheets, 13*l*. 10s. to 13*l*. 15s.

QUICKSILVER quiet. Rothschild's price, 8*l*.; seconds, 7*l*. 19s.

ANTIMONY weak.—Hallett's price for prompt delivery to America, 58*l*.; ordinary delivery. 54*l*. Ordinary brands and delivery, 50*l*. to 52*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAY 30.

Anglo-Argentine Bank	5 per cent.
Bahai Gas	16s. per share.
Barnagore Jute	5s. per share.
Barlow and Jones...	10 per cent.
B. Mouris and Sons	5 per cent.
Chicago Packing	15 per cent.
Dundee Shipowners	4 per cent.
Daniel Sykes	8 per cent.
English and Australian Mortgage Bank ...	12 per cent.
Iowa Land, 10*l*. shares	13s. 7½d. per share.
J. C. & J. Field	10 per cent.
Lima Railway	8s. per share.
London and River Plate Bank	15s. per share.
Lombardo-Venetian Railway	4f. per share.
Norwich Union Fire	2*l*. 10s. per share.
Oriental Gas	4 per cent.
Richard Hornsby and Son, Ordinary	3s. 3d. per share.
Richard Hornsby and Son, Preference ...	6 per cent.
S. Bottomley and Brothers	7 per cent.
South Australian Co.	13 per cent.
Trust and Mortgage of Iowa	2s. 6d. per share.
Walter Showell and Sons, Preference... ...	7 per cent.
Walter Showell and Sons, Ordinary	8 per cent.

FAILURE OF A LIVERPOOL STOCKBROKER.—The statement of affairs of George James, stock and share broker, Southport, was filed in the Liverpool Bankruptcy Court yesterday. The net liabilities amount to 85,332*l*. and the assets 1,801*l*.

ANTIOQUIA (FRONTINO) CO., LIMITED.

THE quantity of mineral stamped during the year 1890 was 3,715 tons, which produced 2,607½ ozs. of gold, or an average of 14 dwts. to the ton. The revenue account shows a profit of 1,216*l*. 5s. 9d. This will only permit of a dividend of 5 per cent. on the preference shares, which has already been paid. The causes which have led to the diminution in profit, whereby the full preference dividend cannot be paid have been that the lodes operated upon have been pinched, and that the ore accessible has been poorer in quality. The latest reports, however, speak of an improvement. The new mill in the San Pedro Valley was completed also in Oct. last, but its site being considerably lower than the levels from the hillside it was necessary to have a wire rope incline to lower the mineral from the level to the mill, and such wire rope incline caused some delay in erecting, and was not got into action until Jan. in the present year.

THE KANGARILLA PROPRIETARY SILVER MINES.

THE following is an extract from a report of Mr. Rosewarne, which has been issued to the shareholders. The accumulated mullock on the bottom of north level has been cleaned up and the rails are laid up to main shaft. Fully 450 tons of mullock have been cleaned up, and we are ready to truck the ore, of which there is about 350 tons broken in the level. Generally the ground is very hard, and as soon as practicable we must consider the erection of air-compressing machinery to drive rock-drills to facilitate mining operations. No. 1 winze: Has been started, and the sinking is in average grade ore, yielding 1¼ tons per ft. No. 2 winze: 8 ft. have been sunk, and it is yielding 10 cwt. per ft. In a few feet this will be in a solid body of ore. This winze is being sunk through No. 4 block, and when holed through to adit level will render this block at once available for stoping. No. 3 winze: Will not be started yet, but we have four men cutting a plat to sink winze from. No. 4 winze: The lode in the bottom still continues to look excellent and is yielding 1½ tons of ore per ft. The Mount Barker tunnel when cleared up was 100 ft. long, and we are cross-cutting east with a view of proving the whole width of the lode formation before starting to drive north. At present we have quartz pyrites and spots of lead only.

REPORT OF MEETING.

PINOS ALTOS BULLION CO., LIMITED.

HELD *PRO FORMA*, AND ADJOURNED IN CONSEQUENCE OF NON-RECEIPT OF ACCOUNTS.

A MEETING of the shareholders of this company, convened by the following notice, was held on Thursday, at the Cannon Street Hotel:—"Owing to the non-receipt from the mine of the 1890 accounts, which have been delayed in consequence of the illness of the book-keeper, I am directed to say that it will be impossible to present these to the members during the present month, as prescribed by the company's articles of association. In order, however, to comply with the articles, notice is hereby given, that a *pro formâ* general meeting of the company will be held at the Cannon Street Hotel, on Thursday, the 28th inst., and be adjourned to some day next month, of which due notice will be given." By order, J. B. Palmer, Secretary.

Mr. A. P. Hepburn

presided, and said:—Gentlemen,—There is no business before the meeting on this occasion, owing to the delay in the receipt of the accounts, and in addition to that delay there has been

A FURTHER DELAY,

owing to the assistant manager having left the mine without giving warning. I now beg to move:—"That this meeting, called in conformity with the articles of association, which prescribe that general meetings shall be held in the month of Apl. or May in every year, do stand adjourned in consequence of the non-receipt from the mine of the 1890 accounts, until some day in June or July next, of which due notice will be given."

Mr. R. F. WILKINS seconded the resolution, which was carried.

Mr. HARVEY asked if the chairman could give any information about the mine.

The CHAIRMAN said that he thought it would be better if any shareholder desiring information would call at the office of the company, as when the notice was sent out it was stated that the meeting would only be held *pro forma*, and he thought that to give any information would be unfair to the absent shareholders. He might mention, with regard to the debentures, that the directors had sent circulars; about the responses were not all that they could have hoped, but the shareholders were asked to apply more as a "feeler" than anything else. The last reports from the mine were better than they had been in the immediate past. The first batch of the accounts had been received that morning, and he thought that probably the general meeting would be held about June 25 next.

THE directors of the Lombard Trust Co., Limited, of 39, Lombard Street, E.C., are just issuing the balance of their capital, 25,000*l*. in all, at a premium of 5s. per share on the 1*l*. share. The company was registered in June last, and in spite of the depressing commercial times through which we have been passing, has earned, under contracts that mature within the next four months, over 30 per cent. on its capital. It has recently greatly improved its position by receiving the services of Mr. A. Latimer, one of its directors, and Mr. George V. Sims (as managing director), who was connected for many years with the London and North-Western Railway and with the Northern Pacific Railroad of America, and both of whom bring to the company valuable connections. It is the only trust company, we believe, that pays its ordinary shareholders 15 per cent. before its founders participate in the profits.

THE MONTANA CO., LIMITED.

POSITION AND PROSPECTS OF THE COMPANY.

May 27.—The directors have now the pleasure to communicate to the shareholders extracts from recent letters received from Mr. R. T. Bayliss, conveying the latest information as to the workings of the mine.

EXTRACT FROM MR. R. T. BAYLISS'S LETTER OF APL. 29, 1891.

You will have learned from my cable of the 23rd inst. that I arrived safely at my journey's end, and am pleased to report that I found everything running very smoothly; and Mr. Robinson informs me that matters have gone very satisfactorily during my absence. Proposed changes: As Mr. Robinson preferred to await my arrival before making any changes in the staff and operatiou of the plant, matters have gone on during the past month (Apl.) upon the old lines; but since my return, and in concert with Mr. Robinson, I have decided the changes to be made, and with one or two exceptions they will take effect on May 1, from which date I hope to reduce the expeuditnre down to the point mentioned when in London. You will, of course, understand that there may be many reasons for delaying temporarily some of the alterations, but as stated, the bulk will go into effect on May 1, and the rest will follow as quickly as I find it possible to make them. I have the pleasure to assure you that all the staff have co-operated with me in the changes which it is proposed to introduce.

EXTRACTS FROM MR. R. T. BAYLISS'S LETTER OF MAY 8, 1891.

The Mine: As promised in my last report, I will now give you a detailed description of the most important points now under attack. The Empire lode: The 400-ft. level north has not been advanced during the past month, as Mr. Henley has been making arrangements for the station from which we are sinking the winze below the level. For some distance this drift has been advanced in barren ground, composed of a mixture of quartz and slate, which is not of sufficient value for treatment in the mills. In the course of a few days, however, it is our intention to re-start this drift, and to continue it, in the hope of encountering the ore bodies to the north of our present workings, the existence of which is indicated by the out-crop upon the surface. The intermediate drift in the Empire lode presents a face of ore from 3 ft. to 4 ft. in width, of fairly good grade, but this drift has also been stopped for the past two weeks in order that a connection may be made from the stope below, by which the different grades of ore encountered in this level can be brought to the 400-ft. level. This has become necessary for the reason that in the main shaft there is only one ore shoot, and as we have now to handle both high and low grade ore, as well as waste, it is necessary that we should have these separate channels for conveying this material from the intermediate drift. This connection is now made, and the drift will be re-started in the course of the next two or three days. Mr. Henley has also just started an upraise from the intermediate level, to connect with the Cruse level above, and has encountered a good grade of ore. The main stope of the Empire lode, over the 400-ft. level, has not presented any material change since I left in Feb., and we are extracting from that point a grade of ore similar to that which has been obtained from this stope for the past six months. In the 800-ft. level upon the Empire lode an upraise has been started since I left upon a little body of ore which occurs just near the split in the Drumlummon lode. This upraise is now about 30 ft. above the level, and gives promise of opening up a satisfactory ore body. The grade as sampled in the drift is from $30 to $35 per ton. I have also impressed upon Mr. Robinson and Mr. Henley the importance of sinking the winze from the 400-ft. level with all possible speed, and after discussing the matter with them, it has been decided to commence a new winze near the intersection of the cross-cut with the drift. No. 1 shaft: This shaft is now down about 70 ft. below the 1,400-ft. level, and will be sunk with all possible speed, until the 1,600-ft. level is reached, at which point we are looking for some considerable improvement, basing our opinion upon the improved condition of the 1,400-ft. level. 600-ft. level: An upraise is now being advanced to connect with the Castletown No. 3 in the 500-ft. level, from which we expect to extract some considerable quantity of fairly good grade ore. There is a considerable extent of ground below the 500-ft. level on this shoot which has not yet been touched, and which presents a vein 12 ft. thick, and probably $15 per ton in value. The north face of the 600-ft. level is also being re-started, and we have hopes of encountering some profitable ground in that direction. No. 2 shaft, 1,200-ft. level: The north drift in this level has been advanced 640 ft. from No. 2 shaft without encountering a workable ore body. The face of the drift presents a more favourable appearance than it has done for some considerable time, aud we hope to have some better results to report from future workings. 800-ft. level: An upraise has recently been started in the stope and presents a most satisfactory appearance. It will be remembered that this stope, when first worked, pinched out to almost nothing, but upon going up we find that it is opening out again, and is presenting a good looking ore body, assaying from $16 to $42 per ton, and I think the prospects for further work in this direction are most favourable. 1,000-ft. level: The stope upon the Sampson shoot in this level is now 350 ft. long, and has been worked to a height of 75 ft. above the drift. It shows a decided improvement since I left, and on the whole is yielding a better grade of ore than it has ever done in the past. We are looking to this stope now for a considerable tonnage of fairly good grade ore. The Cruse level: During my abseuce a drift has been run from the southern extremity of the Castletown ore body, and has developed the ore exposed in the engine drift, showing an ore body 80 ft. long and from 8 to 10 ft. in width, which is of a very satisfactory grade. This places at our disposal a considerable reserve of ore in the Cruse level and up to the surface; and as a drift advanced from the Castletown in the No. 2 level for the purpose of intersecting this ore body in depth has just entered it, and proved its existence at that level, we have the probability of a considerable tonnage between the No. 2 and Cruse levels. Generally: Whilst I do not find that any developments have been made during my absence of exceptional importance, I find the mine looking as well as I anticipated, and I still look forward with the very greatest confidence to the developments in the 880-ft. level upon the Empire lode, and upon the further developments in the Drumlummon from the No. 1 shaft, in the 1,600 and lower levels, to yield us large quantities of ore, and to place this company in a better position than it has been for two years past April return: When writing on April 30, I was afraid, from information then in my hands, that the return for that month would be very disappointing, and did not expect it to exceed $64,000; but upou making the clean-up I found the mills had overrun considerably, returning a total of $70,000, which was about what I expected it to be. Working according to the new order of things, I did not consider it necessary to make any detailed explanation at the end of my cable, further than to inform you that the expenses for May would show a very considerable reduction, and be brought down to the estimate I laid before you when in London. I have now completed nearly all the changes which it is proposed to make, and am in hopes that the expenses for this month will be as low, if not a little lower than the sum which I mentioned in my estimate for the average working expenses. The St. Louis lawsuit: Mr. Cullen informed me, the day before yesterday, he did not think there was the slightest probability that the hearing of this case would be reached before the Nov. term of court, even if it came up during that session. Bluebird and Hickey: Since the date of the directors' last report to the shareholders, a valuable discovery of ore has been made in this property. In a letter from Mr. Bayliss, dated Apl. 29, he states that an ore body has been entered for about 30 ft., about 4 ft. wide, and assaying $116 per ton. Remarks: From a perusual of the foregoing extracts the directors are of opinion that notwithstanding the recent low monthly returns, a decidedly hopeful view may be taken of the future prospects of the undertaking. They are, however, convinced that the best and quickest way to secure a return to prosperity is to devote every pound possible to the rapid development of the mines. This must be their primary object, and every other consideration secondary to it. In order to give effect to this policy they have decided to suspend for awhile the payment of dividends and to devote the net earnings to the still more rapid development of the Drumlummon as well as the Bluebird and Hickey Mines—the latter, consequent on the recent important discovery of high grade ore, as reported by Mr. Bayliss. The directors are confident that this decisiou will commend itself to every shareholder.—T. NEAL, Secretary.

SOUTH AFRICAN TRUST AND FINANCE CO., LIMITED.

SUMMARY OF REPORT BY MR. W. Y. CAMPBELL ON VAN RYN PROPERTY.

WE have already expressed the view that Van Ryn shareholders were wise when they asked the South African Trust and Finance Co., Limited, to take up their cause. At that time they were as sheep having no shepherd, but, at all events, they now have a reliable report upon their property and know all about it. As the circular of May 26 remarks, "The shareholders were absolutely in the dark as to the real position." Mr. Campbell, acting on behalf of those shareholders, arrived in Cape Town (where the Van Ryn Co.'s Head Office is) on Jan. 22, and found that at a general meeting of shareholders, held on Jan. 15, 1891, at the Head Office, Cape Town, it had been resolved, owing to the financial state of the company: "That the Van Ryn Gold Mining Co., Limited, be liquidated voluntarily, either absolutely or with the view to re-construction, on such terms as the directors may deem advisable." The company were penniless, and for months the property had been kept up by the bondholders, whose bonds were overduc, and the property in consequence liable to be expropriated. On Mr. Campbell's arrival he obtained a delay of three weeks. The books and documents were investigated from the commencement, and two mining engineers of the South African Trust and Finance Co. proceeded to the mine and reported upon its aspect and the condition of the machinery and other assets. The audit inspection showed that the accounts were in order, and that some 137,000*l.* in cash had been spent by the board of the Van Ryn Co. in or about that company's property. The engineers' report stated that the property was a good one, but that the management had been extravagant aud far from satisfactory, and that of the 138,000*l.* spent, over 100,000*l.* had simply been thrown away, there being nothing to show for this expenditure. Mr. Campbell verified personally the departmental reports, and was forced to the conclusion that the position so far as the shareholders were concerned could not be worse. He had a long fight and at last intimated to the bondholders and the board that if they consented to any scheme which left the old shareholders with nothing, he would impeach the bonds, oppose provisional sentence, and so compel them to an illiquid suit, which would hamper any settlement for six months. This attitude, while beneficial to the old shareholders, could not last long; and when the position was most strained the South African Trust and Fiuance Co., Limited, made the board of bondholders an offer which provided that the liquidators of the Van Ryn Co. would receive 10,000 fully-paid shares of 1*l.* each in a new company, in consideration of the transfer to them of all the assets of the old company free of liability. The South African Trust and Finance Co., Limited, at the same time agreed to buy outright the bonds for which the property had been mortgaged. Protracted negotiations took place, when at length the board and bondholders consented to the scheme of the South African Trust and Finance Co., Limited, and the matter was closed. The position at date is, therefore, that the liquidators will receive 10,000 fully paid up shares of 1*l.* each in a new company, whose capital will be 85,000*l.*, of which 30,000*l.* required for working capital has been guaranteed by the South African Trust and Finance Co., Limited. The debts of the Van Ryn Co., amounting to 39,000*l.*, are extinguished under the arrangement with the South Africau Trust and Finance Co., Limited. The 10,000 shares assigned to the liquidators of the old company will in consequence only be liable to any small claims arising from the costs of liquidation, thus leaving a considerable iutcrest in the new company for division amongst the old shareholders. The shareholders had a valuable and paying investment—which has beeu sadly mismanaged, and that anything at all is forthcoming is solely due to the action of the few shareholders who met at Winchester House on Nov. 19, 1890, and placed their proxies in the hands of the South African Trust aud Finance Co., Limited.

REPORTS OF MEETINGS.

ETHERIDGE UNITED GOLD MINING CO., LIMITED.

A STORMY MEETING RESULTS IN THE RESIGNATION OF THE DIRECTORS AND THE APPOINTMENT OF A COMMITTEE—A VOTE WHICH THE CHAIRMAN SAYS

An extraordinary general meeting was held at Winchester House, Old Broad Street, on Thursday, for the purpose of considering, and, if thought expedient, of passing, resolutions, with or without modification, which the shareholders have received, and of which we published the substance last week.

Col. Malleson

(chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

A MINE THAT WITH CAREFUL WORKING WILL PAY.

The CHAIRMAN: Gentlemen, the resolutions intimate the reason why we have found it necessary to call you together this morning. The capital of the company is exhausted, but we believe we have in the Caledonian an excellent mine, and want funds to work it. We wish you to concur in a scheme for raising that money on principles which are likely to be as satisfactory to you as they are to ourselves. The directors are very large shareholders, and I would here refer to a letter in the Press signed "Weary." The writer of that letter asks pertinent questions regarding the mine and its management, and the prospects it holds out of paying a dividend. I will not take it upon me, in the presence of Mr. John Taylor, who is here this morning, to answer those questions, but that gentlemau has gone thoroughly into the question; and I have no doubt will make a statement regarding the prospects of the mine which will be satisfactory to all reasonable minds. In my belief we have a mine which, with careful working, will pay a dividend, and it is because we believe this that your directors have taken upon themselves the responsibility of proposing a scheme which, while it lessens the capital of the company, will not materially, if at all, lessen your interest in it. It matters not a pin's head whether you call the share of the value of 1*l*. or 5s., so long as the market gives a view in the direction of the lower sum. Before I propose the resolution I should like to inform you that the appointment of new directors will be made by the subscribers to the articles of association; the present directors will only hold office until the statutory meeting, and that then the board will be chosen by the shareholders. It is not our intention to ask you to pay up on application and allotment more than 3d. per share. I thiuk that statement will commend itself to all those shareholders (and they are many) who would decline to pay a large sum upon a property which has not yet been proved. I now move the first resolution, to wind up the company with a view to re-construction.

Mr. ROBERT WALKER, J.P.: I second the motion.

The CHAIRMAN: I will now ask Mr. Taylor to address you.

MR. TAYLOR ENCOURAGES THE SHAREHOLDERS TO PROCEED.

Mr. JOHN TAYLOR, who was loudly applauded, said: Perhaps, gentlemen, it is hardly necessary I should remind you that it is only a few months, not more than half-a-year ago, since my firm becamc associated with the management of this company, and I am not, therefore, as you will all be aware, in a position to deal in any way with its past history, nor if I were in that position would it be desirable that I should in any way touch upon it. It is of the present condition, the prospect, and the probability of doing any good with it in the future that I shall only speak. (Hear, hear.) Now, the mine which the company is at preseut working is called the "Caledonian No. 1 South." This mine was taken up by Mr. Ferguson in consequence of the very satisfactory results which our neighbour, Mr. Princc, and the gentlemen associated with him, had obtained, and were obtaining, in the adjoining properties, called the Caledonian Mine. In Mr. Prince's mine the workings are very shallow. He has no pumping machinery, and they, therefore, only extend to the water-level. I believe we may take that water level to be something like 100 ft. down, or very little more, and our iuformation (I believe reliable) is that from that small mine about 12,000 ozs. of gold have been extracted. Now, Mr. Ferguson, in his letters to the directors for months past—probably for 12 months—has frequently alluded to this adjoining property, and has expressed the high opinion he holds of it, the good credit it has in the colony as a sound and promising minc, and as one which ought to be extremely valuable when further development has taken place, and when it is provided with the necessary pumping and other appliances. He has, therefore, strongly recommended the securing of the lease of this adjoining property, No. 1 South, and so it was takeu up. The first letter from which I will read you an extract is dated Aug. 23.

"Caledonian No. 1 South Mine: This is the new lease which I took up. The shaft we are putting down is withiu 50 ft. of where good payable ore was got on the adjoining lease from a very large reef which has always been payable, and has been worked for a length of over 500 ft. and down to the water level, aud averaging about 3 ozs. per ton."

The reef has considerable width, and, as you know, can be more cheaply worked than if it were small.

On Sept. 30 he says:—

"I have been down through the underground workings of the adjoining mine, and the workings are very large, and all taken out down to the water level. This is a very good sign of its having been a payable one."

On Dec. 24 he says:—

"We have now cross-cut through the reef in No. 1 shaft at 80 ft. Thc reef here is 6 ft. in thickness of mundic ore. It looks equally as good ore as that from the adjoiuing mine belonging to Messrs. Prince and party, which has crushcd from 1 oz. to 4 ozs. per ton."

Two or three shafts have been sunk upon this new property, and according to all our latest advices Prospect shaft is now dowu 130 ft.; the cross-cut is being driven at that depth, and we are told that any day we may receive information of the lode having been intersected. Now, I think, gentlemen, as far as we can judge there is no doubt that the mine, immediately over the boundary, within a very few feet of us, is a good one. You have expended a considerable amount of capital, and the result is that you have now in this one mine (the others, as you are aware, have been for some time abandoned)

PROSPECTS WHICH CERTAINLY ARE VERY FAVOURABLE.

It is provided with what Mr. Prince's mine has not, and that is, pumping machinery, and there is also (which Mr. Prince's mine has not) a capital mill, all in full working order. The development work so far has been extremely limited in extent, but we may certainly look, after the record of what has been done over the boundary, very hopefully for the results of the further continuance of that exploratory work, and within the immediate future. This is not one of those cases where, after subscribing money, you would have to wait for years to know the result of the expenditure, because the cross-cut we shall have information about almost immediately, and the work of sinking the shaft deeper would be a question of a few months only, and not of a lengthened period. In my opinion it would be unwise, unbusiness-like—perhaps it would not be too strong a word to use to say that it would be suicidal—on your part to abandon the works at this particular stage. If I were putting before you the suggestion that you should expend an enormous sum of money, spread over a long period, before you came to any definite conclusion as to whether you have a property of value or not, I think you might look at it in a different way, but I must certainly say I shall strongly advise the proprietors to support this scheme, or any modification of it, were such desired (although that would cause delay), for the re-construction of the company, and for the provision of a sufficient amount of capital to continue the operations, so as to show you whether you have really a property which will recoup you or not. (Loud cheers.)

AN AMENDMENT.

Mr. EWER: I move this amendment, that the word "is" be struck out, and the words "may be" substituted; that all words after "thereto" be omitted and the following words added: "A committee of shareholders be appointed to investigate the position of the company and to report and advise the best methods of terminating the present crisis." The amended resolution would read thus: "That it may be desirable to re-construct the company, and that with a view thereto a committee of shareholders be appointed to investigate its position and to report and advise the best methods of terminating the present crisis." This is a very important crisis in the history of this company, and it behoves us to proceed with caution. You will all agree with me that the past management has not been satisfactory, and I am sorry to have to say so in the presence of the directors. (Hear, hear.) We are also agreed that whatever form of life we give to this company it will be essential to exercise the strictest economy, and I do uot hesitate to say that we have lost confidence in the direction. It would be insane to suppose that a body of gentlemen who have takeu 1,000*l*. a year from the company, and refused at the last meeting to reduce their fees, are those to whom we should entrust the future management. I dare say you may be told that it is unwise to swop horses while you are crossing the stream; but if in crossing a stream you find yourselves upon the back of a discredited animal, do not go down with him, but let him go down by himself, and you strike out for the shore. It is essential that we appoint a committee. We want to know what is the best method of putting this company on a sound financial basis. It may be there are other methods that will suggest themselves to the committee, and which they may suggest to us, by which we can avoid the expensive plan of re-construction. We do not want to spend our money unnecessarily. But if we do it, let it be with the prospect of earning something in the future for ourselves. (Cheers.)

Mr. HAMILTON: I second the motion, and would have proposed one myself of a more stringent character—that the company be wound up at once, but will support Mr. Ewer's modified proposal. We have listened to the half-hearted explanation which Mr. Taylor has given us, and cannot help comparing that with what he said on the former explanation. Then Hope told a brilliant tale. (Cries of "No.") Six months have elapsed, and nothing has come of that beautiful tale. The chairman said there was a good look out, and we should know more in six months, but since then our remaining money has gone, and we are now asked for more. I think it is very likely, if the committee be appointed, that some tales will come out which will render it incumbent upon the directors to explain still further certain matters. I am not a large shareholder, and am only speaking ou a question of principle. I hold 74 shares, bought in 1886, at an average of 13s. 6d. Directly the re-construction plan became known the shares fell to 1½d.—a pretty good idea of what the public and the shareholders thought of the proposed scheme. Are we to trust the directors with any more of our money? (No.) I think that auswer renders it unnecessary for me to further waste your time.

MR. HAMILTON CORRECTED.

Mr. JOHN TAYLOR: I must be allowed to correct one statement Mr. Hamilton has made, that I put anything before you at the meeting Dec. 22 that I have not followed up to-day. (Cheers.)

Mr. HAMILTON: I had no intention of imputing anything to you.

Mr. TAYLOR: You have spoken of the statement I have made to-day as half-hearted, but it was not my intention to make it so, for the opinion I expressed was that you had good prospects, and such as warranted me in strongly advising you to pursue operations. While you have been speaking, I have read what I actually stated, and there is nothing I then said that I have not practically repeated to-day. (Cheers.) I made no statement whatever that you can truly call of a more favourable character than the one I have made to-day, and here it is for anyone to look at who chooses. There are many gentlemen present who know that I am exceedingly careful in my statements, and that I will not put forward one that anybody can afterwards justly describe as either wild or exaggerated. (Loud cheers.)

Mr. HAMILTON: You are quite right, and my remark was not intended to apply to you, but to the chairman's speech six months ago.

Mr. TAYLOR: You distinctly meutioned me by name. (Hear, hear.)

Mr. HAMILTON: I did bring in your name, but only with regard to your statement to-day.

A SUGGESTION.

Mr. THORN: I am an original shareholder in this aud the other compauies in which I hold 4,000 shares, not bought at the wretched price of 7½d., but principally as an original shareholder. These amalgamations have been nothing but a blind to hinder remarks, and to prevent research into the original formation of the company. The losses have been 13,000*l.* in one year, and 20,000*l.* in another, and I think it nigh time the shareholders should decide to take the management out of present hands. The directors were quite entitled legally to take their fees, but whether it was desirable in the position in which the company was found was quite another matter. I go entirely with the mover of the amendment, but think it hardly went far enough, because you may require, in addition, official assistance. I hope the amendment will be altered in this sense.

Mr. EWER: I will add the following words:—"And that such committee shall have full power to examine all books and papers, and employ professional assistance."

AN APPEAL FOR A HEARING.

The CHAIRMAN: We have listened with the greatest atteution to the remarks of the three gentlemen who have addressed you, and as a body of English gentlemen, I trust we will receive from you the same courtesy and fair play that we have extended to previous speakers. The only result of carrying the motion which has been brought forward would be that the company would collapse for ever. (Uproar.) The fact is, it is absolutely necessary for the maintenance of our property out there that we should send monthly remittances of at least 400*l.*, and this enquiry, if it takes place, would stop the sending out of that money, and would render it impossible unless you find it out of your own pockets to keep the mines. (Uproar.) I must beg you to have the courtesy to listen to me. (Cheers.) I have listened with great pains to Mr. Ewer's remarks, inasmuch as they have endeavoured to make a difference between the gentlemen on this side of the table and on that. (Hear, hear.) Now, if this investigation were to take place the first thing the committee would find would be that there are no shareholders in the company who have put so much money into it when the shares were at 1*l.* each as the five gentlemen who sit here. I, for one, put 2,000*l.* into this company, aud I am anxious that that amount should not be altogether lost, but I am quite sure it will be lost if the amendment be carried. (Hcar, hear, and cheers.) We have made a very moderate proposal. We do not ask you to subscribe a large sum, or to continue your confidence in us. I am asked about fees, and it is perfectly true Mr. Thorn made an appeal to the directors not to draw their fees, and what are the facts? These gentlemen have spoken to you as if we had drawn our fees. We have drawn no fees for our work in the current year. (Cheers.) We have worked for nothing. (Cheers.) We have lost our money, and when we found the mine in the lowest possible state, we placed it in the hands of Messrs. John Taylor and Sons, hoping their experience would enable us to put it on a morc substantial footing, and I am bouud to say we have received the greatest assistance from them, aud am confideut that if you listened to the admirable advice which was given to you by Mr. John Taylor, and consent to subscribe that 3d. per share, you will have no reason to repent of acceding to our proposals this morning. (Cheers.) A great deal has beeu said by the gentleman who addressed you with so much eloquence aud fervour of the want of confidence in this board. It is not in the power of any body of gentlemen in the world to command success—(cheers) but I assure you we have done our best to deserve it. We have given our best energies to the development of the mine, and do not ask you for any further confidence. As I told you in my opening remarks, it will devolve upon you to choose a new board, and I only hope they will bring this concern to a successful issue. I believe they will if they give to it the saue energy and devotion that we have. (Cheers.) No one regrets more than we do our non-success, but we have done our best, and having thoroughly examiued the situation are absolutely confident that the ouly means of putting this mine on a paying footing again is to adopt the proposal which I have suggested.

Mr. S. A. BIRD: This company from the beginning has been a success, but only a success for the promoters, and its past history is weighing heavily upon it. To call iu the Messrs. Taylor when only 101*l.* was in the till was not to give those gentlemeu a fair chance to do anything with the property. For what could anyone do with such a sum as that, and such a property as this? (Cheers.) I think we ought to be careful to separate Messrs. John Taylor and Sons from the past management when we make strictures upon the position in which we now find ourselves. We must be very careful whom we appoint as members of this committee, because, if we do not have independent men, our last state will, if possible, be worse than our first.

AN ASSERTION WHICH SHAREHOLDERS CONDEMN.

Mr. HAMILTON: The interest of the Messrs. Taylor is only to keep the mine going and get more money out of our pockets. (Loud cries of "No," aud "Withdraw.") They want us to find more money, and that is what we object to do at present. As to the directors' holding, they are bound to have their qualification, but were did they get the money from? (Uproar.)

A SHAREHOLDER—who refused his name—addressed the meeting in support of the amendment.

Mr. CAMPBELL: If we do anything rashly we shall only damage ourselves. We have heard eloquent speeches from small shareholders, and perhaps you will listen to a few words from one like myself, who holds something like 16,000 shares.

Mr. HAMILTON: What did you pay for them?

10,000*l.* IN THE COMPANY.

Mr. CAMPBELL: Over 10,000*l.*, and I paid 2*l.* premium for some of my shares, so that I think I have a right to speak. (Cheers.) I think we should make a distinction betweeu the past, the present, and the future. I quite agree that we should have a committee, but not that you should mix it up with re-construction. The Messrs. Taylor have just come into the company, and they were pressed very hard by friends of theirs to take the management. They refused for a time, until they got reports from their own people on the other side, who told them they believed the mine was worth working. When such a firm interests itself in our affairs I think we ought to listen to the advice they give. (Loud cheers.) It is only a question of a comparatively small assessment, and I think we should pay it. I would certainly do so myself to the extent of 1s. on my 16,000 shares, and I would take more than my proportion if any shares were left. We should start the new company to-day, and as the Messrs. Taylor will have the management they will know how the money is spent, and direct future operations. We can also have a committee for the past, but if we mix up the two things there is a great fear that the property will pass from our hands. A committee will take time to investigate, but we can re-construct, or take the first step towards it, to-day. The chairman and the board are perfectly willing to resign at the first meeting.

The CHAIRMAN: The present directors are quite ready to vacate their offices as soou as you pass the confirmatory resolution, and will only retain it till then for the convenience of the shareholders. (Cheers.)

Mr. CAMPBELL: I think my proposition not an unfair one. I quite agree with what old shareholders say, but disappointment in the past is no reason why we should throw away the little we have left. I think we should put reliauce in the Messrs. Taylor, and uot treat them as though they had auything to do with the past. (Hear, hear.

Mr. EWER: I agree with Mr. Campbell as to the need of caution, and that it will be necessary to distinguish between the two functions of this committee—enquiry into the past, and consideration of the present. Their first duty will be to devise means to extricate the company from its present difficult position, which would only require a week or a fortnight, and then they would be able to convene a meeting and lay their report before the shareholders. After that they could go into the past history of the company. I am told the gentleman who has just addressed us was the official broker of one of the mines conrected with this group.

Mr. CAMPBELL: I agree with you that the committee should report as early as possible, and even if we pass this resolutiou to-day we do not bind ourselves, as it is not confirmed.

A SHAREHOLDER: The feeling of the meeting is one of indignation and anger, but it is most unjust for any shareholder to have said a word derogatory to the Messrs. Taylor, who have had nothing to do with the company's past. (Loud cheers.)

Mr. RANKIN: I hold 1,900 shares, and am sorry to confess I was one of the fools who gave over 2*l.* for some of my shares. I have lost heavily by these companies, and came to propose that the present board should be removed from office, and to support and even to propose compulsory liquidation. I was in Queensland for several mouths recently, and found that the opinion of Etheridge is very small. We are asked blindly to wind up and re-construct, but the company should be put into the hands of Mr. Stewart, the Official Receiver. Let the committee consist of five, and let it be composed of men above suspicion, for otherwise it will be a delusion. I was a member of a committee in another mine to which members were added afterwards who did not represent the shareholders' interests, and the views of the independent members were swamped. If you pass the resolution the company will go into liquidation; it will then be in the hands of the liquidator, and the committee will be told that they have no right to look at any books whatever. The chairman has stated that he would not consent to hold office if the shareholders had no confidence in him, and I hold him to his word, though I do not think we can ask them to resign to-day.

SOLICITOR'S POSITION.

Mr. DALE (Hillyard, Dale, and Newman), solicitor to the company: It is not actually correct to say, as it has been said, that I am merely solicitor to a company which is not already in existence. I was instructed by the board, on behalf of this present company, to advise them as to the preparation of this scheme of re-construction, and am the solicitor for this company ouly. There has been made a suggestion as to the feasability of uniting the appointment of a committee of investigation with the approval by the meeting of this special resolution; but the latter is no resolution until it has been confirmed at a secoud meeting, which will have to be called. No opposition being offered from this side of the table, it is competent for you at this meeting, having passed this special resolution by a separate one, to appoiut a committee and to report, which they could do to the confirmatory meeting.

The CHAIRMAN then put the amendment to the meeting, and declared it carried by the votes of those present.

Mr. HAMILTON: I propose that the directors be requested to resign.

A VOICE: Will the Messrs. Taylor take the management during the time that there are no directors?

Mr. TAYLOR: I think we must have time to consider this.

Mr. CAMPBELL demanded a poll, but afterwards did not press it.

Mr. EWER: I second Mr. Hamilton's motion.

DIRECTORS RESIGN.

The CHAIRMAN: The directors resigu office. You have passed a vote which everybody in this room will bitterly regret. (Hear, hear.)

The following names were then proposed, and carried, as members of the committee:—Messrs. Rankin, Goddard, Ewer, Cæsar Cohen and Dimant.

Mr. TAYLOR: You will have to give some instructions with regard to the future conduct of the business. Your directors have resigned, and I have no legal authority to cousult. We were formally appointed managers, and your secretary was appointed at the same time, and we must have instructions from some properly authorised body. As far as our position is concerned, only one gentleman has made any inference at all uupleasant to me and to my firm.

Mr. HAMILTON: It was not intentional.

MR. HAMILTON'S STATEMENT REPUDIATED.

Mr. TAYLOR: You inferred that for the sake of securing our salaries we would recommeud the continuance of operations. (Hear, hear.) I hopc we stand too well in the City of London for any person, except the gentleman in question, to believe such a thing possible. (Great applause.) I hopc the gentleman who drew that inference is alone in his view. (Cries of "He is." I cannot give you any assurance that this company is going to be a success, but the prospects are such as—did the mine belong to me—I would not abandon it, but the question remaius—what are to be the instructions to your managers and secretary, aud who is to give them? We do

not want to go away from this room without knowing what the proprietors as a body desire as to the future.

Mr. EWER: I would move: "That Messrs. Taylor and Sons be instructed to continue their management of the mine until further instructions from the committee, and this company holds them free from all "indebtedness," and that the present secretary be requested to continue his office until the committee are able to report."

The motion was seconded and agreed to.

Mr. TAYLOR: Another remittance will be necessary about June 5 or June 6.

A SHAREHOLDER: What are the calls unpaid?

The CHAIRMAN: We have no cash at the bank; there is 10,935*l.* due on calls' of which 1,958*l.* are estimated as recoverable, and 2,955*l.* are doubtful, aud 6,022*l.* bad.

A cordial vote of thanks to the Messrs. Taylor for their services closed the business.

NEW CALIFORNIA, LIMITED.

IMPORTANT DEVELOPMENTS IN THE EASTERN GROUND—THE NEW CLAIMS SHOW PROMISING INDICATIONS—SINKING THE SHAFT—BRIGHT OUTLOOK—SPEECH BY MR. ALFRED RICKARD, THE MANAGER.

THE ordinary general meeting of the shareholders of this company was held at Winchester House, London, on Thursday.

H. T. Walker, Esq.

(chairman of the company), presided.

Mr. W. H. ROWE (secretary) read the notice convening the meeting, and also the minutes of the previous meeting, which were approved aud signed.

A CLEAR EXPLANATORY STATEMENT.

The CHAIRMAN: Gentlemen, before moving the adoption of the report, I take it that you wish me to make a few remarks in regard to the reports and accounts as presented to you. I rather feel that some of the shareholders will be a little disappointed at not receiving a divideud for the year ending 1890; but you will recollect, gentlemen, that at the last meeting we had some considerable discussion as to the closing of the development account, and it was then decided that that account should be practically closed. The directors were of the opinion that the account should be closed; hence you will find in the accounts that we have been forced to debit our revenue account with the sum of 4,795*l.* in respect of development, which in the ordinary course of thiugs would have really gone to capital account within a very small sum. That is one reason why you do not get a dividend on these accounts. Further, it has been undoubtedly the policy of the directors to so work this mine that we might have a lastiug revenue from it rather than spasmodic spurts. The sinking of the shaft, therefore, has cost us a large amount, and the results, which I shall refer to presently, have certainly justified the policy which your directors have pursued, inasmuch as our manager, who is present here to-day, estimates that having sunk our shaft down to the depth of 2,200 ft., we have got enough

ORE PRACTICALLY IN SIGHT

to give us a supply for three years from that quarter alone. (Cheers.) One point should be borne in mind with regard to the output of this mine, and that is that it is what you would call a variable miue. The ore is not consistent in value; at times it may run as high as 6 oz. to the ton and it may then fall to as many pennyweights, so that you will see that it is rather difficult to gauge any actual result that we are going to get from month to month. Like all mines, I presume there is a certain amount of vacillation in the value of the ore that we can get to pass through our mill. You see this map here (pointing to the plan).

SEVEN MILES OF LEVELS.

The various levels there, measured and put together, would give an extent of seven miles in levels; so that you can understand that there is a great amount of work being carried through with regard to the California itself, and when we come to extend our cross-cuts on the east ground, we can hardly tell what the measurement will arrive at. I simply mention that because it certainly must prove that we have a mine there, and all who are connected with California know that we have got a large amount out of it. You will observe by the balance sheet that we have paid off 1,500*l.* of debentures. We decided to do that owiug to the fact that our auditor would insist upon a certain amount of our earnings for the year 1889 beiug placed to reserve fund to provide for the debentures; and rather than keep the money in our coffers, or at the bank, we thought we would redeem some of the debentures, thereby saving the premium 10 per cent. which was payable on theu, and also the interest as long as they ran, which was a considerable amouut and worth saving. The next matter I have to refer to is the revenue account. The revenue account for the year 1890 is, in comparison, very much the same as that of 1889. Certaiuly there is slight falling off, but that is owing really to the lower grade ore that we have been working during the past year.

A FAVOURABLE COMPARISON.

In the year 1889 we put out 11,000 tons, as against 10,471 tons for 1890; and the average assay of the ore was $11.26, as against $10.62. That accounts for the slight falling off that appears in the revenue account. The actual revenue for the year is 24,716*l.* In the profit and loss account there is very little for me to refer to. I have had my attention called to the fact that there is a slight increase in the directors' fees. That is accouuted for in this way. The actual amount due to the directors is 750*l.* a year. For the year 1889 there was a sum of 25*l.* not claimed by one gentleman, and 25*l.* was retained on account of another gentleman. That would make it 700*l.* The latter sum, however, was paid during the year 1890, which makes the amount 775*l.* It is really a matter of accouut, but I thought it better to refer to it, as I have had letters from one or two shareholders calling my attention to it. Next year that amount will be reduced, owing to the fact of our number being six instead of seven. The items for printing and stationery and postages and telegrams are a little heavier than they were in the previous year; that is attributable to the fact that we send you every month the monthly output, which costs between 30*l.* and 40*l.* So far as the accounts are concerned, I think that is all I have to refer to. I have no doubt you have read the manager's annual report, and when I say that that contains the absolute history of the mine up to the present time, I think it is unnecessary for me to go into the details of the working.

THE FUTURE OF THE MINE.

Now, gentlemen, the point that we have to consider is the future of the mine. The sinking of the shaft is absolutely necessary, so that we may have some work in the future to go on with. The directors have had in view the necessity of placing the mine on a sound and businesslike footing; and the results, as I stated just now, of the sinking of the shaft, have certainly confirmed the policy that they have pursued. Up to the present the monthly returns for the current year have been fairly good; but when we have driven levels on the 2,200 and lower levels, we should practically have the whole of this ground to explore for the next two or three years, and as we have gone down the value of the ore has materially increased. (Hear, hear.) Mr. Rickard at one time was quite enthusiastic about the richness of the ore, and telegraphed to that effect. The value, I believe, keeps up fairly well. Mr. Rickard is here, so that you can ask him any questions you like with regard to that. But certainly from the appearance of the mine at the present moment, it never was in a better position than it now occupies; and if the workings should turn out as is predicted, there is no reason to believe but that we shall be in the same position as we were in during the years 1883 and 1884 when we were paying quarterly 1s. dividends. (Cheers.) I think we have a very fair prospect of arriving at that position within a very few months of the present time.

LATEST BY CABLE.

Mr. Rickard has handed me a telegram from the manager in charge with regard to the sinking of this important shaft, and I will read it to you because it is really very satisfactory:—"Opening up 2,200 splendidly." That means that at the bottom of the shaft, east and west, the ore is of the same value as Mr. Rickard found it himself when he was there, which is very satisfactory. (Hear, hear.) There is another point that I might mention, that is that our existing machinery will help us, and is quite good enough to work the lower depths that we have gone to, so that certainly for three years we shall not be called upon to spend auy money on the improvement of machinery.

THE NEW CLAIMS COMING INTO PROMINENCE.

There is another matter still that we have not taken into account yet, and that is the new claims that we purchased, the Governor Adams and the Rhode Island. True, the work upon those properties has been of rather a limited character, but that is entirely owing to the state of our finances. We were not strong enough to attack the sinking of the shaft and the new properties in a wholesale manner, so that we have had to restrict our operations there, but the results from what have been done have been most excellent. It has been ascertained beyond doubt that the new claims cover at least 600 ft. of ground to the east, which is practically virgin ground; and there is one circumstance in connection with this new ground that I might mention. Mr. Rickard informs me that quite to the east of us there is a company working, quite recently formed, turning out from 800 ozs. to 1,000 ozs. of gold per month, and he is of opinion that, as the ore bodies pitch generally to the westward, they must come in on our new claims. Therefore, we should have there, as I stated just now, about 600 ft. of virgin ground. The results obtained from what work we have done on the new properties have been satisfactory; one lode I might refer to particularly, the "B" lode, and the 1,500 south vein, which have yielded fair amounts of gold. We have not worked them in vain, and we have taken something out of them.

CAUSE FOR CONGRATULATION.

Gentlemen, taking the whole view of things as we stand at the present moment, I think that we may fairly congratulate ourselves upon the fact of having certainly good prospects in the future, and I think that with Mr. Rickard still at the head of affairs, we shall be rewarded for having to forego our dividend for the past year.

DEATH OF MR. ELLIOTT.

There is one paragraph in the report I should like to refer to before I close, and that is in reference to the death of Mr. Elliott. Mr. Elliott was a gentleman who sat on this board for a number of years, and he always held the view that with proper development and proper sinking we would again come across that rich ore body which we had in the 1,500-ft. level. It is satisfactory to know that Mr. Elliott's opinions up to the present moment, certainly, have been confirmed. It is with great regret that the directors lose his services, for, undoubtedly, he rendered us good service for some time. We do not propose to fill up the vacancy, and, as I stated just now, that will decrease the expenditure in London. The chairman then formally moved the adoption of the report and accouuts.

Major J. W. M. COTTON (director): I have very much pleasure in seconding the report, and I can only express the great regret that we as a board feel at poor Mr. Elliott's decease.

QUESTIONS.

Col. FLUDYER: I notice that the sum of money in hand on Dec. 31, 1890, was 3,828*l.*—is that about the amount now?

The CHAIRMAN: I believe it is.

A SHAREHOLDER: Will you explain how it is that the amount of debentures is stated at 7,000*l.*, whereas in last year's balance-sheet it was 6,600*l.*?

The CHAIRMAN: There were 400*l.* of debentures issued in excess of the amount appearing iu the last balance-sheet. With regard to the debentures—the interest for the present year will be less than in 1890.

Col. FLUDYER: You mentioned a mine as being worked to the east of our sett. Is that on the same lode as our shaft is being sunk on?

The CHAIRMAN: I will ask Mr. Rickard to address a few words to you with regard to the working of the mine. He is better able to do it than I am. As he was over here for a short vacation, we embraced the opportunity of getting him to meet you. I will now put the motion for the adoption of the report and accouuts.

The motion was carried unanimously.

VIEWS OF THE MANAGER.

Mr. ALFRED RICKARD: Mr. Chairman and gentlemen, I will first answer the question as to the mine lying to the east of the California sett. This mine is known locally as the San Juan, and was worked for several years on a very small scale, on what is familiarly known as the tribute system. Eventually a local party bought it and opened it up on a very good scale, and I have there seen what is our great and main leader—the porphyry dyke, or in Cornish terms, the elvan dyke, which goes through the whole length and breadth of our workings, and which is no doubt the mother of the lode. Now, the fact of this porphyry dyke being in San Juan, and being of the same nature as that in our mine, and only a few hundred feet distant, and in the same line as to course and dip, we may therefore conclude that it is the same lode. They have then our lode and also the lodes known as the Badger State and the Gardiner. It is the junction of all these lodes at which they are working, and that mine to-day is producing very largely. I can tell about the results, because we are milling their ore at our mill, and a large share of the 15,000 tons which we worked as custom ore came from that particular mine.

THE EASTERN GROUND.

Beginning, therefore, at that point I may say that the stopes which are necessarily worked on the ore ground, and which follow the ore, and the ore only—these stopes have a general tendency westwards, and by following out our main lode along this elvan course, or porphyry dyke, we must necessarily come to join the San Juan workings, and in doing so it is my opinion that we shall get some part of that ore body which is yielding so much to them. That increases very materially the prospects and value of this eastern ground, which is covered by those new claims to which the chairman referred. Our workings during the year 1890 have been very largely confined to the western ground. The work we did in the previous years eastwards—notably from the 1,400 all the way down—did not result in the discovery of any profitable ore, although the vein was large, strong and well-defined, and, in every respect, a vein which a miner would follow expecting to find ore. This eastern grouud has been practically abandoned since we left the 1,500. In previous years the workings down to the 1,500, and the shaft in going down to that depth, had ore nearly all the way, and the shaft was situated in the centre of the ore-ground; so that there was very little drifting to be done to get at the ore and to mine, and return it. But in later years the ore-ground has been from the west; and in the 1,900 ore-ground, from which we have had most of our returns, the yield for the 80 ft., which it comprises in height, was $138,000. This ore ground is 600 ft. to the west of the shaft, and, therefore, the drifting to get to it has been a long and costly thing to accomplish.

THE 2,000 FT.-LEVEL.

Our 2,000-ft. level has a further distance to go; this is evident from the pitch of the ore, which is towards the west. In that 2,000-ft. level we have already extended some 850 ft. up to the present date. We have found some good ore from time to time, but nothing sufficiently rich to induce me to stop the drifting in order to start stoping and make returns from it, my object being to get into the mass of the ore as quickly as possible, so as to have a good face of ground to work upon. We have, however, made a connection, or winze, from the 1,900-ft. level at the edge of the ore-body, and have got good ore here. We are now working this ore-ground from that point until we can get in here (pointing to the plan), and make further connections and block out the ground for stoping. The prospects are very good in that direction. The ore in places is 10 ft. and 12 ft. wide, and in others 2 ft. wide. Our prospects in this direction—well, they are more than prospects; I consider that the outlook has a great deal of certainty about it. I cannot speak of it as ore-ground that I have blocked out, measured and sampled; but I give you my opinion, as a mining man, after having followed the course of these workings for the past eight or nine years, and during the past year more particularly.

AN IMPORTANT POINT.

The next point to which I would direct your attention, and which certainly is of more importance than any other, is the shaft. The shaft, when I saw it last, at the end of Apl., was in a magnificent ore-body. The vein was quite 4 ft. wide. I took a sample of it for 2 ft., which was the richer part of it, and that gave 6½ ozs. to the ton. (Hear, hear.) Now, I do not want to mislead you, either as to the value or the extent of that ore-body — I cannot tell how far it goes east and west, nor can I tell how far this rich ore vein is going to extend in the lode; but I give you the fact as I found it myself, and it can be verified at any time. The shaft sinking from the 1,500-ft. level was in a strong vein, well-defined, but yielding no ore that could be turned to profit in stoping. This shaft followed the lode down all the way through the 1,600, 1,700, 1,800, 1,900, and 2,000-ft. levels successively. Then, when we were about to complete the sinking at 2,000 ft. to make room for storing the water and hoisting the ore, we came across some very good ore, some samples of which—or rather specimen blocks—yielded about 8 ozs. of gold to the ton. (Hear, hear.) The bulk of it was fair-grade milling ore. On resuming sinking, we have a continuous vein from 2,050 ft. down to the present depth of 2,200 ft.—that is, 150 ft. of ore, varying from a few pennyweights up to 6 ozs. to the ton. This ore-ground we have followed to the extent we have done with the view of getting larger scope for our operations. Hitherto our scope has been rather limited, and to that is due the great fluctuations which you have not failed to notice in the returns throughout these past years.

THE RICH CALIFORNIA ORE-BODY AGAIN.

Now, having this ore-ground at this depth and on the California lode, I am of opinion—and I think that it can be very reasonably held—that we have again come upon the real California ore-body—that ore-body which in times past yielded so largely, and in the first three years of the first company gave something like 40,000*l*. profit. (Cheers.) My opinion is that we have come upon that ore-ground, and we have now about 150 ft. of it. The latest news from the mine is that the shaft being finished, they are extending their drifts upon it, and it is "looking spendid"—(cheers)—that is to say it is looking as good as when I saw it. Therefore the outlook, so far as the California property is concerned, is that we have the Hidden Treasure ore course in the west ground, and we have a new one in the east; that we shall not have occasion to sink the shaft again for some time, and that in this block of ground (pointing to the plan), which is 54 fms. high, from the 1,900 downwards, we have all that ground to work upon, and from it I certainly expect good returns. The returns will, of course, depend upon what we find as we go along, but

THE CALIFORNIA LODE IS NO SMALL VEIN;

it is a strong fissue—one of those lodes which has never shown any indication of falling off or being pinched out or of going out in any way. Throughout the whole length and breadth of our workings, we have always found this lode to be strong and profitable, although there have been of course the variations which are incidental to all mining enterprises. Therefore, I think that our prospects are that we shall have very shortly—as soon as we have got these levels out sufficiently far to begin stoping—very considerable returns; and if my idea is correct as to this ore ground being a repetition of the old California, we may certainly congratulate ourselves upon having a very good thing indeed. (Cheers.) I do not know that it is necessary for me to say anything about the new claims. The chairman has told you all that I could tell you, and in my report I have endeavoured to put before you all the facts that I have to mention with regard to them. One thing, however, is very important in connection with them, and that is this eastern ground and the greater scope which it gives us for further operations when we are ready to do it; but for the present the deeper workings are the most interesting. (Applause.)

Mr. MILLER: You say you have 150 ft. of virgin ground. What is the assay value of that?

Mr. RICHARD: It varies from a few pennyweights up to 6½ ozs. to the ton.

Mr. MILLER: Will it average 1½ ozs. all round?

Mr. RICKARD: No; that would be too rich for us altogether. During the past year our average was $10.62 to the ton, but our average is about $12, and with that we can make

A VERY GOOD PROFIT.

If we can get $12 ore we shall make $4 or $5 profit. (Cheers.)

The CHAIRMAN: After the information Mr. Rickard has given us, we certainly ought to congratulate ourselves upon that part of the business.

Col. FLUDYER: The mine is now, I understand, more than 300 fms. deep. Are you satisfied that your drawing appliances are ample for so deep a mine; or would you, if the funds were available, prefer to either strengthen the machinery, or have a regular skip and improved machinery for drawing?

Mr. RICKARD: As an engineer, I must say that the method of hoisting by buckets is certainly not the best, but we have a very

EXCELLENT PLANT AT THE SURFACE.

The hoisting plant, consisting of an engine, boilers, ropes, &c., are as good as they need be, and when it comes to a question of sinking the shaft some time later—which, of course, will be decided by the directors—it will be better and safer to change the bucket for a cage, or a skip, as the case may be. That has yet to be decided. The engines and boilers are of sufficient power to sink the mine 1,000 ft. deeper—(hear, hear)—and the cost of the change that may be necessary in the reel where the rope is wound up, and of putting in skips, will not be over 2,000*l*. or 3,000*l*. That outlay, however, the company should certainly be able to spare out of the results we expect to get from the ground we have now opened out.

RE-ELECTION OF DIRECTORS.

The CHAIRMAN: I beg to propose the re-election of Messrs. Thompson and Heiron. These two gentlemen, I can assure you, are always at their post. They take the deepest interest in the working of the mine, and sitting as I do at the board with them week after week I think that you cannot do better than re-elect them.

Major COTTON: I have much pleasure in seconding that, and in also stating how valuable their services have been to the company in the past.

The motion was carried unanimously.

Mr. C. H. THOMPSON: I thank you very heartily for the confidence you have reposed in me, and it will be my pleasure to pay great attention to the affairs of the company. I hope to see you one of these days in receipt of regular dividends from the mine.

Mr. ARTHUR HEIRON: I also beg to thank you, gentlemen. You placed me here three years ago and I promised to do my best for you. The value of your mine to-day is in my judgment, intrinsically far greater than it has been for many years past. (Cheers.)

Col. GREEN proposed the re-election of Mr. Leslie as auditor.

Mr. THOMPSON seconded, and the motion was carried.

Mr. LESLIE briefly returned thanks.

MONTHLY RETURNS.

The CHAIRMAN: Since we have been in this room a shareholder has handed me a memorandum with regard to the monthly returns that we issue to you. He seems to think it a needless expense. It serves no useful purpose; for one month you are depressed and the next month you are elated. The board wish to know the feeling of the shareholders in respect to it. Every telegram we get is sent to the newspapers, and shareholders who take an interest in their property can see the news in the papers.

Mr. LESLIE: The memorandum came from me. I think it is an expense we could very well do without. I am sure, gentlemen, you are in good hands. The directors are very attentive and anxious about our affairs, and I propose that the monthly returns be discontinued.

Col. FLUDYER: I second that.

The CHAIRMAN: We are much obliged to you for the expression of your opinion, and I think you may leave it in our hands. (Hear, hear.)

THANKS TO THE OFFICERS AND STAFF.

Col. FLUDYER proposed a vote of thanks to the chairman and directors and to Mr. Rickard and his staff, and said: I think this mine is managed as well as most mines are, and the manager's reports are most satisfactory. You will never see anything but what is plain and straightforward in Mr. Rickard's reports. If the mine is poor, he says so. I think, from what we have heard to-day, that we have every reason to hope that, in the very near future, this property will turn out a very fine permanent mining speculation. I hope, however, that shareholders will not run away with the idea that because the

mine can in some places turn out 6 ozs. to the ton, that that is the value of the stuff that goes to the stamps. The value, I take it, of the stuff that goes to the stamps is about ½ oz. Now, if we can produce 1 oz. of gold to the ton of stuff we shall have

A VERY RICH MINE INDEED.

I think Mr. Rickard's statement was everything that it ought to be. It was delivered in a miner-like way, and I think he is right in saying that the schute of ore to the east of us is very likely to come into our mine in depth. Everything is exceedingly satisfactory. We are much indebted to the chairman and directors for their management in London. There is nothing whatever to complain of. (Hear, hear.) I hope that the manager when he gets back, will be able to work away and send up a large pile of this ore, and bring the mine rapidly into a dividend state. I am glad that he has in his employment nearly all Cornishmen, who have no superiors, as miners, in the world (Applause).

A SHAREHOLDER seconded the motion, which was carried.

The CHAIRMAN: I beg to thank you on behalf of my colleagues and myself for the vote of thanks. With regard to the manager—the directors do appreciate the services rendered by Mr. Alfred Rickard.

THE HONEST TRUTH.

As Col. Fludyer has just stated, if we come across a poor body of ore he does not hesitate to tell us; on the other hand, he does not magnify the good too much. I think you are quite right in passing a resolution offering your thanks to the manager and staff.

Mr. RICKARD: Mr. chairman and gentlemen, I have to express my great appreciation of the kindly way in which you have spoken of me, and I know that my assistants will also be very much pleased and encouraged when they hear that our combined services give satisfaction to our employers. We are as much interested in the welfare of your property as if it were our own. We are at a great distance from head-quarters, and have, therefore, sometimes to take matters in our own hands, and to use our best judgment on the occasion of an emergency, but, whenever possible, we refer to the board of directors, and from them we get the kindest consideration, and the most valuable suggestions and instructions. I beg to thank you for your very kind vote of thanks.

The proceedings then terminated.

THE WYLDSDALE GOLD EXPLORATION AND DEVELOPING CO., LIMITED.

THE PRESENT POSITION DETAILED—HOPES FOR THE FUTURE—THE DIRECTORS REDUCE THEIR FEES.

THE third ordinary general meeting of the shareholders of this company was held at Winchester House, Old Broad Street, E.C., on Monday, May 25, to receive the directors' report and statement of accounts, and for other the general business of the company.

Mr. Henry Brown

presided.

Mr. S. D. GRANT (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said that he would be glad to answer any questions that any of the shareholders might desire to ask, and would supplement those answers with a few remarks of his own on the mine, but he would now formally move the adoption of the report and statement of accounts.

Mr. THOS. PYKE seconded.

A SHAREHOLDER suggested that the chairman should make his statement first and take questions afterwards.

The CHAIRMAN said if that was the wish of the meeting he would agree to do so.

Another SHAREHOLDER asked the chairman in his speech to give some explanation of the item 1,440*l*.

ARREARS OF CALLS.

The CHAIRMAN said that, first of all, with regard to the matter of the arrears of calls, he was glad to say that out of that balance of 1,440*l*. there now only remained 300*l*., which had not yet been paid. At the time of their last meeting they certainly had hopes that their auriferous alluvial ground would yield them a steady regular iucome, but at that time they had only washed 100 yds. of ground, which had given a certain profit. Since then they had washed 620 yds. of ground, they had turned over a very large quantity of the reef, and they had sunk a great number of shafts, and, unfortunately, the result had not been very satisfactory. It had not been worked at a profit, and that, to a certain extent, had been disappointing. The gold secmed to be scattered somewhat widely over the whole of their area of 1,200 acres, but it varied in depth very much; in some places it was only a few inches deep, in other places as many feet, while in some parts it went down to the bedrock. There were no signs of the gold having been carried any distance; they had found it in different places, and some in nuggets as large as 6 or 7 ozs., and the board maintained the position which they had taken at previous meetings, that the gold which they had found had been brought from rocks in the immediate vicinity. They had ceased to work that ground, and proposed to sink a shaft to develop the mine and try and strike some decided auriferous rock. The board had had people apply to work the alluvial upou tribute, but up to the present they had declined the offers, but he thought that might be the best course to pursue. At the present time, however, they had decided to obtain some large machinery and work the mine themselves. The two reefs which he had before referred to were the Fa-Fa reef aud the Rotten reef. Ou the Rotten reef a shaft had been sunk 70 ft., when the reef was lost, and as the ore there was very low grade the directors did not thiuk it desirable to spend any more money upon it. From the Fa-Fa reef they had received several samplcs which yielded 12 to 14 dwts. of gold, but they did not think that the whole of the reef would yield anything like that quantity, and although they had splendid water power adjacent to the property it would require heavy machinery and a great amount of money to make that reef profitable, and as the shareholders would remember, the board asked them at the last meeting to leave the whole matter in their hands, so that they might search for any rich reefs in the immediate neighbourhood. They sent out four or five prospectors, who made several discoveries, but the principal reef to which he wished to direct their attention, and the one upon which they had spent the most money, was the Lomati reef, originally called the Alexander reef. From that reef they had received several samples taken from various places, which were very rich in gold. The board, however, considered that too much notice was frequently taken of samples sent home—directors often judging the whole of the mine to be as rich as the samples, and they decided to erect a small crushing machine to crush a certain amount of quartz. Fortunately, however, for them they found that with the concession they had

A PROSPECTOR'S SMALL MOUNTAIN BATTERY OF THREE STAMPS.

They had excellent water power near the machine, and they constructed a water-race from the Fa-Fa River, and repaired the water wheel to work the battery. From the first amount of 6 tons 90 lbs. crushed they received over 17 ozs. of gold, and that gold had been sent home, and was on the table if any shareholder would like to see it. They then crushed 13 tons 13 cwt., and the results were 40 ozs. 14 dwts. of gold; and as they were not then perfectly satisfied they crushed a further 14 tons, which gave similar satisfactory results. Those results, he thought, were more to be depended upon than the analyst's samples sent home, and the board decided to erect a 10-stamp battery. They did not wish to put up expensive machinery until they were certain that it was the true fissure rock, and that they could work it profitably. The reef from which the gold had been taken consisted of three distinct ribs of rock: the greeustone rock, which yielded little or no gold; the white rock, which yielded from over 3 ozs. to the ton; and the blue rock which yielded 8 or 9, and in some places 16 dwts. of gold to the ton. The white rock was the true rock, but they found in various places that the green stone swelled out and pinched the white rock. They, therefore, drove out to cut the white rock, and the last quantity of gold which they crushed was taken from the reef between 80 and 85 ft. A telegram from the manager, dated May 19, said that in the west drive they were workiug good ore, and in the shaft 120 ft. had been reached; the latest developments were good, and

THE ORE WAS OF THE HIGHEST GRADE.

He (the speaker) thought that all they wanted now was the machinery, and he considered that their board had followed a wiser course than many South African companies who had sent out expensive machinery before the property had been in any way developed. On account of the depression in South Africa, their manager expected to get the required machinery at a very low price, and he thought that, considering the water power they had so near, the crushing of the ore ought to be carried on cheaper than at any other mine in South Africa. Having referred to the commitee appointed in Swaziland, he concluded by stating that if they kept a small army of prospectors at work for 20 years, at the end of that time they would still have hidden treasures beneath their feet.

Mr. CHARLES HILDER wished to review the present position before they moved the adoption of the report. The position was, he thought, one of considerable difficulty. They had been a company for a year and a-half, and the gold return was about 133*l*. He wished to put a serious question before the meeting: that was the question of the directors' fees, and he wished to appeal for a reduction under the circumstances. He did not mean retrospective or prospective. It was the future they had to deal with. The directors had done their work well. and the shareholders had nothing to complain of. He knew it was rather

HARD LINES

to ask the directors to work for a reduced fee, but the custom was growing up in the City of London to pay by results. He proposed that they should, for the present, accept the sum of 250*l*. per annum, awaiting better results from South Africa. He hoped other expenses would also be kept down.

Mr. GEO. FREEMAN commended the action of the board in not rushing up machinery until the reef was proved. He agreed with the remarks of the last speaker with regard to fees. He thought they might, when the better times come (which they were sure they would do), recoup the directors for the fees they asked them to forego now.

Mr. HOPKINS asked the present position of the cash account, and whether an immediate call was anticipated.

The CHAIRMAN, in reply, said the view of the board had been that the expenses were much too heavy, and the directors had already decided to

ONLY DRAW HALF THE FEES,

and he hoped that that would be satisfactory to them all. As to the present position of the finances, they would have to make a call at a very early date for the purchase of the machinery. The cost of the machinery did not cover all the expenses. It had to be sent out and erected, and he felt that the total cost would be about 2,500*l*.

A SHAREHOLDER asked if they could not hire batteries in the neighbourhood?

The CHAIRMAN said he did not think that such a course would be desirable. They had made all possible inquiries.

In reply to questions from other shareholders as to the

TIMBER,

&c.,

The CHAIRMAN said that when the concession was granted this company had the right to the whole of the timber, but afterwards further concessions were surrendered, by which this company only had the amount of timber needful for their own purposes. The fees would be reduced for the future, and not for the past. The directors had begun with themselves, and the shareholders must trust to them to reduce the other expeuses where possible.

The report was then adopted.

The various plans of the mine and the gold brought over were, the CHAIRMAN stated, open for the inspection of the shareholders.

FORMAL BUSINESS.

The CHAIRMAN then moved the re-election of Mr. Harold Anderson as a director of the company, which was seconded by Mr. PYKE and carried.

The CHAIRMAN then moved the re-election of the other retiring

director, Mr. J. W. Greig, which was seconded by Mr. HOPKINS and carried.

The re-election of the auditors, Messrs. Ford, Rhodes and Ford, at a fee of 20 guineas for the year, was agreed to.

Mr. FREEMAN said he had had

FAVOURABLE PRIVATE ADVICES

from the other side, which corroborated the remarks of the chairman, and he hoped at the next meeting they would not only pay the creditors their full fees, but also a bonus. (Hear, hear.)

A vote of thanks to the chairman closed the meeting.

UNITED KINGDOM TEMPERANCE AND GENERAL PROVIDENT INSTITUTION.

JUBILEE YEAR—FIVE MILLIONS STERLING OF ACCUMULATED FUNDS.

THE fiftieth annual meeting of this institution was held at the City Terminus Hotel on Tuesday.

Mr. Robert Warner

(chairman) presided.

Mr. THOMAS CASH (managing director and secretary) read the notice of meeting.

A 50 YEARS' RETROSPECT.

The CHAIRMAN: Ladies and gentlemen, on behalf of my colleagues, the directors of this institution, and on my own behalf, I now formally propose "That the report and statement of accounts that you have heard read be received and adopted." Gentlemen, I may remind you that this is the 50th annual report; in popular phraseology, our Jubilee year; and you will not be surprised that I feel a special pride and pleasure in being permitted to take part once again in the proceedings. I have not, it is true, been present at every one of these annual meetings, but on each report, from the first to this present one, has my name appeared as one of those responsible to the members. A brief retrospect may not be out of place. Our first year's business, 1841, resulted in the issue of 255 policies, assuring 31,185*l.*, and leaving in hand, after payment of all disbursements, the modest sum of 585*l.* 15s. 4d. In 20 years (1861) the corresponding figures were:—2,730 polices, for 453,223*l.*; accumulated capital, 409,623*l.* 14s. 1d.; in 1881, they were 2,045 polices, for 517,846*l.*; accumulated capital, 3,020,000*l.* The figures for 1891 you have in the report just presented. At the present date, May, 1891, you have, after an existence of 50 years and, say, five months, a fund belonging to the policy-holders of five million pounds sterling, supported by an annual income of five hundred and fifty thousand pounds. We have distributed in bonuses considerably more than two million pounds, and have paid in claims over three-and three-quarter million pounds to members or their representatives.

THE MANAGEMENT.

The institution has been under the care of 34 directors, and I have been present at the election of every one, whilst the nine gentlemen who are at present responsible for the management have been connected therewith for an average term of 23 years, and we gratefully acknowledge the kind and courteous manner in which the members have year by year signified their approval of our services—indeed, for the past 35 years there has scarcely been a discordant note at any of our meetings. The following table, showing the number of members now alive who entered in each of the first 10 years, may be of interest, and I think shows a good record:—1841, 12; 1842, 9; 1843, 6; 1844, 10; 1845, 20; 1846, 21; 1847, 24; 1848, 43; 1849, 67; 1850, 76; thus giving 288 as the total number of policies issued prior to 1851 that are still in force.

FREE POLICIES.

And now a few words as to our present position and prospects. I believe the terms and conditions offered to the public are equal to those that can be obtained from any solid and well established office. Claims are settled promptly on satisfactory proof of death and title, the proofs as to the death being merely a copy of the registrar's entry of death, and a certificate of a simple character, on a form supplied by the institution, to be signed by the doctor in attendance. Members are allowed to travel and reside in any part of the world, and to engage in any occupation, free from extra payment. Policies are granted for the whole of life, with or without profits, or for endowment assurances on the tontine principle; under this scheme the rates of premiums are very considerably reduced, and only those policies that attain the stipulated age participate in the profits; they are found to meet the popular wants, and prove an eligible investment. The rate of bonus as detailed in the report (see last paragraph on page 2), and which my resolution asks you to sanction, I believe you will admit to be very encouraging, and submit that we are justified in asking every total abstainer, who contemplates effecting an assurance on his own life, to study the figures we put forth, not as estimates for the future, but as actual facts of past working, and which there is every reason to expect will at least be equalled in the future, as our actuaries have wisely taken the precaution to conserve every source of future profits, and thus to enable our present strong and solid position to be maintained, and as this is done in an intelligent manner, there can be but little doubt that self-interest will convince any intending assurer that the United Kingdom Temperance and General Provident Institution is the office he will do well to select, and do bad to neglect. (Cheers.)

Mr. W. S. CAINE (director), in rising to second the motion, was received with loud cheers. He said: The chairman in his address called your attention to progress from 10 years to 10 years, but it may be interesting to let you know that in recent years we have kept up the general average. Sometimes, when offices of this character get prosperous they are apt to get lazy, and to be content with their prosperity, but you will find no indication of that in this report in comparison with previous reports. For instance, in 1885 the amount of funds at the beginning of the year were 3,604,000*l.*; to-day, as we show, the total sums are 4,902,000*l.*, and we have to-day

OVER FIVE MILLIONS STERLING OF MONEY.

(Cheers.) Even during five years we have improved the amount of funds in our possession, and consequently added the solid prosperity of the office by something like 1,400,000*l.* The interest of investments is exactly 4 per cent. That may appear small, but those of us who are trustees of private or public property know that it is becoming increasingly difficult, owing to the increasing wealth of the nation, to get the same rate of interest as compared with times past. We show that your directors are able in this to show as well, if not better, than the general average. One must also remember that it is now impossible to buy first-class railway debentures at a price to pay more than 3 per cent., while Government securities are 2¾ per cent.

OUR INVESTMENTS ARE SOUND.

We have a large sum on mortgage on property within the United Kingdom, and that is always looked upon as the best investment a public body can make. The directors are careful in the choice of their securities, and I am glad to say our customers for this class of business are amongst the best and most solid investors of property that we have in London and in the neighbourhood. We get as early a pick of this class of security as any office in the market. The loans on members' policies is as good a security as we can have, for the members themselves furnish it. We have a certain amount of railway debentures and house property, which I think are the best paying investments that we have. Then we have 1,260,000*l.* in ground rents—a considerable increase in this class of investment as compared with previous years, and the larger proportion of it has been made in the City of London—the pick of property of the world—and those outside the City are mainly in the best positions in the west end of London. We feel perfectly safe with regard to that class of investment. We have 160,000*l.* invested in New River stock. Since we made that purchase there has been a further sale, and the price paid by public auction shows a profit on our investment on that one item alone of 30,000*l.* (Cheers.) So that has been a very good bargain for us. There is no need to comment upon the smaller details, but you will see that as far as our investments are concerned they are sound and satisfactory. Our agents continue to bring us fresh business of the best kind. I do not think any office has a better body of agents representing them throughout the country than we have.

VIEWS OF THE ACTUARY.

Mr. RALPH P. HARDY (actuary): When you take a retrospect for the past 50 years, you must be somewhat astonished, Mr. Chairman, at the growth of the child which you assisted to bring into being. You must have seen this institution merging slowly, but surely, from strength to strength and rising in public confidence. You must have seen its funds reach the almost fabulous amount of 5,000,000*l.*, and, what is more important, you must have seen the policy contract, in which our members are all interested, freed from all unnecessary restrictions, until it has become, to use an expression, one of the most liberal contracts current in the trade. With this panorama, which moves before your eyes, there is one thing prominent throughout—the steady adherence of the institution to the distinctive temperance principles that call it into being; their tardy, but ultimate, recognition by the public; and the guarantee they give of further recognition in the future. You must recollect the vast army of candidates for insurance that has passed before you, exceeding 100,000 persons—the population of a large town. Of the 96,000 persons you have accepted many have passed away, but I find on looking into the accounts that you have paid nearly 3,750,000*l.* in satisfaction of claims. Think of the comfort this must have brought to those for whom provision was thus made. We have now 44,584 persons assured with us, and if you multiply that by five, you nearly get a quarter of a million of human beings who are dependent for their modest family provision upon the successful working out of our estimates, and on our taking up all those promises which we have made. So far as actuarial knowledge extends, and my own somewhat large experience in my business, coupled with the particular knowledge I have of this institution (working)—so far as these things go, I believe the institution to be built upon a rock, and that the elements will not prevail against it. The bonuses that have been declared, and which will be declared to-day are most satisfactory. Gentlemen will go home to day connected collectively richer by the sum of 1,191,000*l.* Your policy which you look at the morning has become increased in value 10 per cent.—a sufficient reward to meet the trouble of a journey to London. We must recognise the facts of life, and to do so we have prepared you a table, which we think will be particularly simple for this class of persons whose minds are impressed with the paramount duty of providing for their wives and children during the period of helplessness. This table will be found suitable to many who, like myself, have worked hard and not received a great amount for it. I hope the agents will say that we have this day placed in their hands two very effectual weapons for competition. I conclude by saying that the bonus to the non-abstaining section will be found equal to that of any sound office. The bonus in the total abstinence department will be found exceedingly high, and I am not aware that any office has touched it.

The report, after some discussion, was adopted, and the usual routine business was transacted.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

THE RESOLUTIONS FOR APPROVING THE AGREEMENT WITH MESSRS. JOHNSON, HEANEY AND BORROW, AND FOR THE INCREASE OF THE CAPITAL TO £500,000, CONFIRMED.

AN extraordinary general meeting of the Goldfields of South Africa, Limited, was held at Winchester House, Old Broad Street, yesterday, in order that the subjoined resolutions, which were passed at the extraordinary general meeting of the company held on the 7th inst., might be submitted for confirmation as special resolutions:—

RESOLUTIONS.

1. "That the agreement dated Apl. 10, 1891, with Messrs. Johnson, Heaney and Borrow, the purport of which has been explained to the meeting by the chairman, be, and is hereby, approved, and the directors are hereby authorised to take all such steps as may be necessary for adopting and giving full effect to the provisions thereof in the interest and on behalf of the company." 2. "That the capital

of the company be increased to 500,000*l.* by the creation of 130,000 additional shares of 1*l.* each."

Mr. Thomas Rudd

presided.

Mr. Henry D. Boyle (the secretary) read the notice calling the meeting.

The Chairman: Gentlemen, these resolutions were fully discussed and explained at the last meeting, and I need only now confine myself to putting the resolution if someone will second it.

Sir Richard Pollock: I shall be glad to second it.

The Chairman: Those in favour of the resolution will hold up their hands; on the contrary. That is carried unanimously, and that concludes the business of the meeting.

The proceedings then terminated.

NORTHUMBERLAND LAND AND COAL CO., LIMITED.

RESOLUTION FOR RE-CONSTRUCTION CONFIRMED.

An extraordinary general meeting of this company was held at the Registered Office of the company, 32, Poultry, on Monday, in order that the subjoined resolutions, which were duly passed at the extraordinary general meeting of the company held on May 7, 1891, might be submitted for confirmation as special resolutions.

RESOLUTIONS.

(1.) "That it is desirable to re-construct the company, and accordingly that the company be wound up voluntarily, and that Mr. Richard Rabbidge, chartered accountant, 32, Poultry, E.C., be and is hereby appointed liquidator for the purpose of such winding up." (2.) "That the scheme of re-construction referred to in the circular issued by the board on Mar. 6, 1891, be approved, and without limiting the general powers and authorities of the liquidator, that he be authorised, pursuant to section 161 of the Companies Act, 1862, to adopt and carry the same into effect in such manner or with such modifications as he may be advised." "3. That the liquidator be also authorised, pursuant to such section, to receive in compensation or part compensation for the transfer of the property and assets of this company to the new company to be formed to acquire the same under the proposed scheme, shares or other like interest in, or other benefits from, the said new company, for distribution among the members of this company.

Mr. Wilberforce Bryant

presided.

Mr. George Noble (the secretary) read the notice calling the meeting.

The Chairman stated that the matter was fully gone into on the last occasion, when he gave the reasons for the proposed scheme (a report of which appeared in our columns), and he had only now to propose the confirmation of the resolutions.

Mr. Benham seconded the motion, which was carried, and a vote of thanks to the chairman closed the meeting.

THE AUSTRALASIAN ALKALINE REDUCTION AND SMELTING SYNDICATE, LIMITED.

ADJOURNED FOR WANT OF A QUORUM.

The annual general meeting of this company was called for yesterday at Winchester House, for the purpose of transacting the ordinary business, and also of considering and, if approved, passing the following resolutions, namely:—1. "That the capital of the syndicate be increased to 33,000*l.* by the issue of 3,000 15 per cent. accumulative preference shares of 1*l.* each, the said 3,000 shares to be entitled to priority over the ordinary shares in the distribution of the assets of the syndicate in the event of liquidation." 2. "That the name of the syndicate be changed to 'The Cambrain Manganese Co., Limited.'"

Some considerable delay took place in consequence of a quorum not attending, and eventually, after the prescribed time had expired, the meeting was, in accordance with the articles of association, adjourned until Friday next at the same time (3 p.m.) and place.

HIGHLY IMPORTANT SALE OF MINING PROPERTY.

THE BWLCH UNITED SILVER LEAD MINES, CARDIGANSHIRE,

Including Bwlch, Caenant, Pencraigddu, and Pwll-yr-henaid.

MR. W. H. WEMYSS will OFFER for SALE by AUCTION, at the Belle Vue Hotel, Aberystwyth, on WEDNESDAY, June 3, at Three sharp, in One Lot, as a going concern, the whole of the Valuable PLANT, MACHINERY, &c., on the above-named property. The landlord is prepared to grant a lease of 21 years, at 1-22nd royalty, no dead rent, upon the above well-known mines, to an approved purchaser. The Mines are situate about 8 miles from the Port of Aberystwyth, and 4 from Bow Street Station on the Cambrian Railway. The whole Sett comprises 450 acres, and lies in the centre of the richest Silver Lead Mining District in Wales.

The ore contains from 16 to 25 ozs. of silver to the ton. The mines are fully equipped with valuable Plant and Machinery, erected at great cost, worked by water power, and amply sufficient to raise and treat large quantities of ore. There are also good Residences for manager and agent upon the property, and the necessary Buildings for all purposes. Capital shooting and fishing may be had in the neighbourhood.

This is an opportunity rarely to be met with of acquiring a first-class Silver Lead Mining Property, which, with a little outlay, will yield handsome returns. Further particulars of the Auctioneer.

ROYAL COLLEGE OF SCIENCE, LONDON,

WITH WHICH IS INCORPORATED

THE ROYAL SCHOOL OF MINES.

Next Session begins September 30, 1891.

Prospectuses and forms of application for admission can be obtained from the Registrar.

FOUNDED 1871. BANKERS:—ALLIANCE.

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The upward movement has commenced. The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash

All communications should be sent to

REPORTS OF MEETINGS.

DEVON GREAT CONSOLS.

THE COMPANY CONTENDS WITH ADVERSE INFLUENCES—ARSENIC CONTRACTS—QUESTIONS THAT ARE DEEMED INDISCREET—TWO NEW DIRECTORS ELECTED.

THE half-yearly meeting of this company took place at Winchester House on Tuesday.

Mr. Peter Watson, M.C.C.,

(chairman of the company) presided.

Mr. ALLEN (secretary) read the notice of meeting.

BAD WEATHER, BUT LITTLE DAMAGE.

The CHAIRMAN, after mentioning that he had been suffering very severely from an attack of influenza, which had left him extremely weak, said: Gentlemen, I have not a great deal to say to-day, because the report is so full. It states that :—

"The long and severe winter weather has militated much against mining and surface operations. Great destruction of life and property was caused about two months ago by the 'blizzard,' especially in Cornwall and Devon, and although the company's works have suffered, yet it is a matter of sincere congratulation that the disastrous snow-storms did not do much greater damage."

On that point I think both Cornwall and Devon are to be congratulated that the damage has not been worse than has actually taken place. In living memory there never was such a storm in the west and all along the south coast. You can see by the report the extensive works there are at Devon Consols, and those gentlemen who have been there know how open the place is, and how fortunate we are to escape with an outlay of merely 200*l*. I think it reflects great credit on Capt. Richards, and the workpeople who have so successfully safeguarded our interests. Now we come to the arsenic.

"For several years, as shareholders are aware, annual contracts for arsenic at advancing prices have been made. This year, no such satisfactory offer being obtainable, sales have been made otherwise, and although in the American, continental and home trade the demand has been less, yet it is believed in a few months an increased general consumption will take place, when the comparatively small stocks of arsenic now held in this country would quickly disappear, and probably with advanced prices."

For years we have made these annual contracts. Offers, or talkable offers, were made to us, and were not accepted, because they were lower than the previous years' contracts. Many of you are aware (certainly those who read my budget of last year) that prices rose from 6*l*. to right up to 9*l*. and 11*l*., which was the price last year we sold our arsenic at. It was said at the last meeting that we could have done a great deal better, but I should only like those gentlemen who said so to have addressed themselves to the task. We have not secured the price we did last year, and, consequently, have had to become merchants, as it were, in the best way we could. The American trade has not been so good, simply because the potato bug has not made its appearance as it did in former years, but it is believed that the stocks are not large in America, and that there may be a good demand from thence. Since the report has been printed some shipments have been made to America and also to the Continent. I think also the home demand may be increased, but, on the other hand, I do not believe that stocks of arsenic have been so low for many years. Consequently we have hope of maintaining present prices, if not an advance. If America were to come in and buy, and the Continent and home trade were to improve, we should in all probability have a very 'good advance in the price of arsenic. With regard to the statement of accounts, you will see that we have to

CHARGE A SEVEN MONTHS' COST.

These are lunar months, and we have 13; consequently the lunar month had to come into the accounts to Apl. 30. It was a liability, and therefore ought to have come in, and was due to bepaid on May 2. With regard to copper, you will observe that before this report was written there had been a total fall of 10*l*. a ton, or equal to about 10s. a ton, on our ore, which made a difference to us of 600*l*. or 700*l*. For instead of our sale realising over 2,100*l*. it realised 1,521*l*. Then again, on loan account, we owed last time 2,500*l*., but have now

BORROWED UP TO 5,500*l*.

We have borrowed before to a much larger extent than that, and shall do so again; that is to say, instead of making a call of 10s. simply for working capital, we thought it advisable to get the money in this way, as money has been cheap, rather than trouble you with a call, and we hope not to do so. With our arsenic in hand, and all paid for and ready for shipment, at a moment's notice, we could easily pay off the indebtedness. Hence if we have not got it in meal, we have it in malt, and to a much greater extent than 5,500*l*. (Cheers.) The next point is the serious

FALLING OFF IN THE MAKE OF ARSENIC

during the last six months. We went on making 275 barrels of arsenic up to Jan. 10, and then fell off to 200 barrels, and kept it at that during Jan., Feb. and Mar., and a good way into Apl. Capt. Richards is the responsible officer in connection with the mine, and has told you that the output fell off both at surface and at underground. We have increased again from 225 to 250 barrels, and yesterday the make was 260 barrels. I hope in a short time we may reach again what we had for a considerable time—275 barrels. That has made a falling off of about 1,000 barrels, or in money value nearly 2,000*l*. With regard to coals, we used to give 10s. 6d. and 11s. 6d. a ton, but we have had to pay 16s. and up to 16s. 6d., so that 4s. or 5s. difference on 9,000 tons a year is a very considerable sum against us. At the same time we have made a contract with two gentlemen at a lower price, and are trying to get that price still further reduced, and I hope we shall. We want them to have a profit, but freights generally are lower than they have been. I do not think we are going to have coals much cheaper than they are at present, or that the working classes will allow it, but all depends on the state of trade. Now, gentlemen, we are coming to a rather important matter at page 8.

COPPER TRADE.

"The commercial, banking, and financial troubles of the last few months have had a depressing effect on the copper market, and it is impossible to predict as to the future, but seeing the stocks of copper on Apl. 30 last were only 59,316 tons compared with 90,230 tons on Apl. 30, 1890, it is possible that the fall of some 10*l*. per ton in the last six months may be regained during the year."

We all know that supply and demand regulate every market, but it is extraordinary that in the face of the 59,000 tons, against 90,000 tons (12 months ago) of copper, a rise has not taken place before. It is extraordinary, in my judgment, that we have not had a 10*l*. rise in price, because the demand for copper is excessive at the present time, and the production is certainly not increasing. Therefore, I say I hope in the next six months to have a rise of at least 10*l*. a ton, and since this report was written there has been an actual rise of 30s. or 2*l*. The last points mentioned in the report are as follows :—

"Since the last half-yearly meeting of shareholders the death of Mr. Henry Cattley Stewart has taken place; and Messrs. Peter Watson and Hugh Stanley Morris retire in accordance with the articles of association. The auditors, Mr. G. T. Rait (of the firm of Messrs. Rait and Kearton, public accountants) and Mr. F. W. Freese, also retire in accordance with the articles of association."

With these remarks, I beg to move the reception and adoption of the report and accounts.

Mr. MOSES seconded the motion.

DISCUSSION.

Mr. GROVER: I have listened to the remarks of the chairman which have been most discouraging, for things are in much the same state as they have been during the last 11 years, when no dividend has been paid. Calls of 2*l*. a share have been asked for. (No, no.)

Mr. WITT: There were two calls of 10s. each.

Mr. GROVER: I think the money might as well have been thrown away. (Laughter.) There is sure to be something occur to disappoint us—storms, or floods, or droughts, and all through the last 10 or 11 years there has been nothing but disappointments, without prospect of improvement. There was a red herring thrown before us in the shape of an invitation to go down to the mine, but to my great surprise I found that all that was provided for the shareholders was conveyance to the mine and luncheon. Each visitor had to pay his travelling expenses. (Laughter.)

QUESTIONS.

Mr. GEORGE PAWSEY WITT: I must say the report is eminently unsatisfactory, and by this time the shareholders must be getting accustomed to such documents. We are told that the annual contracts have not been made, and that no satisfactory offer has been obtained for the arsenic. I want to ask the chairman (reading from a paper of memos) how and to whom the arsenic has been sold, together with the price since the termination of the last contract. I want to know how many tons have been sold, and after all charges have been deducted, the net amount the company realises. We are told the present stocks are small, but I should be glad to know what they consist of, both in London, Glasgow, Liverpool, and the Continent. No doubt the chairman, who is well versed in the management of this company, can give us that information. What are the principal markets and sources that he looks to, to take the stock of arsenic which the company now holds, and which I do not find in the report? We see here an amount in the reduction works of 8,910*l*., but what does that consist of, and how is it made up, and where, in these accounts, is the stock of arsenic shown?

The CHAIRMAN: In the reduction works.

(Hear, hear.)

Mr. WITT: The information is insufficient, for what is there in the words, "reduction works" to signify that it means arsenic?

Mr. HORNCASTLE: It says sales of arsenic, and that is not copper.

(Hear, hear.)

Mr. WITT: I would like also to know as to the stock of arsenic being ample to cover certain loans. You speak of "annual contracts

at advancing prices" that have been made, but what are those prices, and will you endeavour to obtain an offer from the same people who have hitherto purchased it? As to the last account—it is

STRANGE THAT THIS COMPANY SHOULD ALWAYS BE IN DEBT.

At the present moment the debt is 5,500*l*., which has been borrowed, you say, on this arsenic. How can we have credit for the arsenic when so much is owing on account of it? How much of it is mortgaged, and how much of it free? I do not understand the amount received for sales of arsenic, and advances on arsenic in course of delivery, 8,908*l*. How is that made up—how much for cash received for sales, and how much for advances? Who has made the advances, and when is the delivery to take place? I want to know whether Mr. Bawden is still connected with the company, and whether it is a fact that he is interested in other arsenic works in the neighbourhood, thereby being a competitor of the company. Who negotiates the sales of these arsenic contracts, and how do you expect to meet the next six months' expenses, if through the arsenic what quantity have you to sell? As to shipments being made—by whom and when have they been made? What is the clause in the articles which entitles the company to borrow upon its unsold products? When you became managing director this company had a credit balance of about 9,000*l*., since which time you have called up 10,000*l*., and sold a house worth 3,000*l*., making a total of about 22,000*l*., and now you present us with an account leaving us in debt to the tune of thousands of pounds. What is the amount paid in dividends during the last eight or nine years? I paid 16*l*. each for some of my shares, and have had four dividends, or two in one year. I purchased 25 shares of you, sir, at 16*l*. each, and I ask you when are we likely to see the fulfilment of the promise you made in your circular at the last meeting, that there was every probability of a dividend of 5s. or 6s. per share, or equal to 12½ per cent., being declared? Are you of the same sanguine opinion now, in view of the fact that instead of being in a position to declare a dividend, we are thousands of pounds in debt.

CHAIRMAN URGED NOT TO REPLY TO SUCH QUESTIONS.

Mr. BOYCE: I shall not attempt to reply to the gentleman who has just spoken, or to instruct you how to do so, but would point out that it is very inadvisable indeed that we should give details with regard to contracts and prices of any commodity with which you have to deal. (Hear, hear.) It seems to me that any shareholder who wishes to be informed on these subjects should address himself privately to the chairman and managing director, and get the information in that way. I know our chairman will be most anxious to answer every question in detail, but I give him a warning that any attempt to reply to the questions asked by the last speaker may do serious damage to the future of the enterprise. (Hear, hear.)

Mr. SLOPER: I certainly think if the directors provided luncheon and conveyance to the mine, the least any shareholder visiting it could do would be to pay his own fare from London. (Cheers.) In the balance-sheet there is an item of 1,499*l*. due to sundry creditors, which I hope the chairman will explain. I hope you are not going to rely on loans to keep this mine going, and trust you will give us a distinct promise that none will be raised save on stocks in hand, because if you do the shareholders will be liable for calls. How far are we from the granite in our western workings on Watson's lode? How many years' work have you left of deads for crushing? Then how many years' work have you left in the main lode above the levels abandoned? It would also be a great advantage that the shareholders have a plan of the mine showing the workings, and that the directors should meet at least six times on the spot each year. I have

GREAT FAITH IN THE FUTURE OF THIS MINE.

Supplied with the reports, I went down last Aug., and having studied mineral veins underground and over ground, combined with other geological studies, I am of opinion that the working should be proceeded with in the granite, where you will ultimately get tin. I have recently become a shareholder because I am sure that if this mine be well managed by the directors, and if strict attention be paid to the finances, the result will be a great success.

MR. GROVER WRONG IN FACTS AND INFERENCES.

The CHAIRMAN: Mr. Grover said we had made calls of 2*l*., but Mr. Witt has put him right by telling him they have only amounted to 1*l*., but still the difference is not great to Mr. Grover, who only holds 10 shares—not so great as it is to me, and to many of the other gentlemen before me and absent. The calls were made for specific purposes, under the arrangements with regard to developments and royalties. Then we had to do certain work to obtain a reduction of royalty, and to do that work a call had to be made. We have developed the mine, and have not been altogether unsuccessful in opening it out in certain portions. You remember that at Watson's and Emma sections we had to sink the shafts and spent something like 30,000*l*. in development over and above what we called upon the shareholders to pay. If you look at

THE MAGNITUDE OF THIS MINE,

and the difficulty of keeping the whole of the machinery at work with five or six big steam engines, with a consumption of 8,000 or 9,000 tons of coal a year, independent of various water wheels, the shareholders will then see the task to which we have to address ourselves. It is different keeping things going now from what it was when copper was three or four times the present price. Moreover, materials have advanced, and altogether I do not think Mr. Grover justified in his criticism, though he has a perfect right to express his views. I sympathise with him in the non-receipt of dividends very keenly, because, according to the number of my shares I should have received near 20 times more than he would. I deny that there has been any red herring in this matter, but perfect straightforwardness throughout. (Cheers.) Now I come to Mr. Witt, who says that the report is eminently unsatisfactory. He wants a great variety of particulars, which he knows as a business man that I cannot judiciously give him, and he knows also he is put up to ask those questions—not in the interest of the company, but somebody else.

PASSAGE AT ARMS.

Mr. WITT: What right have you to make that statement?
The CHAIRMAN: I do make that statement.

Mr. WITT: It is false.

The CHAIRMAN: You do not think my eyes have been closed as to your requirements with regard to this arsenic business. Many old shareholders are here who will remember that the former chairman always said "There are two things I decline to answer at a meeting—first, the quantity and price of the arsenic sold, and next the name of the person who bought it." Manifestly it would be unjust to the buyers to do so, for these contracts are made usually for speculation as well as for trade, and it is not right we should let his competitors know what he has done. (Cheers.)

Mr. WITT: You have published the price before—in Nov., 1890.

The CHAIRMAN: That was taking during a period of 15 or 16 years which has elapsed. I have sold from 6*l*. up to 11*l*. a ton, but that was published afterwards, and supposing we have made a contract this year—would it be right to publish the name of the individual who bought for 12 months? (No.) Certainly it would not. This commodity is a very delicate thing to deal with, and there are only about 10 persons in the trade, and any publication of our sales would be unjust to the buyers. Those sales are managed by the directors, but any information I can really give Mr. Witt that he will promise me to regard as in perfect confidence, I will give him; but you know that if you go to Mincing Lane and Mark Lane and talk about these things what an injury you will do to this company, and what a gross injustice you will be guilty of towards your buyers. Shareholders know full well that I have told them the prices from time to time, but have always asked the reporters not to include them in their notes. Therefore, I hope you will support me when I refuse to give information publicly which would be injurious to the company, and I hope Mr. Witt will withdraw his questions. (Hear, hear.)

Mr. WITT: I will not withdraw them.

The CHAIRMAN: Then in the interests of the company I ask the shareholders to support me. I must protect the company. (Cheers.)

Mr. WITT: Inasmuch as you have made a statement to the shareholders that we did not communicate the present prices of arsenic contracts, now let me call attention to what you said in your circular last Nov.:—"Then came the time for entering into contracts for 1890, and when the last year's prices of 9*l*. 17s. 6d., when the prices gradually went up to 10*l*. and 10*l*. 5s., and afterwards to 10*l*. 10s. per ton, all three prices which I refused." You heard the statement that it was not policy to disclose prices, but there they are disclosed in the chairman's own circular.

The CHAIRMAN: That is in reference to the past years—not what is being now carried out by sales.

Mr. BOYCE: Mr. Watson was wrong even to publish that.

The CHAIRMAN: It cannot do injury if I simply refer to the past year's transactions.

Mr. BOYCE: Mr. Witt also wants the name of the buyers, and prices and shipments, where it is going to, &c.

FURTHER REPLIES.

The CHAIRMAN: I will now ask those who are in favour of my not answering Mr. Witt's questions to hold up their hands—27; those who think I should—4. You now (Mr. Witt) see the feeling of the meeting. With regard to the loan account, nothing is locked up. We have 330 tons ready to be delivered at the end of Apl. This quantity would go towards paying off that loan. With regard to Mr. Bawden being a competitor—he simply holds the position of purser to three or four other companies where mundic is produced. As to where the money is to come from for the next six months' expenses—it is to come from the produce of the mine. (Cheers.) Shipments are going on at the present time, and will go on, and we shall get the money in due course. I have already explained how our receipts fell off in consequence of the decline in the make of arsenic. Am I answerable for that decreased production? Capt. Richards, your manager, is here and will tell you how it came about. We can only do our best, and, of course, the lodes vary. Copper has fallen in price and coal has risen, and against these circumstances all we can do is our best, but we cannot control them. Mr. Boyce has made some very proper remarks with regard to arsenic, which we value. In the old mine they drove on the side of the lode and got copper. There is a large quantity of mundic which we find by the side of the lode, and that is looking better than it did 12 months ago. It is difficult to get men, as they have gone abroad. The item of 1,449*l*., merchants' bills, is largely accounted for by the seventh month's cost, which was payable on May 2.

Mr. SLOPER: Have you sufficient to meet the 1,400*l*.?

The CHAIRMAN: We have 1,300*l*. in the other account, cash in hand, and ample provision is made for that amount in our assets.

Mr. CLUFF: You might tell us of the amount under the head of reduction work, as to how much of it is absorbed by saleable stock, and how much by plant.

The CHAIRMAN: The 330 tons of arsenic is stock, which you might take, say, at 11*l*. per ton. You can see what it is. We write off something every year against plant and machinery.

The motion for the adoption of the report was then put and carried by 24 votes to 2. (Hear, hear.)

Mr. OWEN LEWIS moved the remuneration of the directors on the same basis as the year before, namely, 300*l*., to be divided as they may decide.

Mr. HORNCASTLE seconded the motion, which was carried unanimously.

The meeting then proceeded to consider the question of

THE ELECTION OF THE DIRECTORS.

Mr. T. N. ROBERTS: I have to move that Mr. Peter Watson be re-elected a director of the company. It has been said "Good wine needs no bush," and so long and efficient services need no recommendation from me. I will only so far contravene that principle by saying how well we have been served by Mr. Watson, if only for his efforts for the suspension of royalty. I frequently called upon him whilst these negotiations were going on, and I saw what voluminous correspondence had taken place, and the many interviews they had involved, and had these negotiations not been successful we should not have been here to-day. I could say a great deal more. I have been in connection with Mr. Watson for the last 12 or 13 years, and have always found him accessible and willing to give any information I sought. (Hear, hear.) There has been a great deal of time taken up at this meeting, and, therefore, I will say no more, but simply move the re-election of Mr. Peter Watson. (Applause.)

Mr. PAIGE seconded the motion.

Mr. GROVER asked if Mr. Watson had carried out his promise to reduce the office rent.

The CHAIRMAN : Yes, it is shown in the accounts. (Applause.)

Mr. BAWDEN said, as his name had been mentioned at the meeting, he thought he should say a few words. He had been associated with the company for the last 11 years, and during the whole of that time the contracts for arsenic were made, and made well. (Hear, hear.) Although he was associated during that time with other companies producing arsenic, no contracts were made by these companies until the Devon Great Consols had made theirs, and then they followed suit. (The CHAIRMAN : That is quite right.) He had done his duty to the company during the whole of the time he was connected with it. (Hear, hear, and applause.)

The motion for the re-election of Mr. Peter Watson was then put and carried, with only one hand held up against him.

The CHAIRMAN moved that Mr. Thomas Nicholls Roberts be elected a director of the company. This motion was made in accordance with the articles of association. Mr. Roberts had been a shareholder of the company almost as long, if not longer than he (the chairman) himself. He was a man who knew a great deal about mining, and during the last six months had assisted the chairman very materially in matters connected with the Devon Consols. (Hear, hear.)

Mr. BOYCE : It is most necessary we should have harmony on the board, and therefore I think it most desirable, if we could find a man equal to the task, and who is likely to work in harmony, that we should elect such a one to the vacancy on the directorate. (Applause.) I think Mr. Roberts is such a man, and, therefore, I will second the motion, with the belief that it will be advantageous to the company.

AN AMENDMENT.

Mr. FREEZE said he had an amendment to move. He had not a word to say against Mr. Watson; on the contrary, no one felt more strongly than he that there were times when a strong man was needed at the helm, and such a strong man was Mr. Watson. But he did object to a one-man board. He did not have a word to say against Mr. Roberts ; therefore, it was not on personal grounds he moved the amendment. Without in any way wishing to prejudice the matter, he did think they ought to see if amongst their largest shareholders they had not a gentleman more fitting to serve them on the board. There happened to be such a gentleman, a large shareholder who lived in the neighbourhood, and a most experienced chemist. He (the speaker) felt convinced that if certain matters in the management of the company were modified it would become a great success. He was speaking of Mr. Oxland. He thought if they had an opportunity of placing such a man on the board, the shareholders would be wise in seizing that opportunity. (No, no.)

The CHAIRMAN : Mr. Oxland is not eligible for election. His notice did not come in in accordance with the constitution of the company.

Mr. FREEZE : How?

The CHAIRMAN : By date, or time.

The SECRETARY : It came on the afternoon of the 19th.

Mr. SLOPER : I believe seven days' notice is required?

The CHAIRMAN : Yes. I must tell you that at the last meeting the shareholders entrusted me with a very large number of proxies, and at this meeting larger than last time, and I say it is not consistent with their wishes to elect Mr. Oxland. (Cheers.) It is their feeling, and, inasmuch as the amendment is out of order, I must put my proposition to the meeting for the election of Mr. Roberts.

Mr. FREEZE said he was informed it would be legal, and in conformity with the articles of association, if the shareholders chose to elect Mr. Oxland on June 1 under such circumstances. But if Mr. Watson was desirous of sticking at trifles, he would point out that the meetiug was not legal. Whereas, on the first page of the report it was called for Tuesday, May 26, on the fifth page it was put down for Wednesday, May 26.

Mr. BOYCE : Pardon me; that is not the notice convening the meeting. I think the notice convening the meeting is separate from the report.

The CHAIRMAN then produced and read the notice, which stated Tuesday, May 26.

Mr. FREEZE : I feel very strongly. I have the feeling of the meeting with me—(loud cries of "No, no")—and I repeat it, that we do not desire to have a one-man board.

The CHAIRMAN : I must call you to order. I consider that an insult to me. (Hear, hear.)

Mr. FREEZE : I think it a matter of such importance that this meeting ought to be adjourned. (No.)

Mr. GRIFFIN : I believe we had Mr. Oxland here some three or four years ago, and he gave us hope of good things, but for the last two or three meetings we have seen nothing of him. I think he ought to have attended this meeting, and also the last meeting. (Applause.) I have been very much disappointed with Mr. Oxland, and I shall certainly vote against him—(Cries of "So shall I ")—and if Mr. Roberts is thoroughly acquainted with mining, and takes deep interest in the company, I shall vote for him. I hear Mr. Oxland's health is very uncertain, and it is questionable whether he would be able to attend the meetings.

CHANGE OF FRONT.

Mr. FREEZE here withdrew his first amendment in favour of one for adjourning the meeting.

Mr. SLOPER seconded the latter.

Mr. BOYCE did not see what good purpose an adjournment would serve. (Hear, hear.)

Mr. HORNCASTLE said he was sorry to see the auditor of the company stepping out of that neutral position which the company required him to occupy. (Loud applause.) He cousidered it would be waste of time to adjourn the meeting. He thought it was done for the benefit of Mr. Oxland. He had no faith in that gentleman. The only capacity he had appeared in was to make promises, which he has not fulfilled. (Hear, hear.)

The amendment was lost, only four or five hands being held up in its favour.

The original motion, for the election of Mr. T. N. Roberts to the directorate, was then put and carried *nem. con.*

Mr. THOMAS GLENN was also uuanimously elected director of the company.

Both gentlemen acknowledged the compliments, and remarked that they would each be prepared to do their best for the interests of the shareholders and the company.

A resolutiou, voting 30 guineas for the promotion of the education of the children of the miners, was also agreed to unanimously.

On the motion of Mr. CLUFF, seconded by Mr. PAIGE, the retiring auditors, Messrs. G. T. Rait and F. W. Freese, were re-appointed, 30 guineas being voted to them as remuneration for the past year.

The CHAIRMAN : I have to express my sincere thanks to the shareholders for attending here to-day. I also wish to thank those shareholders who have sent me their proxies, which represent with shareholders present to-day a very large majority. If Mr. Witt wants any information with regard to arsenic I shall be pleased to give it him or to any other shareholder, on the distinct understanding that such informatiou is uot used or divulged, so as it might be prejudicial to the interests of the company. It is my duty to protect the interests of this company. (Hear, hear.) I will now ask Capt. Richards to say a few words as to the mine.

THE MINE.

Capt. RICHARDS : The granite is distant from Watson's engine shaft from 400 to 500 fms. It may be met with in the under workings nearer than that. We have ample surface leavings for two or three years yet. The workings on the old lode may continue for years. We depend partly upon the price of arsenic and the price of copper. As we go on we are frequently making discoveries at the side of the old workings, but I cannot say how long they will last. We are making discoveries, although we are not sinking, so that we are taking away the reserves. (Applause.)

The meeting closed with a hearty vote of thanks to the chairman.

WEST WHEAL GRENVILLE MINE, LIMITED.

THE GREAT FLAT LODE NOT YET CUT, AS PREDICTED BY NUMEROUS EXPERTS—SHAREHOLDERS ENCOURAGED TO PROCEED FOR A TIME BY THE OPINIONS OF CAPT. ROSEWARNE.

AN extraordinary general meeting was held at Winchester House, on Monday, for the purpose of considering the report of Messrs. Henderson and Son on the mine, and of passing a resolution as to futurc working.

Mr. Charles Clark

(chairman of the company) presided.

Mr. D. JULYAN (secretary) read the notice of meeting.

The CHAIRMAN : Gentlemen, I wish to read to you a subsequent report, which has been received this morning from the Messrs. Henderson, and also a couple of reports and letters from the agent, Capt. Skeat.

May 23.—The Great Flat lode :—Since writing our report of the 7th inst., our assistaut, Capt. W. Richards, visited the mine (on the 19th) for the purpose of dialling up the ends and filling in the plan. The mauager, Capt. Skeat, then reported to him that he had, within the last few days, discovered another lode in Pendarves grounds, and requested Capt. Richards to inspect the same. This he accordingly did, and, as the result of a careful examination, expresses a strong opinion that it is the back of the Great Flat lode, the stones he saw there being of very similar character to those discovered near Beacon referred to in our recent report. If this be the fact, the extension of the course of the lode would come to a point 200 fms. north of the brace of the engine shaft, or 55 fms. north of the boundary of the sett. Assuming that the lode preserves the underlie, which it has at Wheal Grenville and other mines eastward, the 120 cross-cut will still have been overdriven about 40 fms. An underlie of say 8 ft. in a fm. would just bring it to the present cross-cut end. Our estimated underlie has been 10 ft. per fm. We consider the wisest course to adopt, under all the circumstanees, is to persevere in costeaning at the surface, extending the costean pits, if necessary, into the adjoining field to the north.—HENDERSON and SON, C.E.

May 23.—We have costeaned in field by the hedge, about 5 fms. south and 15 fms. north of spot named by Mr. Henderson in his report. In some of the pits we have found floors aud branches of quartz carrying iron and tin in small quantities. We have sunk the pits in which these branches have been seen 12 or 13 ft. deep, quite down in the firm settled rock, but cannot find them to be making down in a satisfactorily defined form, or of the right dip or underlie. In a pit about 12 fms. north of place notified by Mr. Henderson we have a branch about 7 or 8 ins. wide, fairly well defined, composed of quartz and a little iron, with a regular dip or underlie of about 5 ft. in a fathom south ; on this we have sunk about 13 ft., and are continuing it a little further to see if it makes larger or takes a faster dip south.—J. SKEAT, N. TEMBY.

ADVICE SOUGHT.

The CHAIRMAN, continuing, said : The occasion of our summoning you to-day is not to ask you to adopt any cut aud dried resolution, but to consult with us as to the best course to be adopted in the interests of all the shareholders. The operations up to the present time have been exceedingly disappointing, and the question we have to consider is whether it is wise to go on spending further money, to endeavour to sell the mine to other people, or to adopt any other course. Perhaps I may put the opinion of the board, and probably of the shareholders, as concisely as possible, if I read a few words from a letter addressed by the Messrs. Bolitho to Mr. Laue as follows :—

"Messrs. Henderson's report still leaves many matters iu obscurity. On the one hand, we do not like throwing good money after bad ; at the same time, if there is a reasonable chance of success we dislike throwing up the sponge prematurely."

That, I suppose, is the opinion we all entertain, and the question we have to discuss is how are we to carry it out? You must bear in mind that the distance of West Wheal Grenville from the most westerly workings is very great, and that a very small deviation from the known bearing of the flat lode in those mines would cause the strike to be either north or south of the engine shaft. We must remember that in places the flat lode is small and poor, and that it is possible the old workers may have failed to notice it in sinking the engine shaft. It may, therefore, be standing south, as the report of the Messrs. Henderson suggests; but if the lode crops out

at Pendarves' ground at surface, it should be possible to find it there in West Wheal Grenville at small expense. If it is determined to act upon the Henderson recommendation and cross-cut south, I should say we ought to get the Messrs. Henderson to point out the exact point at which the cross-cut should be started, and the direction in which it should be carried; and in the event of its being so started, it should be driven by lines so as to prevent any deviation from the course to be followed. The cost will be considerable, and the current outlay in keeping the mine in fork cannot be estimated at less than 250*l.* per month. I do not think we could put it at much less. The cost of driving would be about 14*l.* a fm., and the rate of progress 7 or 8 fms. per month. Therefore, we have four months' work at a considerable outlay.

THE UNCALLED CAPITAL AT PRESENT IS 8S. PER SHARE

upon 48,950 shares, which represents a sum of about 20,000*l.*, and it is desirable that, before making up our minds to spend any further considerable sum, we should count the cost, and determine clearly if it is worth while doing so. I should say that all the branches which have been discovered on the cross-cut north going eastwards have shown indications of tin, and the ore stuff is like that of the flat lode. In fact, there have been statements from experts that, except for the absence of tin, they would have said that these branches were on the flat lode. The board would prefer that any resolution should come from the shareholders, and at present I do not think I need say anything more. The second report of the Messrs. Henderson is based upon the discovery of a second lode in Pendarves ground, and we have only seen that report this morning. Capt. Rosewarne, the purser of the mine, is present, and it might be desirable to hear what he has to say.

VIEWS OF AN EXPERT.

Capt. ROSEWARNE: Mr. Henderson made the first report, and I thought, as it was a matter of great importance, that I would see Mr. Pendarves, who owns the adjoining land—in fact, it is in his park—which we could not break up without his permission. We can see the Flat lode there, and it is admitted to be such. Mr. Henderson was told by some people that the Flat lode had been touched in a drive Mr. Pendarves had made. There is no doubt a tin lode has been cut there, but I am more inclined to think it is our Old Engine lode. About 55 fms. to the north of this lode the Flat lode is very plainly to be seen. It is large, and we can trace it all through the park up to the top of the hill, and in the South Condurrow Mine, and I do not think there is any doubt but the north lode is the Flat lode. The stuff is all that you could desire for a lode of that depth, and the indications are good in every respect. In 770 fms. west the north lode has deviated about 55 fms., and if you continue that line to West Grenville it will make nearly 100 fms. north of where it was supposed to be. I do not think the lode has an underlie of 10 ft. in the fathom, but rather 6 or 7.

EXPERTS DIFFER.

Mr. LANE: We have had the best experts in Cornwall to examine this property, and I have in some cases paid money out of my own pocket to have their opinion privately, and the reports have all been the same, that within a short time by going north the lode would be cut. We have persevered, but now Mr. Henderson says "Do not go north but go south. You have gone as far north as you ought to go;" but to-day there is a further report saying "go north," and in addition to that, Mr. Henderson and Capt. Rosewarne advise us to costean, and to sink the old engine shaft. I strongly advise that we should not sink the engine shaft, and do not see that much advantage will be got by costeaning. Our only hope is in driving the 120 further north, but the matter is entirely in the hands of the shareholders. Personally, I have very little hope, but if you decide to go on further I will go on with you. I would advise you to listen to Capt. Rosewarne, and carefully note what he says.

Capt. ROSEWARNE: I think it would be a great pity after spending so much money to abandon the mine at the present moment. My impression is the mine has not been thoroughly proved, and I would recommend you to sink the engine shaft on the old lode to strike the granite, which may be 20 or more fms. down. I should drive a few fathoms further north, and costean the ground at the same time.

Mr. SUCKLING said he thought they ought to act upon the advice and opinion of Capt. Rosewarne to the extent of a call of, say, 1s. or 2s.

Mr. JOHN WILLIS: As a holder of 3,600 shares, I hope this mine will not be abandoned. There are only two shareholders larger than I am, and I, for one, think we have a good property. I suggest that Mr. Lane should visit the property.

VIEWS OF MR. LANE.

Mr. LANE: If my visiting the property would discover the Great Flat lode it would have been discovered a long time before this. I have not despaired of this mine until recently. Messrs. Henderson have come to the conclusion that we have driven north far enough, and Capt. Rosewarne, who knows the district, says we are a little short in the 120 of arriving at the desired point. I am willing to go on, but as regards the sinking of the shaft, I must say I think it will be folly, for the simple reason that the mine was started to intersect the Flat lode. Now, to go on developing the "main," or copper lode, which proved unprofitable to former workers, would be unwise. We have found that lode at the bottom of the shaft split in two parts—one going north, the other going south, and the only chance would be that they would come together again, which is not sufficiently probable for practical men. The only point to which I would devote attention would be the driving of the 120 cross-cut, to see whether the Great Flat lode has underlaid a little less than it did in other parts, and I think a trial of one month or so for that purpose would be enough. I think that is the

ONLY POINT IN THE PROPERTY THAT OFFERS ANY HOPE.

I have been sadly disappointed in this affair. I was led into it by information furnished me by the best men in Cornwall at that time, and confirmed by others. It is not likely I should have gone to the expense I did to work the property previous to your taking it up unless I believed that there was evidence of our having a big mine there. (Hear, hear.) Not only that, but I did not take fully paid shares, but took ordinary ones, and am paying on 8,000 shares just the same as you are.

THE RESULT.

The CHAIRMAN said he gathered the result of the meeting to be that they would go on in the meantime as recommended in Messrs. Henderson's report, but he thought they ought to meet before the end of July, when the shareholders would naturally expect the board to be prepared with a definite recommendation. They had abstained from making one to-day because they wished to take the shareholders into their counsels, and were very much obliged to those who had attended.

On the motion of Mr. COCKETT the chairman was thanked for presiding and the directors for their courtesy in inviting the shareholders to confer with them.

DEVON UNITED CO., LIMITED.

PAST SIX MONTHS' SALES DISAPPOINTING, BUT AN IMPROVEMENT CONFIDENTLY EXPECTED—A PROMISING LODE IN THE 144-FM. LEVEL—TWO NEW DIRECTORS APPOINTED.

THE sixth ordinary general meeting of the members of the Devon United Co., Limited, was held at Winchester House, London, E.C., on Tucsday.

Peter Watson, Esq., C.C.

(managing director), presided.

The SECRETARY (Mr. W. H. Allen) read the notice calling the meeting.

AN EARLY IMPROVEMENT ANTICIPATED.

The CHAIRMAN: The chairman of the company, Mr. Charles Oxland, is not here, and, therefore, it devolves upon me, as managing director, to take the chair. I have no communication from him, either by wire or letter, stating his inability to attend. I hope that his absence is not caused by illness. The directors' report, I suppose, you will take as read, and also the statement of accounts and the reports of Capt. Richards and Capt. Clemo. As you will see by the directors' report, we have not done so well as we anticipated, but Capt. Richards is here and will give you a general account of the mine, as to its present position and future prospects. We deferred selling our ore on account of the fearful weather which we had at the time, but we hope that at the end of the next six months we may have an improved statement of accounts to give you. We did anticipate that at the 60-fm. level we would have got a good lode—it certainly looked very promising at one time; now we are

DRIVING THE 144-FM. LEVEL,

and in a very short time we hope to cut into the bunch of ore which we had in the upper level—the 132. It is somewhat disappointing, I must confess, that we have not had greater riches, considering the appearance of the mine. Then the price of copper, unfortunately, has gone against us. Since the last half-yearly meeting Mr. Stewart's death has taken place, and Mr. Morris retires and does not wish to go on the board again; therefore, it will be incumbent upon you to elect two gentlemen in their place. Messrs. Glenn and Roberts, who were elected directors at the Devon Great Consols meeting to-day, have been visiting the mines, and they and their friends being large shareholders, they have made application for the position of directors, and I hope that when the time comes you will elect them unanimously. I beg to move: "That the report of the directors and statement of accounts be received and adopted," and Capt. Richards will afterwards say something about the mine.

Mr. ROBERTS seconded the motion, which was carried unanimously.

CAPT. RICHARDS' CONFIDENCE IN THE MINE.

Capt. RICHARDS: I have nothing to add to my report, except to say that I expected that we should have had ore in the 144-fm. level before now, but, unfortunately, my hopes have not been realised. The ground is, however, very promising indeed. The 60-fm. level has been a great disappointment, but I believe when we resume working there we shall get an improvement. I have still very great confidence in the ultimate success of the concern.

The CHAIRMAN: Do you think that by driving at the 144-fm. level we shall come into the ore ground that we had in the 132?

Capt. RICHARDS: Yes, sir.

The CHAIRMAN: That is where it was worth 3 and 4 tons to the fm. How long will it be before we get there?

Capt. RICHARDS: We will have 7 or 8 fms. to drive.

The CHAIRMAN: Then you think in about three or four months' time?

Capt. RICHARDS: Yes; and if we get it there—as I think we shall—it will be a very good thing.

Mr. BAWDEN: Are you sinking a winze at the bottom of the 132?

Capt. RICHARDS: Yes.

Mr. BAWDEN: How is the lode looking?

Capt. RICHARDS: Very well.

Mr. BAWDEN: And how far is that winze at present above the 144 level?

Capt. RICHARDS: 16 fms.

The CHAIRMAN: So that in 7 fms. driving we shall get into that bunch?

Capt. RICHARDS: Yes, I think so,

A SHAREHOLDER: What is the rate of driving?

Capt. RICHARDS: About 2½ fms. a month.

SHAREHOLDERS' WISHES.

Mr. JAMES (Messrs. James and Shakespear): At the last meeting I proposed a resolution, which was carried, in favour of a re-constitution of the management of the mine. I do not see any reference to it in the report, and I should like to know why it has not been done?

The CHAIRMAN: The resolution, proposed by Mr. James and seconded by Mr. Glenn, was "That the directors be requested to reinstate Mr. Peter Watson as managing director, and at the same remuneration as and from Oct. 15, 1890, and that no such removal shall in future take place without the authority of the shareholders;

and that Capt. Bawden be re-instated forthwith as purser." Is that the resolution you refer to?

Mr. JAMES: Yes.

MINUTES.

The CHAIRMAN referred to the minute book, and said: I find that our meeting was on Nov. 26. A board meeting took place on Dec. 3, at which the four directors were present, and this is the minute:—"That in deference to the opinion unanimously adopted by the shareholders at the semi-annual meeting on Nov. 26, Mr. Oxland proposed, and Mr. Stewart seconded, 'That Mr. Peter Watson be, and is hereby, re-instated as managing director of the Devon United Co. as and from Oct. 15, 1890.' Carried." Then the following minute is entered:—"Mr. Peter Watson demurred to the resolution, inasmuch as it does not embody the words of the resolution of the shareholders' meeting on Nov. 26, namely, that no such dismissal in future takes place without the authority of the shareholders." Nothing more was said on the subject, and the wishes of the shareholders were not properly carried out. Then at the same board meeting I proposed Mr. Bawden as purser, in accordance with the resolution of the general meeting, and no member of the board seconded my proposition, consequently it fell to the ground. The other directors were adverse to it. The directors re-instated me, but not in accordance with the full terms of your resolution; neither did they elect Mr. Bawden.

A FAIR REQUEST.

Mr. JAMES: I presume there will be no objection to the matter being brought up again at your next board meeting. Perhaps the new directors will be more in sympathy with the feelings of the shareholders. Of course, we cannot force directors, but I think, in deference to the wish of the shareholders, the resolutions should have been carried out in a proper manner. (Hear, hear.)

The CHAIRMAN: I think so, sir; I always bow to the decision of the shareholders. I will bring the questions again before the directors.

NEW DIRECTORS.

I beg to move "That Mr. Roberts be elected a director of this company."

Mr. JAMES seconded the motion, which was carried unanimously.

The CHAIRMAN: I have now to propose "That Mr. Glenn be elected a director of this company." I am quite satisfied that Mr. Glenn will be of very material assistance to the company, because whatever he takes in hand he pays great attention to. It is not, as Mr. Freese said at the Devon Great Consols meeting, "One man board vote." I take it as a deliberate insult to me to say such a thing, because I am at all times most anxious to consult my colleagues. I have been brought up to this mining business, and have had 45 years' or more experience; I know, therefore, perfectly well what I am talking about in the management of these undertakings. I play second fiddle to no one in the management of any mining undertaking. (Hear, hear.) There must be a head in all these things, but I know full well that if I have these two gentlemen on the board they will be of great assistance to me, and

WE SHALL WORK HARMONIOUSLY.

So far as Mr. Morris is concerned—until the last meetings he and I worked together harmoniously for a great number of years, and never had an angry word.

Mr. JAMES seconded the motion, which was carried *nem. dis.*

Mr. ROBERTS: Gentlemen, I am very much obliged to you for electing me. I was a shareholder in the original company, and I thoroughly believe in this mine. At the time when it was proposed to take it over again, I had many interviews with Mr. Watson on the subject, and he was good enough to say that I was of great assistance in re-starting the concern. I thoroughly believe in it; otherwise, I would not go on the board. I shall do all I can to make it a success.

Mr. GLENN: I am also very much obliged to you, gentlemen, for electing me, and I will do my utmost to bring about success.

On the motion of Mr. MOSES, a vote of thanks was accorded the chairman, and the proceedings terminated.

WHEAL METAL AND FLOW.

A LIVELY DISCUSSION—CALL OF 1s.

A GENERAL MEETING of the adventurers in this mine was held at the Offices, Gracechurch Buildings, Gracechurch Street, London, E.C., on Wednesday, May 27, 1891.

The accounts showed a balance of liabilities over assets of 766*l.* 7s. 4d.

Mr. A. L. Collins

presided.

Mr. C. B. PARRY (secretary) read the notice of meeting, and the minutes of the previous meeting were read and confirmed.

Capt. F. W. THOMAS then read the agents' report as follows:—

AGENTS' REPORT.

May 25.—Since the last meeting of the adventurers we have driven the 27-fm. level east of Watson's engine shaft 12 fms.; during the drivage the lode has been very changeable, containing a great deal of mundic, iron, and a little tin, but not enough to value. The lode in the end at present is split up in branches, but contains a large amount of mundic. We shall continue to drive this end as rapidly as possible. The Flow, during the last two months, has been returning more tin than usual. The returns would have been more had it not been for the very severe blizzard, which did a lot of damage to the machinery. The burning house has been completed and is working satisfactorily, and the outlay has been fully justified by the better price paid for our tin.—F. W. THOMAS, S. P. CURTIS.

DISCUSSION.

Mr. WM. SIMMONS: The amount of tin returned is far below the amount we were led to expect at the last meeting. Can Capt. Thomas give the reason?

Capt. THOMAS: I do not know who led you to expect big returns of tin.

The CHAIRMAN: In the reports of the last meeting you are stated to have said we should get 4½ tons of tin a month. In the report of Capt. Thomas, dated Jan. 20, 1891, he informs us, "We have on the mine about 6 tons of tin." What has become of that 6 tons of tin?

Capt. THOMAS: It has been sold.

The CHAIRMAN: Then we have to deduct that from our present returns?

Capt. THOMAS: Yes.

Mr. WAGSTAFF: Then you have a very little quantity of tin sold, besides that 6 tons, as the result of four and a half months.

The CHAIRMAN: Do you think, Capt. Thomas, that the Flow is getting poorer?

Capt. THOMAS: No, I do not, but we have had such bad weather

Mr. WAGSTAFF: Has the best of the sand all being taken away?

Capt. THOMAS: I do not know what was there before.

The CHAIRMAN: The average returns in Capt. Argall's time used to run about 5 tons a month; now we are getting about 2½ tons a month.

Mr. WAGSTAFF: I think there is something radically wrong with the dressing.

The CHAIRMAN: I think so too.

Capt. THOMAS: I think the sand is better at the present moment than ever it was, but we have had

A LOT OF POOR SAND.

The CHAIRMAN: The quantity of tin is falling off.

Capt. THOMAS: Yes; but we have had very severe weather. For three months we scarcely did anything.

Mr. SIMMONS: We have met here to-day under very disappointing circumstances, and I think it is due to us to have a perfect understanding with Capt. Thomas as to what is the reason we are called upon to put our hands in our pockets again. We have seldom, if ever, made two calls in succession. There must be some cause, and we ought to know it.

Capt. THOMAS: I believe I am the second largest shareholder in this coucern, and it is as disappointing to me as it is to you that we have to pay calls. The reason is the Flow produced a certain amount of tin, but we have had to work underground. The price of coal is also very high. I am disheartened, as you are, over the result, but I cannot help it.

Mr. HODGKINSON hoped there would not be any feeling about this matter.

The CHAIRMAN: It seems to me there is such a widespread feeling of dissatisfaction in the management of this concern that I think the best thing Capt. Thomas can do is to offer to resign.

Capt. THOMAS: I shall certainly not do that.

Mr. HODGKINSON: I would not go so far as that, Mr. Chairman. I do not feel satisfied, I must say, with the way the thing looks now. We have got

A VALUABLE PROPERTY

in those sands, but I question very much whether these stamps get the tin out and whether some other process would not be better.

Capt. THOMAS said the remuneration was so small that it could be no inducement to continue in the management. He was, however, so large a shareholder that he did not feel inclined to abandon the thing to the management of the Collins's. If he resigned he would relinquish all his shares.

After some further discussion, a compromise was agreed to, that Capt. Thomas should resign the management and go on the committee.

The CHAIRMAN then proposed the adoption of the report and balance-sheet.

Capt. THOMAS seconded the motion, which was carried.

Capt. THOMAS proposed "That a call of 1s. a share be, and is hereby, made, payable to the bankers of the company, Messrs. Bolitho and Co., Consolidated Bank of Cornwall, Helston, on or before June 24, and that a discount of 5 per cent. be allowed on all amounts paid by that date.

Mr. SIMMONS seconded the motion, which was carried.

The proceedings then closed.

THE NEW VANCOUVER COAL MINING AND LAND CO., LIMITED.

IMPORTANT DEVELOPMENTS INCREASE LARGELY THE VALUE OF THE PROPERTY—THE GREAT SERVICES OF MESSRS. JOHN ROSENFELD'S SONS AND MR. ROBINS.

THE annual general meeting was held at the Offices, No. 12, Old Jewry Chambers, Old Jewry, on Tuesday, to receive the report of the directors, and to elect directors and an auditor.

Mr. John Galsworthy

(chairman of the company) presided.

Mr. JOSEPH RAMSDEN (secretary) read the notice of meeting.

INCREASED SALES.

The CHAIRMAN: Gentlemen, in rising to move the adoption of the report I shall not have to detain you very long. You will have observed by the report that the sales increased during the past half-year over any other we have previously had. They amounted to 215,000 tons of coal, and during the half-year we had reasonable prices. They improved until towards the end of the half-year—until, in fact, the Australian strike ended, and then they fell away, since which time they have been weaker, till at last, I think, by the end of this half we must begin to think that they will materially fall off. Fortunately, we have some large contracts which will carry us on for some time upon fair prices, so that we do not see immediately any cause for much complaint. At the same time, we must certainly look forward in the next half-year to a very altered state of things. You will observe that

THE HALF-YEAR'S NET PROFIT WAS 9,800*l.*

That was arrived at after writing off the usual depreciation, which amounted to a large sum, owing to the augmented output. The land sales realised 5,589*l.*, out of which we set aside the half of it, according to our rule, amounting to 2,794*l.*, as reserve. The half-year's balauce being 9,897*l.*, with the balance from the previous half-year it would have amounted to a very considerable sum, only out of that wo

paid you a dividend in Dec., which absorbed 5,500*l.*, and we have out of the balance set aside 10,000*l.* to a reserve fund, for the purpose of equalising dividends. That is the commencement of a special reserve fund for that purpose. All these items, therefore, go (as you may readily conceive) towards easing us in our financial position, and preventing the necessity of borrowing so much from

OUR FRIENDS THE ROSENFELDS

as we should otherwise be compelled to do. The state of the mines I need not go fully into here, except so far as it is brought up to-day by the cable, particulars of which I will give you directly. The general position is fully set forth in the report, which, no doubt, you have all read. We have the usual telegram from Mr. Robins, which states as follows :—

"The shaft on Protection Island is now down 160 ft., out of a total depth of 588 ft. The coal in the No. 1 level, East Field Mine, continues good, and 5½ ft. thick. The corrected survey gives this level as 120 yds. under Protection Island. No change in the other mines. The No. 5 shaft, South Field, is now down 300 ft. out of a total depth of 486 ft."

From the start in coal in the No. 1 level there has been a very long and excellent drive in good coal. Of that level, Mr. Robins in a despatch a month or two ago said : "At No. 1 shaft the outlook continues most encouraging. It is indeed a new experience for us to see such a stretch of maiden ground from west to east in some 1,100 yds. (it is now more) as we have in this level, with scarcely a fault, and mostly with excellent roof." That is the

MOST IMPORTANT OPERATION WE HAVE HAD IN THIS COMPANY

since I have been connected with it, and if, laterally, this field of coal results as we hope, there is an enormous quantity to be got by means of that level. You will see that the shaft on Protection Island will enable us to get the coal from that level very much more easily than we could have done from the old shaft on the other side. By the wharf which will project from Protection Island we shall be able to ship it almost directly from the shaft into the vessel, so that the work there is a very important one—the most important, as I have said, that has taken place since I have been connected with the company. During the half-year I am speaking of we have spent a good deal of money on capital account, and you would have supposed, therefore, that the capital asset on the credit side would have been very materially increased by the amount we have spent. The balance-sheet shows the colliery asset this half-year to amount to 269,459*l.*, and last half-year to 264,936*l.*, although we have spent that large sum on capital account. That is accounted for thus :—There were items with regard to explorations which ended in no result, and those have been wiped out, so that our balance-sheet is so much the cleaner and our finances placed on a better basis. I think that the balance-sheet, as a whole, presents features upon which we may entirely congratulate ourselves, and that it may bear favourable comparison with that of any other company of a similar character. I must refer with great regret to the death of our respected auditor, Mr. Charles S. Hill, who has died since we met last year, in his 85th year. (Hear, hear.) We do not propose to fill the vacancy. With these observations, I move, "That the report and accounts for the half-year ending Dec. 31, 1890, now before the meeting, be received and adopted."

Mr. FRY (director) : I second the motion.

VIEWS OF SHAREHOLDERS.

Mr. BLUNDELL : Your statement is so exhaustive that remark is not called for. I agree with you that it is a matter of congratulation that we can present so clean a balance-sheet as that which I hold in my hand. There has been no mention of anything as to the disposal of our property. I presume matters are *in statu quo*.

The CHAIRMAN : Precisely ; there is nothing new to report.

Mr. MOY : On the credit side of the balance-sheet does the coal there represent coal in stock ?

The CHAIRMAN : Yes, but it was principally on its way in ships, and has been realised before now.

The report was unanimously adopted.

The CHAIRMAN : I propose "That a dividend for the past half-year at the rate of 6 per cent. per annum be paid, free of income tax, on June 10, 1891, to the holders of shares in this company on this day."

Mr. TENDRON (director) : I second the motion.

Carried unanimously.

DIRECTORS AND AUDITOR RE-ELECTED.

The CHAIRMAN : I have great pleasure in moving the re-election of the retiring directors, Mr. William Needham and Mr. Frederick Tendron. I need not say anything to bring those gentlemen more prominently before your notice than their own actions have brought them during so many years ; and therefore I move that resolution with pleasure.

Mr. ROBERTS seconded the motion, which was carried unanimously.

The CHAIRMAN : I propose the re-election of Mr. Samuel Lovelock as sole auditor, at a fee of 25 guineas. He used to be paid 20 guineas, but as he will have to do the work alone in future we have thought it only right slightly to raise the fee.

Mr. HALL seconded the motion, which was carried unanimously.

MR. ROBINS NOT FORGOTTEN.

The CHAIRMAN : I propose that the best thanks of the meeting be presented to Mr. Robins, the company's superintendent at Nanaimo, for the zeal and ability he has shown in the management of the company's affairs during the past half-year." I need not say anything in reference to this motion except this, that the operations of the company are very considerable, and I am sure Mr. Robins' abilities must have been taxed to the utmost, but he has always come right up to the mark he has been expected to attain. (Cheers.)

Mr. TENDRON : I have equal pleasure in seconding the resolution. The result of his efforts is, to a certain extent, seen in the report and balance-sheet, but a short time since a considerable portion of that work was under my personal inspection, and it is simply marvellous the amount of time and labour Mr. Robins bestows on every portion of your property. Day and night he is incessantly working, and, as Mr. Louis Rosenfeld mentioned at the time, not only does he seem a first-rate man of business and manager, fitted to take the oversight of the large numbers of men in our service, but he has shown himself a first-rate wharf constructor, engineer, and railway contractor. (Cheers.)

Mr. MOY bore similar testimony to the abilities of Mr. Robins.

The motion was carried unanimously.

THE AID OF THE MESSRS. ROSENFELD ACKNOWLEDGED.

The CHAIRMAN : I now propose that the thanks of this meeting be given to John Rosenfeld's Sons for their services to the company during the past half-year. That has now become a formula with us, and I think a formula which is entitled to be respected by us most fully, because, with regard to our relations with them, I may say in a word that they are simply of a most satisfactory description. (Cheers.) I have great pleasure in proposing the motion. (Renewed cheers.)

Mr. BLUNDELL : I have equal pleasure in seconding it. I made the personal acquaintance of one of those gentlemen when in San Francisco, and am sure your interests are perfectly safe in their hands, and that all their business relations with the company will be most satisfactorily and completely carried out.

The motion was carried unanimously.

THE STAFF REMEMBERED.

The CHAIRMAN : There is another resolution I feel impelled to propose on this occasion, because we know that during the last year there has been an enormous amount of work thrown upon the mine manager and staff generally, through which they have passed with great credit to themselves and advantage to us. The motion is "That the thanks of this meeting be given to Mr. Macgregor, the mine manager and the staff generally, for their services to the company during the year."

Mr. TENDRON seconded the motion, and said he had seen and appreciated their services when he was on the spot.

A cordial vote of thanks to the chairman and directors, proposed by Mr. BLUNDELL, seconded by Mr. HALL, was carried unanimously, to which Mr. FRY responded.

THE MINING EXCHANGE, LIMITED.

A SUCCESSFUL YEAR — SUGGESTIONS TO INCREASE THE INFLUENCE AND UTILITY OF THE EXCHANGE—ENCOURAGING FACTS AND STATEMENTS BY MR. THOS. THOMPSON.

THE annual meeting of the members of the Mining Exchange was held on the Premises, No. 9, Old Broad Street, on Monday, and there was an influential attendance.

Mr. Thomas Thompson

(chairman of the Exchange) presided.

The notice calling the meeting was read by Mr. HARGREAVES, the secretary.

MEMBERS ILL.

The CHAIRMAN : Gentlemen, before proceeding to the business of this meeting I would like to say how very much I regret that we have not with us one of the most valued members of our committee to-day, for the simple reason that he is suffering from the fashionable complaint—I refer to Mr. Peter Watson, who is, I understand, down with influenza. I would like also to say how very much I and the committee regret to see that our meeting is not to-day more numerously attended, but I know there are a great number of our members who are suffering in like manner. With your permission I would take this opportunity of stating, both for the committee and myself, how very much we sympathise with all the sufferers, and how earnestly we wish to hear of their speedy recovery. (Hear, hear.) I will now proceed to the business before us. I have to state, on behalf of the committee, that we have very great pleasure in submitting to you the directors' report and balance-sheet, which have been circulated. In fact, I think I may

TENDER TO YOU OUR CONGRATULATIONS

upon the success which has attended our operations during the past year. At first sight, possibly this success is not altogether apparent, as I notice that the balance we have to carry forward is not quite so large as it was on the occasion when we last met you. This, however, is due to a variety of circumstances. In the first place, there is an apparent decrease of income, and then there is a certain increase of expenditure. As regards the decrease of income, I would point out that we have, during the last 12 months, lost several members, and, although we should have been very glad to have had the benefit of their subscriptions, I think I may say it is a matter upon which we can really congratulate ourselves, because the Exchange as at present constituted is much stronger, and a more representative body, than it was even when the number of members was larger. Then there is a very considerable decrease in the amount we have received from the official broker for commission upon the buying-in and selling-out of shares. We should, doubtless, very much like to have seen a larger sum to our credit than is shown by this balance sheet ; but I would point out that the decrease of this item is really a matter of congratulation, for two very important reasons. The first is this : some months ago our income was so satisfactory that we saw our way to abolishing a certain portion of the commission which some members thought weighed heavily upon them—I mean to say, that when we first commenced operations

WE USED TO CHARGE HALF COMMISSION

upon all shares which were put up to be bought in or sold out, even in the event of those shares not being settled through the official broker. In fact, it used to be customary to charge ½ commission on everything posted in the Exchange. That we have done away with, as it created a certain amount of unnecessary friction. There is another point upon which congratulation is due, but not so much

to you as to the public, inasmuch as we now find that we have not nearly the same number of shares posted to be bought in and sold out, and we attribute that in large measure to the very much more perfect system upon which the members now conduct their business. In other words, the members of the Exchange appear very much more punctilious than they used to be in days gone by in the carrying out of the transactions into which they may have entered. So much for the decrease of income. But there has been a certain increase of expenditure; and with regard to that I would point out that the outlay charged in these accounts against revenue covers the whole expenditure for 12 months, whereas the balance-sheet we submitted last year charged only 11 months' expenditure against practically 12 months' income. Another thing which made the expenditure much less last year than it is at the present time was, that it was only as our Exchange went on we found it advisable to incur greater outlay in advertising and providing conveniences for the members. Hence, many expenses were incurred last year over only five or six months, while this year they cover the whole twelve. That was a matter which entirely escaped the notice of both committee and members at the last meeting, and it is under these circumstances that the expenditure this year does not appear altogether favourable when compared with that which appertained to the first year of our existence. I think I may say we have now entered upon a strong and stable position. We have so far done what was necessary to make the Exchange a great success, and under these circumstances I think it quite possible that for the next year our expenditure will not be nearly so large as it has been recently, because it will not be necessary to make ourselves known, and flourish ourselves so much before the world as we did when we last met you. I do not think it necessary to say more upon the subject of our revenue account, or, indeed, with regard to the accounts at all; but before passing from them I would like to point out, with regard to

THE BENEVOLENT FUND,

that we have during the last 12 months voted something like 200*l*. to persons connected with the Exchange, whom we thought worthy of that amount of consideration, and yet we have still a credit balance to the fund of 100*l*. (Hear, hear.) The capital account requires no remarks, unless it be one to show you that practically we have no creditors of any kind whatever. It is true there appears an item of 42*l*. 14s. for creditors, but that arises in this way:—In the first place there was a gentleman, once a member of this Exchange, who left us, and whose shares were put up to auction and sold, the proceeds being retained by the committee to the present time for the benefit of such members as may have a claim upon the member who has left us. There is also about 30*l*. due to Miss Marlborough under the benevolent fund, which arises in this way, that we have not considered our duties at an end with the simple act of voting the money. We have considered it our duty to look after the interests of the recipients to a certain extent, and Miss Marlborough will receive the balance whenever the opportunity is seen of using it efficiently to her advantage.

HOW THE EXCHANGE MAY BE MADE MORE USEFUL.

I will now draw your attention to the paragraph in the directors' report, which states that the committee consider "the sphere of usefulness of the Mining Exchange may, in several important points, be considerably extended." I have already told you that the number of our members is somewhat more limited than on the occasion when I last had the pleasure of meeting you, but we consider that that is a benefit rather than otherwise, because we have got rid of certain weak men, and I think we may now say that we have a very representative body of good mining men as our members. (Cheers.) It is, however, our desire that we should make this Exchange much more repreSeutative than it is at the present moment of the general mining interest. It is not so long ago that I had the pleasure of meeting Mr. Pritchard Morgan, M.P., who took a large and active interest in connection with the Mining Exhibition at the Crystal Palace, which passed off so successfully. He told me that he was very much struck indeed with the apparent great success which had attended the efforts of the committee and members of the Mining Exchange, and that he thought immediately of joining us, but there was one thing we might do to considerably improve this Exchange, and that was to admit not merely mining dealers, but all the secretaries and directors and mining engineers that might be approved of, and, in fact, that we should make this Exchange as representative as possible of both British and foreign mining as a whole. I see Mr. Pritchard Morgan has taken an active interest in connection with an institutiou to be called "The Chamber of Mines," which is now being taken up by the Chamber of Commerce; but supposing we follow the lines suggested by Mr. Pritchard Morgan I really do not see that this Exchange would enter in the smallest degree into competition with the Chamber of Commerce. I think that by admitting the class of gentlemen whom I have named—first of all, we should take in all the outside brokers who can give us a guarantee with regard to respectability; all the country brokers who can do the same, and that would increase the number of our transactions, and be of benefit to the British mining community as a whole. The next thing would be to admit the secretaries, and through them we should get information. We should also admit the directors, and get them occasionally to spur on the secretaries when needed. Again, we should include the mining engineers, and when we required reliable information as to any particular mine, we should then have some individual to whom we could go. Supposing, also, we wanted to send someone to the other side of the world to inspect and report on mines: we should be able at a moment's notice to communicate with engineers for that purpose. In fact, I really think that the capabilities of this Exchange, if properly conducted, are

ALMOST WITHOUT LIMIT.

But, gentlemen, on that subject I would point out, that if once we take in all these classes we shall have to do so on different terms from those which belong to the Exchange at the present moment. I think, in the first place, that in view of the accommodation we can afford you here that the present subscription of 12 guineas is somewhat too high, and the committee propose to reduce that subscription to 10 guineas for all recognised London dealers.

PROPOSED SUBSCRIPTION ARRANGEMENTS.

With regard to all country dealers, we propose to reduce the subscription from the present almost prohibitive fee of six guineas to three guineas; for all secretaries, directors and mining engineers, we propose to take a subscription of two guineas. We cannot see that there would be any clashing of interests in a matter of this kind. If we take a less subscription from secretaries, directors, and mining engineers, we have to bear in mind the large amount of information we shall receive from them, and we ought also to consider that even if they do have a transaction occasionally with us they can hardly be regarded in the light of ordinary mining brokers, and so our interest as dealers will not be in any way affected. Then we propose, as the result of making a considerable reduction in our subscriptions, to reimpose the ½ commission which was abolished some few months ago. We think that system was decidedly of benefit to the Exchange, and I hope you will forgive me for dilating upon the subject, and showing why we think it of so much importance. In the first place, we think that if a man is so far backward in his transactions as not to have delivered shares that he may have sold within the time prescribed by our rules and by the Stock Exchange, he ought to be punished for it. (Hear, hear.) In the next, there ought to be some further inducement than there is at present to make him carry his transactions out in a more regular fashion; and, lastly, I think there is something due to those men with whom he has dealings, because of the considerable inconvenience he causes them by his delay. Hence, if we put on this ½ commission again it would have a duplicate effect. In the first place, we should receive a certain amount of money, which would enable us to make the reduction in the subscriptions, and in the second place, it would bring about a still more regular carrying out of the transactions into which our members enter.

WHY THE EXCHANGE WAS FORMED.

Now, to go to another subject you will remember that in starting this Exchange it was not only intended to be of convenience to ourselves, but we always intended it to be of service to the public, and that the fact of a dealer being a member of the Exchange should be a guarantee for the carrying out of his transactions in a proper, business-like, and *bonâ fide* manner. (Hear, hear.) On this point I invite discussion, as on the others. There has been a strong feeling amongst some of the members of the Exchange that

IN THE EVENT OF A MEMBER BECOMING A DEFAULTER,

aud failing to pay his differences, &c., and in consequence, ceasing to be a member, his name ought to be communicated to the public Press just the same as is done in the case of defaulting members of the Stock Exchange. I think if we were to adopt a rule of that character it would be considered a great guarantee by the public, and would necessarily bring to us a very large increase of business. (Cheers.) During the last 12 months we have lost several members, as already stated. When this Exchange was first started, we were obliged to take in all the outside brokers who would join us, and we took in a very large number of the weak as well as of the strong. The weak have now left us, and I think I may fairly say that the strong remain, and that we do not mean hesitating to adopt such a rule as that which has not been so much suggested by me as by members ou the other side of the table. When the weak members left us there were those who remained who have said—"Where is the benefit of being a member of the Exchange if there are some men who, by reason of not paying their differences, go out of it, and nobody is any the wiser? Their names remain on the lists previously issued, and they have all the prestige that attaches to their having been members of the Exchange (to which the public attach a certain degree of importance), and nobody knows that they have left, or the reason of their going." In fact, such a man is allowed to carry on his business in any way he may think proper, and if he acts badly it must necessarily be to the detriment of those who still remain members of the institution. (Cheers.) It has, therefore, been proposed by gentlemen on the other side of the table that we should adopt

A RULE SIMILAR TO THAT OF THE STOCK EXCHANGE.

I need not detain you any longer, but, in conclusion, will only say that the success which has so far attended this Exchange has been a matter of most sincere satisfaction to your committee, aud although we have lost some few members, and our income has been decreased from causes I have explained, I think I may say that if this Exchange be carried on with the same amount of union that has been manifested hitherto between the committee and its members there is before it a very brilliant and prosperous career. (Cheers.) I conclude by moving, "That the report of the directors and the accounts circulated be received and adopted." (Loud cheers.)

Mr. BEDFORD seconded the motion, which was carried unanimously, it being agreed by the members that discussion on the topics raised in the chairman's speech should be taken separately.

The CHAIRMAN then invited discussion, and recapitulated the points to which it should be directed—the re-instatement of the rule as to ½ commission; the publication of the names of defaulting members; the admission of secretaries, directors, and mining engineers; and the reduction of subscriptions required from dealers in London from 12 to 10 guineas and in the provinces from six to three guineas.

DISCUSSION.

Mr. J. H. A. SMITH: I think the suggestion to take these matters separately a wise one, because, although we may differ on some of the topics now before us for discussion, we shall all be unanimous in carrying the satisfactory report the committee have laid before us. We are greatly indebted to them for the thankless task they have accepted on behalf of the members generally. It was well said by a newspaper that we had secured as members of the committee the cream of the respectability and integrity of the mining market. As to the matters for discussion, I am, in the first place, very much opposed to the re-imposition of the ½ commission rule, for our position is a little peculiar. The Stock Exchange, which has the advantage of us in years, has fallen very much behind us in the matter of mining dealing. In fact, they generally regard mining shares as fit only to be deposited on the refuse heap. (Laughter.) The peculiarity of our position is this—when we put up our notices on the board, A reads B, and one has no knowledge where the transaction proceeds after B if the third party be a member of the Stock Exchange. In a spirit of fairness we accept any legitimate ticket that may be given to us, but it is not so that we are treated if we happen to be dealing with

members of the Stock Exchange. The position of B is that A in that case puts up on the notice board to buy so many shares, and then B says "I read the House." Under our present rules that stops the transaction until the man in the House has 24 hours to get the shares, but the unfortunate B must pay his ½ commission. In doing our duty honestly to the public, and competing with an institution like that, I think that we are already under sufficient disadvantages, and that we should be

UNWISE TO LOAD OURSELVES WITH A FURTHER ONE.

I do not think any of the members have gone into this Exchange for the sake of dividends, but are anxious simply to have a recognised authority from which the public may be assured that their bargains will be carried out with the true spirit of fairness and that there shall cease to be brought upon respectable dealers the opprobrium that the conduct of unscrupulous persons has brought upon them. I think we have given evidence that we can do mining business not only as well, but vastly better, than members of the Stock Exchange, and I do not think we ought to give away any portion of our privileges, or in any way have our hands tied. Therefore, subject to the explanation of the chairman, I should strongly oppose the re-imposition of the rule of ½ commission.

EXPLANATIONS.

The CHAIRMAN: I think Mr. Smith is slightly in error. According to present rules, when shares are required to be bought in, and are once posted, and the man against whom they are to be bought in puts against his own name that of a member of the Stock Exchange whom he may read, then 24 hours is given in which to deliver the shares in order that they may be bought in in the "House" in the ordinary way. I do not think Mr. Smith went far enough, for the simple fact of reading a member of the Stock Exchange stopped the ½ commission, as it was only against members of this Exchange that this rule applied. Against the House there is no commission. Mr. Smith was also somewhat in error when he said that the members of the Stock Exchange will not take our tickets, but we have

ABSOLUTELY COMPELLED THEM TO TAKE OUR TICKETS,

and should any member of the Stock Exchange refuse to do so with me I should refuse to deal with him afterwards. It is for you to do the same. We have assumed a position now that we can afford to treat the other House with a far larger amount of independence than we did 12 or 18 months ago, and whether your tickets are accepted in that House must rest entirely with yourselves. I say again, I will not do business with a man who will not take my tickets. (Cheers.)

VOICE OF EXPERIENCE.

Mr. SAMUEL JAMES (member of committee): I do not think I was present at the committee meeting when these suggestions were thrown out, otherwise I might have said a few words about them. Sometimes it happens that a notice may have been put up on Monday morning, when members are not in their offices, and as they do not always send their clerks here, shares are bought in that are in course of delivery, or a valid explanation can be given for non-delivery, and then this rule becomes a serious infliction. I find a serious objection to that rule—so serious, indeed, that I thought of showing my opposition to it in a very pointed way. I should very strongly object to its being re-instated in the rules, and believe we can get on far better without than with it. (Cheers.)

OTHER COMMITTEEMEN TAKE A DIFFERENT VIEW.

Mr. CROFTS (member of committee): I am in favour of the re-imposition of the rule, because I think if a member puts up shares to be bought he should do so deliberately, knowing what the consequences should be. (Hear hear.)

Mr. BUMPUS (member of committee): It is only just that there should be a fine of some kind charged to those who do not deliver stock in time.

Mr. BEDFORD: I think the revenue part of the question should be kept entirely distinct from the fines, and that this should not be treated as a financial question at all. If the income is not sufficiently large the members' subscription should not be reduced.

The CHAIRMAN: The question is evidently one on which differences of opinion prevail, and, perhaps, on the whole, it had better be withdrawn. I think the members and committee are agreed that the interests of the Exchange will not be consulted by creating friction amongst ourselves. I uow invite discussion as to the

PUBLISHING THE NAMES OF DEFAULTERS.

I do not think when a member secedes from us he should be allowed to go on trading with all the prestige which belongs to membership.

Mr. CROFTS: We mean to publish only the names of defaulters.

The CHAIRMAN: Or those expelled. (Hear, hear.)

Mr. J. H. A. SMITH: I would go further than Mr. Crofts, and would say that when a member leaves the institution the reason for doing so should be distinctly assigned. It is most desirable that as far as possible the public should know who are members and who are not. Many persons write for a list of members, and keeping that by them go on in full belief that it is never changed. Mr. Smith thereupon proposed "That this meeting recommends the committee to take into consideration the necessary steps for the publication of the names of all those who cease to be members of this institution."

Mr. MITCHELL seconded the motion, which was carried unanimously.

MR. ALFRED THOMAS AND THE CHAIRMAN RE-ELECTED.

The CHAIRMAN: Mr. Alfred Thomas joined us at our last general meeting at the unanimously expressed wish of the members, and I do not think he has been absent from a single committee meeting. In fact, he has been one of the most indefatigable members, and I propose his re-election.

Mr. VICKERS seconded the motion, which was carried unanimously.

Mr. CROFTS: I have great pleasure in supporting the re-election of Mr. Thompson, for I am sure we could not have a better chairman, and that is the opiniou of the whole of the members of the committee.

Mr. MITCHELL seconded the motion, which was carried by acclamation.

The CHAIRMAN, in returning thanks, said: Ever since I have been connected with this Exchange it has been my great desire to make it a great success. I think it is making steady progress, and I see a vast career of prosperity before it.

Mr. LAMBERT proposed in cordial terms, and Mr. BEDFORD seconded, the re-election of Mr. Edward Ashmead, the auditor, which was unanimously agreed to, and

Mr. ASHMEAD, in returning thanks, bore testimony to the admiable manner in which Mr. Hargreaves keeps the books and accounts of the Exchange.

Mr. BEDFORD proposed, and Mr. SAMUEL seconded, a cordial vote of thanks to the chairman and committee.

IT IS TRUE.

The CHAIRMAN: We have done our best in the interests of the Exchange, and have always put our private interests in the background. It was proposed just now that we should reduce the subscriptions of London and country members, and enlarge the area of the institution. I will take it that these questions are relegated to the committee for further consideration, and that, if desirable, they will be brought up hereafter for further consideration.

The meeting then closed.

THE MESQUITAL DEL ORO MINING CO., LIMITED.

THE MINE HAS TURNED THE CORNER—PROFITS BEING MADE AT THE RATE OF £3,000 A MONTH—PROSPECTS OF EARLY AND LARGE DIVIDENDS.

THE annual general meeting of the shareholders of this company was held at Winchester House, on Thursday, for the purpose of receiving the directors' report and accounts to Dec. 31, 1890.

Mr. N. F. Robarts, F.G.S.,

presided.

Mr. RALPH S. ARCHBOLD (secretary) read the notice of meeting.

THE LONG LANE TURNED.

The CHAIRMAN: It is said to be a long lane that has no turning or ending, and that I expect most of you have thought with regard to the Mesquital Co., which is now in its sixth year, and has not yet shown a profit. You will remember that when we met a year ago the company was in very serious financial difficulties. It was then proposed by the directors that further capital should be raised, if possible, and a scheme was drawn out by them for that purpose. Negotiations went on for some months with our solicitors, and eventually we found that, owing to the constitution of the company, half the shares being vendors shares under original contract, which prevented more than 50,000 ordinary or preference shares being issued, it was impossible to increase the share capital. We had already authority to borrow upwards of 30,000*l*. on debentures, and as we were making no profit it seemed exceedingiy doubtful how the mine was to be carried on. About last Sept. it was felt by the directors that the only way of getting out of our difficulties was to sell the mine to another company, and by that means, having a company with a larger share capital, acquire what further money was necessary for development and for bringing the mine into a paying position. Fortunately at that moment, after we had borrowed considerably from our friend, Mr. Barry, and certain directors, and were under obligations of about 5,000*l*. or 6,000*l*. for borrowed money, in addition to the amount which we had already raised upon debentures,

THE MINE TOOK A DECIDED TURN FOR THE BETTER,

and we were able to carry on to the end of the year and up to the present without making any alteration in the constitution of the company. I very much wished that our chairman who sits beside me (Mr. Whitall), who expected not to have been present, but who I am glad to see here, could have given you the favourable information instead of myself, that the very unhappy meeting of last year (as I am sure you must have felt it to be) need not be repeated to-day. and that the company is by no means in the financial straits in which it then found itself. (Cheers.) I may first comment upon the accounts submitted, and give you a short *résumé* of the working of the mine during the last year, and then point to our prospects. In the remarks I have to make I hope to answer one or two inquiries made by letter since the meeting was called, and I need not definitely refer to them. I think I shall answer absent shareholders in what I have to say. You will notice in the report we first of all call attention to a large expenditure, or

LOSS UPON EXCHANGE.

In Mexico the currency is silver, and, therefore, in paying our silver there we have either to remit money to Mexico and lose by exchange, when silver has fluctuated so adversely as it has done during the last 12 months or so, or else realise our gold in Mexico for the payment of wages. We have found it has been best in all ways to have our gold remitted to England, and for the convenience of the company to obtain funds by drafts upon London, and those drafts during the past year have had to be sold at an average of 42d. per dollar, as against 37¼d. in 1889, and the consequent loss has been about 2,500*l*. This year we have adopted the new plan of stating that loss separately instead of putting it on to the cost of mining, in order that the comparison between the different years' cost can be more easily made, because it is not an increase in mining, but finance. Then, with regard to the way in which our loss for the last year has been made up—there has been a certain amount of extra expenditure on debenture interest. There has been a very heavy item for travelling expenses, consisting in sending out seven or eight officials to the mine—several agreements with our former officials having expired, and home travelling expenses under agreements, and outward travelling expenses falling to be paid by the company. This unusual expense has been 541*l*., besides the expense paid there of 54*l*., but in the next year it will not perhaps be nearly so large.

FEES SURRENDERED, AND OFFICIAL SALARIES REDUCED.

Then, in order to meet the difficulties which the directors felt the company was in about the middle of last year, they agreed amongst themselves not to claim during the past year the amount of directors' fees to which under the articles they are entitled, but take only half that

amount, and Mr. Archbold, the secretary, and one of the officials of the mine, also reduced their salaries by the sum of 300*l.*, thereby saving to the company 800*l.* last year in management expenses. (Cheers.) Now, unfortunately, we have on Dec. 31 a debit balance of 11,000*l.* I may say before I go further, that we have considerably improved our financial position since then; we have now, after the Apl. bar is realised, and after paying off all borrowed money here, some 2,000*l.* in hand, and if the May bar realises about as much as that for Apl. we shall have about 5,000*l.* in hand. (Cheers.) That will therefore enable us to carry on our mine as regards cash in hand with ease and comfort during the remainder of the year. I will allude more particularly later on to our prospects with regard to finance. As regards the work of the mine,

OUR STAFF HAS BEEN VERY MUCH CHANGED.

At our last meeting we informed you that Mr. Holberton, who had had the management for several years, was about to leave, and the under manager, Mr. Jordan, would be put in charge. Mr. Jordan was left in charge as temporary manager until last Jan. Meanwhile we informed you that we were sending an expert, Mr. Bousfield, to take charge of the mill for six months and see whether we were saving all the gold, and to report fully. Unfortunately Capt. Jones was invalided, and one of the English workmen was killed by an accident due to his own action and that of two others, who fled the country to avoid prosecution by the Mexican authorities. We had, therefore, to send out an entirely fresh staff, and were exceedingly fortunate last Dec. in being able to appoint our present general superintendent, Mr. Davis, who came to us with the highest recommendations, and when I tell you what he has done since he arrived you will feel that we have selected the right man. Mr. Davis arrived in Jan., taking with him Capt. Kennedy as mine manager, and he has now obtained a very efficient man to manage the mill in Mr. Blake, whom we have heard highly of on this side, and he has also taken out two or three other English workmen, so that we have an exceedingly strong and efficient staff at the present time. We have made one alteration in our management, and that is, instead of having a financial agent and mining manager,

MR. DAVIS HAS BEEN APPOINTED GENERAL SUPERINTENDENT,

and takes the whole charge of finance and everything else. As to the works we have done in the mine — you all have had plans sent you. They would have been forwarded with the report, but owing to a delay on the part of the lithographer, they were not ready in time. At our last meeting, that is at the beginning of the year, the San Miguel tunnel was completed. Up to the present time, the report which Mr. Jordan gives shows the drivages done in the mine during the year to be a total of 1,535 ft. against 1,992 ft. in the previous year. The falling off in the work done was owing to our financial position in the middle of the year, when we felt it was necessary to stop the development as far as was possible, until we had sufficient money to carry on further, or otherwise we should have been able to drive and open up as much as we exhausted. Since Dec. 31 we have sunk the Briones shaft 64 ft. and driven the San Miguel level, which runs from that shaft east and west under the 256 level, east 250 ft. and west 450 ft., so that we have opened up a considerable amount of reserves since Jan. 1. (Cheers.) We have gone on with the assessment work and our other claims, but have only done what has been absolutely necessary to retain them, and have not, and shall not, unless we actively develop anything, receive anything from them in the way of produce. During the year we have found, after a report from Mr. Bousfield, that the mine was considerably over-estimated in previous years from the samples. Of course the test of the mine after all is in the milling, and we have found that during the year our ore has averaged a production of 12 dwts., with almost 4 dwts. in the tailings—showing that our ore is about of the value of 16 dwts. on the average for last year. Mr. Bousfield made out almost exactly the same value for it when he assayed the samples handed to him out there. With regard to Mr. Jordan's report, you will bear in mind that he was not our manager—only manager *pro tem.*—and we do not altogether endorse the report he has submitted. We consider it not sufficiently favourable in several respects, and the results of the last four months have shown that Mr. Jordan has under estimated the production of the mine. We must, therefore, ask you to accept that report provisionally. We, however, felt if we had not sent it we should be thought to be holding something back. We thought it advisable to issue it, but now prefer to ask you to

WAIT FOR MR. DAVIS'S FULL REPORT

on the mine. It will be prepared as soon as he has had time, but he has a good deal to do in seeing, first of all, what can be done to improve the product of the mill, and then how the output may be increased. During the year we have been running 50 stamps, and are now crushing about 90 tons per day, which, with an average of 25 to 26 days a month, gives an average monthly crushing of from 2,200 to 2,400 tons. We have also been able to accumulate a little ore upon the floor, so that in case of another strike we hope that the mill will continue to run. Our electric light has been very serviceable, and our mill is always in charge of an Englishman, and we are quite satisfied there is no robbery. Our tailings are a matter of great importance and have been reduced to the lowest possible point. During the year they averaged under 4 dwts., but are now considerably less than that. In Jan. there were just over 4 dwts., in Feb. only just 2 dwts., in Mar. under 3 dwts., and Apl. we do not yet know, but we feel that we have brought down our average to 3 dwts., and our ores all being free milling, we feel that those who are acquainted with gold mining will see we have reduced our tailings to as low a point as we can expect. We have had a good deal of complaint of theft from the mine, and believe there has been more peculation going on than we were aware of, but with Mexican workmen we shall never be able to stop that entirely.

COSTS.

As to our costs, as regards milling, they are brought down to $1 77c., and administration to 42c., and our mining to $4 20c. Our milling is brought down almost as low as Mr. Harvey, when estimating in 1888, anticipated, say, within half a dollar, and, no doubt, we shall bring it considerably lower this year with the larger quantity we are putting through. Our administration is rather more than we anticipated, 42c. against 25, but that depends on the tonnage and output; and our mining and tramming for the last year we consider still too expensive, but are glad to say that Mr. Davis is reducing it rapidly. I must refer to a strike which occurred in Mexico, and which compelled us to raise wages about the middle of last year; but I think Mr. Davis is getting more work done for the amount paid, so that perhaps, after all, we shall not be sufferers. We feel that in the past we have not had full work out of the Mexican workmen. We hope Mr. Davis, with his strong English staff, will enable us to get a better amount of work done for what we pay. The difficulty we have had to contend with during the year is that our ore has been of less value, but so far as we can see that seems likely to be changed, and our ore is now becoming of rather more value than it was during the past year. The San Miguel tunnel, which we anticipated would save largely, now economises to the extent of $1 37c. upon what we were previously paying, for carriage costs only 53c., or a saving upon 18,000 tons of upwards of 4,000*l.* if all the ore had gone through the San Miguel tunnel, as all our produce will do this year. I shall be asked—how is it with all these savings we have had no profit? I have explained that the exchange has been very much against us, also the heavy travelling expenses, and we think we have not had full value for the labour. As to the future — I will now say a few words, for the rest has been ancient history. I want to draw attention to the paragraph in the report, which says that during the past four months we have made a nett profit of 7,000*l.*, or at the rate of 20,000*l.* per annum, which should give, as soon as we have repaid our debit balance, profits, and

DIVIDENDS OF UPWARDS OF 20 PER CENT.

We have now wiped off our debit balance with the exception of 3,000*l.* or 4,000*l.*, and our May bar (if as good as that for April) will pretty nearly wipe off the rest. After that we shall be free for dividend, and if we go on as at present, those dividends ought to be at the rate of about 20 per cent. per annum, and I will leave you to judge how soon that will come about when I say the first 5 per cent. on 50,000*l.* in preference shares is only 2,500*l.* Then as regards our dividends—to Nov. we have 30,000*l.* accumulated on the preference shares. If we can go at the rate of 3,000*l.* a month profit as we did last month, we ought to be able to wipe this off in the course of next year. We have one thing, financially, to consider, that 10,000*l.* debentures fall due at the end of the year. They have to be paid off with a bonus then. If we renew them (and I think there will be no doubt we shall be able to do so, and on more favourable terms), it will allow us to divide all profits we make in dividends. This will leave us with only (after having paid off all loans) 6,000*l.* working capital, and we want to develop our mine more largely, because during the past year we have eaten into our reserves, and we must not only bring our reserves to the position they were in at the beginning of last year, but must increase them considerably, so as to put down more milling power. Now, as we cannot increase our capital, and it is not wise to borrow upon debentures, and as we want to devote the money we make in dividends, we shall probably have to see if we cannot

SELL A PORTION OF THE PROPERTY

so as to raise further capital, and there is no doubt that, if we like to take that course later on we shall be able to do it with advantage. I feel sure that we have now

ENTERED UPON THE ERA OF PROSPERITY

we have been expecting for some time. (Cheers.) There is no doubt we have very efficient management now whatever there might have been in the past. We have considerable dividend-earning power. Our mill is working excellently, and is reported on very favourably by Mr. Davis, and all I have to ask you is to watch the monthly returns, and see if we can keep up the 1,800 ozs. which we made last month, and which gave us about 3,000*l.* profit for the month. If we do that I think it will not be long before our mine takes one of the highest positions in the gold mining market. (Cheers.) I now move the adoption of the report and accounts.

Mr. WHITALL (director): I second the motion.

DISCUSSION.

A SHAREHOLDER asked whether the appreciation of silver was adverse to the company, and would the chairman say something more on the question of reserves.

The CHAIRMAN: With regard to exchange, the higher the price of silver, as we have to raise silver there, the more it is against us. Every dollar costs us 42d., instead of 36d., which is a loss of one-sixth. The work done during the past year has been shown in red on the plans, and during the last four months by dotted lines. We have sunk the Briones shaft 66 ft., and are just at this time beginning to drive east and west therefrom at 66 ft. from the San Miguel. That has opened up a new level altogether, and will give us considerable increased reserves. We have also driven a good deal to the west, and are pleased to say that, though in the stopes, which were found poor in the 190 level, in the 256 beneath we have found a very good shoot indeed, which did not appear in the 190. A winze is being sunk to the San Miguel, and we expect to get some very good ore from that point. That is the first time that towards the west of our mine we have really found good ore, although there are old workings which no doubt higher up produced good ore. The San Miguel level to the east shows that the rich shoot we have always worked largely upon in the east side extended to the San Miguel, and in all probability goes down to the lower level, and as far as we can ascertain the mine is not getting less productive as it goes lower. Our Briones shaft is in a wide strong lode, going almost perpendicularly, and as far as we can ascertain the lower we go the greater is the amount of our reserves. Our ore will not decrease in value, but in all probability increase, whilst we can drive east and west, and at any time may come upon fresh shoots. The mill consumes about 30,000 tons per annum, but we hope to be able to open up as much as we exhaust. If we have sufficient capital to push on we shall be much ahead of the mill, but that is a question shareholders will have to consider. I think we must say we are quite satisfied that the ore is not getting less in value, but if anything is improving.

A SHAREHOLDER enquired if any rich deposit had been found similar to what the old workers were said to have had.

The CHAIRMAN: Mexican history is not sufficiently good to enable us to say what they found, but there are large openings showing extensive workings.

Mr. HARVEY (who has been on the property): I do not think there were rich shoots, but they were able to work the low-class ores profitably by means of slave labour.

Mr. F. T. BARRY, M.P.: Although there are no Mexican records at this mine, in the mining records of Seville, of which I have copies, there exist records of this mine, which wind up by saying: "It is one of the best gold mines in Mexico." Those records are nearly 100 years old, and speak of the mine as being very productive.

SHAREHOLDERS ADVISE.

Lord RICHARD BROWNE: I am sure that all the shareholders will be of opinion that it will be far better to devote your profits to the opening up of greater reserves than to the premature distribution of dividends. I hope the board will adopt that policy. (Hear, hear.)

The CHAIRMAN: I am sure the board would never think of diminishing the reserves, and the question is, how are they to be increased?

Mr. AUSTIN (director): The question is a vital one. We have a difficulty in raising new shares from our constitution, and have already issued enough 10 per cent. debentures to be wholesome to us, and it has been proposed that we should sell a portion of the property which, I think, will be a very doubtful proceeding, more especially on account of the labour questiou, for then we should have a competitor close by us. The quantity of labour is limited, as we found to our cost by the strike in the spring of 1890, and that has been one of the reasons our expenses have been so great. Everything points to this —that we ought to devote a certain amount of our dividends to increasing the efficiency of our mine.

The CHAIRMAN: We should not sell to a subsidiary company without having a controlling influence in its direction.

ROUTINE BUSINESS.

On the motion of Mr. F. T. BARRY, M.P., the chairman, in cordial terms, was re-elected a director.

On the motion of Mr. AUSTIN, Mr. Bateman, who, with his brother, holds 1,000 shares, was unanimously elected.

On the motion of Mr. BARRY, Mr. Sweetland was re-elected a director.

Mr. WOODS proposed the re-election of the auditors, Messrs. Cooper Brothers and Co., at the same remuneration as before.

Lord RICHARD BROWNE seconded the motion, which was carried.

The CHAIRMAN: We have been asked to mention, though it does not come officially as a proposal from the board, the desirability, as it is considered by some of the shareholders, of reducing the 5*l.* shares to 1*l.* But the matter is not before you formally in any way.

A cordial vote of thanks to the chairman closed the meeting.

GRAVEL GOLD MINES OF COLOMBIA, LIMITED.

THE WORKS GOING WITH 1,000 INCHES OF WATER, AND THE DITCH COMPLETED FOR 13½ MILES—A BRILLIANT OUTLOOK.

THE annual general meeting was held at Winchester House, on Thursday, for the purpose of receiviug the directors' report and accounts for the past year, and electing directors nd aan auditor iu the place of those retiring.

Mr. J. T. P. Pechey

(chairman of the company) presided.

Mr. SYDNEY A. COBBETT (secretary) read the notice of meeting.

POSITION A YEAR AGO, AND NOW.

The CHAIRMAN: Gentlemen, I have to move that the report and accounts be received and adopted. At our last meeting a year ago we went very fully into the details connected with the prospects of this enterprise, and I do not thinkiyou feel that it is necessary for me to go into all the details as to the objects for which this company was formed this afternoon. Since then we have endeavoured to keep you thoroughly informed of the progress which has been made in the construction of the aqueduct, which, as you are all doubtless aware, is the key to the whole of this undertakiug. Some delays—some months' delay—have taken place in the completion of the first section of this work; but these delays, I am bound to say, are not duc to any causes which could have been foreseen or anticipated in any shape or way. A friend of mine—a shareholder in this company—was saying to me yesterday that he meant, to use his own expression, to "pitch into me," because, in the circular which the directors sent out on Feb. 9 last, I think, Mr. Welton said that he expected to be at work by the end of the month. I am sorry that that shareholder is not here this afternoon; but I think it will be as well to let Mr. Welton speak for himself. This is what he writes to me on Apl. 1 last:—

"Rica, Apl. 1, 1891.

"J. T. Pechey, Esq.

"My Dear Pechey,—Yours of Feb. 6, received on Mar. 16. It is very satisfactory to find that our expenses are coming within the estimate, but we appear to have been sadly out in our estimate of the time required to get the water here. The ground is so variable, that however safe it may appear, therc is no telling where the weak places may be until the ditch is full of water.

"Fissures in the rock or holes made by animals appear when the water is turned on, and then flumes have to be put in where we least expected. The expense of this is not great, but thc time lost is considerable where timber has to be brought from so great a distance. All this is very annoying to us, and will be trying to your patience as well, but there is no help for it. We had better make a good job at once than have accidents after we commencc running. That thcre should be the least delay in getting the water on, and that the ditch may be thoroughly tested and examined as the water is brought on, I have Carleton again here with Silt and Joncs, and the whole of the water is bcing brought down until we find a weak place. It is then left running down to that point. Frequent examination is made of the portion of ditch in which the water is running, and whcn a weak place is repaired the water is brought on a further distance, until I get the water all down to the mine and the ditch thoroughly tested and in working order.

"I have no doubt that I shall be able to deliver the minc and San José water to Griffith upon his arrival here, and the rest of the ditch to Aqua de Dios in a month after. I quite understand that the accounts, &c., shall be kept quite separate until the ditch is finished to Guali.—Yours very truly,

"WILLIAM S. WELTON."

As stated in the report, which we ask you to adopt, within two or three weeks from the date of his later letter of May 1, 1,000 ins. of water was turned on to the mine from the San José quebrada, and that would probably be followed by the water from the Aqua de Dios quebrada. The first section of the ditch (13½ miles) is completed, and the water is running at thc mine. The Rica and Reposo syphons, each 3,000 ft. long, 26 ins. in diameter, and under a pressure of about 300 lbs. to the square inch, have been successfully laid, and are among the largest of their kind in the world. I think it is a matter of great congratulation for Mr. Welton and ourselves that these syphons, which carry this large body of water over two valleys nearly the height of St. Paul's, have been tested, and found to stand the pressure. I must own I have always had a little fear as to whether these syphons would stand so great a pressure. I suppose I have not had sufficient faith in Mr. Welton, but I do feel

GREAT CREDIT IS DUE TO HIM

for the way in which he has carried out these 13½ miles of ditch, the hardest part of the work that has to be done. Within the next three or four weeks (and I see no reason to doubt it, because the ditch has been tested so well) we shall have 6,000 ins. of water running on banks of gold-bearing gravel 150 ft. in height, and from the practical working tests made on these banks, I also see no reason to doubt what the result of our operations will be. As we told you at the last meeting, it will take four to six weeks to clear away the Spanish *débris* lying at the foot of these banks, but after that we ought to be running continuously, and I do not doubt successfully. Gentlemen, there is nothing that I know of that calls for comment in the accounts. We have spent a good deal of money—22,000*l.* The money was raised for the purpose of bringing this water on, and constructing 22 miles of ditch to convey it. It is a costly engineering undertaking, but it has becn pushed on as fast as possible. (Hear, hear.) Mr. Welton has had a force of 500 men, on an average, on this work during the past year.

WHAT HAS BEEN DONE.

What work, you may ask, has been completed for this expenditure? Well, thc mine has been thoroughly equipped; the syphons have been put in, sluices laid, launders sent out and put into position, 13½ miles of ditch completed, and the water has been turned on; and not only that, but at the section on the River Guali, which is to be eventually the main source of our supply, great progress has been made. Nearly one-half of it (over one-half) has already been graded, and a large portion of the ditch has already been constructed, so that that work is also wonderfully well under way. It is very satisfactory to see from Mr. Welton's private letters that he is keeping the cost well within the estimate. I am inclined to think it may be a little exceeded for this reason, that during the last few months the premium on dollars in Colombia, which, when this company was first formed was 100 per cent., has got to about 80. Fortunately, it comes only at the tail end of the enterprise. Mr. Welton's estimates were based on the premium then ruling of over 100 per cent. It makes a difference of 500*l.* or 1,000*l.*, for instead of getting $10 for every pound, we only get in the currency of the company $8. We took advantage of the probable fall to send out a considerable amount, and I think we realised 77 per cent. At all events, we have had the advantage of a premium nearly the whole time that this work was being carried out. There is one little error that has crept into the accounts—if it can be called an error. I stated at the meeting of the Colombian Co., that the Government of Colombia had passed a Bill which made it incumbent on all mining companies, who are ruuning their *débris* into streams, to provide drinking water, and water for domestic purposes, to any towns through which that river might pass. Fortunately, gentlemen, this company, in carrying on its operations, only fouled the water of the Guali for the town of Honda. The new municipality of Honda, under this law, demanded that we should put on as a supply of water for domestic purposes at least two or three fountains in the public squares. Mr. Welton, on behalf of this company and the Colombia and Orita, was able to obtain a very favourable concession by which these companies had the right for a certain period of years to give a supply of water to all the houses in the place at a cost of $2 per month, the householders themselves paying the expense of laying on the water. We had, in contemplation, to form a small private company, which would have had a capital of 5,000*l.* or 6,000*l.* to do this, but as the state of things has been so unfavourable for the moment, we are going to carry this work out ourselves, and let the municipality do it if it wishes to purchase the whole of the works that have been completed. They are nearly completed, and the expenditure we have thus far incurred has been about 800*l.* This has been put, by a slip of the pen, into the construction account, but it will be very easy to transfer that back to a separate account at some future time if we wish to do so. I might read you the words Mr. Welton writes about this Honda water:—

"Honda Waterworks, Apl. 19, 1891.

"W. S. Welton.

"The drinking fountains have arrived, and are very much admired. The corporation have determined to send a special train, at their own expense, with a band of music, to bring in the fountains. All the people are now desirous to have water laid on to their houses, and such is the ambition to be as good as their neighbours, that even the very poor people desire to have their private supply of water. In the present state of feeling in Honda, I do not think 20 householders would refuse to go to the expense of having the water laid on."

In case you should receive the prospectus of a small private company for carrying out these works in two or three towns in Colombia, water works have been very successful, and if the householders take the water. there is no doubt that a small private company will pay very well indeed. At the last meeting we stated we thought of appointing Mr. Griffiths as superintendent. That gentleman was in England two or three months, and we had the opportunity of chatting with him, and we have no hesitation whatever in appointing him superintendent. He has taken out with him Mr. Lindsay Scrutton, who has gonc through all thc shops in a very large engineering establishment, and is competent in metal work, and, therefore, will be to Mr. Griffiths what Mr. Sharman has been to Mr. Oakes in the

Colombian Co. Our conversations with Mr. Griffiths, who has been engaged in the construction of the aqueduct, and has been on the property from the commencement, show that he has

A VERY HIGH OPINION OF THE RESULTS WE ARE GOING TO OBTAIN,

and before he left England he became a shareholder in the company. I think I have now put you in possession of all the facts down to the date of the last advices. I think we are about to reap the first fruits of the patience which we on this side have been exercising, and the perseverance which has been displayed on the other side, and which has enabled them to bring this company to what I believe to be the threshold of a very great success. I hope that long before we met again we shall be able to give you dividends. No one can regret more than directors do the delay that has taken place, but by no possibility could that delay have been avoided, and, after all, if we are going to have a concern which is going to pay us dividends, this four or five months' delay will not make any difference to any of us. I now move the adoption of the report. I would mention that Mr. R. G. Webster, M.P., is here, and as he has recently been to the property, he might wish to address us.

VIEWS OF ONE WHO HAS BEEN IN THE COUNTRY.

Mr. R. G. WEBSTER, M.P.: I rise with great pleasure to second this report. I am glad to hear the progress that has been made, and that the mine will soon have, if it has not at the present moment, 1,000 ins. of water, and from my knowledge of that district, and having been within half a mile of the property, though I was never at it, I venture to think that this company has very great prospects of success. Putting on the water at the long distance that it had to be in this case, no doubt must have taken a long time, and I can fully confirm one fact the chairman stated, namely, that this has been a very wet season in Colombia. From the time I arrived there, and from the time I left, I verily believe it never left off raining. This is a particularly good part of Colombia. I did not actually test this mine, but I tested some mines, with engineers I met, very close to this one, and the results were of an eminently satisfactory character. At the Tolima meeting, I am sure the shareholders will be pleased when they hear what I have to tell them. We know what a good chairman we have in Mr. Pechey, what a hard worker he is, and what experience he has had in California. I know from what he has told us to-day will have the effect of making our hearts as light as feathers, and that he only wishes to lead us to the golden gate of prosperity. With regard to this mine, I can only state that I found your engineers doing their best—Mr. Carleton, Mr. Welton and others. I saw them on several occasions, and think that if anything can be done by them to further the prosperity of this mine, they are undoubtedly doing it.

A REPROACH.

We have not, as Englishmen, gone as fast ahead as we ought to have done. I find that in the general trade the Germans are before us, and, in fact, there are very few English houses in that part of the world. In the mines England holds its own, but at the present time there are a vast number of other nations watching the great prosperity we have of such mines as Tolima and Colombian Hydraulic, and there are Americans, Frenchmen, and others, who are out there endeavouring to get hold of good mines and develop them as we have done. There is no doubt that all the gold, or the great proportion that used to be brought in the Spanish galleons in the time of the Spanish Main, was brought from Colombia, Peru and the neighbouring provinces. After the revolution, the natives were so glad to throw off the yoke of Spain, and so pleased to take it easy in a climate which invited them to do so, that they rather neglected these mines, and it was only by the indefatigable work of Mr. Pechey and others that they have been, so far to speak, re-discovered. Although we are more fond of putting our money into ventures in Australia and South Africa, I do believe there is a good deal more gold in South America than in those other parts of the world. I hope you will take heart from the remarks of the chairman, for I believe that this mine in the future has every prospect of being a great success. If we get dividends you must not mind waiting as long as we have done. I think the report, on the whole, eminently satisfactory, and it fully explains the cause of the delay. It puts before us a statement of accounts which is clear and comprehensive, and I have therefore much pleasure in seconding the motion.

QUESTIONS AND ANSWERS.

A SHAREHOLDER: Can you give us an idea when the mine will become dividend paying, and will you also tell us whether the capital is likely to be sufficient for the completion of the whole of the works originally contemplated.

The CHAIRMAN: I was under the impression I had already stated that as soon as we got into the gravel banks, three or four weeks hence, we should be making profits. As to the question of capital, we shall not only have enough to carry on the works to completion but working capital in hand. (Cheers.) If we get this mine in working order we shall form a subsidiary company for the Maravilla property.

A SHAREHOLDER: Is it intended to apply for a Stock Exchange quotation?

The CHAIRMAN: We think it hardly worth while to do so at present.

A SHAREHOLDER: Is there any fear of the stream being interrupted after completion?

The CHAIRMAN: Not the slightest. Honda is the only town we pass, and we have made arrangements for its water supply.

The motion was carried unanimously.

The CHAIRMAN proposed the election of the Hon. F. C. Drummond and Mr. T. S. G. Kirkpatrick as directors.

Capt. RETTALLACK seconded the motion, which was carried unanimously, and

Mr. KIRKPATRICK responded, expressing confidence in the chairman and in the company.

Mr. WATSON proposed, and Mr. CHANCE seconded, the re-election of the auditor, Mr. E. A. Harvey.

AN ABSENT FRIEND.

The CHAIRMAN, in replying to a cordial vote of thanks which was passed to him, said: I am sorry Mr. Rogers is not here, but he has been very ill from influenza, although he is now recovering. I should like you to have heard a word or two from him, because he is conversant with the matter.

THE NOBEL-DYNAMITE TRUST CO., LIMITED.

THE TRADE IN BLASTING EXPLOSIVES HAS BEEN SATISFACTORY, AND THE DIRECTORS ARE ABLE TO PAY 11 PER CENT. DIVIDEND, FREE OF INCOME TAX, CARRYING FORWARD £14,268—PROSPECTS ENCOURAGING.

THE fifth ordinary general meeting of the Nobel-Dynamite Trust Co., Limited, was held at the Offices of the company, No. 220, Winchester House, No. 50, Old Broad Street, on Monday, for the transaction of the usual business of an ordinary general meeting, including the declaration of a dividend. The notice added :—Sir Charles Tennant, Bart., Mr. J. D. Taylor, and Mr. C. Wichmann are the retiring directors, and, being eligible, their re-election will be proposed. Messrs. Cooper Brothers and Co., chartered accountants, are the retiring auditors, and, being eligible, their re-election will likewise be proposed.

Mr. Thomas Reid, J.P., of Kilmardining,

(chairman) of the board of directors, presided.

Mr. F. C. BOURNE (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Gentlemen, you will have seen from the accounts in your hands that the net profit of the past year has been 195,683*l.* 15s. 6d., an improvement of about 53,500*l.* upon the previous account. A substantial portion of this increase must no doubt be attributed to the investment of additional capital issued last year; but making every allowance under that head we have

A MOST GRATIFYING RESULT.

The improvement is the more satisfactory as previous years had already shown a marked expansion of profit since the incorporation of the company. In 1887 we paid a dividend of 5 per cent., in 1888 7¼ per cent., in 1889 8½ per cent., in 1890 again 8½ per cent., and now for 1891 we are able to recommend 11 per cent. For the progressive increase shown by these figures we are indebted to a great extent to the growing development of mining activity in the various countries in which we are doing business. It is important, therefore, that in reviewing our position we should take careful note of the condition of that industry; and I regret to say that in those branches with which we are more especially concerned its indications are for the present in the direction of diminished activity, and that, compared with the early part of last year, there has been some falling off. The promotion of public works, railways, &c., is also at the moment detrimentally affected by the present depressed condition of enterprise in various countries. It is possible, of course, that the abatement indicated may be of very short duration, and that a further expansion may be developed at an early date. I need hardly say that out of the profits of the year substantial amounts have been set aside, as usual, by the subsidiary companies as reserves, and that their factories have been maintained in a high state of efficiency. One particularly favourable feature of the year has been the comparatively low cost of production, and, in addition, we have to congratulate ourselves upon having experienced an almost complete immunity from serious loss arising from explosions. I now pass to another branch of your interests—the trade in military powders. The report submitted at the last meeting informed you that circumstances had rendered desirable a close union between the subsidiary companies and an important group of leading powder factories, involving, *inter alia*, the pooling of their profits. That arrangement, I am pleased to state, has led to a most useful and harmonious co-operation between the parties, from which we expect to derive considerable advantages in the matter of

MR. NOBEL'S SMOKELESS POWDER.

I wish, however, for the moment merely to lay stress on the fact that our annual profits are, as a result of this agreement, no longer wholc dependent upon the ordinary explosives trade, but may be materially influenced by the state of the powder business as well. The past year, you will be glad to learn, has been as favourable in the one business as in the other, and I believe the present prospects in regard to military and other powders continue distinctly satisfactory. We are unable to report at present any large sales of the smokeless powder manufactured on the basis of Mr. Nobel's invention—that is, in the countries in which we are interested—although, as you know, in Italy it has been adopted for some time and largely manufactured for the Government; and I must add that, having regard to the discretion which it is desirable should be observed in such matters, I do not think I can, with advantage to your interests, say anything material upon the various negotiations which are proceeding, or the steps generally which we are taking to secure orders. The development of events is, perhaps, not as rapid as could have been wished; but you will quite appreciate that so momentous a question as the adoption of a new powder cannot be decided without a searching examination at the hands of the various Governments that must, under the most favourable circumstances, as I indicated last year, occupy a very considerable time.

WE ARE SATISFIED

that our confidence in the powder will be fully justified, and that its remarkable properties will secure a good demand for it ultimately, more especially as a further material improvement has recently been made in its manufacture. I am advised that it can unhesitatingly be pronounced to be the perfection of a propelling agent, especially for use in ordnance. I now move, "That the report by the directors, and accounts for the year ending Apl. 30, 1891, be adopted, and that a dividend be now declared on the paid-up capital of the company at the rate of 11 per cent., free of income tax, to be paid on and after Tuesday, May 26, and that the sum of 14,268*l.* 19s. 5d. be carried forward to next account." (Applause.)

Mr. MAX A. PHILIPP: I beg to second the motion.

No questions were asked.

The resolution was put, and carried unanimously.

FORMAL BUSINESS.

The CHAIRMAN: The next business is the election of three directors in place of those retiring, viz., Sir Charles Tennant, Bart., Mr. J. D. Taylor, and Mr. C. Wichmann, but, being eligible, they offer themselves for re-election. I have much pleasure, therefore, in moving the re-election of Sir Charles Tennant as a director. He is not here to-day in consequence of ill-health, but I am glad to say he is improving. He is a very excellent director, and one of great advantage to the company.

Mr. T. MENZ seconded the motion, which was carried.

The CHAIRMAN: I now beg to move that Mr. J. D. Taylor be re-elected a director of the company. He is a very excellent director, and one who devotes a great deal of attention to the business of the company.

Mr. E. KRAFTMEIER seconded, and the motiou was carried.

The CHAIRMAN: I now beg to propose the re-election of Mr. C. Wichmaun as a director. He is a very useful director indeed, and has been connected with the dynamite industry for many years.

Mr. H. BECKETT seconded, and the motion was carried.

The CHAIRMAN said that the next business was the re-election of the auditors, and rested with the shareholders.

Mr. R. W. COX proposed that the company's auditors, Messrs. Cooper Brothers and Co., should be re-elected at the same remuneration as heretofore.

Mr. JOHN WALKER seconded, and the motiou was carried.

The CHAIRMAN said that that concluded the business of the meeting.

Mr. M. WESTFIELD said he wished to be allowed, before they separated, to propose a very hearty vote of

THANKS TO THE BOARD OF DIRECTORS AND THE OFFICERS OF THE COMPANY,

who, he had reason to know, took a very great interest in its welfare, and each aud all did the best in their power to further its prosperity. He certainty felt they were deserving of the thanks of the shareholders. (Cheers.)

The motion was seconded and carried.

The CHAIRMAN said that the directors and officers were very muoh gratified at this vote of thanks. They had done, as they would continue to do, the best to promote the interests of the compauy. On behalf of the board he thanked the shareholders—he would leave the two principal officers to auswer for themselves.

Mr. H. DE MOSENTHAL, F.I.C., F.C.S. (technical secretary), briefly returned thanks, and said he was very much obliged to the shareholders for their vote. The staff had done all in their power to further the company's business, and would continue to do so. (Cheers.)

Mr. F. C. BOURNE (the secretary) said he wished to endorse the remarks that had fallen from Mr. H. de Moscnthal, and to thank the shareholders for their kind resolution.

The proceedings theu terminated.

JAVALI CO., LIMITED.

A SATISFACTORY YEAR, AND BETTER PROSPECTS GENERALLY.

THE twenty-third ordinary general meeting of the shareholders of the Javali Co., Limited, was held at the Offices of the company, 139, Cannon Street, E.C., on Tucsday.

Admiral Sir Leopold George Heath, K.C.B.,

presided.

The SECRETARY (Mr. Edward Schubert) having read the notice convening the meeting,

SHAREHOLDERS CONGRATULATED.

The CHAIRMAN said: Gentlcmen, in submitting the accounts for the year 1890, I may, I think, congratulate you upon their satisfactory nature. You will remeuber that the year has becn devoted to the prosecution of Pim's tunnel rather than to the earning of dividends, and it was only the fortunate, but unexpected, re-discovery of a valuable ore shoot in the bottom of the old Nispero workings that has allowed the two processes to go on simultaneously. By the last account this shoot appears to be exhausted, and for the remainder of the year we shall have to rely principally on the western workings. In the year 1888 samples from this part of the mine were sent home, and they assayed 3 ozs. to the ton. Capt. White has not as yet reached this locality, but he is not far from it, and the letters for the next two or three months will be very interesting, as indicating what we may hope for in 1891. There is nothing special to comment upon in the accounts, which, as well as the tables 1 and 2, are in the same form as that to which you have been accustomed. The profits for the year were 3,171*l*., but this figure is arrived at after charging on the debtor's side 1,000*l*. of the cost of Pim's tunnel, and, on the other hand, crediting the revcnue account with 545*l*. for Tienda profits, which properly belonged to previous years. I trust the shareholders will fully approve of the policy of the board in charging a large proportion of the cost of the Pim's tunnel to revenue, for it is really a matter of indifference whether it should be charged to revenue or to capital account, because the board, in believing that a sum of about 4,000*l*. should be kept in hand, would not have recommended an increased dividend even had the apparent profits been 1,000*l*. more than are now shown. The advantage of the plan adopted is that the temptation to use that 1,000*l*. for dividend purposes is removed, since it remains nominally as capital. In future all developments will be, as formerly, at the expense of revenue. In the balance-sheet you will see "sundry creditors" 351*l*. That includes the unclaimed debentures and interest. On the other side is the sum of 460*l*. due from customers at our Tienda. We are assured that these debts are all good, but, of course, there may possibly be a small deficiency. I will only add that it is impossible to give a forecast of the results for the year 1891. Probably we shall crush more ore than in 1890, but it is almost certain that it will be of lower value. I will now move "That the report and accounts be received and adopted," and I shall be pleased to answer any questions you may put to me. (Applause.)

Mr. ROBERT G. HALL seconded the motion.

DISCUSSION.

Mr. HOPPER: Can you give any intimation as to what are the results of the year's working up to the present time?

The CHAIRMAN: Certainly; but they are not very satisfactory. The receipts have nominally been 1,229*l*. for the three months, and the expenses 957*l*. You may reckon that the receipts will really be about 1,400*l*., because the gold always fetches more than the price it is valued at. The expenses are considerably less than 957*l*., because we sent out our silver and buy our dollars at about 75 per cent. of their nominal value, so that really it is a worse looking account than it really is.

Mr. HOPPER: Is it absolutely necessary to keep such a large amouut as you have in hand?

The CHAIRMAN replied that many times the directors had been at their wit's end to pay the people at the mine. They had had kind bankers who had trusted them with money, and they had got through. When the mine was in full work there would probably be 2,000*l*. afloat —1,000*l*. coming in and 1,000*l*. going out.

The motion for the adoption of the report and accounts were then put to the meeting and carried unanimously.

The CHAIRMAN then proposed that a dividend of 3d. per share be declared, free of income-tax, making 25 per ceut. for the year.

Mr. R. G. HALL seconded the motion, and it was carried with acclamation.

Mr. R. G. HALL: I have great pleasure in proposing the re-election of Aduiral Sir Leopold George Heath as director of the company. He has proved himself a most able chairman. Sir Leopold has always attended assiduously to the business of the company, and has brought it round from adversity to prosperity.

Mr. NEWS: I have great pleasure in seconding that.

It was carried unanimously.

The CHAIRMAN suitably acknowledged the compliment.

The auditor, Mr. Frewer, was then unanimously re-elected.

Mr. ROWSEL proposed, and Mr. MANLY seconded, that the thanks of this meeting be given to Capt. White for his zealous work at the mine during the year.

The meeting closed with the usual compliments to the chairman.

EXTRAORDINARY MEETING.

An extraordinary general meeting was then held for the purpose of passing, or otherwise, the following special resolution:—"The following words shall be added to Article 122 of articles of association:—'The directors may declare interim dividends.'"

The CHAIRMAN moved the adoption of the above resolution. He remarked that the directors were desirous of payiug an interim dividend last year, but found by the articles of association they had not that power, but that it could only be done by the shareholders in general meeting. Now, if they passed this resolution they would be able to declare an interim dividend without troubling the shareholders to attend a meeting.

Mr. R. G. HALL seconded the resolution, which was carried unanimously.

HOLLOWAY'S PILLS AND OINTMENT.—The combined ill-effects of over-crowding, sedentary occupations and monotony of life are only too well known to those who have to pass the best part of their lives labouring in factories and crowded workrooms. The compulsory confinement weakens the general health and induces chronic constipation, indigestion, and various forms of skin diseases. Holloway's remedies are of priceless value to persons of this class, for they can be used without entailing loss of work, being purely vegetable in their composition, and consequently act without harshness on the most delicate system. The experience of more than 50 years proves that no means surpass Holloway's remedies for curing bad legs, bad breasts, piles, and wounds of all kinds.

GREAT WHEAL FORTUNE MINE, BREAGE.

To be Sold as a Going Concern.

A. J. TANGYE, Auctioneer, Camborne, has received instructions to SELL, by PUBLIC AUCTION, on TUESDAY, 2nd June, 1891, at Abraham's Hotel, Camborne, at 3 o'clock in the afternoon, the whole of the Great Wheal Fortune Mine, with the PLANT AND MACHINERY thereon (subject to such conditions as shall be then and there read), comprising:—one 33-in. Cylinder Pumping and Stamping Engine, fitted with Oldham's Patent Spring Piston, with large Fly Wheel and Crank; one 10-ton Boiler and Fittings; 13 fms. 10-in. lift, 10 fms. 11-in. Lift, Balance Bob, L Bob, 15 fms. 2-in. Iron Rods, with sheaves and stands complete, Horse Whim, Shaft Tackle, 28 Heads of Stamps, viz., 16 and 12 Head Axles, with Heads, Lifters, Cams and Tongues complete, Winding Drum, 100 fms. Wire Rope, 250-Tram Road, Tram Waggons, Buddles, Kieves, small Water Wheels, one 28-ft. dia., 2-ft. 4-in. Breast Water Wheel, with six Head Stamps, attached in working order, Smiths' and Mining Tools, and the requisites for the carrying on of a large Tin Mine.

The Sett is very extensive, and is situate in the Great Wheal Vor district. There are four known Lodes and several Cross-courses traversing the Sett and a large number of Tin branches; it is confidently expected that these branches will in depth form one large masterly lode, and therefore is well worth vigorous prosecution.

To view, apply to Capt. S. P. Curtis, on the Mine; and further particulars may be had of C. B. Parry, Esq., Gracechurch Buildings, Gracechurch Street, London, or of the Auctioneer, Chapel Street, Camborne.

EXTRACT FROM CIRCULAR ISSUED BY

GEORGE GREGORY & CO.,

STOCK AND SHARE DEALERS,

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

Bankers: The London and South-Western Bank, Limited, London. Telegraphic Address: "GRAMMARIAN, LONDON."

May 26, 1891.

DEAR SIR.—Our last Circular, dated 11th inst., obtained an unusually wide postal distribution in every part of the United Kingdom, and further appeared in full page advertisement form in the daily financial press of the week then current, as also in the principal weeklies, both in London and the provinces.

Copies remaining on hand are at the service of applicants post free, and we now record the principal intervening occurrences and their effects upon values of stocks and shares.

THE MONEY MARKET.—We reported the reserve as having declined to the legal minimum limit of one-third of the liabilities, which was not then viewed with apprehension under a four per cent. bank rate.

The latter was deemed sufficient to attract supplies from abroad, and doubtless would have proved to be so but for rumours of the most disquieting character obtaining circulation during the progress of the settlement then proceeding.

A large financial house was named in the most uncompromising manner, and the high class group of securities, which it, in a great measure, controls were mercilessly hammered, the general market, of course, sympathising in the fall. These rumours proved to be utterly groundless; but, meanwhile, fears of panic had been aroused abroad, and for its proper protection the Bank had no alternative but, on the 14th inst., to raise the rate to 5 per cent., at which it still remains.

In the interval over £2,000,000 on balance have come in, with considerable further amounts to arrive both from abroad and from the north to enlarge the visible supply.

For years past at the corresponding period, with a similar reserve, the minimum has not exceeded 3 per cent., and the existing rate is, therefore, a severe tax upon commercial enterprise.

It seems not unlikely, however, that Thursday's return will exhibit features to warrant some relaxation in current charges for discount.

Contangos to-day seem to foreshadow such conclusion as they are only on the same scale as at last settlement, while the official minimum is now 1 per cent. higher.

THE STOCK MARKETS have been in a turmoil of fluctuation, owing to hourly varying opinions concerning the probable movements of money, with a general disposition to curtail current operations until greater steadiness has become assured. The immense fall which in the past six months has taken place in most foreign and many home securities must have led to a great and general displacement of capital, but, on the other hand, new business is thus made more secure of profit, for, undoubtedly, the majority of depreciated securities are entitled to a considerable, if even very gradual, reaction in the shape of improved values.

We give below some official figures in support of this line of reasoning, and they may be worth keeping in mind as the dawning improvement develops.

HOME RAILWAYS have ruled most irregularly, as will be noted from the following comparison at the two dates. In addition to showing the advance or decline, we annex the approximate rate of increased dividend earnings for the current half-year, if the past scale of gross increase be maintained to its close.

	May 11, 1891.	May 26, 1891.	Advance or decline.	Gross increase per cent.
MIDLAND	149½	151¼	A 1¾	1⅝
GREAT WESTERN	155½	155	D ½	1½
NORTH WESTERN	170	169¾	D ¼	1¼
GREAT EASTERN	93½	92¼	D 1¼	1
SHEFFIELD "A"	36½	35¾	D ¾	—
METROPOLITAN	82½	83¾	A 1¼	2
DO. DISTRICT	31	30¼	D ¾	1
DOVER "A"	92½	90	D 2½	—
BRIGHTON "A"	147½	140	D 7¼	1⅝
CHATHAM ORDINARY	18	17⅛	D ⅞	—
NORTH-EASTERN	159¾	158¼	D 1½	—
GREAT NORTHERN "A"	78	75	D 3	3
LANCASHIRE AND YORKSHIRE	112¾	113	A ¼	½
CALEDONIAN	116⅝	117	A ⅜	—
DO. DEFERRED	40¼	40¼	D ⅛	—
NORTH BRITISH	69½	69	D ½	—
DO. DEFERRED	43¾	42⅝	D ⅛	—

In the case of Midland and Great Western such figures go far to ensure increase of dividend, while the others to which rates are annexed afford ample margin for at least maintaining the past scale.

Besides, it should be remembered that the continued depression in prices of foreign stocks points to their insecurity in public estimation. If even, therefore, British railway current expenses are found to continue upon a scale equal to those of last year, these securities generally, at present prices, offer a temptation to investors.

It may be noted that Brighton "A's" are now 29¾ lower than on August 23 last, when the price was 169½. With the holiday season before them, they must promptly react for the better. Great Eastern unmistakably resents the liberty taken by bear sellers in the form of a backwardation of ⅜ per cent., which is very strongly in their favour at the present juncture.

Sheffield, North-Eastern, Caledonian, and North British are too far behind in the race and too erratic in their movements to admit of hazarding an opinion as to how they will figure up at dividend time.

The above figures indicate the order of our present recommendations.

MEXICAN RAILWAY (VERA CRUZ). — Although everything Mexican is rapidly developing improvement, even to this railway's dividend and traffic on the line, it seems unable to emerge from the expressed fears of the effects of competition. The country and its resources are so vast and so inviting to the immigration of both population and capital that we cannot help thinking that a permaneutly safer investment it would be difficult to find in any list after a fall so serious, while weighing other concurrent circumstances at anything like a true value.

The various issues compare with last year's September prices as follow, viz.:—

	Highest 1890.	May 26, 1891.	Decline.
ORDINARY	67¾	37¾	30
FIRST PREF.	134¼	117½	16¾
SECOND DO.	95⅜	68	27⅜

AMERICAN RAILROADS.—The export of gold from the United States, to which recent attention has been rather prominently directed, has this year exceeded the import to the same quarter by more than £1,000,000 sterling per month to date. Still, the Treasury is in a healthy position, and in return for a large proportion of the season's heavy grain crop, Europe will require to ship bullion liberally to the other side during the later months of the year. The advance in prices of shares and bonds was to some extent checked by the unexpected monetary agitation in London a fortnight ago.

Both traffic and crop prospects make the outlook fully as favourable as at any time last year; still, prices are very much below the parity then current.

The following comparison will probably prove to be of interest to present or intending operators:—

	Highest 1890.	May 26, 1891.	Decline.
ATCHISON INCOME BONDS	73½	48⅛	25¼
CENTRAL PACIFIC	38⅜	31⅜	6⅛
MILWAUKEE	81½	66½	15
DENVER ORDINARY	22 11/16	18¾	4 7/16
DENVER PREF.	63¼	59	4¼
ILLINOIS CENTRAL ORDINARY	124	101	23
LAKE SHORE	117⅛	113	4⅛
LOUISVILLE	95⅜	79¾	15⅝
ERIE	30¼	21¼	9
ERIE PREF.	71	53½	17½
ONTARIO	23¼	17½	5¾
NORFOLK PREF.	68⅜	51⅝	13⅜
NORTHERN PACIFIC PREF.	88⅝	71¼	17⅜
OHIO AND MISSISSIPPI	28⅜	19¼	9⅛
PENNSYLVANIA	58¾	51⅜	7⅜
READING	25	16¾	8¼
UNION PACIFIC	70⅜	48½	21⅞
WABASH	18⅞	10½	8⅜
WABASH PREFERENCE	37	22	15

The traffics declared to date are generally considerably in excess of those for the corresponding period of last year. This applies notably to—

ATCHISON, NORFOLK AND WESTERN PREFS.,
MILWAUKEE, NORTHERN PACIFIC PREFS.,
ILLINOIS CENTRAL, READING,
ONTARIO, UNION PACIFIC,

All of which may safely meet with the present support of both investors and speculators.

FOREIGN AND MISCELLANEOUS STOCKS.—The shrinkage in values of these has been appalling. The following figures illustrate not only how serious and widespread have been the losses in a comparatively short period, but point also to the opportunity in the near future of making money on the gradual restoration of confidence in the pick of such securities.

	Highest 1890.	May 26, 1891.	Decline.
ARGENTINE, 1884	94⅞	44	50⅝
DO. 1886—7	95¾	67¼	28½
DO. RAILWAY EXTENSION	92¾	60	32¾
DO. CEDULAS "B"	50½	19½	31
BRAZILIAN, 1883	92	74½	17½
DO. GOLD LOAN	95	84	11
DO. 1889	85⅞	67¾	18⅛
BUENOS AYRES, 1882—6	100½	36	64½
DO. 1883	102½	39	63½
CHILIAN, 1886	105¼	81	24¼
COSTA RICA "A"	94¼	68	26¼
DO. "B"	94½	64	30½
EGYPTIAN UNIFIED	99	94¾	4¼
DO. STATE DOMAIN	105⅞	103	2⅞
DO. NEW DAIRA	104½	95¼	9¼
ENTRE RIOS CENTRAL RAILWAY	99½	45	54½
DO. EXTENSION MORTGAGE	96	40	56
GUATEMALA	70¼	43	27¼
HONDURAS	17	8½	8½
MEXICAN 1888	100½	86¼	14¼
PORTUGUESE THREES	64⅞	43½	21⅜
SANTA FE AND RECIFE RAILWAY	96¼	48	48¼
SPANISH FOUR PER CENT.	79	71½	7½
URUGUAY UNIFIED	78¼	47½	30¾
DO. STERLING	91	53	38
BELL'S ASBESTOS	21⅛	95	11⅛
EASTMAN'S ORDINARY	22¼	8⅞	13⅜
HAMMOND'S ORDINARY	11	2⅝	8⅜
PRIMITIVA NITRATE	23 1/16	7½	15⅝
RIO TINTO	27 1/16	21	6 1/16

It will be observed of these stocks in the industrial department that either the public have paid too much to the promoters or the shares are now at unduly depressed quotations. We incline to the belief that both elements have been successively at work.

SPECIAL RECOMMENDATIONS ARE TO BUY—

CALLAO BIS. WENTWORTH. SILATI RIVER.
RIO TINTO. OCEANA. BROKEN HILL.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We contiuue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium.

Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

£10 „ £1,000 „ 1 „
£20 „ £2,000 „ 1 „ „
£50 „ £5,000 „ 1 „ „
£100 „ £10,000 „ 1 „ „
With no further liability whatever.

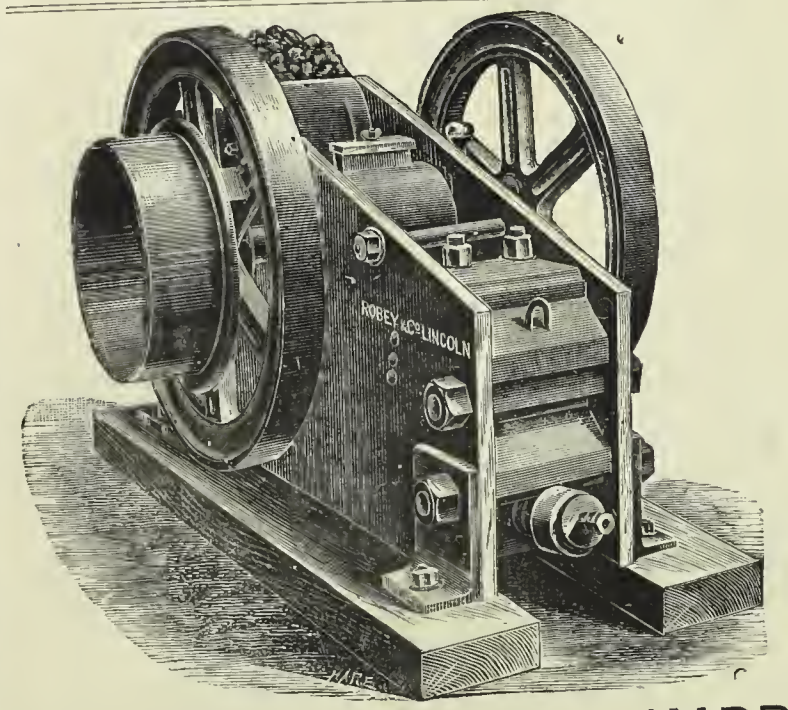
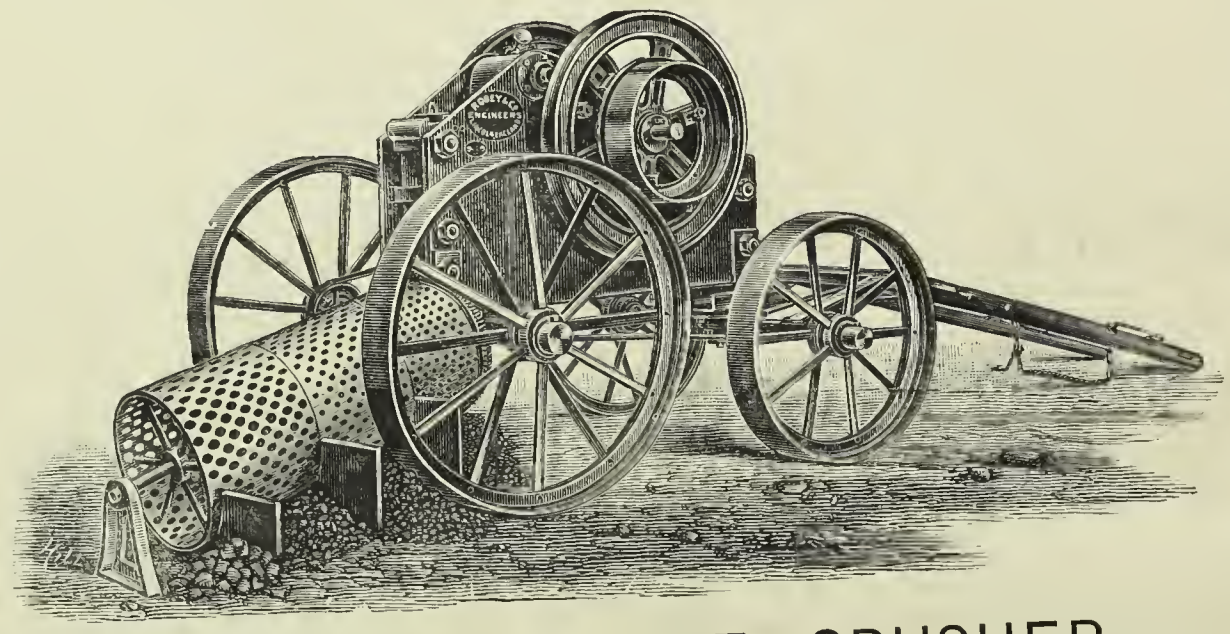
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BUSINESS REVIVES AT THE END OF THE WEEK—IMPROVED INDIAN RETURNS—SPECIAL MENTION OF AUSTRALIAN BROKEN HILLS, BALKIS, SHEBA, MONTANA, FRONTINO, ALMADA, ELMORE, ETC.—COPPER SHARES FIRM—BANK RATE LOWERED—DEALERS SHORT OF STOCK—CORNISH SHARES BETTER.

THE most noticeable feature of the market this week has been the shortness of stocks, from which brokers are suffering. When the sudden rise occurred in Balkis there was a rushing hither and thither, and a strong effort to make up "shorts," but little relief came from a pitiless market that had suffered too long from the persistent attacks of the "bears."

The decided improvement in the Indian returns gave a fillip to the Mining Market to-day, which it seriously needed. In the first part of the week the condition of affairs was far from hopeful, but later on, when the bank rate was reduced and telegrams from sundry mines were announced, the spirits of the brokers revived, and business, which had been almost stagnant, recommenced.

It exhibited most life for the moment in Australian Broken Hill Consols, which constituted a very active market, and though prices have fluctuated considerably, they close a shade better. Wentworth Priority shares have scarcely been named, and though some dealings have taken place in East Broken Hills, they are believed for the most part to be between brokers, so as to get the prices officially recognised. The Australian Market generally, with the exception we have named, has been shaky. There has been much more business in the Copper department, where Rio Tintos particularly have been largely dealt in. The metal closes at about the same price it was last week—56*l.* for Chili bars. The position of copper and tin is discussed in our leader columns. We think the shares in this department ought to be firmer.

In the Indian market, the telegram announcing the discovery of a lode worth 15 dwts. in Colar Central Mine caused a demand for these shares which has not existed for many months past. Much higher would Colar Centrals have risen were the public reassured of the financial position, but the opinion seems to prevail that reconstruction is in the air, though those, possibly better acquainted with the facts, still maintain that there is a substantial balance in hand. Activity in Colar Centrals led to business in Indian Consolidated, for the reason that this concern holds a very large proportion of the former company's shares. It was, in fact, its offspring, but has been a prodigal son rather than a good boy. Indian shares, generally, have been weaker, but the information contained in the telegrams we publish in an adjoining column has not yet filtered through the country. Mysore Wynaad has made a call of 6d. and the shares are now 19s. 6d. paid; whilst those of Devala Moyar are 9s. paid. Although the grade of the ore in Mysore Reefs Mine has fallen off, the developments of late have not been without encouragement. Those who have read the recent reports cannot fail to have observed that a change has occurred in the character of the lode at the bottom of the shaft. People who think that Mysore Reefs is played out have very imperfectly mastered the facts, though, of course, there is a possibility that more capital may be required to bring to fruition the present favourable outlook.

In the African section, one of the most encouraging features this week has been the big return from Sheba—a mine which we have long recommended to the notice of our readers, not merely from its intrinsic merits, but because of the high character of the management. The return in question gives 2,820 ozs. from 2,640 tons, which must be deemed highly satisfactory, and may be taken as a substantial instalment of the good things foreshadowed in the chairman's speeches at several of the later meetings. London and South African Exploration shares rose on the extremely satisfactory meeting held last Saturday, and Goldfields of South Africa have substantially risen, and Oceanas fractionally so. There is a rumour that this company has taken Balkis under its wing, but its attention, one would think, ought rather to be turned to the nourishing of its Silati offspring, which has much need of any fostering care that its hitherto neglectful parent can give it.

Balkis shares have been almost the sensation of the week, and from the dull level of 1s. 9d. have advanced rapidly to close upon 5s. The rise on the week is measured by 2s. 9d. It is just when one despairs of Balkis that a rise like this is wont to take place. The last time Balkis shares went to 10s., and if the strong buying goes on that has been noticed this week they will do so again.

There has been a falling off of 86,400 dollars in Montana for the first 5 months of this year, as compared with the corresponding period of 1890. The working expenses for May, however, show a considerable reduction. Some shareholders think the directors might well have paid a small dividend, but we incline to the opinion of the board, that it was better to pass any distribution for the time, and to keep the financial position as strong as possible.

The changes in other directions are almost fractional, and call for no special comment. De Beers are firmer, but New Jaggersfontein and Burma Ruby have lost part of their recent rise.

Almost all the Miscellaneous shares are down, but the outlook for some of them is decidedly good, as is shown in a leader we this week specially devote to them. The Frontino meeting to-day passed off pleasantly enough. 2s. 3d. a share in dividends for the half-year is a creditable performance for the directors, particularly for a mine that only a short time ago was metaphorically dragged by the hair of the head by Mr. Donagan and his colleagues out of a veritable slongh of despond. Out of the 5s. liability which the shareholders accepted on re-construction 3s. 6d. has been called up, and the shares to-day are ronnd about 22s. Those who refused to go into the re-construction scheme are weeping and wailing and refusing to be comforted because they are not. The meeting to-day of Elmore Gold was also noteworthy, for the fact that the shareholders only a few weeks ago accepted a liability of 1s. of which they have paid 6d., and they can now sell their shares round about 2s. This is decidedly better than throwing them away, as some may have done. In the madness of re-construction there is a good deal of method and also of profit. Shareholders whose "hair was like the raven, and whose bonny brow was bent" when they joined the Almada Co. 20 years ago, but whose locks now are like those of "John Anderson my Jo," and whose brows are furrowed with

Almada and other cares, described the mecting this week as "the most encouraging the company has yet held." We should not be surprised to see this concern earning large profits during the currency of the present year. Tesoro Golds have been firm, having been again bought for the rise. Report speaks very favourably of the mine.

Home mines have taken a turn for the better, and in several instances a substantial rise has occurred—Wheal Agar leading off with 1½. In one or two cases, however, there has been a further fall, Dolcoath being on the downgrade to the extent of 1½. The adverse rumours with reference to Carn Brea (in the shares of which there have been considerable dealings) are not justified by the perusal of the managers' reports. There is every appearance that the returns will be maintained. The position in Cornwall has much improved. The outlook for tin is better, and generally a more hopeful feeling prevails.

In regard to next week, the prospect is, on the whole, promising, and a further amount of business may be expected. The spirit of enquiry is abroad, and this almost always is the forerunner of active bnsiness and better prices.

Kaffir Lands.

A slight improvement has taken place in these shares, and the public seem to have regained confidence in the situation as regards Portngal. Goldfields of South Africa, London and South African, and Oceana all leave off firmer.

Bnsiness :—A rise has taken place in Bechuanaland, 1/16; British South African Chartered, 1/16; Goldfields of South Africa, 1/16; London and South African, ¼; Oceana, ⅛; and Zoutpansberg, 1s.; whilst the following are lower :—Exploring, ¼; Horo Concession, ⅛; Johannesburg Estate, ⅛; and New Grahamstown, 6d.

Making-up Prices. May 26.	Name of Company.	To-night's Prices.
⅛	Bechuanaland	13/16 — 15/16

Diamonds.

This market has been more active than for some time past, and De Beers, after being done at 13 1/16, close about 20s. higher, or a rise of 7s. 6d. on the week. It should be remembered that a very few shares will affect this market.

Businc.ss.—A rise is shown in De Beers of ⅜, but a fall has taken place in New Jagersfontein of ⅜, and Burma Ruby 1/16.

Africans.

There has been rather more life in these shares during the last few days, notwithstanding the fact that one dealer put several large blocks on the market for sale. From the present outlook it would appear that very little buying on the part of the public would be snfficient to put up the price of many of these stocks.

Crown Reefs have risen, and at present price appear to be worth buying.

Business :—The following have risen :—Pigg's Peak Ordinary, 1s.; Ditto Preference, ⅛; City and Suburban, ⅜; Crown Reef, ½; Durban Roodepoort, ⅛; Ferreira, ¼; Johannesburg Waterworks, 1/16; Langlaagte, 3/16; Luipaards Vlei, 6d.; Simmer and Jack, ⅛; Wemmer, ⅛.

The following have fallen :—Anrora, ⅛; Bantjes, 1/16; Geldenhuis, 1/16; Great Gold Zone, 6d.; Henry Nourse, ¼; Johannesburg Pioneer. ¼; Jubilee, ¼; Kimberley Roodepoort, ⅛; Langlaagte, Block B, 1s.; Randfontein, 1/16; Stanhope, ¼, and Witwatersrandt Knights, 1s.

Indians.

There has been a fairly good business transacted in these shares, althongh on the week prices in several instances show a slight fall. Mysores are 5s. lower, notwithstanding the extremely favourable crushing for May. Devala-Moyars are lower in consequence of the call of 6d. Mysore Harnhallis have had a further drop of 2s. At the present price they are a pure gamble.

Business :—There is no rise to record, whilst a fall has taken place in Balaghat of 3d.; Champion Reef, 1/16; Mysore Gold, ¼; Mysore Harnhalli, 2s.; Mysore West, 6d.; Mysore Wynaad, 6d.; Nundydroog, 1/16; and Ooregum Ordinary, ⅛.

Australians.

Generally speaking, this market has been weak. Kangarillas have been offered freely, and have receded. A demand, however, has sprung up to-day for British Broken Hill Consols in consequence of a favourable cablegram from the manager. East Broken Hills have also been inquired for.

Business.—A rise have taken place in Australian Broken Hills of ⅛, whilst a fall is noted in British Broken Hill of ¼; Day Daw

Block, 9d.; Gympie Great Eastern, 3d.; Kangarilla, ⅛; and Wentworth Proprietary, 1/16.

COPPER.

The upward movement has for the moment stopped. Rio Tintos have, however, continued to rise in consequence of a shortness of shares on Paris account. Masons are lower, but the market for these shares is generally an unsatisfactory one, for the reason of its being so limited. Capes are a shade lower. The tone, however, is slightly firmer at the close.

Business.—The only rise to record is in Rio Tinto of ¼, whilst a fall is noted in Capes, ⅛; Libiola, ⅛; and Mason and Barry, ¼.

GENERAL FOREIGN SHARES.

Balkis shares have been in demand, and on a very little bnying have risen to 4s. 9d. to 5s. 3d. There are many other low-priced shares which would rise with the least demand from the general public. A fall is shown in Fortuna, Golden Gates, Linares and Tolima The market closes weak.

Business :—A rise is shown in Balkis of 2s. 9d.; but the following are lower :—Amador, 1/16; American Belle, 1s.; Callao Bis, 6d.; Colon, 3d.; Flagstaff, 3d.; Fortuna, ¼; Frontino, 1s.; Golden Feather, 1s.; Golden Gate, ¼; Linares, ¼; Loma, 3d.; New Eberhardt, 3d.; Tolima, ¼; and Yankee Girl, 6d.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—The company have sold, through Messrs Johnson, Matthey and Co., Limited, the gold obtained in the month of Apl., which realised 743*l.* 0s. 2d. A telegram, dated June 5, gives last month's return of gold as follows :—"210 tons of quartz produced 256 ozs. of gold."

INDIAN GOLD.—The following information has been received by cable, viz. :—"May.—Total amount crushed is 980 tons, yielding 95 ozs."

MYSORE.—The company have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold produced in the month of Apl., which realised 21,580*l.* 13s. 2d. A telegram, dated June 5, gives last month's return of gold as follows :—"3,554 tons of quartz produced 5,047 ozs. of gold, and 682 ozs. obtained from tailings, making a total of 5,729 ozs. of gold."

MYSORE HARNHALLI.—Owing to Mr. Sheridan's illness no report has been received, but the secretary sends a copy of the resident director's letter, dated May 6, 1891, which speaks of "excellent progress" having been made.

NUNDYDROOG.—The company have sold, through Messrs. Johnson Matthey and Co., Limited, the gold obtained in the month of Apl., which realised 6,204*l.* 4s. 1d. A telegram, dated June 3, gives last month's return of gold as follows :—"1,000 tons of quartz produced 1,634 ozs. of gold."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The managing director reports by telegram received June 2 "that the output for the fortnight ending May 29 last was 7 tons, containing 60,243 ozs. of silver, 1 ton of which consists entirely of native silver."

BLUE SPUR AND GABRIEL'S GULLY.—A cablegram from the superintendent states :—"May yield, 523 ozs."

BRILLIANT.—Messrs. Arthur Forbes and Co., agents of the Brilliant Gold Mining Co., received a cablegram, dated from Charters Towers May 30, giving the past three weeks' crushing as follows :—"1,320 tons for 3,000 ozs. gold; value, 10,500*l.* A dividend (21st) of 2s. per share is declared, making 4s. per share for the month of May."

BRITISH BROKEN HILL PROPRIETARY.—For the week ending June 4 there were 704 tons of ore treated (including 245 tons of iron ore), yielding 148 tons of lead, containing 6,336 ozs. silver.

BROKEN HILL PROPRIETARY.—For the week ending June 4 there were 4,907 tons of ore treated, yielding 736 tons of lead, containing 181,559 ozs. silver. Cable also states : "Price of company's shares in Melbourne, 10*l.* 11s."

EAST BROKEN HILL CONSOLS.—Telegram from the managing director resident at Broken Hill, dated June 2 :—"We have struck main lode, Block 98, 10 ft. below the surface."

ETHERIDGE UNITED.—A telegram from the mine manager, dated June 1, is as follows :—"Cut reef cross-cut; water troublesome."

HARRIETVILLE,—Telegram from the mine, 22nd June :—Cleared up June 1. Mons Meg Mine, 635 tons, 267 ozs. : New lease, 283 tons, 36 ozs.; Amalgamating pans, 35 tons, 84 ozs.; We have struck Mons Meg Mine Main Shoot, 50 ft. below J."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram :—"We pay 37,500*l.* on Monday, being dividend of 9d. per share (free of dividend tax) for the month of May."

SCOTTISH AUSTRALIAN.—The allotment letters for the 50,000 new shares, created May 1, have been posted to the allottees.

SUNBURST.—Cablegram from Charters Towers, May 29, reports : A partial clean-up from 360 tons stone has yielded 1,136 ozs. gold, value 4,000*l.* An interim dividend of 1s. per share is declared, and crushing is continued. A resolution of shareholders is passed converting the company into one of 48,000 shares, "no liability."

FOREIGN MINES.

CASTILLON (PYRENEES).—The company has sold 50 tons silver-lead ore to Messrs. Quirk, Barton, and Co. at 8*l.* 15s. 6d. per ton f.o.b. Bordeaux.

DICKENS CUSTER.—The following are extracts from a letter from Mr. A. H. Axford, managing director :—"As I anticipated in my cable, I started the mill on the 11th. The few days I have been rnnning, I am quite satisfied. The mill is going splendidly. Hope to ship you a bar of bullion very soon."

DON PEDRO.—Messrs. Lacy, Hartland and Co. notify that they will be prepared to pay the debenture coupons of the Don Pedro Gold Mining Co., Limited, falling due on the 9th inst.

ELKHORN.—Information from the mine :—"Bullion produced for week ending May 30, eight thousand three hundred and ten dollars ($8,310)."

KETCHAU (PAHANG).—The corporation has received advices from the Mount Siam Mine to May 31 last announcing sales of bullion amounting to 229 ozs. 3 dwts. 9 grs., which was sold to the Hong Kong and Shanghai Bank, and realised 914*l.* 18s. There being no machinery as yet on the property, all the gold is obtained from quartz which is crushed by hand by Malays.

LA PLATA.—Cablegram from the manager :—"Results for the month of May.—Mine output, $5,000; Slag Dump, $720; Profit, $850. White Cloudclaim (Red Mountain District). Shaft sunk 50 ft., showing a fine prospect."

MAMMOTH.—A further shipment of bullion has been sent into bank, making the total product for the month of May, $24,800. Mill running well; mine looking well.

NEW PIERREFITTE.—The company has sold 150 tons silver-lead ore to La Société des Mines de Pontgibaud at 10*l.* 16s. 2d. per ton f.o.b. at Bordeaux.

OSCAR.—Mr. J. Daw, jun., the manager, telegraphs under date June 4 : "All work progressing well 200 and 300 levels; also new winze producing quartz, assaying 6 to 7 dwts.; other points, no alteration; crushed 60 tons of quartz from north level and stopes, yielded 19 ozs. of gold; other places, 170 tons of quartz, yielded 35 ozs. of gold, exclusive concentrates."

PAHANG CORPORATION.—The company advises a further shipment of 5 tons 10 cwt. of black tin per s.s. Kaisow.

PESTARENA.—The Pestarena Mine produced in May 452 ozs. of gold from 461 tons of ore, equal to 19 dwts. 15 grs. per ton.

PINOS ALTOS.—The out-turn for the week ended 23rd ult. was $6,500.

RIO TINTO.—The company publish the numbers of their Five per cent. Second Mortgage Bonds, 1884, which have been drawn for payment at par on July 1.

SAN LUIS. — Cablegram from the manager at San Luis, Nicaragua :—"Bullion shipped, May 27, 420*l.* Mill stopped 12 days for repairs and change to wet crushing. New system of wet crushing successful. Have increased output 20 to 30 per cent. Everything is going well."

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro June 4 :—"34 fms. sunk during May."

TOLIMA.—Cablegram :—"May gross returns are 8,000*l.* The net profit is over 4,500*l.* Snnk 12 ft."

UNITED MEXICAN.—Telegram :—"San Cayetano : Gross returns for week ending May 29, $2,680; San Cayetano : Expenditure for week ending May 29, $3,630; San Cayetano : Loss for week ending

May 29, $950; El Cubo: Gross returns for week ending May 29, $5,050; El Cubo: Expenditure for week ending May 29, $4,730; El Cubo: Profit for week ending May 29, $320; profit on mill for last month, $1,780."

HOME MINES.

ENGLISH ANTIMONY.—The manager reported a few days since thus:—We have just struck a splendid vein of antimony in the branch north of the shaft. We are rising some good stone of antimony from this point. We have also taken out four rocks, and find they weigh over 200 lbs. of almost solid antimony.

SOUTH PHŒNIX.—This mine, as will be observed by the monthly ticketings, seems now to be on the point of making good returns. The last ticketings show that over 11 tons of tin per month have been sold, realising 542*l*. The stopes in the 30-fm. level west are rich, and good returns are being made.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

SALISBURY.—The crushing for last month was 1,300 ozs.

FORBES REEF.—The yield for May was 40 ozs. from surface soil.

KLEINFONTEIN.—Result of last month's crushing is 920 ozs. of gold.

FERREIRA.—Crushings for last month, 4,776 tons; yielding 4,011 ozs.

STANHOPE.—The result of last month's crushing yielded 966 ozs. of gold.

CITY AND SUBURBAN.—The result of last month's crushing yielded 811 ozs. of gold.

LANGLAAGTE ESTATE.—"5,896 tons of ore crushed last month yielded in retorted gold 4,350 ozs."

GELDENHUIS MAIN REEF.—The result of May crushing produced 400 ozs. of retorted gold from 800 tons.

SIMMER AND JACK.—Quartz crushed during month 7,356 tons; obtained 3,300 ozs. gold during month.

LANGLAAGTE BLOCK B ESTATE.—"8,028 tons of ore crushed last month yielded in retorted gold 1,409 ozs."

DURBAN-ROODEPOORT.—Crushings since May 5:—3,545 tons crushed, 26 working days, 2,025 ozs. retorted gold.

SHEBA.—The following cable is from the general manager:—"2,640 tons crushed, yielding 2,820 ozs. of gold."

MAY CONSOLIDATED.—The yield of gold during the past month (May) was 2,100 ozs. from 4,600 tons, mill running 28 days.

WITWATERSRANDT (KNIGHT'S).—The London Agency advises the receipt, ex Athenian s.s. from Cape, of 574 ozs. smelted gold.

GRASKOP MILL AND MINING.—A cablegram announces the result of the May crushing as follows:—"Crushed, 770 tons; yield, 272 ozs.; estimated cost, 600*l*."

JOHANNESBURG (GOLD).—Cable from the manager:—"The lode carries gold in paying quantities below the old workings 3 ft. wide. We have milled 27 tons, the gross yield being 15 ozs."

TRANSVAAL GOLD EXPLORATION AND LAND.—Mined during month, 375 tons. Battery working 21 days, double shifts, crushed 575 tons; mixed ore yielding 560 ozs.: pans, 650 ozs. Total for May, 1,210 ozs.

NORTH-EASTERN BULTFONTEIN.—This company has telegraphic advice announcing for last week 6,600 loads washed, producing 1,200 carats of diamonds, making for the four weeks ending 30th ult., a total of 4,500 carats of diamonds for 24,700 loads washed.

ORIENTAL AND SHEBA VALLEY.—Cablegram:—"60 stamps, running 27 days, crushed 2,560 tons; yield 420 ozs. gold; and 6 tons concentrates, assaying 15 ozs. per ton." The directors are of opinion that there has been a great loss of gold in milling, and, therefore, the services of a competent expert on the spot have been obtained to thoroughly investigate the whole matter.

OCEANA.—The company have received the following cablegram from their Transvaal representatives, dated Johannesburg, June 3, in reply to a message sent to them on June 2, stating that a report was current in London that war was imminent between the Boers and the Chartered Company, and asking for authentic information on the subject:—"The following information is reliable. The report is not true; situation still unsettled; expectations of peace generally entertained; trek weakening; confident hopes any collision avoided."

EDWIN BRAY (May 2).—Manager's report:—Mine—Working No. 2 quarry: Most of the work has been concentrated on the western end of No. 2 quarry, our 'platform below being full of quartz. Mill: The battery with 25 stamps has been at work continually, and crushed about 160 tons. The excavations for the buddles are advancing rapidly, and in the meantime all the tailings are being caught in pits and saved. The contractors for the battery shed are at work again, and hope to have all the framework completed by the end of this week.

PIGG'S PEAK ESTATE.—Mine report for week ending May 2:—Devil's reef: Drive on top of the hill: Drove for the week 20 ft.; total, 57 ft. Ground getting softer, but no gold in panning. Winze sunk for the week 7 ft.; total, 50 ft. Ground much the same as last week. Amount of cuttings 120 ft., in different places. Six boys cutting timber, and remaining boys filling bags and loading waggons. Tamblyn's reef: Shaft sunk 3 ft.; total, 15 ft. Good-looking rock but shows no gold in panning. Drive: Drove for the week 16 ft.: total 29 ft. Ground getting harder. Amount of cuttings, 363 ft. Peak: No. 2 south drive: Drove for the week 3 ft.; total, 42 ft. Ground very hard. Work has been stopped for the present. Pigg's Drive. Drove for the week 27 ft.; total, 100 ft. Have struck the reef which shows a little gold in panning. Have let another contract to cut through the reef. No. 1 works: Drove for the week 8 ft.; total, 210 ft. Ground getting harder; no gold in panning.

CERRO DE PASCO.—The following report has been received from the mine, dated Barberton, May 2:—Middle reef: The 500-ft. level drive has been driven 9 ft. (working 13 days, day time only), making total distance, 454 ft.; average width of reef, 5 ft. Quartz extracted 18 tons, making total 110 tons since we commenced work in this drive. We stopped all work in this drive on Apl. 15. Block P extension: South-east cross-cut has been driven 82 ft., making total distance 116 ft. In this cross-cut we have cut seven quartz leaders. No. 1 leader, 9 ft. from entrance of cross-cut, 18 ins. wide; No. 2 leader, 28 ft. from entrance of cross-cut, 9 ins. wide; No. 3 leader, 45 ft. from entrance of cross-cut, 10 ins. wide; No. 4 leader, 56 ft. from entrance of cross-cut, 6 ins. wide; No. 5 leader, 59.6 ft. from entrance of cross-cut, 3 ins. wide; No. 6 leader, 78 ft. from entrance of cross-cut, 9 ins. wide; No. 7 leader, 106 ft. from entrance of cross-cut, 11 ins. wide; six of which are gold-bearing. Block F extension: Air shaft has been sunk 43 ft., making total distance 93 ft. We connected this shaft with south-east cross-cut on Apl. 27. Block 12—North-east cross-cut: Excavation for this cross-cut was commenced Apl. 16, and is as follows: Open cutting, 30 ft. by 6 ft. wide, and averages 7 ft. high. Cross-cut drive has been driven 16 ft. Total ground excavated, 1,740 cubic ft. Block F, main shaft: We had two miners and five natives repairing two wall plates in shaft on Sunday, Apl. 12. Assays are being made of samples from the leaders met with in the south-east cross-cut.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank Rate was reduced yesterday to 4 per cent. Bar silver closes 44¾d.

COPPER has been steady. G.M.B. warrants were rather excited on Monday morning, and 55*l*. 12s. 6d. was paid cash, and 56*l*. 5s. three months. It was easier in the afternoon, and 55*l*. 5s. cash taken, and 56*l*. three months, with a further fall to 54*l*. 10s. cash, yesterday, closing with buyers at 54*l*. 15s. cash, and 55*l*. 10s. to 55*l*. 15s. three months. To-day's prices are 55*l*. 5s. cash, and 56*l*. three months. The month's arrival of copper in England and France was 9,672 tons; delivered, 11,180 tons; visible supply, 57,808 tons, against 59,361 tons on May 1. We quote English tough, 57*l*. to 59*l*.; best selected, 59*l*. to 60*l*.; strong sheets, 66*l*. to 67*l*.; India sheets, 61*l*. 10s. to 62*l*. 10s.; yellow metal, 5¾d. to 6d.; ore, 10s. to 11s. 3d. per unit.

TIN has been active, and Straits has improved from 92*l*. 10s. to 93*l*. 10s. for spot, and from 92*l*. to 93*l*. 15s. for three months. To-day's prices are 94*l*. cash, and 94*l*. 2s. 6d. three months. The month's arrivals were 1,269 tons. Delivery, 1,687 tons, inclusive of 130 tons to America. Stock in London 2,701 tons against 3,119 tons on May 1. Stock and afloat to England and Holland 7,836 tons against 7,532 tons May 1. The Dutch Market has improved to fl.56 for banca, and fl.55¼ billiton. English ingots, 96*l*. to 97*l*.

TIN PLATES still disorganised. We quote 16s. for prompt and 13s. 6d. for forward delivery ordinary coke Liverpool.

SPELTER improved to 23*l*. 2s. 6d. to 23*l*. 5s. for ordinary brands ex ship here.

SHEET ZINC.—180 tons London rolled sold in public sale yesterday at 25*l*. per ton.

LEAD has improved to 12*l*. 12s. 6d. to 12*l*. 15s. for soft Spanish, 12*l*. 15s. to 13*l*. for soft English; L.B. China pigs 13*l*. 5s.; sheets, 13*l*. 10s. to 14*l*.

QUICKSILVER steady. Rothschild's price is 8*l*.; seconds, 7*l*. 18s. 6d.

ANTIMONY dull—Hallett quotes 55*l*. for prompt shipment to America, and 52*l*. for Continent. Ordinary brands, 50*l*. to 52*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JUNE 6.

Assam Co.	7 per cent.
Alexandria Water	10 per cent.
Alliance Marine Insurance	1*l*. 10s. per share.
British and American Trustee and Finance ...	6½ per cent.
Brazilian Bank of Germany	10 per cent.
Brahmapootra Tea	12 per cent.
British Deli and Langkat Tobacco, Preference	7 per cent.
British Deli and Langkat Tobacco, Ordinary	10 per cent.
Brazilian Submarine Telegraph	5s. per share.
Bengal Central Railway...	8s. per cent.
Bank of Montreal	5 per cent.
City of Melbourne Bank	15 per cent.
Colonial Bank of New Zealand	7 per cent.
Commercial Cable	7 per cent.
Colonial and United States Mortgage ...	12 per cent.
Ecclesiastical Buildings Fire	5 per cent.
Freehold Investment of Australia	8 p. c. & 2s. 6d. bo.
Fuller's Earth Union	7 per cent.
Grand Junction Waterworks, Ordinary ...	8 per cent.
Grand Junction Waterwork, "C"	7½ per cent.
Grand Junction Waterworks, New Ordinary	7 per cent.
Grand Union Canal	1s. per share.
House Property and Investment	4 per cent.
Imperial Ottoman Bank	7 per cent.
John Brown and Co.	1*l*. per share.
London and Provincial Steam Laundry ...	7½ per cent.
Louth Corn Exchange	3¼ per cent.
La Guaira and Caracas Railway	9 per cent.
Marine Insurance	37s. 6d. per share.
Norwich and London Accident Assurance ...	5s. per share.
Newcastle Breweries, Ordinary...	10 per cent.
Newcastle Breweries, Preference	6 per cent.
P. and O. Steam Navigation	7 per cent.
Royal Bank of Scotland...	9 per cent.
Samnel Heath and Son	10 per cent.
St. Louis Breweries	10 per cent.
United States Brewing	1*l*. per share.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (June 4).—Wheal Maria, Capel Tor, Eastern shaft : In the 112-fm. level west the lode is 2 ft. wide, composed of capel and quartz, with small quantities of copper and mundic ores. Watson's engine shaft : In the 172-fm. level east the lode is 2 ft. wide, and yields saving work of copper and mundic, with occasionally a little tin. In the 160-fm. level east the lode is 4 ft. wide, very promising, and yields 3 tons of copper and mundic ores per fm.—I. RICHARDS.

DEVON UNITED (June 4).—Willesford's shaft : In the 144-fm. level east the lode is 1½ ft. wide, composed of capel and quartz, with a little mundic. In the 144-fm. level west the lode is 2 ft. wide, composed of capel and quartz with peach, and a small quantity of mundic. In the winze sinking below the 132-fm. level west the lode is 2½ ft. wide, very promising, and worth 2 tons of good quality copper ore per fm. The lode in the stope in the back of the 132-fm. level west is worth 2 tons of copper and mundic ores per fm. We have prepared for sampling to-morrow computed 70 tons of copper ore of good quality.—I. RICHARDS.

PRINCE OF WALES (June 3).—The shaftmen have completed the casing and dividing of shaft below the 166-fm. level, and are now engaged taking out penthouse and ground left which partly formed the same, and hope to complete it in a day or two. At the 166-fm. level west the men have been engaged driving by the side of the lode ; to-day they have cut through it, and find it 3½ ft. wide, and of a promising character. There is no apparent change in the cross-cut since last week.—J. PROWSE.

ROMAN GRAVELS (June 4).—The 155 north is driven 2 fms. 2 ft., but there is no material change since last week in the vein, which is 4½ ft. wide. The rise in the 140 north is producing 2½ tons lead ore to the fm., and the two stopes at work are each worth 1 ton per fm. We hope to communicate the winze in the 125 with the 140 south some time next week. Good progress is being made in rising from the 140, but the deepening of the winze is going on slowly, owing to the great quantity of water which has to be drawn. The 140 south-east on caunter is producing 1 ton per fm. The lode in the 125 south is 2½ ft. wide, producing good stones of blende. The three stopes at Lewis winze are together producing 4½ tons of lead ore to a cubic fm. The four stopes in back of the 110 south are together worth five tons per fm. The lode at the 80 south is only producing stones of blende at present, but the vein maintains its usual width and character, and there are no signs of the shale, so that we anticipate an early improvement. The three stopes in back of this drivage are together producing 4 tons lead ore and 2 tons blende to the fm. The two stopes at Glover's winze in the 80 on east lode average 1½ tons of lead ore per fm. The 50 tons of lead ore sold to-day realised 418*l*. 15s., and we have sent out samples of a parcel of blende, computed 20 tons, for sale on the 11th inst.—A. WATERS.

SOUTH DARREN (June 4).—The shaft is 28 ft. 6 ins. under the 142 level, having been sunk 3 ft. this week. The ground is a little harder for sinking. The 130 end west contains a nice branch of ore, worth 12 cwt. of silver-lead ore per fm. The lode continues large, but the lead is not quite so good as it was last week. Drawing and dressing is being carried on.—I. MITCHELL.

WEARDALE.—Report on Weardale Co's mines for the week ending May 30 :—Ore raised for week, 94 tons ; ore dressed for week, 92 tons ; ore and slag smelted for week, 155 tons ; producing 80 tons of pig lead.

WEST WHEAL GRENVILLE (June 2).—The shaftmen are continuing the costeaning and have sunk pits in field north of the boundary hedge for about 15 fms. in length, but as yet have not struck the lode, although at times we have found stones carrying tin and iron in small quantities which have the appearance of being thrown off from a lode.—J. SKEAT, A. TENBY.

WHEAL CREBOR (June 2).—The lode in the 156 end driving east of new shaft continues to present a favourable appearance, still yielding 6 tons of good quality mundic and stones of copper ore per fm. The stopes and pitches and all other points in the mine are the same as reported last week.—P. D. HOLMAN.

WHEAL METAL AND FLOW (June 4).—During the past week our surface and underground operations have been retarded through the boiler having sprung a leak, which necessitated our stopping it for repairs. The lode in the 27 end east is from 6 to 12 ins. wide, containing a good deal of sulphur, mundic, peach, red and white prian, and a little tin. We have commenced to clean another parcel of tin. —S. P. CURTIS.

WHEAL UNY (June 3).—In consequence of H piece failing at the 160-fm. level we have not been able to sink Hind's shaft with our usual speed. We shall have to change this H piece and do sundry other jobs on Friday, which will delay the sinking for a few days. Lode in shaft looks as well as ever. The 244-fm. level west : The ground in this end is getting harder ; we think it will soon change again ; still in payable ground. The 230 east looks better ; nothing to value. The 230 west without change. The 203 end west is improving.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

BALAGHAT MYSORE (May 13).—Report of work done for the past fortnight.—North engine shaft : The 600 north has been driven 13 ft. 9 ins. ; total distance from shaft, 35 ft. ; the quartz is now about 8 ins. wide, and worth 2 ozs. 9 dwts. The 600 south has been driven 8 ft. 6 ins. ; total, 23 ft., and carries a few strings of quartz, giving a small show of gold. We had to suspend this drive temporarily from the difficulty in getting away the dirt from the shaft. The 500 north has been driven 25 ft. ; distance from shaft, 558 ft. ; we are carrying about 10 ins. of quartz, worth 6 dwts. 12 grs. The 500 south has been driven 1 ft. 6 ins. ; total, 95 ft. 6 ins. ; there is no change here. The 500 winze, No. 1, has been sunk 8 ft. 6 ins. ; total depth, 63 ft. ; the quartz is about 10 ins. wide, worth 3 ozs. 10 dwts. 9 grs. per ton. The 500 stopes north (back) close to No. 1 winze : Averages 4 ins. of quartz, worth 13 dwts. 1 gr. The 500 stopes north (back) close to No. 2 winze, quartz averages 2 ft. wide, worth 2 ozs. 9 dwts. 12 grs. The midway winze sinking below the 410 has holed to the 500-ft. level. The 500 stopes south (back) : Size of quartz, 6 ins., worth 1 oz. 9 dwts. 21 grs. The 410 back stopes : Average size of quartz, 8 ins. ; value, 3 ozs. 12 dwts. 2 grs. The 330 north stopes : Average size of quartz, 10 ins., assaying 1 oz. 16 dwts. 22 grs. The 330 plat back stopes : Quartz 8 ins., assaying 1 oz. 9 dwts. 22 grs. The 270 south has been driven 3 ft. 3 ins. ; total distance, 652 ft. 3 ins. The 205 winze sinking about 20 ft. north of Haines' shaft has been sunk 6 ft. ; total, 6 ft. The 205 north stopes : General average of quartz, 10 ins., assaying 5 ozs. 1 dwt. 6 grs. Haines' shaft : The heavy ground is now all secured at the 270-ft. level, and we have commenced to strip away the ground on the foot going below the 270. Surface : We had an unfortunate accident with our winding engine which threw us back several days in the mine, and we were unable to hoist quartz for the mill.—A. S. B. OAKLEY.

BRATSBERG.— Mining report for week ending May 23. — Hoffnung Mine : No. 2 adit level, as well as No. 1 rise in the back is yielding ¾ ton per fm. No. 3 adit level is of about the same value as last week, viz., ½ ton per fm. At No. 4 level the lode appears to be improving ; present value, ½ ton per fm. The trial level at Murchison's keeps very regular in value, viz., 1 ton per fm. Johannes Mine : The western level here is worth ¾ ton per fm., and the eastern level about ½ ton per fm. Surface work and remarks : Dressing work is proceeding satisfactorily. The Mary Owens is being loaded, and we shall begin at once to forward ore for the second cargo.—J. D. HOLMAN.

CALLAO BIS (May 11).—Independiente : The shaft has been continued a further distance of 3 ft. ; total from surface, 147 ft., or 7 ft. below the No. 3 level. The progress is small, as the miners have been employed in cutting ground to receive bearers for tank. This will be completed in a few days more. The No. 3 level west has been driven 45 ft. ; distance from cross-cut, 82 ft. Lode 6 ft. wide, of fair value. The No. 3 level east has been driven 29 ft. from cross-cut ; lode 2 ft. wide, of fair value. I hope soon to meet with the north and south lode, which will be cabled to you. The No. 3 raise has been driven 15 ft., where communication is made to the No. 1 winze. Total distance from the back of this level to the bottom of the No. 2 level, 70 ft. Average width of the lode for this distance, 4 ft., of fair value, which gives a splendid piece of stoping ground. The No. 2 winze has been advanced 11 ft. ; distance from bottom of level, 24 ft. Lode 10 ft. wide, of fair value. The No. 2 level west : We have resumed work at this point. Surface work : Mill : The roof is completed over the 10 stamps. Engine in its place ; steam connections of same almost completed. We hope to commence crushing with 10 stamps by the end of this month.

— The following telegram has also been received : "425 tons—544 ozs. gold. Mine is looking well. Mill ready June 1."

CHAMPION REEF.—Superintendent's report for the fortnight ending May 11 :—Mysore section—Carmichael's shaft : Sinking 3 ft. 6 ins. ; total depth, 239 ft. 6 ins. ; small branches of mineral, which for some distance have been vertical in shaft, are now dipping west. We have 26 coolies employed in the 24 hours, but owing to the excessive hardness of the rock and the abundance of water, it is difficult to make any very great speed in sinkiug at this point. As reported last fortnight, we are driving south at the 225 level on the course of the lode ; the amount driven is 16 ft. Ribblesdale's shaft has been sunk 4 ft. ; total depth, 235 ft. 6 ins. We are still passing through small branches of quartz, and the ground on the east side of the shaft is strongly mineralised ; the last branch passed through in sinking carries a good wall, and has an underlie to the west about 3 ft. in a fm. A sample taken from this branch shows a good trace of gold. Garland's shaft has been sunk 5 ft. 3 ins. ; total depth, 236 ft. 9 ins. The sinking at this point has been retarded considerably, in consequence of having to stop the small hoist to put up the new poppet heads and strengthen the collar of shaft for the new work. Dalyell's shaft : Raising collar of shaft 5 ft. 6 ins. ; total depth of shaft 241 ft. 6 ins. The shaftmen have been employed blasting away ground for a plat, and driving 6 ft. north and 5 ft. south at the 240-ft. level. There still remains a little more ground to be blasted out in the hanging of shaft before we shall be able to resume the sinking. The lode in the south drift carries about 1 ft. 6 ins. of quartz, and the north end about 1 ft., the assay value varying from 3 dwts. to 6 dwts. per ton. Coromandel section : At Prospect shaft the 320-ft. level north has been driven 7 ft. 6 ins., and is now 114 ft. 3 ins. from shaft ; the lode at this point is nearly 4 ft. wide, 2 ft. of which on the footwall is very compact and carries free gold. Two samples taken across 2½ ft. of the lode during the past week assayed 1 oz. 7 dwts. 9 grs. and 2 ozs. 5 dwts. 17 grs. respectively. This improvement in the quality of the ore at this point is very encouraging. Coolies are now engaged cleaning up the shaft, and we hope soon to be able to commence operations from bottom of shaft to intersect this shoot of ore at a greater depth. The 290 end south has been advanced 4 ft. 9 ins. ; total distance, 154 ft. 9 ins. ; the lode is about 2 ft. wide, carrying 1 ft. 6 ins. of quartz. The assays from this point are very poor, only giving a pennyweight or two per ton. Surface and general work : At the Coromandel section we are digging a few costeaning trenches both east and west of shafts. The erection of the various buildings at Mysore section is proceeding satisfactorily. The poppet heads at Garland's shaft is in position over the shaft, and the carpenters are now employed erecting a capstan, and we hope by end of the week to commence sending down the pitwork.

COLAR CENTRAL (May 13).—Eastern section, North division, New shaft : West cross-cut 200-ft. has been driven 2 ft., by hand labour ; total, 43 ft. 6 ins. East cross-cut 200-ft. has been advanced 2 ft. 6 ins. by hand labour ; total, 40 ft. We have not been able to get the men to work full time here, but I hope we shall be able to show better progress for the next measurements. The ground still remains very hard and bad for blasting. South division, Main shaft : The water was forked here on the 5th inst., and we proceeded at once to draw the pitwork, which was all finished on 7th iust. Marden's shaft was forked on the night of the 8th inst., and we had all the pitwork out of the shaft on 12th inst.—A. S. B. OAKLEY.

— Office note.—The following telegram has been received from Mr. Oakley, dated June 1 :—"Cross-cut has cut the lode to the west. New shaft, 2 ft. wide, 15 dwts. per ton."

CUMBERLAND (Apl. 6).—I beg to submit my progress report for the month of Mar. :—No. 7 level : Since my last report the contract for driving this level 150 ft. has been completed. Nothing of any further import was met with until we reached a point 145 ft. from the shaft, when a leader 4 ins. in width, of good quality quartz made on the footwall side of the lode. I am pleased to say that as we have advanced this leader has gradually widened out to about 8 ins. It is much to be hoped that it will go on improving to give us more encouragement to start stoping. The level is now being carried on by four men instead of six, at the same contract price, 37s. 6d. per ft. On cross-cutting the hanging-wall, as mentioned in

my last report, nothing payable was found. No. 1 winze north: This was successfully carried through into No. 7 level by the 24th of the month. Ventilation is now all that can be desired. No. 2 winze north: A contract has been let to sink this winze at 42s. 6d. per ft. It will be started to-day by four men at a point 152 ft. from No. 2 shaft in No. 6 level. We commence on about 18 ins. of fair stone directly under that portion of the mine from whence the good crushing came last year, and almost directly above the stone mentioned, as in the present end of No. 7 level. Tramway: This, I trust, will be completed and in working order during this month.—A. GALLAGHER.

DON PEDRO (May 15).—Maquine Mine—Half-monthly letter:—For this part of the month our force has been employed chiefly on mine drainage, preparing for fixing the new lift in Gordon's shaft. A great deal of work had to be done, several sets of timber had to be fixed, also dividings to support same. All this work was completed to make the stoppage as short as possible. On the 9th we stopped the machinery and commenced fixing the lift in engine end of shaft. All our force was employed here until completed. The time taken in fixing was 21 hours. The machinery was then again started, the new lift working very satisfactorily. In this stoppage water rose 1 ft. above the bottom of 40-fm. level. On the 12th water was again put in fork, and 50 cross-cut and No. 4 drivage resumed. 50-fm. cross-cut: Since our last, an other set of back laths has been started, but owing to the fixing of the new lift, little has been done, but, as far as we can now prove, it seems we are in head-wall of No. 8 shoot. No. 4 drivage: The formation is becoming a little softer for excavating, but remains the same in quality—rich. I shall be able to give you more information in my next report conceruing the two last-named places, as we hope better progress will be made. North of Muquiue: This exploration has been kept on at intervals, owing to the force being engaged about mine draiuage. We shall uow continue this work with greater vigour, as I believe we have, and shall open up, some paying ground. Adit level and all other work in connection with the mine has been continued with the usual attention.

EMERALD (COLUMBIA) (Apl. 12).—The manager writes:—We have been working during the week in the canal below the Angostura, or narrow part. opened up 50 metres more lower down the canal, in order to gain another depth of about 8 metres. In all we have kept on lowering 0.60 centimetres; this part in a leugth of 146 metres, but as water has been a little more abundant I have commenced with about 40 hands widening the narrow part during the afternoons, and done in a length of 37 metres a cut of 2½ metres depth by 3 metres width. In the upper part we only worked with 10 hands in five steps, lowering them in the morning, while in the afternoons we have kept on widening. Hands at work, 105. As the rainy season now seems to commence I shall make the best use of it, keeping on 40 of the hands in cutting down this narrow part and widening the canal below 1 metre. Others will continue to lower the 10 steps from the lowest part towards the Angostura.

EMMA (May 18).—In the south-east part of the mine being developed from Emma tunnel we are timbering the break in the drift. There is still a great quantity of water coming in; however, the flow is considerably less, and we expect to get through the break by the middle of this week. Have reached the footwall drift and resumed work in face; advance, 18 ft.; total, 128 ft. The rock continues much broken and crushed, and is brecciated limestone, carrying low-grade ore. In the north-west part of the mine on the Illinois tunnel level we have raised 17 ft.: total, 89 ft.; the pay seam is now 8 in. to 12 in. wide and 2 ft. low-grade ore. We mined here 3 tons first grade and and about 10 tons concentrating ore. In the drift south-east from Illinois tunuel level, advance, 9 ft., total 29 ft.; the face of drift still filled with small pockets of iron showing occasional nodules of ore. In the drift from point of connection with raise from No. 4 level we advanced 10 ft., total 245 ft. The ore seam continues 2 ft. wide, but is still low grade, but the ledge is fully 6 ft. wide, and ore should become more valuable as depth is attained, and if we find this seam continues in depth we will start a crosscut from No. 4 level to cut it. We have about 28 tons first grade ore mined and about 310 tons of low-grade ore for concentrating.—H. C. WALLACE.

FLAGSTAFF (May 16).—I can again report fair progress made in the mine for the past week. Sixth level: This is now in 120 ft. I have uot reached the hanging-wall yet; the rock is well mixed with small bunches of iron. I still think we are going to find an immense body of ore in this vicinity. I have two men at work in the body of ore that we cut, and it is turning out well. It bears a little north of east, and pitches downwards in running 26 ft. We are 7 ft. below the level. I am keeping this ore by itself, as it does not look to be so good as our other first-class ore, although there is lead mixed throughout the entire body and is very heavy, and may run better than we think. This seam averages about 20 ins. wide, and it is full height of incline, and ore still in bottom. I have not done anything with the last bunch we cut yet, but will put a man at work on it to-night. Seventh level: This level is now in 28 ft., and is good looking ground for ore; there are small bunches of iron mixed all through the rock. Number of tons of ore mined the past week, 18.

— Cablegram from Prof. Vinceut, received June 1, reads:—"Arrived Salt Lake; well."

GOLDEN FEATHER CHANNEL.—After repeating cables already published, the manager says:—It is with great pleasure that I confirm this cable. The last blast in the canal excavation was fired on the 14th, and this morning the gap left open in the wall for the running out of *débris* was closed. Most of the forces have been disbanded, only a sufficient number being retained to excavate the entrance to the canal, which was filled up by the tailings washed in by Morris ravine at the time of the very heavy rains of last winter, and previous to the building of the crib dam across the ravine's mouth. The masons are now building the foundations for the wing dam which is to connect the main dam with the head of the canal. They will then build the foundation for the head gates, which are to prevent the water from entering the canal whenever we wish to turn it or keep it out. The river is too high at present to allow us to begin the erection of the main flume that connects the Golden Gate flume with the head of the canal, hence we have had to "lay off" the forces intended for this work until such time as the river falls enough to permit its being done in a proper manuer. From present appearances we should start in on this work about the 25th, and continue work without interruption for the balance of the season, and the foremen have been instructed to have their men in readiness on that date. The greater portion of the pipe has been laid from the large reservoir, at the terminus of the ditch 415 ft. above the canal bed, to our main road, and is now being extended from there into the claim, thus bringing to our aid 1,000 horse-power to work the claim. Two suspension bridges are now in progress of construction to cross the canal—one near the head of Rich Gulch to carry the pipe for working out and pumping the claim, and the other, a foot bridge, near the foot of rich gulch. The pipe bridge will have a suspension span of 80 ft., designed to bear up 50 tons, and will also be used for a foot bridge. The necessary vacation that the temporary suspension of work gives the men will be of great benefit to them, and will enable them to prepare for the hard and exhausting summer work. In reply to your query as to any difficulty in getting labourers or skilled workmen, I have to say that no trouble on that account need be anticipated, as I can procure all the labour, skilled or unskilled, that I require at any time. The short time that the men appear to work on the average is accounted for by the arduous nature of the work, and the fact that I give certain men only sufficient work to retain them here until I can put them to work in the river, that being work they are more accustomed to than rock work or wall building. The completion of the canal, &c., has created considerable sensation, and was yesterday telegraphed throughout the United States by the agent of the associated press. I have the fullest faith, that is shared in by all competent investigators, that the earlier part of this summer will see us working in the river gravels, and that the returns therefrom will be very great. In conclusion, I am pleased to report that all affairs here are in first-class order.—F. McLAUGHLIN.

GOLDFIELDS OF MYSORE (May 13).—Fortnightly report from the superintendent:—The mining operations for the fortnight ending May 11 have consisted only of sinking south shaft, the amount sunk is 6 ft. 6 ins., making a total depth of 263 ft. The rock on the western side of shaft is very hard, but on the east side there is a small branch of quartz, which carries a trace of gold. This branch, undoubtedly, is the same as that we passed through in driving the 206-ft. cross-cut. We have been obliged to discontinue the sinking of winze below the 206-ft. level, on account of water. There is apparently a hard and close piece of ground between the shaft and the lode, otherwise the water would be drained as the shaft is the deepest point.

GOLD HILL (May 20).—I find by measurement that we have about 65 tons of ore from the 160-ft. level winze and 60 tons from Martin shaft, making in stock 125 tons of 2,000 lbs. each. The 435-ft. level: We are pushing ahead on this level from the bottom of Barnhardt towards the Old Field shaft. By measurement I find we are in about 325 ft. At this point the ore is showing in very small strings, following the foot and hanging-walls. They are much diminished in size since last week, but the ore is of greater value, as it shows a little free gold by panning, and it is all through face of working in small strings; they may unite in driving and form a good vein. The 300-ft. level: This level is also driven from Barnhardt shaft, and is about the same distance as the 435 in the direction of the Old Field shaft. What little ore it had in it last week has pinched out, yet, from indications on the 435-ft. level, we feel confident that it will come in again. Between these workings and the Old Fields we have about 500 ft. or 600 ft. to investigate, and judging from the good ore found on the surface we shall strike another shoot in driving towards the Old Field, where can be seen the old workings from which thousands of dollars in gold have beeu taken. Winze on 160-ft. level is down about 33 ft. on good ore, and will connect with an uprise from the 300-ft. level in about 80 ft. Martin shaft is down 150 ft., and has followed a good shoot of ore. The vein is narrow at the bottom, being about 8 ins. in width, although scattered through 18 ins. or 2 ft. of ground.—R. EAMES, jun.

GYMPIE GOLDEN CROWN.—Report for the fortnight ending Apl. 9th:—I have to report that driving and stoping north on the March reef at the 240-ft. level is being continued. The rise has been carried up a further distance of 12 ft. During the past six weeks 250 tons of stone has been raised and crushed for a return of 83 ozs. 10 dwts. smelted gold. Lease 777: Two mile (main shaft): On the Peter and Paul reef the drive north is being continued, but the reef has not yet been met with on the north side of the cross-course. The south drive and back stope is being carried in on a good slate break; the reef is about 6 ins. in thickness, but is not showing much gold. At the eastern shaft the cross-cut east at the 130-ft. level is now extended a total distance of 112 ft. Splendid slate has been met with in this cross-cut. In the western cross-cut the rise on the Peter and Paul reef has been carried up 10 ft.; the reef is fully 12 ins. in thickness, of good, solid stone.—T. RAMAGE.

GYMPIE GREAT EASTERN (Apl. 16).—Fortnightly report.—During the past fortnight the rise on the Orient reef has been put up 13 ft.; total, 127 ft. from where we cut the reef, and is still small, being not more than 3 or 4 ins., but shows a little gold. The country is about the same as last reported on—slate and conglomerate. The cross-cut at this level has been extended 7 ft.; total, 420 ft. from the shaft; there is no change in the country. The north drive has been extended 8 ft.; total, 73 ft.; there is a fair body of crushing stuff showing a little gold. The south drive has been extended 6 ft.; total, 50 ft. The reef formation is looking a little better, but I have seen no gold in it. The stopes going north above this level all show a little gold, but not rich, with a fair body of crushing stuff. The 690-ft. level: The back stopes north and south above these levels are all looking very poor. The Nicholl's lease stopped crushing on Apl. 2, therefore we have 15 head of stampers idle. We wash up on Monday next. Everything about the mine, winding engine, and battery is in good working order. There are 53 men employed, 46 on the miue, and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (May 11).—Phœnix section.—Tramway level has been driven 14 ft.; the lode is now 3 ft. wide, and shows more quartz than when I last wrote. No. 1 level has been extended 11 ft. I am glad to report that the lode has now widened to quite 6 ft. It is still mixed, but in appearance is getting somewhat similar to the stone we have been breaking in upper stopes. The ground being softer now, this end will be pushed on faster, and if the lode maintains its character, I propose rising and sinking on it. Winze has been sunk 12 ft.; the quartz is not particularly good-looking, but is slightly mineralised. We are able to keep the water down by hand baling, but will soon have to rig a pump. Stopes: We are breaking out our usual quantity of dirt; but are not tramming at present, the ground near mill being occupied at present by timber required for repairs to hoppers. These will soon be completed, and tramming will

be at once resumed. The repairs to mill are also nearly finished, and I hope to commence crushing by end of the week. There are no changes to report in any of the stopes except C, the footwall portion of which is almost exhausted ; I will fill up here and break out overhead. At D we have done but little stoping, the contractor being employed in filling up, as the ground was getting heavy and dangerous. We also broke through from north of stope to tramway level to facilitate removal of stone. All repairs will certainly be finished before monsoon, the incline being the only thing left to do, and this is not a heavy job.

— (May 13).—Colar section.—No. 1 new shaft : 210 ft. east cross-cut has been driven 13 ft. by hand labour, and cut the lode, which at point of contact is poor. There is about 8 ins. of quartz, worth 2½ dwts. per ton. No. 2 new shaft : We are busy here cutting plats, and securing the 210-ft. levels. We have commenced to sink again, and have sunk 2 ft. 6 ins., making total depth, 218 ft. 6 ins. The 210-ft. south : We have commenced to drive on a small branch of quartz left behind us in the old south drive, and have driven 12 ft. on this branch, which is only a few inches wide. The 210 east cross-cut : No. 2 has been driven 20 ft. ; total, 103 ft. 6 ins. from the north drive. This has now been suspended, and the rock-drill put to drive north to effect communication with No. 1 shaft as early as possible. We shall also put a rock-drill to drive south from No. 1 towards this drift. North drive from No. 1 east cross-cut driven 6 ft. 6 ins. ; total, 24 ft. 6 ins. There is scarcely any quartz in the present end. South drive from No. 1 east cross-cut driven 6 ft. 6 ins. ; total, 28 ft. There is little of value now in the end. The small branches of quartz show a trace of gold only. Main shaft : The 240 ft. north driven 15 ft. ; total, 182 ft. 6 ins. The end looks rather more promising than it has done for some time. We are now carrying with us a good many small branches of quartz with good underlie. Roache's shaft : The 130 ft. east cross-cut driven 4 ft. 6 ins. ; total, 14 ft. 6 ins. The end is in hard ground, and at present quite barren. New air compressor : I am pleased to say that this is now fully erected, and has commenced to work. We shall, therefore, in future be able to run more rock-drills than formerly.—A. S. B. OAKLEY.

LEEDS COPPER (May 21).—There is no change to notice in any particular in the mine. Everything as reported last week.—T. R. DAVEY.

MONTE DEL ORO (May 26).—Fortnightly report.—Taylor's engine shaft : With the sinking of this shaft in the underlie below the 244-ft. level, very satisfactory progress was made during the past fortnight, 15 ft. being sunk, making the total depth attained, 82¼ ft. The lode is small, and composed of soft slate, which contains no gold, according to the assay of the last sample taken. Shaft No. 6 : In the 244-ft. level north of the shaft the miners maintain a good rate in driving, as the level is now 522½ ft. long, showing an advance of 23½ ft. since the previous report, composed of slate and quartz intermixed ; the lode averages from 18 ins. to 2 ft. in width, the two samples taken from it yielding respectively 5 dwts. 5 grs., and 15 grs. of gold per ton. On extending it 2½ ft., and finding no change in the ground, the driving of the west cross-cut was suspended, its total length being 268 ft. In winze No. 10, below the 186-ft. level north of this shaft, 17 ft. were sunk in the two weeks, making its depth 23½ ft. A sample obtained from about 15 ins. of quartz assayed 12 dwts. 4 grs. of gold, and the last two taken from a lode 2½ ft. wide, the composition of which is quartz, soft slate, and flookan, yielded as follows :—The first, from the hanging-wall, 4 dwts. 13 grs., and the second, from the footwall, 1 dwt. 23 grs. of gold per ton. Low's engine shaft : This shaft has now reached a depth of 82½ ft., the amount sunk in the fortnight being 13½ ft., although the ground is harder than it was for sinking through.—J. ROBERTS.

MOSMAN.—Report for month ended Apl. 18 :—North Australian Mine : From the various stopes being worked stone of fair quality is being obtained in very limited quantity, owing to the smallness of the reef. During the four weeks past 67½ tons of quartz have been raised, making a total of 137½ tons raised since last crushing. Out of this amount 117½ tons has been crushed, from which 312 ozs. 15 dwts. 10 grs. gold has been taken. I estimate that another 35 ozs. will be got from amalgam on hand. There remains 20 tons of quartz in the paddock towards next crushing. During past fortnight very little rain has fallen, therefore the water is much less in the mine, although heavy yet and causing expense. Eastward Ho Mine : Very little work is being done in this mine ; sinking a winze in 1,100-ft. level and stoping above same ; there are only four men employed below in the workings. About 20 tons of quartz have been raised during the past four weeks, total in paddock, 40 tons. Carting starts to-day, and crushing follows Wyndham stone. Wyndham Mine : Have sunk the underlie shaft a further distance of 34 ft., making total depth 749 ft. ; progress has been somewhat slow during the month, owing in a great measure to the wet weather, and not being able to make steam enough to keep pumps and compressor at work continuously. The rock, too, is just now, much harder than any yet passed through while sinking. There is no reef in the sink yet. The slide running very straight down with the shaft increases the distance through it in sinking. The 400-ft. level : This level has been driven a further 14 ft. ; total from shaft, 66 ft. ; the reef is 10 ins. thick, of white stone. The 550-ft. level south has been driven an additional 13 ft. ; total from shaft, 78 ft. ; reef 8 ins. thick. The 550-ft. level north has been further extended 17 ft. ; total from shaft, 84 ft. ; reef 6 ins. thick, of fair quality. Stoping above the level is being carried on on a reef varying from 15 ins. to 2 or 3 ins. thickness. Have raised 112 tons during the four weeks, which has been carted to the mill. This with that raised previously, altogether 180 tons, has been crushed, and the gold from it will be paid in to the bank on the 21st inst. From appearances I judge the quality at about 25 dwts. per ton. Crushing mill : Owing to the wet weather the mill has not been kept so well employed as I should have wished ; therefore, the usual amount of stone has not been crushed. Crushing reported Apl. 28 :—338 tons, 580 ozs. ; approximate value, 1,990*l.*

MOUNT MORGAN EXTENDED (Apl. 15).—At the end of March we have driven 104 ft. in the eastern cross-cut, at the 86-ft. level from shaft No. 3 Immanuel. This morning the full length of the drive was 126 ft., we have therefore driven 22 ft. since last report. At 109 ft. the rock changed to a more granitic appearance, underlaying eastward. This stuff was about 8 ft. wide. At 115 ft. there was a regular vein cut through, a thin quartz vein, with about 12 ins. of black slatey stuff, heavily charged with mundic. At 125 ft. another small vein was cut, which runs parallel to the first mentioned. These veins run in the proper direction, between them we were in cross heads. Mine manager Miller says on this subject in his report to me of to-day :—In some districts these veins would indicate a big reef not far off, but in this rock one cannot be certain. From 104 ft. to 109 ft. assays showed *nil* ; from 109 ft. to 115 ft., traces of gold ; and from 115 ft. to 122 ft., only minute traces. Since then there is no gold to be found in the stone. I consider that our fortnight's progress has been very satisfactory and rapid considering the nature of the ground. —R. BALLARD.

NERBUDDA COAL AND IRON.—Under date, Mohpani, May 14, the manager writes as follows :—Boring Rig : We expect to start this for No. 14 boring next week, but the progress will be slow at first as we cannot yet trust her to our native foreman borer entirely. At the mines : There is no occasion for melancholy that I see, as I think our coal field certain to yield other coal than the present patch, and even in this we have still a lot of coal. All is well here. We to-day lowered the sinking set further in the Helen Pit. The north pier of Big Bridge is now completed, and part of south end repairs are done. The only difficulty is labour, and this is the direction in which our conflict with the railway company last year has hit us the hardest. I may mention that they are now anxiously asking for more coal.

NEW CALIFORNIA.—Mine report for first half of May :—Shaft : Siuking below the 2,000-ft. level, down 2,190½ ft. On account of the heavy influx of water, due to a sudden thaw after the long winter and heavy snows, we have been obliged to stop the sinking of the shaft. The bottom of the shaft shows a strong vein. 3½ ft. wide, and of good grade. We have just started to cut in at 2,170 ft. east and west, and shall have good returns to give from this place when next reporting. The 2,100-ft. level : East of shaft in 9½ ft. ; the 2,100-ft. level : West of shaft in 12 ft. Before leaving the shaft we started levels at 2,100 ft. east and west, where we went in on 2 ft. of good pay, which holds well. The 2,000-ft. level : West of shaft in 808 ft. The ground in this level has been harder during the past iortnight, and though we have had a mill run from the end, where there is an 8 in. vein, the end is not yet in good ore, though just behind, and a few feet above, we are rising on a 2½ ft. vein of good milling ore. The 2,000-ft. level—Stopes east of No. 2 winze : In these workings we have a fine showing, the lode yielding 8 tons per fm. from a width of 3 ft. The 1,500-ft. level : West of shaft, south vein east and west of junction : The lode in these workings continues as last described. The 1,100-ft. level : East of shaft in 480 ft. The development in this place has been most encouraging in the last two weeks, having improved much. The vein is 2 ft. big, and of fair grade. The 1,400-ft. level : B lode in cross-cut : This place maintains its contribution to the output. There is no change to report.—F. RICKARD.

NEW DEVALA MOYAR (May 12).—No. 1 winze : We are now down 60 ft. below the 116-ft. level, having sunk 4 ft. during the week. We still have a band of quartz across the face, but the country rock predominates, the walls, however, continue good. 116-ft. level drive west : We have improved in our progress in this end, having driven 10 ft., total distance 166 ft. ; reef of no value. Main shaft : We have excavated and started putting in surface frame. All our stopes continue in good order. During the week we have sent 81 tons to the mill. Crushing has been started and everything is running well.

NEW EBERHARDT (May 17).—The mine manager reports as follows :—Total weight of ore extracted and assorted for the fortnight ending May 16, 75 tons ; assay value of the same as per mine samples, $36 per ton. The general appearance of the mine is about the same as last reported. Mill : Our mill has run steadily, crushing for the two weeks 196 tons of ore ; assay valuc of same as per battery samples, $38.50 per ton. Ore team : The ore team is still hauling, having brought down 118 tons of ore to the mill. I have shipped two bars of bullion, the standard value of the same being $3,488.40.

NEW HOOVER HILL.—Report to May 21 :—Driving south of Briol's shaft at the 130 we have not cut into any water as yet ; the ground is very hard, and we are cutting through quartz stringers, which pan a few colours of gold. Sinking below the 50-ft. level south of Provost shaft the ore is looking well in the bottom, but we cannot do the work we should like to on account of the water. We are breaking some fair ore around Provost old workings, which I hope will help our returns this month.

NEW VISO (May 30).—In the Santa Cristina deep adit north the lode is unproductive, and carries a large portion of dark slate rock. Altogether its appearance in the present forebreast is not very kindly for tin. The San Guillermo deep adit south is in a compact and fine looking lode, composed of quartz with spots of tin. From this driving we occasionally pick out some tin-stuff for the dressing floor, but up to the present the yield has not been continuous or remunerative. The California adit north produces sufficient tin to pay for extraction, and the general character of the lode is good. There is a large and promising section of unexplored ground in this direction, and the means now employed will give it a proper trial. We have just now commenced washing the alluvial deposit just recently discovered in the Mi Amor concession, which, from samples taken, I think yields sufficient tin to pay for dressing, and while working away the alluvial we shall uncover the back of the lode from which it has come, and may thus make a more important discovery. We are now cleaning up a small parcel of tin, which will be weighed and despatched for sale in the beginning of next week.—R. R. NANCARROW.

OOREGUM (May 13).—Fortnightly report of the superintendent. —I beg to hand you the following mine report for fortnight ending yesterday :—Wallroth's shaft was sunk to 30th inst. 1 ft. 3 ins. ; total below 280-ft. level, 104 ft. 3 ins. ; lode 4 ft. 6 ins. wide, assaying 3 ozs. 16 dwts. 5 grs. per ton. On the 1st inst. we sollared over the shaft at 360 ft. and commenced levels north and south. The 360-ft. level south has been driven 10 ft. ; lode 2 ft. wide, assaying 3 ozs. 16 dwts. 5 grs. per ton. The 360-ft. level north driven 8 ft. 8 ins. ; lode 4 ft. wide ; value, 3 ozs. 10 dwts. 2 grs. per ton. As soon as we have completed the plat and extended levels a sufficient distance from the shaft, sinking will be resumed. The 280-ft. level south advanced 14 ft. ; total, 603 ft. 6 ins. ; lode 1 ft. 10 ins. wide ; value, 10 dwts. 8 grs. per ton. No. 1 winze, same level, sunk 1 ft. 1 in. ; total, 46 ft. 8 ins. ; lode 1 ft. 3 ins. wide, assaying 4 ozs. 8 dwts. 21 grs. per ton. No. 2 winze, 280-ft. level north, sunk 4 ft. ; lode 6 ins. wide ; value, 9 dwts. 19 grs. per ton. No. 3 winze, same level, sunk 3 ft. 2 ins. ; total, 40 ft. 10 ins. ; lode 6 ins. wide ; value, 10 dwts. 21 grs. per ton. Driving south on lode from cross-cut east from 280-ft. level north, 2 ft. driven ; lode 2 ft. wide ; value 8 dwts. 17 grs. per ton. The 215-ft. level north advanced 1 ft. ; total, 72 ft. 9 ins. ; lode 1 ft. 6 ins. wide ; value, 4 ozs. 8 dwts 4 grs. per ton. The 215-ft. level south advanced 3 ft. 11 ins. ; total

267 ft. 5 ins.; lode disordered. Low's shaft has been sunk 2 ft.; total below 350-ft. level, 9 ft. 4 ins.; no lode. The 350-ft. level south advanced 12 ft. 3 ins.; total, 123 ft. 11 ins.; lode 2 ft. wide; value, 4 ozs. 18 dwts. per ton. Probyn's shaft: Sunk 7 ft. 10 ins.; total below 450-ft. level, 90 ft. 6 ins.; lode 5 ft. wide; value, 2 ozs. 10 dwts. 2 grs. per ton. The 450-ft. level south advanced 16 ft. 2 ins.; total, 174 ft. 7 ins.; lode 2 ft. 6 ins. wide; value, 3 ozs. 5 dwts. 8 grs. per ton. Rise in back same level, 12 ft. 5 ins. risen; total, 29 ft. 9 ins.; lode 1 ft. 6 ins. wide; value, 5 dwts. 10 grs. per ton. The value has fallen off in consequence of its near approach to the floor of country rock, referred to in previous reports, which we shall cut through for ventilation. Two winzes have been commenced in bottom of 450-ft. level, and each sunk 1 ft. 6 ins.; lode 3 ft. wide, assaying respectively 1 oz. 4 dwts. 8 grs., and 5 ozs. 11 dwts. 18 grs. per ton. The 450-ft. level north advanced 15 ft. 6 ins.; total, 42 ft.; lode 4 ft. wide; value, 3 ozs. 16 dwts. 5 grs. per ton. No. 2 winze, bottom 366-ft. level south, sunk 1 ft. 3 ins.; total, 16 ft. 9 ins.; lode 1 ft. 3 ins. wide; value, 10 dwts. 21 grs. per ton. The 300-ft. level south advanced 7 ft. 6 ins.; total, 267 ft. 8 ins.; lode 9 ins. wide, assaying 8 dwts. 17 grs. per ton. Stopes: During April we cut in Wallroth's shaft 6 fms. in bottom of 215-ft. level; lode standing averages 1 ft. 6 ins. wide; average assays, 2 ozs. 3 dwts. 19 grs. per ton. Back 280-ft. level south, cut 9 fms.; lode 2 ft. wide; value, 1 oz. 10 dwts. 12 grs. per ton. Low's shaft: Bottom 200-ft. level south, cut 8 fms.; lode standing 2 ft. 6 ins. wide; value, 10 dwts. 21 grs. per ton. Back 350-ft. level, cut 3½ fms.; lode standing 1 ft. 6 ins. wide; value, 2 ozs. 19 dwts. 22 grs. per ton. Probyn's shaft back 366-ft. level south, cut 1½ fms.; lode standing 1 ft. 6 ins. wide; value, 1 oz. 5 dwts. 10 grs. per ton. Bottom 300-ft. level south cut 9 fms.; lode standing averages 4 ft. wide; average value, 2 ozs. 9 dwts. 13 grs. per ton. Bottom 230-ft. level south, cut 15 fms.; lode standing averages 5 ft. wide, assaying 2 ozs. 3 dwts. 13 grs. per ton. Back 230-ft. level south, cut 5 fms.; lode 4 ft. 6 ins. wide; value, 3 ozs. 5 dwts. 7 grs. per ton. Surface work is now proceeding with more regularity. Fair progress is being made with the erection of the tailings machinery, and very soon we shall commence excavations for the new mill, many parts of which have already been delivered on the mine.

OSCAR (May 30).—Since writing last there is no alteration to note. We have opened the new levels and are pushing all work ahead. The boiler has been completed and the mill is running. I hope to send you result from about 200 tons early next week, and shall send a very full report by the first Hull mail.—J. Daw, jun.

RUBY.—Report upon the mines for the week ending May 16:—Dunderberg: We have 12 tributers at work here. No change of note in the Home Ticket quartz. The upraise in the 500 cross-cut shows several seams of lead. The 800 drift has been driven past the ore that made under the level, and the ground looks so well that I deemed it better to go ahead for the present. Lord Byron: We have 26 tributers at work here. They have not done much work, as they are sorting and shipping ore. The pipe of ore in this mine is small but good.

— (June 2).—Telegram from Eureka:—"46 tons tribute ore shipped; 24 tons tributeore smelted; producing to company, $180."

YURUARI.—The secretary advises receipt of mail from the mines, dated Chile, May 15. In it Mr. Pryor says: Since last report I have sunk the water shaft another 20 ft., but have been somewhat delayed owing to the accumulation of water. The rains have now set in, and it looks at present like another wet season. The bottom of the shaft shows an excellent hanging-wall. I have driven No. 6 level 18 ft. east of shaft, and 15 ft. to the westward. The formation of both walls is good, but the quartz is still mixed. The appearance in No. 5 drift west is much better, and I mark a clear improvement both in quantity and quality of quartz. Both walls are solid, and contain a promising leader of rock on the footwall of some 18 ins. thick. I intend testing the lode at all points of interest very shortly, and hope results will be satisfactory. I am sorry not yet to have been able to commence crushing, but can assure you that I have done everything in my power by following the lode down at its most promising points, and could pursue no other policy, owing to development operations, and reserves in the mine having been allowed to run down by my predecessor. The advantage of present work will, however, be realised later on, and I trust at no distant date. Mine report and usual documents will follow by next mail, as customary.

REPORT OF MEETING.

RED REEF GOLD MINING CO.

DIRECTORS ADVISE LIQUIDATION — MEETING ADJOURNED — VENDORS MAY COME TO THE RESCUE.

An extraordinary general meeting of the members of this company (adjourned from Jan. 7 last) was held at No. 30, Finsbury Circus, on Monday, "to consider the position of the company and to pass such resolutions connected therewith as may be determined.

Lord Hay of Kinfauns

presided.

Mr. Felix F. Wilson (secretary) read the notice convening the meeting.

A SAD MINING TALE.

The Chairman: Gentlemen, this meeting, as you are aware, was adjourned from Jan. 7 last, in order that the vendors might be communicated with and their willingness to help the company ascertained. Previous to the decision to adjourn, we had explained to you the financial straits of the company, brought about by the default of the holders of a large number of shares in paying their calls. We also explained that there had accrued, and were still accruing, some liabilities in the shape of claim rents, which, if not discharged, would jeopardise our title to the claims. As stated in the circular sent you convening this meeting, the negotiations with the vendors' representatives have not resulted in the suggestion of any practical *modus vivendi*. The claim rents in the meantime continued to accrue until the six months' grace allowed by the Transvaal mining laws have expired, and the claims have been advertised for sale by the Government authorities. In anticipation of this, we instructed our manager to sell what movable property there was on the claim, which he did, and the proceeds are accounted for in the company's balance-sheet. We regret that the property has thus

PASSED FROM OUR POSSESSION,

but the mining operations on the whole of this line of reefs—not only of our own, but also of our neighbours—have been so unprofitable that we fail to see any encouragement for further expenditure upon them. With regard to the balance-sheet, there is one large item which calls for comment, namely, the

ARREARS OF CALLS.

This is, we believe, mostly a bad debt, but legal proceedings for their recovery are still in progress, and in one instance we have obtained judgment for 700*l.* and costs, this being the only claim that has yet come before the Court. Practically, the only creditors are the directors, who, as you are aware, not only voluntarily reduced the amount the articles entitled them to charge, but have only received their fees to Mar. 1890—in other words, there are over 14 months' fees owing to them. I think, gentlemen, it now rests with the shareholders to consider what they ought to do. We have done our best in every way we possibly could to get money in, but I am sorry to say we have failed. At the same time I am bound to say that the reports from the mine have not been encouraging. We at one time had good news, but it did not continue. The directors feel that in calling you together to-day they can only repeat what they said last time—that unless money can be found to re-purchase these claims, there is only one course open for us, that is liquidation.

Mr. H. H. Thompson complained that the directors had not called the shareholders together sooner to inform them of the result of the negotiations with the vendors.

The Chairman said that the meeting had been postponed until after Whitsuntide by the desire of the vendors.

Mr. Thompson thought it desirable to avoid liquidation, as South African things would not continue under the cloud of depression. He imagined that the vendors were probably trying to force the company into liquidation with the view of getting hold of it again themselves.

VENDORS OPPOSED TO WINDING UP.

Mr. Rogers, representing some of the largest holders of vendors' shares said that they were in no sense antagonistic to the directors, but they differed from the board inasmuch as they were strongly opposed to winding up. The vendors' alternative proposal was that the company should purchase a main reef property, and they would find the necessary funds for developing it, or, at any rate, of testing its value. Negotiations with that object were now in progress. Having proved its value, there should be no difficulty in getting further capital. If this proposal met with the approval of the shareholders, the vendors wished that, pending the development of this new property, all home expenses should cease.

The Chairman said that he and Mr. Littlehales wished to resign. He could not remain on the board of a company that possessed no property. Hopes had been held out in the past by the vendors with regard to capital, which had not been realised.

MEETING ADJOURNED.

After some further discussion,

Mr. Thompson proposed, "That this meeting stand adjourned till the July 24 in order to give the vendors an opportunity of offering the company another mining property on definite terms, which property they will undertake to develop and prove at their own expense previous to its transference to this company."

Mr. Neal seconded the motion, which was carried unanimously, it being understood that no further expenses, so far as the directors and secretary were concerned, would be incurred.

A vote of thanks to the chairman terminated the proceedings.

THE SUNBEAM GOLD MINING CO., LIMITED.

A DISAPPOINTING RESULT—CRUSHING NOT EQUAL TO ASSAY VALUE.

The annual general meeting of shareholders of the Sunbeam Gold Mining Co., Limited, was held at Winchester House, Old Broad Street, on Wednesday, June 3, for the purposes following, namely:—1. To receive the annual statement of accounts and balance-sheet, and the report of the directors. 2. To elect directors and auditors, and to transact the ordinary business of the company.

Mr. J. S. Thompson

presided.

Mr. H. Hodges (the secretary) read the notice calling the meeting.

The Chairman expressed regret that the directors had to come before the shareholders with such a disappointing result. The ore when crushed had not yielded anything like the assay value, and, under the circumstances, as stated in the report:—"The board consider that the result of the trial crushing will certainly not warrant the attempt to raise fresh funds at the present time, though they think it quite possible that if sufficient means were available for testing the eastern claims, payable ground might yet be discovered. The company, however, not being itself in a position to undertake this work, the board have decided to advocate the leasing of the mine on tribute, and have requested the company's agents in the Transvaal, and Mr. Mark Miller, the consulting local director, to make enquiries to that end, and cable home, for approval, or otherwise, any suitable offers which they may succeed in obtaining." The first idea had been for liquidation at once, but the return to the shareholders would have been so small that it would not be advisable, and the above decision had been arrived at. He moved, in conclusion, the adoption of the report.

This was seconded by Mr. Percy Tarbutt, and carried.

The Chairman said the whole of the directors retired by rotation, but it was only the proposal of the board to have three directors in future.

Mr. H. E. M. Davies moved that Messrs. Thompson, Tarbutt, and Scott should be elected directors for the current year, which was seconded and carried.

The auditors were re-elected, which closed the meeting.

REPORT OF MEETING.

BIG GOLDEN QUARRY MINING CO.

IMPORTANT WORKS IN PROGRESS—DIRECTORS CONFIDENT AS TO ULTIMATE SUCCESS—OPERATIONS HINDERED BY THE NON-PAYMENT OF CALLS.

THE first ordinary general meeting of the shareholders in this company was held at the Offices, No. 4, Bishopsgate Street Within, London, E.C., on Thursday.

Mr. J. Ogle

presided.

Mr. C. E. GREEN read the notice convening the meeting, and the report was taken as read.

ADVERSE CIRCUMSTANCES.

The CHAIRMAN: Gentlemen, we have endeavoured in our report to give as much information as possible, but of course this cannot be much when we are simply getting the property ready for the ordinary business of mining and milling. We should have liked to have made greater progress than we have done, but the tightness of the money market and the objection that the largest shareholders have to paying their calls have compelled us to keep our expenses within the lowest possible limits. Notwithstanding this, however, we have made very good progress, and with a little increased expenditure we should very soon be in a position to mill our quartz and get returns. Our property is different to the general run of mines in the Transvaal—at least, according to the reports given regarding most of them. They are nearly all supposed to yield very large assays; but we have never pretended to have large assays, although it is possible that we may get them as we sink deeper, and those who are best qualified to judge think that the result will be very favourable. Any man who has had a long experience in mining will tell you that there is a good deal of scepticism regarding a property giving many ounces to the ton; they would, as a matter of fact, rather have the same quantity of pennyweights, because then it is worked on a large scale, and the general result is much more favourable to the shareholders.

REPORTING PROGRESS.

Complaints have been made that we have not issued reports as to our progress, but I may tell you that had we done so we could have conveyed no information whatever to the shareholders. We have not gone to the expense of employing an assayer, because assays were made for the old company, and we know perfectly well what the surface stuff is. We have also the opinion of Mr. Tozer who went out to report officially on the property prior to the re-construction, and it gave us no fresh information whatever, but merely confirmed what we knew before—that it is a low-grade ore as far as the surface is concerned—and the mountain of quartz has been proved to be very much of the same quality all through. As we sink deeper, however, it is thought that we shall probably get something very much better. Mr. Woodford, upon whose report we originally bought the property, and who was afterwards appointed mining engineer to the Government, has been over here lately, and he says that this instead of being called a Transvaal mine should have been called an American mine, for it is more of that nature. He says it is a business—not a speculation; and in working this mine you have to go gradually to work and increase your profits as you get deeper, but there is enough to keep us going for a long time without going to great expense in sinking.

THE RE-CONSTRUCTION.

As you were all shareholders in the old company you know what the re-construction scheme was. It was carried out by agreements which were duly passed by the old shareholders, and the liquidator was authorised to put those agreements in force. We took charge on the 4th Apl., and we had at that time a certain sum of money which we shall account for. We are large shareholders ourselves, and we have done the best we could with it in our own interests as well as in yours. A re-construction requires a certain amount of expenditure, but you have passed that, and therefore it is not a question that we have to deal with at the present time. What we have to deal with is the exenditure incurred by your new board. We have secured the services of

A FIRST-RATE MANAGER,

not a sensational man, who is given to writing voluminous and pleasant reports. He calls a spade a spade, and does not waste one word in his correspondence or reports. We have heard from people out there that he is considered one of the best men that we could engage. He was invited to become a member of the Mining Board, and we have sanctioned his doing so. It is no expense to the company, but merely an honorary position; and gives him a certain influence in the place, and enables him to take advantage on our behalf of any additional experience he may thereby gain. When Mr. Tozer was there he, like all experts, necessarily took a somewhat superficial view of things. Experts go out and advise as to the proper course to be pursued, after perhaps a week's visit to the mine, and it not unfrequently happens that their reports are opposed to the views of men who have been working there for years. Mr. Tozer's advice was not to bring the machinery up from Moveni until the railway was built, which was to be almost immediately, but he did not examine the machinery.

MACHINERY.

When we came into office we at once told the manager to have the machinery examined and see what condition it was in. His report was that the heavy parts of the machinery were intact, but the woodwork and anything that could be carried away had been stolen. Moreover, he reported that he had received information—which was subsequently confirmed—that the railway was not going to be built to Barberton but to a certain place about 40 or 50 miles away from Barberton. Upon this, we resolved not to allow the machinery to continue to rust or any other parts of it to be taken away—and consequently decided to transport it to the mine As to Mr. Tozer's report—he says that the mine can easily be worked for 5 dwts. as a maximum. Indeed he himself offered to find any new machinery that was required and to

CONTRACT TO MILL AND MINE FOR 5 DWTS.

as long as we chose until we would begin to get into better ore. There was sufficient there to justify him in making that offer. The title of our property—the Big Golden Quarry—is not a fancy title; we have literally a mountain of stuff, of good low grade ore.

DIRECTORS HAVE CONFIDENCE IN THE PROPERTY.

From the advices we have received we have no reason to alter the views that the old board had regarding the property; and one of our old directors is present, and he will remember that we had always a very favourable opinion of it. The difficulty was that the shareholders would not find money at the time, and consequently we had to go into liquidation, and the concern has remained in that state for a considerable time. The capital is, therefore, larger in amount than it would have been if the old board had been in a position to re-construct. I now beg to move "That the report and statement of accounts be received and adopted."

Mr. J. A. TRAVERS (director) seconded the motion.

QUESTIONS.

Mr. RUMMENS: On what date was the statutory meeting held?

The CHAIRMAN: Apl. 8.

Mr. RUMMENS: The articles of association say that you should hold this meeting within 12 months from that date. Why has that not been done?

The CHAIRMAN: They did not calculate in drawing up these articles the time it takes to get the accounts from the other side. Had we not delayed the holding of the meeting, we could not have given you the full accounts.

THE PACTOLUS REEF.

Mr. RUMMENS: What is the Pactolus reef? This is the first time I have heard of it.

The CHAIRMAN: Under the re-construction it was part of the property that was purchased by the new company. It was included in the contract which was passed by the shareholders at two meetings.

Mr. RUMMENS: You appear to have increased your loan account.

The CHAIRMAN: We have not increased the one loan of 1,500*l.*, but the directors have lent the company 750*l.* more.

PRECLUDED FROM VOTING.

Mr. RUMMENS: I see by the articles that those who are in arrears of call cannot vote at the meetings. I presume, therefore, that I am precluded from voting?

The CHAIRMAN: Yes.

Mr. RUMMENS: Has Col. MacCoy paid his?

The CHAIRMAN: No. A large number of shares were put in other names, and under the contract he guarantees the payment of all the calls on those shares. It is very fortunate that we did not go to the expense of sending out another 10-stamp mill, because a mill can now be bought there almost for the cost of transport. We have shown our confidence in the property by paying our calls, and giving a guarantee for the 1,500*l.* borrowed. The people look to us personally for it.

THE SHEBA FORMATION.

In answer to a question, the CHAIRMAN said: Mr. Woodford says that from the underlie of the ground he believes that it is a continuation of the Sheba formation, but in the meantime, he says, you have a fair commercial undertaking—not one that will make your shares worth 50*l.* each, but a really good mercantile undertaking.

COMPLAINTS.

Mr. WEST complained that he had never received notice of the re-construction meetings; the first intimation he had of the re-construction was a circular asking him to apply for an allotment of new shares, and to pay a deposit. He objected to the way in which the directors had been appointed. He contended that the general body of shareholders should have been asked to elect the board, and decide who should manage their affairs. As to the Pactolus reef—he failed to see why they had to acquire that property, seeing that the prospectus of the old company stated that their property was too large as it was, and that portions of it would would have to be sold to subsidiary companies. He concluded by moving as an amendment: "That a committee of three independent shareholders be appointed to investigate the affairs of the company, and that this meeting be adjourned for a month to receive their report."

The amendment fell to the ground for want of a seconder.

AN ANSWER.

The CHAIRMAN, replying to Mr. West, said that it was the liquidator's duty to notify all the shareholders as to the meetings. The liquidator had to carry out the whole of the re-construction. The shareholders appointed him on the motion of Mr. West. The directors were appointed in accordance with the articles of association, by the seven signatures. The Pactolus reef was part of the re-construction agreement. If shareholders would not attend meetings and ask for information, they should not call upon the directors to explain the nature of the re-construction scheme, which was fully explained and approved at the time. At one of the meetings the contract was read and an explanation given as to this Pactolus reef, and at the subsequent meeting the contract was taken as read by the consent of the shareholders present.

Mr. WEST: I am uot blaming the present directors, but it seems to me, as I had no notice of it, that the people who re-constructed this company did so behind the backs of the shareholders.

The CHAIRMAN: The liquidator was appointed by the shareholders and not by the old board. He did a certain amount of his work, and then went out to Africa, and left his duties unfinished. A new liquidator had then to be appointed.

Mr. RUMMENS: Who were the vendors of this Pactolus reef?

Mr. TRAVERS: The liquidator and Col. MacCoy arranged the whole matter, and if it had not been for their arrangiug it we should never have re-constructed at all.

DIRECTORS NOT TO BLAME.

Rev. Mr. KELLY: The vendors of the old company were hostile to

the directors. They came here with an absolute majority, and Mr. West unfortunately sided with them. They appointed a hostile liquidator to the old board—a man of whom they knew nothing, and who left them in a mess; therefore, the old board were not to blame. When the company was re-constructed the new board took it over, and the new directors are not to blame either.

IMPORTANT TESTIMONY.

Mr. LEAN (a member of the old board) said: I think, sir, you referred to me when you remarked that a member of the old board was present who shared your confidence in the property. I have never lost that confidence. I believe that this property is really a good one, and it only requires good management and sufficient money to make it a paying concern. I have always been of opinion that a ½-oz. reef—which this practically is—would pay well. It is, I understand, all free milling stuff, and the analyses of deleterious matter that would interfere with milling are practically *nil*. Therefore this ½ oz. reef should be one of the best properties in the Transvaal, because it holds out. I am very anxious to see the concern in a prosperous state, and I hope you will be able to afford such information as will give the large shareholders the confidence they seem to lack at the present time. (Hear, hear.)

Mr. LEAN said he had received information that the drills had been sent out, and that it was intended to open the quarry in such a way that when the mills did begin there would not be the slightest chance of their stopping. He had

EVERY CONFIDENCE IN MR. POWTER,

of whom he had heard very good reports from personal friends. He believed that Mr. Powter would do his best for the company, and if the board were acting on his advice he (the speaker) would be quite content. What was the actual amount of money required to put the company in a working condition?

PRESENT OPERATIONS AND PLANS.

Mr. TRAVERS said that Mr. Powter, being a cautious man, would not commit himself to an absolute estimate. It was on his recommendation that they set to work on the water-race first. They had to borrow money to push on with the work and save the season. The water-race was almost completed now. It was proposed to make the water-race first, and then erect the turbine and air compressor for working the rock drills. He thought that two or three months would see them well on with the erection of the mill, but they were hampered in consequence of the arrears of call. As soon as they had got the rock-drills to work there would be something to report to the shareholders, because they had a tunnel driven 115 ft. through the reef, and from that they could at once begin breaking a certain amount of stone and getting it out through the tunnel to the 10-stamp mill. Of course, the 10-stamp mill would not pay dividends upon their large capital; it would, however, be paying expenses and proving what the mine was worth.

ALMOST A CERTAINTY.

From Mr. Woodford's and Mr. Tozer's reports they were almost certain to find the stone richer as they went down, but there was enough good stone already exposed to do very well for the mine if they could get up extra stamps by and by.

Mr. RUMMENS: What is the length of the water race?

Mr. TRAVERS: About 1¼ miles.

A long discussion then took place anent the shareholders who were in arrear with their calls, and the CHAIRMAN promised to reduce the expenditure if they found much difficulty in collecting the arrears. It was urged that strong measures be adopted for their recovery.

The report and accounts were then adopted.

Mr. BULL proposed the re-election of the auditor—Mr. Flaxman Haydon—voting him 20 guineas for his services during the past year.

Rev. Mr. KELLY seconded, and the motion was carried.

Mr. WEST proposed a cordial vote of thanks to Mr. Ogle, commending him for his perfect fairness as chairman, and also for the good temper with which he had fought his battles.

The motion was seconded and carried, and with the brief reply of the CHAIRMAN the proceedings terminated.

OSCAR GOLD, LIMITED.

A SATISFACTORY STATUTORY MEETING — MINE MEETING TWO-THIRDS OF ITS COST—THE IMPORTANCE OF THE CONCENTRATES.

A GENERAL MEETING of the shareholders was held at No. 6A, Austin Friars, yesterday, in pursuance of the Companies Act, 1867.

Mr. Frank Hodgkinson

(chairman of the company) presided.

Mr. C. HARRISON SMITH (secretary) read the notice of meeting.

LATEST CRUSHING.

The CHAIRMAN: This is a stututory meeting, which we hold so as to be in conformity with the law. I will read to you (as giving the best information available) a cablegram from Mr. Daw, who was asked by us to send the latest news. This cablegram was received this morning:—

"All work progressing well, 200 and 300 levels; also new winze producing quartz, assaying 6 dwts. to 7 dwts.; other points, no alteration."

This new winze is going down from the 200 to the 300 level. The telegram goes on to say:—

"Crushed 60 tons from north level and stopes; produced, 19 ozs.; other places, 170 tons 35 ozs., exclusive of concentrates."

I think Mr. Daw would have crushed more if he had had time, but there was delay in the delivery of the coals, so we asked him to send whatever he had got, and that is the result. The 60 tons gave a very good return—19 ozs., but the 170 tons, from different points, giving only 35 ozs., pulled the average down. The general result will be 190*l*. about.

QUESTIONS.

Mr. CRANE: Does any of that come from Hulett's lode?

The CHAIRMAN: He does not mention Hulett's lode in this cablegram. They had driven a long distance—much longer than Mr. Daw thought they have to drive. They are working to pick it up, but they cannot do much in Hulett's lode until they get the ventilating fan which they have written to the board for. We expect the accurate dimensions by next mail next week. That is the latest so far as Hulett's lode is concerned, but he has been working in other points, so that the mine is getting pretty well opened.

THERE ARE SEVEN POINTS IN OPERATIONS,

and he has got into a richer shoot of ore, which is running down north into the new purchase. This fan will ventilate the workings in Hulett's cross-cut, for at present the air is so bad that the men cannot work for any continuous time in it.

A SHAREHOLDER: Do you, sir, still retain your sanguine hopes?

The CHAIRMAN: As I get older I am not so sanguine about anything.

Mr. CRANE: Could you tell us anything about the concentrates? When they are collected is it intended to send them to England for treatment, or what is your policy with regard to them?

The CHAIRMAN: I have impressed upon Mr. Daw the necessity of urging forward the machinery as much as possible. He obtained estimates when he was in Cornwall, but we found that it was so expensive, that we concluded to purchase and make it in Norway, and all the wood-work is now pretty much *in situ*. He is only waiting for the iron castings from Bergem.

THE WEALTH OF OSCAR, I THINK, LIES IN ITS CONCENTRATES.

Those concentrates ran all the way from 2 ozs. to 300 ozs. Over 300 in fact to the ton. Mr. Daw thinks we can save 2 per cent. of all the concentrates in the ore, and in such circumstances as this cablegram reveals we should have between 5 and 6 tons of concentrates if we could have saved them—that is, if the machinery was in operation. That would produce a very fair amount of gold. I think we should send a portion to England to be tested, whilst we might also test another portion on the spot. It would be very satisfactory to try them at both points. Mr. Daw is a metallurgist, and will be able to express a more accurate and certainly more reliable opinion than men who would want to buy them simply to make as much out of them and us as they can. I have always had great faith in these concentrates, and think that when we get the machinery to work it will deal with the produce of 10 stamps, and if we find it a success we shall immediately erect sufficient for the whole of the stamps that we can run. At present we are losing them, or simply retaining an insignificant quantity. We have, I suppose, some tons of concentrates on the mine now. Of course we have not had so much cash as we should like, and have had to feel our way very carefully. We do not wish to make a call until absolutely necessary, and we shall get about 190*l*. out of this crushing, and afterwards I think Mr. Daw will produce more. If our expenses are 300*l*. a month, you will see that

THIS RESULT GOES TWO-THIRDS TOWARDS THEM.

Mr. CRANE: I understand we have no dykes in Hodgkinson's lode.

The CHAIRMAN: That lode by the last report was discovered in the shaft, but the richest point now seems to be the shoot which I think is 16 or 20 ft. long, and widening out. It was not so long in the upper levels, but in the lower levels it is widening out considerably. Mr. Daw speaks of it as quite a rich shoot, the winze is going down into it, and the shoot is trending into the new property. I do not wish to be enthusiastic, for we all know what mining is. We must not be disappointed if the lode falls off, and must not be unduly elated if it becomes rich. We are getting free gold, and have these concentrates to fall back upon, in which I have the greatest confidence.

Mr. J. J. BISHOP: I gather that Mr. Daw has now a fair amount of stoping ground laid open.

The CHAIRMAN: He is increasing it all the time, and is a man who always makes an effort to get his mine well opened ahead, as should be done with every mine. We shall continue to manage the company as economically as we possibly can consistent with proper and efficient working.

Mr. BISHOP: Do you think the time has arrived when more men can be put on?

The CHAIRMAN: We ought to have more men at work, but have been nursing our finances. If at present we had too many men employed they would be in each other's way, but when the levels are driven a little further we can put more men on then with advantage. I propose to

VISIT THE MINE

towards the close of this month with the secretary. I think it beneficial that those in authority in London should by their occasional presence show the interest they take in the work out there. The expense is very trivial, and we can go thoroughly into matters with Mr. Daw on the spot.

On the motion of Mr. J. J. BISHOP, seconded by Mr. LEAK, a cordial vote of thanks to the chairman closed the meeting.

EL CALLAO GOLD MINING CO., LIMITED.

A DISCOURAGING REPORT ISSUED BY THE LICCIONI BOARD.

THE report of the board states that large sums have been expended in explorations, but nothing has yet been found of a valuable and permanent character. The active continuation of the prospecting works was stopped in a large extension of ground during the month of Dec. last year, by reason of the decrease in the returns of the mine, and since then the works have been limited to the current exploration of the mine. With the object of increasing the development resources, considerable economy has been effected, and the annual expenses have been reduced from B. 5,445,154.81 in 1887, to B. 4,024,983.81 last year. Under this newly-established plan of economy the directors hope to be able to continue, without any difficulty, all the works giving any encouragment with the view of effecting a happy change in the present state of the mine.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

EMMAS AND DICKENS CUSTERS.

SIR,—Among the range of low prices in the mining market an unusual opportunity occurs of getting some really substantial shares, almost certain of doubling and trebling themselves in a very short time. Take Emmas now at a dead-lock price, with their reputation and prospects. The company commenced crushing on the 20th, and will commence tramming to Salt Lake City the first-class ore on June 1. The prospects of the mine were never so good as at present ; plenty of ore is ready to tram, which will yield large returns. (See report May 13.) It is no longer prospective, but an absolute certainty. The shares are likely to cause a surprise some morning suddenly.

Dickens Custers are likely suddenly to have a large rise. They commenced crushing on the 11th, and in the course of a few days good results are expected. They have over 2,000 tons of ore out on the floor ready for crushing, and now they are stoping rich ore, so it is a certainty of having a good supply of ore to keep the 30-stamp mill running the season. These shares are about 2s. 6d., and are, without exception, the cheapest shares in the whole lists. It would not be surprising, on the report of the first crushings, to see them treble their present price. They are 1*l.* shares, and considered a prize. Not a moment should be lost in securing shares. Several others may be selected, but those appear to be the pick of the market.—I am, &o.,

C. B.

CALLAO B1S, LIMITED.

SIR,—Would you grant me space for a few remarks relative to the above company, and its dividend prospects ?

A year ago the company began to work a new property, and within six months not only was gold found, but regular returns were commenced.

In the six months from Oct. to Apl. last 3,668 ozs. of gold have been produced, which gives an average of 611 ozs. per month, and this has been done with 10 stamps belonging to another company.

Now, the chairman at the last meeting made the three following statements :—

1. "At the end of the present month we shall have 10 stamps at work, and within a few weeks they will be increased to 20."

(2). "Our expenses will see a considerable reduction when we are working our own mill."

(3). "The prospects of increasing prosperity and approaching dividends are bright in the extreme."

Now, the object of my letter is to show that, as soon as the 20 stamps are working, we shall be working at a considerable profit, sufficient to pay a 10 per cent. dividend, and that is taking the quartz at its present value. Thus :

The gold extracted from the mine with 10 stamps during the last six months, equal to	£14,104
A year's working with 10 stamps would equal	28,208
A year's working with 20 stamps would therefore equal...	56,416
Deduct entire expenses for one year, equal to	20,000
The balance nett profit for one year, equal to	£36,416

Now, a nett profit of 36,416*l.* on a working capital of 320,000*l.* is equal to 11.3 per cent.

I have very carefully worked out the above figures, as I do not wish to mislead. I do not think I have made a mistake, but should anybody discover one I trust they will point it out through your columns.

In conclusion, I would add that if the company would only consider the advisability of selling one of the blocks that they at present cannot work, the prospects, if anything, would be brighter than they are now.—I am, &c.,

A SHAREHOLDER.

June 4.

AARONS REEFS, LIMITED.

SIR,—This company was formed last year, and the undated prospectus lies before me, in which it was stated it was a first issue of 200,000 shares of 5s. each, upon which 6d. per share was payable on application and 6d. on allotment, and added, "no further call this year."

I have searched your paper for 1890, and that of the *Mining Journal* for the same period, but can find no report of the statutory meeting of the company, and I was informed in your office and in that of your contemporary that no notice had been received of such meeting.

On Feb. 5 last the directors issued a report, in which they stated that the general meeting would "shortly be held." On Mar. 5 last they issued a circular, which stated that "In response to the numerous demands of shareholders who desire to pay up their shares in full, the directors have decided to put all shareholders upon an equality, and have, therefore, passed the following resolution :—

"Resolved, that a call of 4s. per share be made upon all shareholders who have not paid in full, payable to the secretary at the registered office of the company on Mar. 19th inst., and that the secretary give notice forthwith." This was signed "F. G. PYM, Chairman."

This was followed in my case, and I know in that of others, by a letter on Mar. 21 (two days after the call was due) from the secretary, reminding me that the date for payment of the call was the 19th inst., "and to ask your immediate attention before the matter passes out of my hands." This was followed by a circular dated Apl. 27, requiring me on or before the 4th proximo to pay, "or your said shares will be liable to be forfeited." A further circular, day May 5, informed me that the directors "this day forfeited your shares in the company," and, finally, the solicitors to the company wrote on May 12 for payment of calls and interest "due on 100 shares allotted to you by the company," and added, "We trust you will remit the amount during the present week, so that further interposition on our part may be unnecessary."

I observed in the *Financial News* of the 27th ult. that a shareholder named Osborne "has commenced an action in the Chancery Division for rescission of the contract to take shares, and for rectification of the register, on the ground that the prospectus was fraudulent in numerous particulars."

Now, I have no doubt that many shareholders have received circulars and letters similar to those sent to me (I know they have been sent to some, although I know one who has only received the call letter), and I trust that all those whose shares have been forfeited will combine in resisting the unwarrantable action of the directors, as the case is one that demands the most thorough investition.—I am, &c.,

A VICTIM.

June 4, 1891.

SHEBAS.

SIR,—Anyone possessed of the least reasoning power would have expected a serious recovery on Sheba's shares, on receipt of the last crushing.

This crushing is, however, yet far from the maximum anticipated, for, as soon as the tramway's wires are thoroughly seasoned, it is expected to attain close on 4,000 tons.

As regards the yield (although now giving over the ounce) it is considered as certain that it must improve materially as the works get on (a good deal of inferior stuff blocking the way having been used through the mill), and none of the richest portions having been yet touched.

However, even if one were satisfied to base the net profit on the last month's crushing, it would already give to shareholders on the par price something like 20 per cent. per annum, and the shares stand at 17s. or 18s.! with the almost absolute certainty of 10 per cent. or 20 per cent. more, and this is based on a yield of 1 oz. alone, whereas, from former experience, this yield must in time average 2, if not more, for one must not forget that the lower levels are the richest, and that many of them have averaged 8 ozs.

What are investors thinking of to let these shares stand at 17s. and 18s. ? knowing that this mine is under an absolutely trusty board, and its richness a positive fact. On the present crushing alone in ordinary times they should be worth 30s.—I am, &c.,

CONSTANT READER.

London, June 5, 1891.

A GOOD STOCK TO BEAR.

SIR,—During the past week the shares of the London General Omnibus Co. have fallen steadily day by day, the only question being whether the fall was one of 10*l.* or 5*l.* As this seems likely to go on the bears seem to have a very fine opportunity. I have no wish to go into the ethics of the 'bus strike, but it occurs to me as an onlooker that if the *employés* have robbed the company of money the company has robbed the *employés* of all social comfort and everything which to most of us makes life worth having. Moreover, it also seems to me that they have acquiesced in the system of alleged peculation that has gone on, and based their rates of wages accordingly. Anyhow, I repeat, omnibus stocks, and particularly that of this company look good to bear.—I am, &c.,

ONLOOKER.

London, June 5th, 1891.

THE MINING EXCHANGE.

SIR,—1 notice by the report of the meeting of the Mining Exchange that the members have been somewhat reduced in numbers during the past year, but that it was stated this was rather an advantage than otherwise, as the weak ones had been weeded out. Now, it seems to me that if these weak-kneed gentlemen have left the Exchange, and are no doubt still doing business, the only course for the public to adopt is to refuse to deal with gentlemen who are not members of the Mining Exchange. In this way they will not only strengthen the position of that institution, but they will also add greatly to their own security. I have known it happen only too often that contracts entered into by outside brokers have not been carried out ; whereas if they had been members of the Stock Exchange or Mining Exchange, the delinquent brokers could have been dealt with in the manner they deserved.—I am, &c.,

AN OCCASIONAL SPECULATOR.

AFRICAN MINES.

SIR,—The shares of these companies are going from bad to worse. Where they will stop I will not presume to say, but I desire to remind your readers, as you have done yourself, that many of these shares are far below their intrinsic value, and for persons who can afford to buy and hold, the time now seems opportune. It only requires an intelligent person to spend half an hour examining the returns from these mines to make up his mind which to choose.—I am, &c.,

A MAN ON THE LOOK-OUT.

JUNE 4.

DICKENS CUSTER.

SIR,—The encouraging news from this mine seems to have been overlooked by the public, or the shares would never remain at their present price. The letter of the managing director, dated May 16, states that the mill started on 11th of that month, and up to the time of writing he was quite satisfied. He further says he hopes to ship a bar of bullion very soon. Under these circumstances the shares should be worth considerably more than present prices.—I am, &c.,

OBSERVER.

MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the resident director at the mine :—Total weight of ore crushed during May, 6,510 tons ; yield from the mills, $65,000 ; working expenses for the month, $45,200. N.B.—The estimated number of ounces contained in returns by assay benig—gold, 2,395 ozs. ; silver, 12,015 ozs."

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular coutaining special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

B. Broome.—The particulars are published regularly in this paper. The last return is considered good.

S. B. (Great Yarmouth).—Will, of course, have to re-construct. Their prospects are encouraging.

Godwyn.—Sell.

Market.—A small recovery is likely, we think, in them.

L. Ingram.—Can hardly advise at this enhanced price, although we think well of the company.

D. A. R.—Why sell at this low price when the chances are so good for a rise? Hold on, by all means.

Crown.—Sell the first and last-named, but hold others with the hope of an improvement taking place.

G. S. and B.—Rather out of our line, but from what we know the stock is well held.

Ray.—They have fallen a good deal lately, but we rather think a better price is likely to be obtainable very soon.

K. Islett—No. Not as a permanent investment; only buy for speculation.

Anxious (Emma Co.).—We are officially informed that no call is to be made for some time.

C. M. W.—Sell. The rise will not be maintained, in our opinion.

Sphinx.—The concern is under good management, but unforeseen circumstances have delayed its progress. Hold on to your shares.

Lead (W. W.).—Yes. Low in sympathy with the market generally.

Doctor.—With pleasure. A few low-priced shares worthy of attention just now are Emma, Almada, Mysore West, and Tesoro.

Bear (M. K.)—You must certainly stand to the bought-in contract, as the shares were not delivered within the 10 days allowed.

Deer Stalker.—The shares, as a speculation, are good, but not otherwise. Buy a hundred or two, and take them up at the account.

Warner.—We are informed on good authority that the company is making a profit. Rather advise you to hold than sell just at present.

H. E. B. (Durham).—The call must be paid before you can transfer any of the shares. Claim from your purchaser the amount paid.

Indian Shareholder.—Do not sacrifice your holding. A better price for them is expected in the near future.

Owing to the pressure on our space we are compelled to hold over our Table Pages.

The Mining World.

LONDON: SATURDAY, June 6, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE INDIAN RETURNS.

The returns from India still continue to increase month by month. The Mysore return for May is the largest ever made by the company, being 5,729 ozs. against 5,507 ozs. for the month of April. Yet, strange to say, the shares have fallen 5s. during the week. The return from Nundydroog is 1,634 ozs., being within 4 ozs. of that of the previous month. Balaghat, of which we spoke so favourably last month, returns 256 ozs. for May, as compared with 193 ozs. for April. The cholera scare, which has affected the returns from this mine, and, in fact, from all the mines in the Colar district, is now passing off, and we look for a substantial increase in the returns from this mine (which has been the chief sufferer) for the current month. In the face of all the facts we are at a loss to understand why the shares remain so low. There seems to be some doubt about the cable from the Ooregum Company, which gives the production for May as 2,890 ozs. If this is true, and there seems every probability it is, it shows an increase of more than 800 ozs. over April; but then, as we have already pointed out, the April returns suffered on account of the cholera. Nothing can be more satisfactory than the progress of these four Indian mines, and the public will no doubt one day wake up to the fact.

TIN AND COPPER.

In view of the recent somewhat considerable advance in prices of tin and copper the statistics regarding both metals that have been issued this week, possess more than ordinary interest. In tin, as our readers are doubtless aware, there has been a recovery of about 5*l.* a ton from the lowest point reached a few weeks ago; and in copper, though the top quotation touched has not been maintained, a gain of something like 3*l.* a ton is shown. Opinions differ widely as to the causes of the advance and as to the probabilities of its maintenance. We do not propose to discuss either point. It is sufficient to say that the statistical position of both metals is so satisfactory that no artificial stimulus to prices is either necessary or desirable. Dealing in the first place with copper, Messrs. A. Strauss & Co. estimate the total supplies of the metal last month at 9,948 tons, and the deliveries at no less than 16,595 tons. Stocks they put down at 47,989 tons, comparing with 54,636 tons a month previously, 77,860 tons at the end of May 1890, and 113,953 tons at the corresponding date in 1889. For the past five months the imports from the chief sources of supply compare as follows with the first five months of last year.

	1891. Tons.	1890. Tons.
Chili Charters	7,000	10,650
Australian into London	5,571	6,026
American into France	2,797	930
United States to United Kingdom	12,839	9,737
Mexico to United Kingdom ...	1,895	259
Quebrada	1,641	1,495
Cape of Good Hope	3,081	3,788
Spain	1,455	1,744
Spain Precipitates	7,648	6,738

The total supplies for the five months have been 45,095 tons, against 42,728 tons in the corresponding period of last year, the deliveries in the same periods having been 58,844 tons this year, in comparison with 58,615 tons last year. There is nothing extraordinary about the figures, but they show unquestionably that the copper trade has once more got into a sound, healthy condition. If, as rumour has it, French operators are bent on forcing up the price of the metal, we would advise them to leave well alone.

Turning, in the second place, to the tin statistics, the statement supplied to us by Messrs. Strauss enables us to put the matter in a nut shell. They place the visible supply at the end of May at 12,446 tons comparing with 13,037 tons a month previously, 13,081 tons at the end of May last year, and 14,702 tons at the end of May, 1889. Here also, it will be seen, the reduction in the visible supply is the noticeable feature. For the 12 months to the end of May the particulars of shipments and deliveries are given in the following table:—

	12 months ending May, 1891.	12 months ending May, 1890.
Shipments from Straits to London	14,673	15,982
Shipments from Australia to London	5,116	5,311
Shipments from Straits to America	10,892	6,345
Shipments from Straits to France	4,665	4,250
Shipments from Australia to America	850	850
Deliveries of tin in London ...	17,677	17,747
Deliveries of tin in London and Holland	25,689	25,328
Ditto, in London, Holland, France and United States...	46,054	43,978

The expectation is that the stoppage of tin plate production for a month, if carried out, will injuriously affect the position of copper; but it is indisputable that the demand in the United States for these plates will soon absorb the extra supplies which have been sent forward in anticipation of the McKinley Tariff coming into operation; while from several other directions, the orders for tinplates are steadily improving. Few commonsense people believe that the extra duty imposed by the new tariff will result in the establishment of the industry in America within the five years allowed for the experiment. Ultimately, no doubt, tin plates will be manufactured in the States in large quantities, but "sufficient unto the day is the evil thereof." Meanwhile, many things may happen; among them, and not improbably, being the withdrawal of a tariff which would be a disgrace to a country very much less solidly established than the United States.

MONTANA RETURNS DURING 1891.

The Montana return for May gives the yield from the mills as $65,000, making a total of $390,100 for the current year up to date as compared with $476,500 for the same period of 1890, or a falling off of $86,400. The working expenses for May, however, show a considerable reduction, and as the changes intimated by Mr. Bayliss at the general meeting in the management and pan treatment of the ores came into operation during the month, it is only reasonable to conclude that this reduction in the working expenses is the result. We give below a comparative table of the returns from this company.

Comparative Table.

Date.	Ore crushed.	Mill yield.	Working expenses.	Ozs. gold.	Ozs. silver.
1891.		$	$		
Jan.	7204	81500	58800	2985	15348

MEETINGS OF THE WEEK.

MINES THAT ARE TURNING THE CORNER.

The public who look merely to the present quotations of mining shares, for the most part, do the prosperities they represent a very gross injustice. These prices represent the absence rather than the presence of business. They represent the inattention of the investor, rather than the shrewdness of the speculator. The prices at which many of the mines are quoted do not represent their break-up value far less than their intrinsic merits, as attested by competent managers and trustworthy agents.

Take, for example, the important meeting that was held yesterday—that of Frontino and Bolivia. It is true the shares were quoted at 22s. on the strength of the meeting, but who can truly say such a price represents the value of a share upon which 2s. 3d. for the last half-year alone has been paid in dividends and whose returns have been the largest (with one exception) of any previous half-year since the establishment of the company in 1874.

At one time these shares were quoted at 6*l*., but if ever worth that sum they are surely worth it now. The total products of gold from the commencement has been 903,401*l*., and the shame has been that under former *régimes* shareholders have had so little of it. They have had a good deal more since Mr. Donagan and his present colleagues took office and we greatly mis-read Frontino if the finger of the sign-post does not point to even greater prosperity. As to the little breeze that occurred at yesterday's meeting, we attach not the least importance to it. Neither would the chairman have done so had he reflected that its originators had the monopoly of the opinions he expressed, and that the sympathies of the meeting were wholly with the management. Frontino is a living illustration of the advantages of re-construction as well as a monument of the pluck of the average British mining shareholder and the dogged devotion of a hard-working board.

Another mine that looks like "turning the corner," with which we have had to deal this week, is Almada and Tirito. Mr. Swaffield, an Almada patriarch, said he had been performing a sort of pilgrimage in the wilderness of hope for the last 20 years, and still, to use a sporting phrase, he "came up smiling" on Thursday last, as well he might do, for Messrs. John Taylor and Sons have undertaken the management, and it is freely acknowledged that if any firm in London, or out of it, can impart vigour to the dry bones of a moribund mining company it is they. Mr. Swaffield can, no doubt, remember some 15 years ago (he voted cheerfully for it) when the following singular resolution was passed at an Almada meeting—"That the directors be empowered to declare a dividend so soon as the funds are available for the purpose." The shareholders looked at this resolution as the shadow of a coming event, but the shadow has never deepened into anything more tangible, and so Mr. Swaffield has been left with ample material upon which to base a joint stock sequel to "the Pleasures of Hope." Though most of the earlier Almada shareholders who, 20 years ago, began their meanderings with Mr. Swaffield, have "passed to where these voices there is peace," and though, possibly by the doctrine of the survival of the fittest, he is left almost alone to tell the tale of a past that had no substantiality for them, and little for him, save what came to him yearly in the form of auditorial fees we cheerfully acknowledge with him that matters look decidedly better for Almada shareholders who have a good opportunity of averaging at present prices. The report of Mr. Davey is encouraging; the present appearances of the mine most promising, and Mr. Taylor's forecast of the probable future re-assuring from the business point of view.

A third company with whose affairs we have been brought into intimate connection this week is Roburite Explosives, so ably presided over by Sir John Stokes. After a period of great anxiety and intense labour Roburite is steadily making its way into favour as an explosive for mines and cognate purposes. The re-construction scheme has now, we may say, been unanimously adopted by all classes of shareholders, and directors have only to go on improving the vantage ground they have gained to earn not merely dividends for the preference, but for the ordinary shareholders.

Another concern that we should be inclined to say *has* turned the corner is the Alabama Land and Colonisation Co., which owes its good fortune in recent years to the singularly able administration of its chairman, Mr. Augustus B. Abraham, seconded by Mr. Charles Schiff, who has mainly superintended matters on the spot. When Mr. Abraham first took the management the outlook was very unpromising, and the future dubious to a degree. Now that position is wholly changed, and the speech of the chairman may be left to tell the tale as well as to point the moral of a prosperity that must be enhanced as the years roll by.

Oscar Gold, too, whose meeting was held yesterday, cannot be overlooked. As Mr. Frank Hodgkinson, the chairman, pointed out, much depends upon the treatment of the concentrates, for already without these the mine is paying about two-thirds of its costs. We are glad to know that he and the secretary are about to visit the property, to consult with the manager on the spot as to the best means of dealing with the concentrates and opening up the mine in a rapid manner. To the affairs of Elmore Co., which are in the same category as those of the other companies we have named, we devote some special remarks in an adjoining column. Altogether, of the companies with whose affairs we deal this week, a generally hopeful view may be taken, and we boldly assert that in no single instance do quoted prices represent real values.

But what of the mines whose meetings have not fallen to be held this week, and yet which, with equal truth, may be said to be "turning the corner?" Where is the man bold enough, or rather, where are the facts strong enough, to justify the absurd prices at which we quote the shares of the following concerns, most of which we mentioned in a special leader a few weeks ago?—American Belle, Antioquia, Balaghat, Bonnie Dundee, Callao Bis, Cape Copper, Champion Reef, Colombian Hydraulic, Colon, Colorado Silver, Copiapo, Day Dawn Block, Day Dawn P.C., De Lamar, Dickens Custer, Don Pedro, Elkhorn, Elmore, Emma, Flagstaff, Glenrock, Golden Feather, Golden Gate, Golden Leaf, Goldfields of Mysore, Gravel Gold, Gympie Golden Crown, Gympie Great Eastern, Indian Consolidated, La Plata, Leadhills, Libiola, Loma, Montana, Monte del Oro, Mount Zeehan, Mysore, Mysore Reefs, Mysore West, Mysore Wynaad, Namaqua Copper, New California, New Devala Moyar, New Eberhardt, New Guston, Nine Reefs, Nundydroog, Ooregum, Orita, Pahang Corporation, Palmarejo, Panulcillo, Potosi, Quebrada, Roman Gravels, Sheba, Silver Mines of La Luz, South-East Mysore, St. Augustine, St. John del Rey, Tesoro, Vogelstruis, West Argentine, and Yankee Girl. Of course, it is impossible for anyone upon whom the mantle of Elijah has not fallen to prophecy the day and the hour when present prices will change for the better. Could one do that, the millionaires and the merchant princes would soon take a back seat, whilst the lucky prophet would be extolled in those quarters where wealth often counts for more than character, and a strong banker's balance weighs heavier than moral worth. Speaking, however, after the manner of men who can give reasons for what they say, as well as after the golden rule in algebra that you should always proceed from the known to the unknown, the probability of the large majority of the shares we have named seeing better prices is so great that the purchase of some of them appears to be worth the risk.

RE-CONSTRUCTION v. COST BOOK.

THE idea is prevalent in some quarters that re-construction is the cost-book system under another name, but a little reflection will show that it is not. The cost book system admits of calls *ad infinitum*, and where relinquishments take place the "adventurer" ceasing to be connected with a company has to bear his proportion of the liabilities. It is all very well to say that no liabilities should be allowed to accrue, but this is merely the *theory* of the cost-book whereas the *practice* is that they are allowed to accrue, and sometimes to pretty considerable amounts. It is also supposed that at each quarterly meeting a call, where such is necessary, is made to meet forthcoming expenses, but the experience of our readers has been strangely different from our own if it be not this—that the calls are made to provide for past losses, whilst the forthcoming quarter, like a mining orphan, is left to shift for itself. Now, in re-construction, the shareholders know what they are about. They may get nothing out of the assets of a company that is re-constructing, but then they have no share to bear of its liabilities, for these are taken over by the new company. They may be unable to stay the advancing tide of re-construction, but they may retire without being overwhelmed by it. If they elect not to go on their money may be lost, but they know the full extent of their misfortune. If they elect to go on (and many illustrations can be given to show the wisdom of doing so—witness the case of Frontino re-construction on the basis of a 5s. liability, only partially called up, and the shares now standing at 22s.)—they know the utmost extent of the loss that can befall them. Re-construction is much to be preferred to the cost-book system, though we be no means share the view boldly hazarded this week by an orator at the Almada meeting that "Cornish mines are run for the benefit of those who supply the materials." This opinion would probably be changed by a more intimate acquaintance with the facts.

BIG GOLDEN QUARRY.

IT is well-known to those who are in the habit of attending companies' meetings that a certain class of shareholders have a most reprehensible habit of abusing their directors, and indulging in captious criticism of their management. But is there not in many cases something to be said on the other side? How inconsiderate shareholders are in disregarding the difficulties that have to be surmounted; and how loth they are to pay their calls! Frequently directors have to complain of their operations being hindered by a lack of the sinews of war, this tightness of the exchequer not being due to the exhaustion of all the capital of their company, but simply to the fact that a number of shareholders exhibit a strange reluctance to paying the calls upon the shares as they become due.

A striking case of this kind has come under our notice only this week. The Big Golden Quarry Mining Company, whose meeting we report in our present issue, was successfully reconstructed in the early part of last year and the present board have held the reins since the 4th of April with Mr. John Ogle as chairman. That Mr. Ogle knows his business no one will deny. Our readers will remember that it was by his aid that the Balaghat Company was successfully reconstituted, and his varied mining experience has been derived from a connection with a number of other kindred undertakings. Mr. Ogle and his colleages are assisted by an admirable manager in the person of Mr. Powter. They started well with a definite plan of campaign, having previously arranged their finances in order to cut their coat according to their cloth. But, as many other boards have found before them, their carefully prepared *modus operandi* was interfered with at an early stage. The machinery sent out by the old company had, on the advice of Mr. Tozer, an expert, been left at Moveni (there being no immediate use for it on the property) pending the construction of the railway, which it was thought would be brought to Barberton. Mr. Powter (the new manager) found, that the machinery was not being properly protected, with the result that it was becoming by degrees beautifully less. Passers-by evidently thought it was there *pro bono publico*, and carried off as much of it as they could remove. When this was known to the board in London, orders were at once given to have it removed to the mine, and such portions of it as were missing renewed. The cost of this operation amounted to 826*l*. 19s., and this

unlooked for outlay, naturally upset the financial calculations of the directors, besides causing considerable delay in the completion of important works on the mine—notably the making of a water-race. This difficulty has, however, now been overcome, and the board earnestly appeal to the defaulters to pay their calls without delay.

A word as to the property itself. The "Big Golden Quarry," Mr. Ogle told the meeting, "is no fancy title." The property is literally a mountain of ore, and although the stuff is of low-grade, it is of equal quality throughout, as far as has yet been proved, and experts say that it can be easily worked at 5 dwts. to the ton. Mr. Woodford, who at present holds an influential position as mining engineer to the Transvaal Government, states that the working of this property is not a speculation, but a sound commercial business, and he also adds that the quality of the ore is likely to improve as depth is attained. There is, however, enough ore to keep the company going for some time to come without going to any great expense in sinking. We wish the company every success, and it is to be hoped that the shareholders will not fetter, but strengthen the hands of the present board.

CAPITOL FREEHOLD LAND AND INVESTMENT CO.

THIS company is apparently going ahead. The speeches made at the meeting on Thursday showed clearly that the policy was a progressive one. The cattle have increased in number and value, and the sales of land have been most satisfactory. The position of the company as a whole seems to be all that can be desired, and, with the increasing demand for land in Texas, that position will be still further strengthened. The increase in the herd for the past year has been at the rate of 25 per cent. over the previous year, and the conclusion drawn by Mr. Farwell from this fact, was that at the expiration of the lease the company would possess, after deducting the sales likely to be made in the meantime, no less than 300,000 head of cattle, one half of which would go to the lessees. The outlook is encouraging.

LONDON AND SOUTH AFRICAN EXPLORATION CO., LIMITED.

As will be seen from the *verbatim* report of this company's meeting in another column, the chairman, Mr. C. J. Posno, was able to give a very encouraging statement to the shareholders, and to shadow forth various sources of increased revenue and profit. The result of the operations of the company during the past year enabled the directors to pay the shareholders a dividend of 16s. 6d. per share. Amongst other satisfactory features that the chairman had to present to the shareholders was the fact of the renewal of all the claim leases, and the rental of 900 new claims, but the most gratifying announcement that Mr. Posno had to make was that the last of the lawsuits on the other side had been brought to a successful issue in favour of this company. Although this happy consummation has now come about, it cannot be denied that the company has the effects of these suits at law still lingering with it, and it does, in good sooth, seem a great pity that individuals and companies alike have had to suffer from the pernicious endeavour to create a monopoly in South Africa for the diamond industry. It is to be sincerely hoped that a lasting truce has now been arrived at, and that peace and harmony may prevail in the future. As to that future, Mr. Posno would not be tempted upon the wide and dangerous field of prophecy, and contented himself with recapitulating a brief *resumé* of the prospects that rendered that future bright and encouraging. He pointed out that they had definite sources of increased revenue, and with this he asked the shareholders to be content. He did not like the unreliable region of prophecy, as he had always found, he said, that prophecies had a nasty knack of falsifying themselves. The complimentary part of the meeting was of a specially cordial character—well-deserved votes of thanks being accorded to the chairman and board, to the local manager, Mr. Currey, and to the London secretary, Mr. George Brown; and when it is remembered that the shares of this company are 10s. fully-paid, and, therefore, 16s. 6d. per share is equal to 165 per cent. per annum, it can be readily understood that the votes passed by shareholders were no mere matter of form.

ELMORE GOLD, LIMITED.

THE reconstituted Elmore Gold Co. was, as Mr. J. R. Armitage told the meeting yesterday, three months old on 5th June. The reconstruction has been a great success, and the amount received on application and allotment in respect of the new shares is about 7,500*l*., which it is calculated on the basis of the present expenditure is sufficient to carry the company on comfortably up to the end of the present year. By that time the mine will be thoroughly proved one way or the other. The result of the working during the month of April was decidedly encouraging. On an expenditure of $2,336 for prospecting and development work there was only a deficit of about $1,500 to make up. A letter, under date of 22nd May, from the manager, stated that the east drift on the Alturas lode, which was cut some time ago, had been advanced during the week 25 ft., and that the total distance now in from the cross-cut was 105 ft. The west drift had been advanced 30 ft., and the total distance driven on the vein was then 60 ft. The quality of the quartz, it stated, was improving in both drifts. Satisfactory work is being done by two tributers on the Confederate Star lode, and during April 60 tons were extracted by them, giving a yield of 210 ozs., or 3½ ozs., to the ton. One-third of that the company received, and also $3½ per ton for working it. It is expected that the junction of the Alturas and Elmore lodes will take place about 60 ft. lower down, and it will probably come in the direct line of the shaft. The manager is, however, aiming first at finding good pay-ore on the present level. The title deeds are being thoroughly investigated, and so far they have been found in proper order, but the investigation is not yet completed. Local people, it is said, are buying shares, and this fact ought to give confidence to the proprietors. A *verbatim* report of the meeting will appear in our next issue.

SAN JACINTO ESTATE, LIMITED.

THE resolution passed by the shareholders authorising the directors to raise additional capital to the extent of 50,000*l*. was, we think, a wise one. The company has evidently got hold of a property of no ordinary value, and with additional capital ought to justify its existence in the shape of dividends to the shareholders. The speech of Sir John Stokes, and also the report of Capt. Harris, must have convinced the shareholders of this fact. The former gentleman no longer regards the concern as a speculation, but as a matter of fact. The metal is there of a very rich character, and all the company has to do is to turn it out, dress it, and smelt it. Capt. Harris has also apparently formed a very high opinion of the property, and he is a gentleman who ought to know, for not only has he examined the property, but he is also a very capable judge of its worth.

HOUSE PROPERTY AND INVESTMENT CO.

THE report of this meeting, in another column, shows the gratifying and somewhat unusual feature of realised prophecy, the members being in receipt of the further ½ per cent. than was foreshadowed at the last meeting. We can only express the hope that, in the present instance, the anticipation that a further ½ per cent. will be earned in this year will be as surely realised.

BRITISH EQUITABLE ASSURANCE CO.

MR. DEPUTY WILLIAM SUTTON-GOVER, F.I.A., F.S.S., the managing director of this prosperous company, is undoubtedly a man of statistics. They positively seem to ooze from his fingers' ends, as a perusal of the *verbatim* report of his remarks in our meeting columns will prove. There is nothing more convincing in this world than facts, unless it be figures, and certainly the figures laid before the members at the meeting on Tuesday last speak volumes as to the present position of the company. The new insurances (always a satisfactory feature) effected in the year from May 1, 1890, to Apl. 30, 1891, consist of no less than 1,174 policies, assuring 201,457*l*., and yielding in annual premiums 6,435*l*. On Jan. 31 last, when the twelfth triennium of the company came to a close, the usual valuation of the policies and the general investigation into its affairs was made, and enabled the directors to make the gratifying recommendation that the sum of 3,000*l*. (being profits arising from non-participating business) should be carried over to the credit of shareholders' profit account, and that in future there should be an annual payment of 12s. 6d. per share in addition to the original interest of each share. The reversionary bonus on all policies effected on or prior to Apl. 30 last year, which would be in force on June 1, the directors had decided should be as follows: "On policies for the whole term of life, effected on or prior to Jan. 31, 1888, a reversionary bonus of 3*l*. per cent. on the amount of such policies; and on policies effected between Feb. 1, 1888, and Jan. 31, 1889, inclusive, 2*l*. per cent.; on policies effected between Feb. 1, 1889, and Jan. 31, 1890, inclusive, 1*l*. per cent.; and on policies effected between Feb. 1, 1890, and Apl. 30, 1890, inclusive, 10s. per cent.; and on other policies effected on or before Apl. 30, 1890, and entitled to participate, a proportionate bonus to be calculated by the actuary." Mr. Sutton-Gover, in recapitulating the history of the company for the past 36 years, divided the time into four equal periods of nine years each, and pointed out that in the first period 61,000*l*. was laid by; in the second, 249,000*l*.; in the third, 492,000*l*.; and in the fourth no less than 525,000*l*. As to the accumulated funds at the end of the first period, they stood at 61,000*l*.; at the end of the second, at 310,000*l*.; at the end of the third, at 802,000*l*.; and with the close of the 36 years they had reached the respectable total of 1,328,000*l*. Satisfactory as the meeting was it was not without a touch of sadness (which appeared to be most keenly felt by all present) at the loss all had sustained in the death of their late chairman, Mr. Hartley, who, for a period of 22 years, had presided over the meetings of the company. The new chairman, Dr. Edward Bean Underhill, paid a high tribute of respect to the memory of his predecessor, and to the great services rendered by him to the company. Regret was also expressed at the death of Mr. William Olney, one of the directors. The votes of thanks to the directors, managing director, the agents, and the staff in general were heartily carried, and the remarks of the managing director, in responding, form an excellent *résumé* of the position at the present time, and of the prospects before the company, for he said "The present position of the society, with its excellent lives, low mortality, excellent investments, and excellent body of agents, together with my

colleagues who devote themselves thoroughly, earnestly, wisely and painstakingly to their duties, is a subject for congratulation." This is a view that we think the public will heartily endorse, and we feel that the directors and management are justified in looking forward to a long continuance of the prosperity which has hitherto characterised the operations of the company.

TWO-REEL LOCK-STICH SEWING MACHINE CO., LIMITED.

THIS company has been formed with a capital of 200,000*l*. for the purpose of acquiring the patent rights granted to Mr. Daniel Jones, of Cardiff, in respect of improvements in lock-stitch sewing machines. The invention of the two-reel sewing machine appears to be one of practical utility, and will no doubt, commend itself to the general public. It dispenses altogether with the use of spools or shuttles, the ordinary commercial reels being used, and thereby saving a considerable amount of time and labour. The prospectus of the company goes very fully into the details of the invention, and is accompanied by reports and opinions of experts and the press. Perhaps the most important of these is a report by Sir Edward J. Reed, who says: "I would beg leave to compliment and congratulate you upon having worked out with marked, and even striking success, a series of very ingenious improvements, the *ensemble* of which provides a machine that, if I judge the matter rightly, will come into very extensive use, both at home and abroad, because of its convenience, and of its great economy both of first cost and of operation." In addition to the sale of the machines in this country, the directors anticipate that considerable profit will accrue from the sale of or granting of licenses under the foreign patents which the company will acquire. It is proposed to erect works in Birmingham with plant capable of turning out 30,000 machines per annum. The price to be paid to the vendor for the British and foreign patents, &c., is 90,000*l*., payable as to 48,000*l*. in cash and 42,000*l*. in fully paid ordinary shares (being the largest amount allowable by the Stock Exchange rules). The vendor has agreed that if there be insufficient capital subscribed to pay the whole of the said 48,000*l*. in cash, and to leave 30,000*l*. cash for working capital, he will accept such part of the 48,000*l*. as there shall be insufficient cash to pay in fully paid-up shares. He has also agreed that he and his nominees shall not sell any portion of the 42,000 shares for a period of at least three years. The company has secured the services of Mr. Daniel Jones (the inventor) for a period of at least seven years upon such terms as may be fixed by the directors. The company possesses an extremely strong board of directors, and the names of these gentlemen will no doubt give confidence to investors. On the whole the prospects of the company seem to be extremely good. The preseut is an issue of 126,000 ordinary shares of 1*l*. each. The subscription lists will close on or before Monday next, June 8.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

REDUCTION OF THE BANK RATE.

AFTER very serious disturbance the Money Market has calmed down, and for the present uneasiness on various accounts has been relieved. Money is free and easy, and prices of securities once more buoyantly disposed. The Bank rate has been reduced from 5 to 4 per cent.; there has been a further large influx of gold at the Bank, and the return is now exceptionally strong. The force of circumstances has been too much for the combination of joiut-stock banks, which has practically broken down, the question of supply and demaud in a free market being beyoud control, as foreseen from the first. The attempt at joint action in support of the Bank at the present juncture was misunderstood, being thought to be connected with financial trouble; but it was soon elicited that there was no foundation for the fears or rumours circulating, and that the object was simply the support of the Bank policy—a very praiseworthy movement in itself, but ill-timed. The "corner" has failed, but it is to be hoped the good understanding in view of any future danger will be maintained. Discount has fallen to about 3¼ per cent., and money to 2½ per cent., and the discount houses have lowered their deposit rates by 1 per cent. to 2½ and 2¾ for money at call and notice, the banks allowing 2½ per cent. The exchanges with the fall in the rate have turned against us, but gold is still being shipped from New York, probably for Stock bought. The influx at the Bank for the *Gazette* week was 1,830,000*l*. or nearly six millions since May 14, when the 5 per cent. rate was fixed. Over 400,000*l*. more has gone in since, and the return itself shows an increase in the bullion of about two millions, making the total 26,300,000*l*., and the reserve is 1,590,000*l*. better at 17,660,000*l*. (against 13,187,000*l*. last year), or 44⅜ per cent. of the liabilities, which have increased on balance. The private securities have further run off 1,400,000*l*. through redemption of securities on the arrival of the gold bought for the Bank at New York as mentioned last week.

There has been a very doubtful tendency in the Stock Markets, and only now is gloom beginning to disappear. Rumours of financial disasters have been thick, and though in every case falsified, at least to public knowledge, a species of melancholia took possession of the "House," against which the reduction in the Bauk rate made only a partial improvement. The dreaded settlemeut in Paris has been and gone, leaving behind the failure of a handful of *coulissiers*, and one banker who thoughtfully disappeared and owed liabilities amountiug to some millions of francs. But, nevertheless, thc French bourse has been strong and the "bears" of Rentes, Spanish, &c., were nicely caught, all of which has grcatly dimiuished speculation open for the fall. However, the most serious items, because actual, are affairs in Argentina, where there has been a run on the banks, and five have closed their doors. Intense excitement existed, and the gold premium fluctuate, between 293 and 323 per cent., but the worst is now believed to be over. Argentine bonds and Railway Stocks show a smart fall, despite a recovery, and Cedulas of the series K. and P. are as low as rubbish like Honduras. Uruguayan improved on the contrary, because, to everyone's surprise, their Budget balances, both receipts and expenditure, including railway guarantee, and Internationals are all up. The Home Funds are weaker, and the Railway market has been very flat, but led by the eccentric Brighton A., which is an admirable barometer, prices have revived saving North Eastern, which is lower upon labour difficulties in the iron centres. Canadian and Mexican railways have been sold, particularly the latter; nor are Nitrate and United States Railroads brilliant by an means. The Yankees have control of the latter, and are nicely exercised how to support their burden, for on our part we refuse to absorb the stock. Trusts, Banks, Financial undertakings and Miscellaneous generally are lower, American Breweries showing especial depression.

The Rank of England to-day bought and received 215,000*l*. in gold. Bar silver continued in demand with an improved market which now quotes 44⅜. Rupee loans are stronger likewise, the Exchange and the India Council has now made unusually heavy sales.

Discount to-day has been weaker, and the current market rate has been 3 to 3⅛ per cent., and money freely offering at 2 and 2½ per cent. At the meeting to-day of the representatives of the London joint stock banks, private banks, and Scotch banks, resolutions were passed approving the efforts of the six banks already in combination to support the action of the Bank of England in retaining the gold that they have acquired, and agreeing that as the reserve of the Bank shows a considerable increase, present circumstances do not make it imperative for the banks to fix a minimum rate of discount. It was approved that meetings should be held in times of difficulty in order to assist the Bank in its efforts to maintain a sufficient stock of bullion in the country.

There is a recovery in the value of public securites, which, too, were a little active on provincial buying, upon the easier rate of mouey, but otherwise the last-named circumstance has neither galvanised life nor stimulated new business. The imminence of the settlement is now a great drawback to the markets, but confidence has not entirely evaporated, as shown by Consols to-day touching 95½ for July account. The new Indian loan has been dealt in at 2¾ premium, and while other sound investment securities, like Colonial Inscribed and Indian Sterling issues have recovered, Euglish Railways are a little stronger. Great Northern, North-Eastern and Metropolitan however, sold at a fall, but Brighton "A" on the coutrary was active up to 141½, and practically concentrated all business in that particular security. Foreigu Bonds have appreciated, and Spanish, Italian, Portuguese, French, Turkish, and Egyptian were best supported, but South Americans, saving Brazilian and Buenos Ayres of 1882, were easier, because the gold premium had advanced to 345 per cent. American Railroads appeared fairly well maintained at a small improvement, and Grand Trunks were re-purchased in view of economies in management. Canadian Pacific also advanced, while Mexican drooped, owing to competition with the Mexican Central Co. Most Argentine lines expanded, and Buenos Ayres Great Southern rose 7, but Buenos Ayres and Pacific Preference fell 8, to 70 sellers. American Breweries are decidedly better, some favourable dividend announcements having stopped further heavy selling. Houg Kong Bank shares recovered 3, and London General Omnibus fell another 5 or just 20 per cent. during the week in view of a strike.

Annexed are the final quotations to-day:—Consols Account, 95$\frac{5}{16}$; 95$\frac{5}{16}$; Egyptian Preference, 91¼, 91¾; Egyptian Unified, 96, 96¼; French Four-and-a-Half per Cents., 103¾, 104¼; Hungarian, 91⅛, 91⅜; Italian, 92½, 92⅜; Mexican, 87, 87½; Peru Corporation Ordinary, 8¾, 9¼; Peru Preference, 24¼, 24¾; Peru Bonds, 73¾, 74¼; Russian, 1889, 98, 98½; Portuguese, 45⅜, 46; Spanish, 73⅜, 73⅝; Turkish, 1871, 95¼, 95¾; Turkish Defence, 93, 93½; Caledonian, 117, 117¼; Great Eastern, 93⅜, 93⅝; Great Western, 155½, 155¾; Brighton "A," 140⅝, 141⅛; North Western, 170¼, 170½; Metropolitan, 83, 83½; Metropolitan District, 30¼, 30¾; Midland, 152, 152¼; North British, 41⅝, 41⅞; North Eastern, 155¼, 155½; South Eastern "A," 90, 90¼; Grand Trunk, 8⅝, 8¾; Grand Trunk First Preference, 58⅝, 59⅛; Grand Trunk Second, 38⅞, 39⅛; Grand Trunk Third, 22, 22¼; Canadian Pacific, 80⅜, 80⅝; Denver, 17¾, 18; Erie, 20, 20¼; Milwaukee 64½, 64¾; Lake Shore, 111¾, 112¼; Louisville, 76¼, 76½; Atlantic First, 32¼, 32½; Ontario, 16¾, 17⅛; Ohio, 18⅝, 19⅛; Norfolk and Western, 53⅜, 53⅝; Reading, 15⅞, 16⅛; Reading Bonds, 80, 81; Union Pacific, 45½, 45¾; Wabash Preference, 21¾, 22¼; Ottoman Bank, 13$\frac{1}{16}$, 13$\frac{3}{16}$; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4½, 4¾; Hudson's Bay, 16, 16½; Suez Canal, 106¾, 107¼; Guiuness, 320, 322; Allsopp's Ordinary, 30, 33; Bryant and May, 13⅞, 14⅛; Eastmans, 8⅛, 8½.

THE NEW EBERHARDT CO., LIMITED.

A SATISFACTORY REPORT.

THE directors' report cannot be regarded by shareholders with other than a favourable eye. The past year for the Monitor Mine has been a repetition of the one immediately precediug. As to Eberhardt,—immediately after the meeting of Feb. 11, the directors cabled to Capt. Read to re-commence operations, and earnestly hoped that good results will be speedily obtained from this important, and as they believe very valnable property. The mine revenue account compares very favourably with that of the previous year, the loss for the year being only 791*l* as against 2,445*l*. in 1889.

THE SMASH ON THE METROPOLITAN.—We are not surprised that the Metropolitan Railway should have felt ashamed of itself for yesterday's accident; for, so far as present information goes, the accident was inexcusable. But can the mauager or directors really have been responsible for the childish behaviour described as follows by a correspondent of the *Standard*:—"Travellers on the Undergrouud Railway yesterday afternoon must have been not a little surprised at the unusually reduced size of the contents bills of the eveuing papers on the railway bookstalls. All lines relating to the accident at St. John's Wood had been carefully cut away, and where occurring iu the centre of the bill the two euds had been afterwards pasted together." Such a proceeding could only pass muster, says the correspondent, in Russia—and perhaps in Ireland under coercion also?—*Pall Mall Gazette*.

REPORTS OF MEETINGS.

THE ROBURITE EXPLOSIVES CO., LIMITED.

THE RE-CONSTRUCTION SCHEME AGREED TO BY A UNANIMOUS VOTE—ALL OPPOSITION WITHDRAWN.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Thursday, to confirm as a special resolution the resolution passed at the extraordinary general meeting of the company, held on May 8th inst.

Lieut.-Genl. Sir John Stokes, K.C.B.

(chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I do not propose at the present stage of the proceedings to make any speech to you. I shall, therefore, simply in the first instance put to you the first resolution which you are convened to consider; that is "That the following resolution passed at an extraordinary general meeting of the company on May 18:—'That the articles of association of the company be amended by adding the following additional article:—" 108. The dissolution of the company may be determined on for any purpose whatever, and whether the object be the absolute dissolution of the company, or the re-constitution or modification of the company, or the amalgamation of the company with any other company, or any other object," '—be, and is hereby confirmed as a special resolution."

Genl. E. C. SIM: I have much pleasure in seconding the resolution as one of the members of the shareholders' committee.

The resolution was then put and carried.

The CHAIRMAN: I now rise to move the remaining resolutions which are submitted to your consideration. "To consider and, if thought fit, to pass the following resolutions, which, if passed by the required majority, will be submitted for confirmation as special resolutions at another extraordinary general meeting, to be subsequently convened":—

RESOLUTIONS.

(1.) "That it is desirable to re-construct the company, and accordingly that the company be wound up voluntarily, and that Herman Alexander Krohn be and he is hereby appointed liquidator for the purposes of such winding up." (2.) "That the said liquidator be and he is hereby authorised to consent to the registration of a new company under the name of the Roburite Explosives Co., Limited, or some other suitable title, to be formed and registered under the Companies Act, 1862, for the purpose of acquiring the undertaking of this company with a memorandum and articles of association, a draft whereof is now submitted and signed by the chairman of the meeting, for the purpose of identification." (3.) "That the draft agreement submitted to this meeting and expressed to be made between this company and its liquidator of the one part, and the Roburite Explosives Co., Limited, of the other part (which draft is also signed by the chairman of this meeting for the purpose of identification), be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to Section 161 of the Companies Act, 1862, to enter into an agreement with such new company (when incorporated) on the terms of the said draft, and to carry the same into effect, with such (if any) modifications as he thinks expedient." (4.) "That the said liquidator be and he is hereby authorised to continue the business of this company pending the transfer to the new company."

OBJECTIONS MET.

In introducing these resolutions I may state that the articles and agreement which the solicitor will read are drawn upon the lines of the scheme submitted at the special meeting on May 8. The discussion upon that occasion turned upon the great advantages conferred upon the preference shareholders by the scheme, and especially in regard to certain words in Article 51, which ran thus: "The preference shareholders in the new company to be entitled to an accumulative 5 per cent. preference dividend, and in case of winding-up to priority as to capital." Those last eleven words gave rise to very great objections and discussion, and the board in deference to the opinion then expressed undertook to withdraw them from the scheme. The result of that alteration is that the great majority (I may say the vast bulk of the shareholders) have adopted the scheme so modified, and, as a matter of fact, the preference shareholders, even those holding no ordinary shares, have considered it really an unimportant clause, as we had no intention to wind up, and as the prospects of business indicated no such probability.

BUSINESS INCREASING.

As regards the position of the business itself—it is only a little more than three weeks since we met, and naturally there is very little more to tell you, but I may say that the increase of business, which I was able to announce to you at that time, has steadily gone on, and we have had some remarkable adhesions of colliery owners in Staffordshire and South Wales, which promise a beneficial advance as the year goes on. (Cheers.) There is nothing to be said in contravention of the good report I made on May 8. I will now ask the solicitor to read the agreement mentioned in the resolutions.

The SOLICITOR read the agreement.

Genl. SIM: I have much pleasure in seconding these resolutions, which were thoroughly thrashed out at the last meeting.

OPPOSITION.

Genl. Sir GEORGE BYNG HARMAN: I must crave your indulgence as being one not accustomed to business matters of this nature, but as a holder of both preference and ordinary shares, I wish to explain that my reason for opposing the reconstruction is solely on account of the way in which it is proposed to deal with the preference shares. When the prospectus was issued, one of the members of our board represented to me that he believed this to be (I am sure he did) a very excellent thing and recommended it very strongly to my notice. On the strength of what he said, I spoke of it to certain of my friends, and we together embarked about 6,000*l*. Always looking at these matters as somewhat speculative, we agreed, in order to protect ourselves, that we would take an equal number of preference and ordinary shares. As far as I understand there is no reason for winding up this company, because it is a failure. At the present moment it is, I believe, beginning to show daylight, and the cumulative preference shareholders have every reason to expect that in due course they will have what is now due on them fully paid up. Instead of that being the case, very much to my surprise, I find the proposal is put forward that we should accept 5 per cent. preference shares, which, as far as I understand it, in a company of this sort can never attain the value at which they were originally issued, and also that we should accept, in lieu of what is due to us, preference shares at their original value, which I understand are quite unmarketable now, or very nearly so. The scheme to me is so incomprehensible that I have not the slightest intention of accepting it, and I also speak on behalf of those gentlemen who took these shares on, I may say, my representations to them, and who have sent me their proxies. I have consulted many business men, and they one and all take the same view.

Genl. TUPPER: I am like the last speaker. When I joined the company the great bait held out was the 7 per cent. cumulative preference shares. If you had represented in your prospectus it was to be a 5 per cent. preference, I should not have thought of taking them, but I felt by taking 7 per cent. I could afford to wait for any dividend that might accrue upon the ordinary shares. In a certain railway in Buenos Ayres they were in very much the same difficulty that you are in here. There were three years' back dividend due, and it was arranged with the preference shareholders when the re-construction took place they should receive 8 per cent. cumulative preference shares instead of 7 per cent. cumulative preference. If that had been done in this case (I speak as a preference and ordinary shareholder, though I do not look upon the ordinary shares as of much value) there would have been something to have been said of the scheme. Now, that appeared to me to be a very fair proposition, involving no sacrifice, but here you call upon shareholders to make a sacrifice of 2 per cent., and give them nothing in return. The committee put forward a proposition which held out something to the preference shareholders in the event of a liquidation, but the ordinary shareholders mustered strongly and cut this out. I, like the last speaker, am not prepared to accept the present scheme.

CONSIDERATIONS FOR PREFERENCE HOLDERS.

Col. COPLEY WRAY (director): I should like to say a word for two, because I happen to be to a certain extent in the same position as the gentlemen who have just spoken, for I hold exactly the same number of preference and ordinary shares, and, as far as I can see, if there is any advantage in the scheme to the ordinary shares it goes against the preference shares and *vice versa*. It can make no difference to me in which way it is decided, except that it has made a considerable difference in the market value of the shares. Last Christmas I was offered some preference shares fully paid at 2*l*. each, and regret to say that I was unable to take them up at the time, but the mere fact of this re-construction scheme has raised the value of those shares from 2*l*. to 6*l*. If the re-construction scheme is not carried I have not the least doubt the shares will go down again, for this reason, that to get 7 per cent. you will have to wait two or three years; you will have to wipe off the preliminary expenses, 10,000*l*.; and besides that, the ordinary shareholders who are in a considerable majority would have the right to claim that so much should be put aside for depreciation. That has to be wiped off year after year, and it is impossible to say when the preference shareholders would be entitled to a dividend—certainly not for two or three years. At that time the ordinary shareholders would be nowhere, but as these gentlemen who are opposing us are equally interested in both classes, and as they cannot possibly gain anything by opposing this scheme, and have actually gained in the market value of the shares as pointed out, I cannot imagine why they should retain their objection. It is not the intention of the directors to fight the question. If these gentlemen are going to law, I do not suppose the directors will for one moment consent to fight it, but I will put it to them (and they will have plenty of time to consider it between this and June 30) whether in their own interests it is not advisable to consent to this scheme. The preference shareholders are strongly represented on the board. Two of our members represent them almost entirely, and I think one has no ordinary shares whatever, but yet he goes in for this scheme, in his own interests and in the interests of those he represents. The scheme was generally assented to at the last meeting, and we have received a large number of proxies in support of it to-day which we cannot use for any other purpose than the passing of these resolutions. We are bound by that, and no other scheme can be assented to but the one for which our proxies were obtained, and that includes the doing away with the priority as to capital. I am sorry that objection should be raised now, for at the May 8 meeting hardly anyone got up except ordinary shareholders who suggested this modification. I will tell you what took place only the day before our last general meeting to myself:—A preference shareholder objected to the scheme. He did not attend the meeting, and it was carried. I said to him afterwards: "We have carried the scheme with a slight modification as regards priority of capital." He replied, "I do not value the question of priority of capital in a flourishing company." I can only

APPEAL TO THESE GENTLEMEN IN THEIR OWN INTERESTS

as well as in the interests of the company to allow the re-construction scheme to be carried. (Cheers.)

Mr. DODGSON: Why is any re-construction scheme necessary when the prospects of the company are so good? Suppose something happens by which no profits are arrived at. Why should we shift our position for nothing? Let us wait till we have the money, and then meet each other like men and divide it fairly. I object altogether to having my position altered, and will take every possible means of offering opposition to it.

Mr. SPARK: Mr. Chairman and gentlemen, I supported this scheme, submitted by the board and shareholders' committee at the last meeting, because it seemed one which was in general terms equitable to all parties, and also, though I did not agree with some of the details, because it seemed to have the assent of the body of shareholders and to meet the approval more or less of both classes. That is a stroug point in its favour, which overweighed any

small differences on details I might have had. I think that the first speaker in opposition to this scheme to-day rather struck the true key-note of his difficulty in giving his assent to it, when he said it was to him incomprehensible. I say it with all deference to the opinion he has received from the business men he has referred to—but it seems to me to show want of appreciation of the true position of the company generally and the preference shareholders particularly, from the cumulative point of view. It is perfeotly true that this company is not on its last legs, and is not driven absolutely into liquidation and re-construction in the sense that some companies are. But still, there is a great deal in the remark made by a director that before any interest can be paid to the preference holders very large sums must be provided for preliminary expenses and depreciation, for I am sure (I speak as an ordinary shareholder holding both classes of shares) I shall insist, and I think I shall be justified in insisting before any interest is paid to preference shareholders that the preliminary expenses are paid, and that ample sums are set aside for depreciation of property, patents, &c. When the interest accumulated to a certain point I believe the Courts would entertain a proposition to wind up the company if it were brought forward by a sufficient number of shareholders, and speaking from that point of view, without having taken advice, I believe such to be the case. In fact, I believe it quite possible if this re-construction be not assented to, and we do not go into it with goodwill for the benefit of all concerned, that we may suffer in common. After all

WE ARE ALL PARTNERS IN THIS AFFAIR

—(hear, hear)—and have to act on business principles, and to give and take with as much good feeling as we can. Hence I should not be at all surprised to see this company, if this scheme is not agreed to, put into compulsory liquidation from the overburden of the cumulative preference interest. (Hear, hear.) I am rather surprised opposition should proceed from holders who have an equal amount of each class of shares. It seems to me they have everything to gain by assenting to the present scheme. Not to do so I think would simply mean the wrecking of the company, and with it the wrecking of all our interests. Even suppose you are largely preference shareholders, to oppose it in any way whatever would mean that even if the company went on, some years would elapse before you could see one penny of the interest actually due to you in the form of dividends. On the other hand, it is highly probable, if you accept the scheme, you will have your 5 per cent. in your pockets in Mar. next. (Hear, hear.)

Mr. Barnes: I am strongly in favour of the re-construction scheme, but it would be more palatable to me if the directors had consented to wait for their remuneration until they had paid a dividend to the ordinary shareholders. (Laughter.) I do not think we ought to be very far removed from that happy position. Personally, I would not have agreed to any re-construction if the preference shareholders had not waived their right to priority of capital in case of winding up.

IT WOULD, INDEED.

A dividend on the preference shares would put the company in a very different position in the market, as a matter of course, from what it is now, paying no dividends. The directors and secretary know that I do not agree with much that has been done in the past. I believe

THEY HAVE A FIRST-CLASS ARTICLE,

which only wants careful and intelligent management to bring into general use. I am a considerable colliery proprietor in South Wales, and believe that if you had the right sort of representatives you might have done a much larger business there than you have done in Lancashire, for the colliery proprietors of South Wales are rich as a rule, and not unwilling to try fresh explosives that will promote their own interests and the welfare of their men. Your agents in the early days were wholly unsuitable. You might as well put a counterjumper to plough a field, and an uneducated Scotchman to teach the Welshmen English—(laughter)—as some of the men you then had to work this company's agency. I am convinced that you could not have better men on the board than Col. Smith and Mr. Loewe, whom I honour, and whose ability I thoroughly believe in. I believe that this company, in spite of the mistakes of the past, will yet achieve a great future.

IMPORTANT FURTHER CONSIDERATIONS FOR PREFERENCE SHAREHOLDERS.

Col. Gerard Smith: I should not have intervened in this discussion, except for the purpose of asking a question from one of the speakers, and answering a few remarks. Genl. Harman is under a mistake in supposing that the preference dividends will be immediately earned. At the best there is something like 26,000*l.* of outstanding liabilities that must be swept off, and only a portion of the arrears could be expected within the next four years. I worked out a scheme to show that if you write off the preliminary expenses and depreciation, the arrears of preference interest will not be overtaken for a great many years—I am afraid I shall be accused of exaggerating if I say how many. I wanted to ask Genl. Tupper about that Buenos Ayres case. I understood him to say that they had originally a 7 per cent. cumulative preference; that when re-construction took place they were offered an 8 per cent. cumulative preference; but they were offered that 8 per cent., I expect, in payment of their arrears. Were the arrears cancelled?

Genl. Tupper: They were 7 per cent. 10*l.* preference, and were made 8 per cent. cumulative preference of 10*l.*

Col. Smith: But I want to know how the arrears were dealt with. (Hear, hear.)

A DIVERSION TO BUENOS AYRES CEDULAS.

Mr. Newton: I know. They got 8 per cent. instead of 7 per cent., because there was an accumulation of arrears equivalent to the difference between 7 and 8 per cent. They got the 8 per cent. on 10*l.* instead of waiting for arrears to be paid. I have watched this question for many years. I bought at that time other Buenos Ayres stock, and I think the General must have been thinking of Buenos Ayres Cedulas. As they were going to take away that preference, I purchased five shares, not knowing anything of the company, but being anxious to see how they could take away a preference right, and when the scheme was brought forward in the first instance, I told them that they were wrong, and that while Lord Redesdale lived they would not carry it. They could not alter the original conditions, and then they gave us an 8 per cent. on 10*l.* shares, but came to such prosperity afterwards that they could not only pay 8 per cent., but more, and the ordinary shares (of which I luckily bought a few) I sold at four times the value I gave, because of the effect of the re-construction, or because of the prosperity of the Argentine. The company has had to go through another scheme, because under the constitution they could not alter the 7 per cent., and they have had to give us back a 7 per cent. for our 8 per cent.; but to do that, having once placed us on the 8 per cent. basis, they have had to give us extra stock, and carry their proposal by Act of Parliament. I cannot understand why a preference shareholder should not come into this scheme. He may stand by his right to all eternity, but the question is—What will he get? (Hear, hear.)

Col. Smith: The last speaker has made my speech for me, and I have really nothing further to say but this, that as a large holder of preference shares (550), and one who for some years has turned his sword into a pen, and been employed in business, I say in my own interests I support this re-construction. (Cheers.)

A COMPANY CANNOT BREAK A CONTRACT.

Mr. Newton: I would remind Mr. Spark that a company can go into liquidation for any purpose whatever except one, and that is to break a contract. (Hear, hear.) Therefore the preference will be secured. You had much better be a living company paying dividends, than a dead company paying no dividends. Your credit and your future will be bright by the preference shares getting a dividend, and the ordinary shares getting a slice now and again. A living company will always have credit, but if you have no credit you will do no business. I have seen shares doubled in value through a re-construction which destroyed all preference rights whatever. Your rights in this case are not destroyed, for you will have a living 5 per cent. instead of a dead 7 per cent. (Hear, hear.)

VIEWS OF A MEMBER OF THE COMMITTEE.

Mr. Bohn: There is very little for me to answer on behalf of the shareholders' committee, for it appears that everyone of our propositions have been approved by at least 95 per cent. of the shareholders. One shareholder objected to the reduction to 5 per cent., and another to the giving up of the preference rights as to capital in case of winding up. Another thought we had given the ordinary shareholders too much, but we did conscientiously try to please everybody and do what was right, as I am sure everyone admits. (Cheers.) We think we arrived at a fair and equitable solution all round. One speaker asked why it was necessary to re-construct at all. It is rather late in the day to ask that question, because the last annual meeting (at which I was not present) decided to re-construct unanimously because the weight of preliminary expenses and accumulated dividends hung like a millstone round the company's neck, and it was felt that if some means were not found of dealing with that terrible weight practically the company would come to ruin. That being the view of the shareholders, Genl. Sim, Mr. Weatherley, and myself were appointed to consider and propose a fair scheme of re-construction which should meet all conflicting interests; and the very rumour of re-construction has, as you have heard, already had a marked effect in improving the value of the preference shares. With regard to the position of those shares, I am absolutely unbiassed, as I hold 100 of each class, which cost me 8*l.* 10s. each, and which I have held from the beginning. Mr. Weatherley has a large proportion of ordinary, but Genl. Sim is in the same position as I am. The board have rather a predominance of preference shares. Take the preference shareholder's point of view. If he waits till he gets his cumulative 7 per cent. he will have to wait long, if, indeed, the company can ever pay it. In the meantime he is acting under the old articles, by which the directors have a right to draw 2,500*l.* a year. Supposing we earn enough even to pay 7 per cent. on the preference shares. First of all we have 10,000*l.* preliminary expenses to write off, then we have back interest, and, in addition, we have depreciation. There is a special article put in the new articles that there shall be no depreciation charged for five years, except with the consent of the preference shareholders. If it be charged it is then quite impossible that the preference shareholders will get anything. You cannot charge less than 5 per cent. per annum. I do not think it necessary, as a matter of policy, to put by for depreciation in a company where a property is increasing in value, and where the machinery is not only kept fully up, but is being improved and added to out of revenue. If you do not carry this scheme you will work under the old articles, and you will have the ordinary shareholders against you, whose opposition will be serious. As the scheme stands I do not say there might not have been modifications, and that it might not have been more complete, but it was at least this—

AN HONEST ATTEMPT TO DO JUSTICE TO ALL INTERESTS.

If the company is wound up I may tell the preference shareholders that there will be only some ground and houses, absolutely worthless for anything but an explosives company. Whether the preference shareholders get the whole of nothing or the half of nothing really does not matter. (Laughter.) I think we might yield the point gracefully, and I did hope the preference shareholders would have seen how unimportant it is, and have rather congratulated themselves that we had come to a friendly arrangement. Having gone so far, I am afraid we cannot modify the scheme now, for these objections ought to have been made at the last meeting, when our report and that of the joint committee were submitted, and when the only opinion expressed was that of the ordinary shareholders, to the effect that the preference shareholders had got the best of the bargain. If we attempted any alteration now we could not hold our confirmatory meeting on June 30th, and the whole thing would be thrown out of gear. If we do not re-construct (although I am not on the board) I venture to forecast that it will be necessary to make a call in order to put the company into a sound position.

A CONVERT TO MR. BOHN'S ELOQUENCE.

Mr. Mertens: I came to oppose this scheme, but after the explanation of the last speaker I approve of it. (Cheers.)

Mr. Sharp called attention to various clauses in the articles of association, after which

ALL OPPOSITION WITHDRAWN.

Gen. Harman said: I do not want to appear obstructive, and

therefore it is my intention to withdraw my opposition. (Cheers.) I am very much of the same opinion I was in thinking that the preference shareholders do not get a fair equivalent, but still, though the pill is bitter I swallow it and withdraw my opposition.

Gen. TUPPER. I will also withdraw my opposition. (Cheers.)

The CHAIRMAN: I was going to make an appeal to these gentlemen to do that which they have already

SO GRACEFULLY AND HANDSOMELY DONE.

(Cheers.) I think the company owes them a debt of gratitude for having waived their conscientious scruples and withdrawn their opposition. I think by that means the company is now going on to a successful future, and that year after year they will be the first to recognise that they have taken a wise and beneficial step to-day. I do not propose to go into further discussion, for I think we have arrived at that happy moment when general harmony is restored. (A VOICE: "Genl. Harman.") (Laughter.)

Mr. BOHN: I propose a cordial vote of thanks to Sir John Stokes for presiding. No one could possibly make a better chairman than he does, and no one could have the interest of the company more at heart.

The motion was seconded by Mr. GLASER, and carried by acclamation.

The CHAIRMAN: I return my hearty thanks to Mr. Bohn for his complimentary remarks. I can only say that I try to do my duty towards you and the company. (Cheers.)

THE SAN JACINTO ESTATE, LIMITED.

THE CHAIRMAN DETAILS THE POSITION AND PROSPECTS OF THE COMPANY—CAPT. HARRIS, THE EXPERT, GIVES A FAVOURABLE OPINION—THE BOARD ARE AUTHORISED TO RAISE A SUM NOT EXCEEDING £50,000.

AN extraordinary general meeting of the members and debenture-holders of the San Jacinto Estate, Limited, was held at Winchester House, E.C., on Friday, May 29, for the purpose of considering the report recently issued by the board in reference to the development of the company's property, and the necessity of raising further capital for the satisfactory completion of the contemplated works. The notice added: "Capt. Harris, the expert recently sent out by the board to inspect and report upon the company's property, especially with reference to the working of the tin mine, has just returned to England, and will be present at the meeting, and prepared to answer any questions."

Sir John Stokes, K.C.B.,

presided.

Mr. D. L. SCHÖNBERG (the secretary) read the notice calling the meeting as above.

The minutes of the last meeting were also read.

The CHAIRMAN: Gentlemen, the proceedings of the last meeting, which have just been read to you, will have reminded you that I had the honour of laying before you at that time the position of the affairs of the company when we took over the property, and that we had expectations of opening it up within a certain time. Our general manager, who was present, at that time expressed to you the hope that by Mar. 15 he would have everything in full swing. Those hopes, I am sorry to say, have been frustrated, not altogether by his fault, because the early part of the year saw the most unprecedented amount of rain and floods which has occurred in South California, which swept away roads and railway embankments, and created a vast extent of damage throughout the country, and especially damaged our own works, both at the mine's mouth and in the valley. The water rose to a height which, I believe, has only once before been known to us. That has led to a great deal of expense and a great deal of delay. As a matter of fact, the road between South Riverside and the mill site has been entirely under water for many weeks, and was not in a condition to be used. Therefore, there has been

A VERY UNPRECEDENTED STATE OF THINGS

as regards communications, which, of course, must of necessity have affected such works as we have been carrying out. But I am able to say to you that the realisation of the hopes which we have formed, and which we led you to form, of the richness and the productiveness of the estate have not been shaken in any way. As we mentioned in our circular to you a few weeks ago, we thought right in the early part of this year to send out to the estate a gentleman who was thoroughly competent to report upon the value of your tin mines, in the person of

CAPT. HARRIS.

He is a mining captain of Cornwall of great repute, and a man who was in charge of most important works there, and who is thoroughly competent and able to advise and form an opinion of your property. His reports from time to time have been most satisfactory, and a special report, which summarises all he has communicated to us, has, I think, been put into your hands as you came into this room, and from that report you cannot fail to perceive that you have in the Cajalco Tin Mine—I will not speak of any other valuable part of your property, but in the tin mine alone—you have ample for the realisation of all your hopes. Of the tin mine he says he has never seen a mine of such richness and promise, and the surrounding country—I am speaking of the country in a miner's sense—he says, gives as great a promise as the one which has already been attacked.

THE ONLY FLAW,

if I can so call it, in the starting of this company has been the insufficiency of the working capital provided. There is no doubt that 50,000*l.* for a property of the magnitude of these mines, and other values, was utterly insufficient, and it is for that reason that we have called you together to-day to devise means for remedying that radical defect in our start. If Mr. Robinson had not been prevented, in the way I have described, from carrying out the works to the extent he expected in Dec., when we met you, we should never have had to come upon you in this manner; because if we had been able, as we expected in Mar., to turn out tin ready for the market at the rate he mentioned, we should have had such an amount of money in hand that we need not have minded the capital of our company being so small; but the fact that the completion of the works has been so far retarded left us so small a margin between the expenditure of working capital and obtaining the result that the capital has had to be expended on these works, and the money is not coming in from the tin to make good the deficiency. Of course, if we had not within view and only waiting to be turned out an immense amount of most valuable metal we should not appeal to you for more money, but, as a matter of fact, it is not a speculative question any longer.

THERE IS NO QUESTION THAT THE METAL IS THERE OF A VERY RICH CHARACTER,

and we have only got to turn it out, dress it, and smelt it, to have most productive results. The board are, of course, hindered in exercising their powers of borrowing money by the fact that the debentures which we issued, and on which alone the capital was raised for starting the company, have a priority of claim. Of course we could go to the money market and borrow money on second mortgage, but I am sure that you all understand that a step of that kind means getting money on very onerous terms. And, therefore, what we have proposed to you in your own interests is to assent to a temporary priority of claim to enable us to raise the money required for further prosecuting the enterprise which is really and truly simply a temporary concession on your part, because the expenditure of that money will lead to the speedy realisation and production of the tin that is in the mine; and when that tin is produced there is a ready market for it, and we shall in a short time be in a position to pay off the additional capital which we now propose to borrow. There is oue point in connection with this which, I think, must strike every debenture-holder, and that is this: the debenture-holders have an option up to July 1, 1892, to exchange their debentures for shares of equal value in the company. Those shares are undoubtedly a valuable possession, and the exercise of that option will greatly depend upon

THE PROOF OF THE VALUE OF YOUR PROPERTY,

which will be obtained by turning out the metal. If you have that proof in your hands you can exercise your option—obtain the shares and dispose of them as it appears best to you; but it is clearly to your interests that the assurauces promised should be arrived at for proving by substantial results the wealth which we know to be under your feet. I think, gentlemen, I have really said all I am called upon to do. I have tried to lay before you the value of what you have, and the reasons for arriving at that value as soon as possible. You may not have read the report of Capt. Harris, and I think it will be interesting to have it read, so that you can follow the reading of it; and after that Capt. Harris, who has just returned from the property and is now present, will be glad to answer any questions put to him. I wish you to bear in mind that when you are asking him questions you are questioning a man who, from a boy of 10 years of age, has been engaged working in mines in Cornwall, and one who, through his diligence and perseverance and knowledge, has raised himself from being a boy in a mine to being manager of one of the best mines in Cornwall; and he is ready to give up the management to work your property, which he has seen with his own eyes. Therefore, he must be assured that it is a good property. I wish you to bear in mind that in speaking to him you are speaking to a man whose integrity is vouched for by everybody he has come in contact with. (Hear, hear.) I will now ask the secretary to read Capt. Harris's report.

Several VOICES: Take it as read.

The CHAIRMAN: Very well, then, we will take it as read; and if the shareholders desire to put any questions upon it, Capt. Harris will be glad to answer them.

A SHAREHOLDER: In paragraph 4 of Capt. Harris' report it is stated:—"A better lode I never saw in Cornwall." Will Capt. Harris tell us what level that refers to.

Capt. HARRIS: I will answer that at once. That refers to the deepest part of the mine where we are now taking out the ore at the side of the level, and as far as I can judge it extends as far as we like to work.

The CHAIRMAN: I may add in regard to this that

A TELEGRAM HAS RECENTLY BEEN RECEIVED

from the mines, stating that, "in following up the work the lode is opening in a splendid manner." (Applause).

Mr. MITCHELL HENRY said that it had been stated in the report that the pneumatic stamps could not be got into operation for a period of six months, and what he desired to be informed upon was whether they could be got into operation before the dam was constructed.

Capt. HARRIS, in reply, said that that would depend upon the time occupied in the getting up of the water. They would not have to rely on the dam for water. The storms had prevented the removal of the machinery, but it would not be very long before the stamps would be got into operation.

Mr. SMITH: Are the levels driven on to the lode?

Capt. HARRIS: The lode has only been cut in places.

THE YIELD PER TON.

Mr. FREEMAN: What is the average yield of tin per ton of ore?

Capt. HARRIS: I estimate all ground laid open will produce 1 cwt. 2 qrs. of black tin, which is equal to 7½ per cent.

Mr. FREEMAN said that in the report of Capt. Harris six lodes were mentioned. He wished to know whether in Capt. Harris' experience he had found a lot of lodes running parallel like this to be productive, or were some likely to turn out barren. Was, he asked, tin found miles away from their mine?

Capt. HARRIS said that his experience was that in Cornwall two lodes was about the extent of the biggest tin mine in that part of the world. The parallel lodes might all prove to be productive, but if they all failed to do so, or if only one proved productive, they would have no cause for complaint. (Hear, hear.)

Mr. FREEMAN: Are there any indications of tin in other parts of the estate?

Capt. HARRIS: I have been over the ground from north to south, and I have taken about 20 samples from different lodes, some of them 4½ miles away from the mine.

I HAVE NEVER TAKEN A SAMPLE WHERE I DID NOT FIND TIN,

and I, therefore, have every reason to believe that all the lodes would prove more productive as we go deeper. (Hear, hear.) The fourth lode, however, from the Cajalco is the most productive.

Mr. Freeman: I should like to ask if the mine is in working order, and if it can be kept going without any difficulty. Is there any scarcity of labour?

Capt. Harris: I am happy to say that the mine can be worked all the year round in consequence of the favourable climate. As to the question of labour, there will be no difficulty in getting ample labour in the shallow ground. Even Cornishmen would be willing to go out there. A severe storm might have some effect upon the carriage of materials, &c., but it would not stop the work.

Replying to a sbareholder.

The Chairman stated that it was intended to send out Mr. Hugh Stephens, a well-known mining man of Cornwall, to take up the position (which would be well understood by shareholders technically acquainted with mining terms) as

THE PURSER.

Mr. Stephens would take charge of the accounts, and all the matters of the expenditure would be under his control. Nothing would be expended without his precise sanction; everything would have to be signed, checked and vouched for.

Replying to Mr. Smith, as to the cost of completing the stamping plant,

Capt. Harris said that he did not think that it would cost much more money to complete the stamping machinery, for he believed that in another three months it would be almost self-supporting. (Hear, hear.) What had been done in the way of developing the mine, he considered had been well done. He strongly advised the erection of pneumatic stamps as soon as possible.

Mr. Strain inquired if Capt. Harris could say whether the 50,000*l.* which had been expended had been well laid out, and why it was he recommended the use of Californian stamps in addition to the pneumatic stamps?

Capt. Harris said that he was not at the mine in the beginning of the operations, and could not, of course, say what the cost had been. Mining in California was more expensive than in England. He could say this, that what had been done had been done well. He recommended the Californian stamps, because it was likely to be some time before the pneumatic stamps would be at work, and he thought that the Californian stamps, which could be put up for about 700*l.* or 800*l.*, could be put to work in the meantime. Capt. Harris also said, in regard to the retaining wall of the dam, that it was a portion of the main wall, which would yet have to be constructed. The dam was not intended for the use of the mine, but for irrigating purposes, which would render the property so much more valuable.

The Chairman, in reply to Mr. Powell and other shareholders, said that their orders to Mr. Robinson were not to do anything more to the dam at present. The construction of the dam was undertaken in the dry season, and when completed would prove

A SOURCE OF REVENUE FROM THE SALE OF WATER

for irrigating purposes. He believed that in the present instance it would have been wiser to have left this alone, and to have concentrated their attention on the tin-mining operations. When, however, they were in a position to do so, they would re-commence work on the dam. As to the debenture-holders, the fact of some of those gentlemen having refused to give up their right of priority of claim had been considered by the board, and, in accordance with the advice of their solicitors they had decided—if it were found that there were any dissentients—that sufficient money should be put by to pay their balances. He might say, however, that they had succeeded in getting a large proportion of assenting debenture-holders, fully two-thirds of the whole number and probably more, as they had received very few dissents. They were endeavouring to get the accounts made up from California, but some delay had taken place as the people over there did not quite understand the English style of bookkeeping.

Mr. Powell asked what proportion of debenture-holders have assented to the present scheme?

The Chairman, in reply, said that fully two-thirds had already promised, and he had every reason to believe that they would get four-fifths. He concluded by moving the following resolution: "That the report of the directors Apl. 28 be approved and adopted, and that the directors be requested to take such steps as they may consider expedient for raising by first charge on the property a loan not exceeding 50,000*l.*"

Mr. Mitchell Henry, in seconding the resolution, said that he should not have embarked his money in the undertaking unless he had thoroughly satisfied himself as to the *bonâ fides*, and prospects of the estate and the company. He had many means in California of ascertaining facts connected with the company quite independently of the people who had any interest in it. He could only say that from the information which he had received from various sources

THE SHAREHOLDERS HAD UNDOUBTEDLY A "PLUM."

(Applause.) The property was one upon which they could hardly form too favourable an estimate of its ultimate return to the shareholders. They had not sufficient money, however, to properly develop the property. 50,000*l.* was a large sum in itself, but it was not sufficient to work it properly, and it was necessary to have a larger capital to fall back upon. He appealed to the shareholders to know whether the report of Capt. Harris and the statement of the chairman did not show that there was not a weak point in the whole of the property. They had heard through Capt. Harris that the tin was of an exceptional quality, far more valuable than the tin in this country. It should be remembered, that, although the directors took power to raise 50,000*l.*, it did not at all follow that they would spend that amount. At the present moment the money was needed to put the pneumatic stamps on the ground, and to convey the water to them for working purposes. With respect to tbe dam, it should be pointed out that when the work was commenced it was believed that the solid rock was but 15 ft. below the surface. It turned out, however, to be 25 ft., and they had gone down to that depth, and built it upon a solid foundation, and he hoped the directors would commence work as soon as they possibly could. In conclusion, he would like to know if the new loan would be borrowed for any definite period.

The Chairman said that it was the intention of the directors to raise that loan by small balances and not all at once. It might never be necessary to take up the whole, and they would further endeavour to raise it on such terms as would enable them to pay off at a short date the money raised. The productiveness of the mine would, however, regulate that point.

Mr. Smith asked whether anything was being done with the lands, or with the

GOLD AND SILVER.

The Chairman, in reply, said the lower lands all depended upon the facilities for irrigating them. He might, however, say that they had received offers for the high land for wheat growing, but nothing definite had been decided. There had been some prospecting for gold, but the board had almost regretted that, as they wanted all the attention given to prospecting for tin, and that course would be followed in future.

The resolution was then put to the meeting, and carried unanimously.

A vote of thanks to the chairman for presiding closed the proceedings.

THE FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

EXHAUSTIVE STATEMENT BY THE CHAIRMAN — RETURNS INCREASED BY NEARLY £10,000, AND EXPENSES ONLY SLIGHTLY AUGMENTED—1s. 9d. PER SHARE IN DIVIDENDS FOR THE HALF-YEAR, A BONUS OF 6d., AND A BIG BALANCE CARRIED FORWARD.

The half-yearly meeting was held at Winchester House, yesterday, for the following purposes:—"To receive the report of the directors and the audited statement of accounts of the company for the six months ending Dec. 31, 1890; to declare a dividend; and for other business. The transfer books of the company will be closed from Friday, June 5, until Friday, June 12, 1891, both days inclusive."

Mr. Richard Donagan

(chairman of the company) presided.

Mr. J. Jameson Truran (secretary) read the notice of meeting.

INCREASED RETURNS BY 9,935*l.*

The Chairman moved the first resolution—"That the directors' report, now presented, be received and adopted, and that the accounts of the company to Dec. 31, 1890, having been duly examined and audited, be now passed and allowed." Once more it is our great pleasure to come before you with a satisfactory report. The returns, which last half-year amounted to 26,568*l.*, have this half-year amounted to 36,503*l.*, being an increase of 9,935*l.* It is true that the expenses have been larger, so that the profit has been 10,455*l.*, against 10,001*l.* last half, being an increase of 454*l.* only. The reasons why the expenses have increased are numerous. The outlay on the Cecilia Mine has been considerable; the proportion of tributers' gold has been greater, involving a larger payment to the tributers; during a portion of the half-year, owing to the change in the superintendent, we had two salaries running on, and had the expenses of one going out and the other coming home, and further, a variety of matters attended the change which led to certain payments being brought into the half-year; also there have been sundry expenses connected with the erection of the New Californian mill for Silencio Mine, which at present are charged to mine cost, but which will eventually, when the mill has been set to work, be charged to plant and machinery, though on the other hand the outlay in like manner made in the erection of Cecilia mill has now been brought back to cost upon that mill being charged to plant and machinery. Again, this half-year we have written off 925*l.* for depreciation against 635*l.* last half. The increase is only 290*l.*, but as we all know from experience a number of small items tell up in the aggregate. Out of the sum carried forward on the last occasion, and the accruing profits, we were enabled to pay you an interim dividend of 1s. per share in Mar. last, and to carry 600*l.* to reserve, which amount has been invested in a further purchase of Consols, and at a later stage of this meeting we shall propose the declaration of a further dividend of 9d. per share, making altogether 1s. 9d. for the half-year, and to carry 450*l.* to reserve. The money required to pay these dividends and to make these additions to reserve is in excess of the profit for the half-year, so that the amount of undivided profit will be reduced by 1,972*l.*, and will then stand at 2,949*l.* 1s. 11d. This last-mentioned amount is partly at the mines, partly in the hands of Messrs. Restrepo, and partly in stores, paid for and in transit; and as it is, of course, out of the question to cripple the operations of the company by calling in these monies and running bills for stores required, it is impossible to divide the profits closer up than we now do. At the meeting in May, 1890, I mentioned that in time we might be able to divide closer, and this time we are doing it.

WHY A LARGER DIVIDEND WAS NOT PAID.

I make these remarks because we have had notes and post-cards expressing an opinion that the accounts showed we could have divided more, but which they really do not. We mention that the returns have been the largest in any half-year, except one, and it may perhaps be interestiug to both old and new shareholders to know what this grand property has done. The company was established in 1864, to work the Frontino Mine and the Remedios Mines. The Frontino Mine was sold to the Antioquia Co. in 1874.

REMARKABLE HISTORICAL FACTS.

The combined properties from 1864 to 1874—exclusive of certain months in the early stages of the company, the records of which are imperfect—and the Remedios Mines only from 1874 up to the last advices received, viz., for Mar., 1891, have produced gold which has been sold for 836,491*l.* 17s. 4d. The Frontino Mine since its acquisition in 1874 by the Antioquia Co., up to the same date, has produced gold which has been sold for 66,909*l.* 19s. 8d. The two properties which this company was originally started to work have, therefore, in 27 years produced gold to the value of 903,401*l.* 17s. (Cheers.)

TOTAL DIVIDENDS PAID.

The first dividend was paid in 1876, and including the dividend about to be proposed to-day, and the amount carried and to be carried to reserve fund, the total amount of dividends of this company amounts to 60,333*l.*, in addition to which a sum of 12,000*l.* was, in 1883, written off profits in reduction of the expenditure on capital account, which expenditure previously exceeded the subscribed capital. The Antioquia Co. has recently paid dividends on its preference capital, and such dividends have amounted altogether to 2,849*l.* 5s. for the years 1889 and 1890. These dividend results are not very brilliant in themselves out of returns of over 900,000*l.*, but seeing as the fact is that of the 60,333*l.* divided by this company between 1876 and 1891, 34,457*l.* has been paid in, and since June, 1888, it would seem that this company is at length emerging from the toils of its early struggles, and yielding a fair proportion of profit from the returns. (Cheers.) From June, 1888, to June, 1891, which comprises four Junes, is practically three years and a-half, and we hope that the next three years and a-half may show even better results, but, of course, we cannot say. To pass from retrospection, it will be seen that in the curreat half-year, notwithstanding the occurrence of the dry season—and avery rigorous one—the returns have kept up wonderfully well during the three months of which we have advices ; the value of the gold—exclusive of the gold derived from a special source to which I will refer next—is estimated at 19,211*l.* ; so that the returns for the last three months have actually been about 960*l.* more than one-half of the last six months' return, and as during the last two months or so of the current half-year, that is May and June, there will probably be rain at the mines, and consequently better returns, it may be anticipated that the current half-year may beat the record as to returns. (Cheers.)

A WINDFALL AND A BONUS.

Independently of the above ordinary returns, there was in January a capital windfall for the company, under the circumstances explained in the monthly circulars and the report. This, I may say, was entirely attributable to the skill and penetration of our new superintendent, Mr. Eustice. On his arrival he found that the amalgamating process had for a time been in use at our mills, but had been discontinued because it was not considered suitable for our ores. He was not satisfied on this point, and determined to try some experiments for himself. The result of these showed him that the decision arrived at by his predecessor was quite correct, and very reluctantly he was obliged to concur in the conclusion arrived at, that amalgamation would not do. But he took the precaution of examining the plates, and after scratching and scraping he satisfied himself that during their use they had become coated—and even impregnated—with gold. He therefore had the plates cleaned off, and in that way obtained 1,162 ozs. of gold bullion ; and as that process did not get at all the gold, he melted down the plates themselves into bars, and despatched them to England for sale. The gold bullion, and such of the bars as have arrived, have been sold, and have realised a trifle over the valuation, and we fully expect that when the remainder of the bars are to hand, and have been sold, and the whole expenses have been ascertained, there will be a clear profit of nearly, if not quite, 4,500*l.* As this matter is quite an exceptional thing, and forms no part of the regular transactions of the current half-year, we propose to declare a bonus of 6d. a share, and put 300*l.* to reserve fund out of it. This will take 3,517*l.*, so if, when every thing is realised and settled up, we find there is still some of the profit from it undivided, we can at some future time determine how to deal with it. Perhaps with some subsequent dividend we may add a small further bonus, or put the money to the reserve fund. At all events, there is 6d. a share to come from it this day week, and I feel sure that the shareholders when they receive their dividend warrants, augmented in this agreeable way by the bonus, will thank Mr. Eustice—(cheers)—as but for his cleverness in the matter, these old plates might have been put into the storehouse to be used up whenever a bit of old copper was wanted to patch a roof, or for any odd purpose where iron gets rusty and copper would be a better material. Since the report was published we have had a further letter from Mr. Eustice, and seeing that our profit for Mar. was only 907*l.*, because of the hindrance of the dry season, I will first and foremost tell you what he says about the weather.

IMPORTANT LETTER.

The letter is dated Apl. 23, and after stating that the summer had been very long and dry, and referring to certain arrangements he had made to minimise the consequences of prolonged drought, he says:—"Within the last few days the rains have set in ; they have not yet benefitted us. Still, I am told it is the beginning of the wet season." Of course, you know that the benefit of the first rain is never immediate, because the parched ground absorbs it all for some little time. At Silencio Mr. Eustice, after expressing regret that the dry season should for two consecutive months have stopped operations at the bottom of the mine, reports that the rise above the 220-ft. level has very considerably improved, which makes the prospects in the 150-ft. level very encouraging ; also that the winze No. 2 below 220-ft. level is in very rich ore, carrying abundance of pyrites and galena ; and a table which accompanies states that both these places are yielding 20 tons to the fm., the one 4 oz. ore and the other 5 oz. The rise is up 67 ft. above the 220, so it is very near to the 150, and the winze is down 56 ft., so it has only 10 ft. more to go to get to the 286, when two ends will be started, which work, when completed, will open two good stopes in the rich shoot ; and, he adds, that as this winze is so rich where it has now reached, it may be inferred that equally good ore will be found in the 286. As we may reasonably suppose that the dry season is over now, we may assume that there is now water enough on the pumping wheel to drain to the bottom of the mine, and water enough in the river

TO GET UP OUR TONITE.

so that, doubtless, work is at the present moment going on at the 340-ft. level ; and as the stratification to the bottom of the shaft, and in the level for the 2 or 3 ft. it was driven, when work had to be suspended, there can be little doubt—if any—that the lode will be found in this level, in which case there will be 54 ft. of it between the 286 and the 340 to be got at—first, by means of the winze below the 286 already being sunk on the lode, and yielding 15 tons of 4 oz. ore. and of a rise from the 340, when it shall be advanced sufficiently to allow of such rise being started. The erection of the new Californian mill for Silencio was proceeding fairly well, notwithstanding the interruption to work, caused by the Easter holidays.

ADDITIONAL APPLIANCES.

Mr. Eustice, after explaining a plan he had adopted for bringing some additional water to Silencio from the Guanana stream, mentions that in laying out the scheme for the framework and covered buildings for the mill, he had arranged for the space and the power to work effective machinery for concentrating the rich tailings accumulated, and still accumulating at this mine, supposing we consent to put it up. As to our consent, we have not only sent that out, but we have also sent out two of the machines as an experiment, and which, as they were shipped from New York in February last, are, perhaps, at the mines by this time. We are now only awaiting Mr. Eustice's further instructions to put in hand as many more of them, or something of the kind if anything different should be preferred, as may be required. Six machines will be wanted for Silencio, others for Cordoba, and possibly for Cecilia, so you must not be surprised if you find a portion of the profits expended in this machinery. Eventually, it will be spread over several half-years, and, indeed, the machines may be expected very soon to pay for themselves, but, in the first instance current remittances must provide the money for them.

WORK IN THE MINE.

In Cordoba Mr. Eustice reports that each point in the mine looks fairly well. The No. 7, or deepest level, to which the attention of shareholders has for some time been directed as a point of great importance for the future, was, at the date of the last advices, yieldiug 12 tons per fm. of 1½-oz. mineral. The drop in the returns which has occurred is, says Mr. Eustice, "due only to lack of water." Only eight heads of the 16 heads of stamps have been at work, and those slowly, but if the rains announced continue 12 heads would be at work in a week. In consequence of the difficulty of getting enough water for the 16-head mill, Mr. Eustice had given notice to the tributer to determine his tenancy of the old Rosario mill, which notice would expire on May 15. In the meantime, Mr. Eustice constructed a watercourse from the El Bitumen stream, which works Rosario mill, to the Cordoba mill water-course, and on May 15 the water was to be taken off accordingly, and it was expected that as from that date the entire mill would be at work. Thus we shall soon have the old returns from Cordoba, and in the next dry season we shall not be so badly off as we were last—a good compensation for the cessation of the trifling profit yielded to the company by the tributer's occupation of Rosario mill. At Cecilia we have a different state of things. At the mines before alluded to we have plenty of mineral, but, owing to the dry season, not enough stamping power. At Cecilia the mine has not been able to supply enough ore to utilise the stamping power, which, even in the dry season, we have there in the fine 16-head Californian mill, recently erected.

CECILIA.

The circumstances may be shortly put in this way, that the difficulties and delays were such—including the bottom of the mine being under water through defects in the pumping apparatus, and deficiency of water in the pumping wheel—that very little ore could be got out, while a good deal of expensive work had to be done to make any progress. Winzes were sunk from No. 7 level as a temporary expedient, but eventually it became necessary to concentrate the work on the No. 8 or lowest level. The latest advices report a favourable improvement in the forebreast, the lode of 1 ft. wide having increased to 3½ ft., with a small portion of auriferous pyrites and galena in the quartz. And Mr. Eustice reports that when work on the lode, by means of No. 8 level, is set going, the winzes sunk from No. 7 will be a great assistance to the operations. The No. 7 level has been pushed on, so as to get to where there can be a rise up to meet No. 4 winze sunk below No. 6 level, and No. 4 winze itself has a better quality of ore in it than of late. Mr. Eustice says that when No. 8 level is advanced sufficiently to be under the winzes sunk from No. 7 he thinks there may be a profit, and will do the best he can to bring this about. At this mine a ditch of 250 yds. has lately been made, to bring in some extra water for the pumping wheel, and this it was that enabled the bottom of the mine to be relieved of the water. As it may be interesting to the shareholders to know exactly what sort of drag Cecilia Mine has been upon us of late, we have had a special calculation made of what has been the result during the year 1890. We find that the expenses connected with the erection of the new mill have been during the year 1,038*l.*, which sum, as already explained, or thereabouts—rather less, in fact—has been charged to plant and machinery. The cost of the mine for the year, reduced to pounds sterling at the rates of exchange which have prevailed, has been 8,325*l.*, and the returns during the same period have fetched 5,626*l.* 9s. 10d., so that the expenses of Cecilia have been 2,698*l.* 9s. 10d., in excess of the returns. This amount must not, however, be regarded as all positive loss, because, besides the work for the future that we have had done for the money, the amount mentioned as the cost includes Cecilia's share of the expenses of management, &c., which would have been about the same whether Cecilia Mine were worked or not. Hence, if it had been determined not to work Cecilia at a loss, but to stop the mine, the expenses of management, &c., allocated to the other mines would have been larger. The money spent has been well laid out for the chance of a prospective benefit, and if every mine were to be stopped in case of some consecutive month's loss, all the mines might get stopped upon that principle. If the operations at No. 8 should not be profitable, it may be another matter.

TIGRITO.

At Tigrito the explorations made by Mr. Eustice began very well, but afterwards the ground fell off in value and the work was suspended. Lately it was resumed, the dry season facilitating operations at a spot where there is no drainage. The drivage during a few days previous to the letter of Apl. 23 had again improved, and Mr. Eustice, chiefly from the records of what the mine has done in the past, presumes that it is worth further trial, and this further trial will be made. As this company is largely interested in the Antioquia Co., as a holder of a goodly number of preference and ordinary shares, I

may mention that since our report on this company was published, our report as to that company has been issued. The audit of the accounts has resulted in the announcement that the 5 per cent. paid on the preference shares in November is all the dividend there can be on the shares for the year 1890. However, the new mill in the San Pedro valley, erected in 1890, was got to work on mineral in Jan.. and crushed 74 tons of 10½ dwts. ore in Feb., and, according to the last advices, the Carmen, or principal mine, had lately somewhat improved. It only wants 2,250*l.* a year to pay the full preference dividend of 10 per cent., so that there is not a very large profit required to meet it. This is not being made at present, but Frontino Mine is a succession of pockets and pinches, and as the mine has now for some time been in a pinch, it is to be hoped it will soon be in a pocket again, in which case the preference shareholders will be "in pocket" also. It was intended to have had the Antioquia meeting to-day, but the papers were not ready in time to give the 14 days' notice required by that company's old-fashioned articles, so we had to fix it for the 15th.

AN APPEAL.

We shall be obliged if some shareholders in the Antioquia Company will make a point of attending, in order that we have a quorum at the time fixed, and so avoid having to keep those who are good enough to attend waiting for 35 minutes before we can proceed with the business. A word as to the reserve fund. We have 2,321*l.* Consols, and the proposed additions will give us another 1,000*l.* stock. Our idea is to put 50*l.* to reserve for every penny of dividend, and as a penny dividend takes 536*l.*, that is very nearly 10 per cent. on the profits divided. This plan should be adhered to, so that by means of it, and the investment of the dividends, a handsome reserve fund may in time be built up. The premium on exchange in Colombia has a tendency to fall. We hear that the nickel dollars are to be melted down, with some additional silver put in them and re-coined, which, of course, will raise the value of the dollar, and, consequently, the paper notes representing them. It will, therefore, want more of our gold to produce a given number of these dollars, and we shall be sufferers to that extent. It is to be anticipated, however, that in time the increased intrinsic value of the dollar will enhance its purchasing power, and so restore things; but there must be an intervening period, during which the dollar will cost more gold, but not buy more goods or services.

OFFICERS PAST AND PRESENT.

We have here to-day two of our old officers who have recently resigned their appointments after many years service—Mr. Evans, who years ago went out to fill the office of storekeeper and afterwards became book-keeper; and Mr. Hoskin, whose father was also in the employ of the company for some time, and died there. Mr. Hoskin has been for years the assayer and reduction officer. We are very sorry to lose their services, but they have both had a good innings. I think I may take advantage of their presence here to venture on a few words of panegyric upon the climate of our property, seeing that after so many years of it they appear before you to-day both looking the picture of health. Mr. Hoskin's post has been filled by Mr. Frank Owen, a nephew of Professor Owen, and he arrived at the mines early in Apl. Mr. Evans' post has not yet been filled up, and for a time the cashier there is doing the work single-handed. At the last meeting a shareholder was so good as to refer to the subject of an increase in the directors' fees, and in my reply I said this was a matter entirely in the hands of the shareholders. This was an error of mine, arising through my not having referred to the clause in the articles on the subject since it was drawn and printed in 1886. The clause contains a provision for an increase of 250*l.*, divisible among the directors in any year when 10 per cent. shall be paid. 10 per cent. on 18s. 6d. is a trifle under 2s. a share, and the dividends already paid for the financial year ending June 30, 1891, having exceeded 2s., the increased rate is now being paid, and will appear in our next accounts. The clause goes on to say that the shareholders may, if so disposed, vote an addition to the fees at any time, and perhaps at some future time, if good dividends should be paid, they may pass such a vote, but at present the addition given by the clause in the articles suffices. I will now move the resolution, and after it has been seconded we shall be pleased to hear any remarks and answer any questions. (Loud cheers.)

Mr. ELDRIDGE: Is that dividend from the Antioquia Co. cumulative?

The CHAIRMAN: No, it is not. The 10 per cent. is to be paid out of the profits of each year.

Sir GEORGE HARRIS: I second the motion, and most cordially endorse everything the chairman has told you to-day. We have carefully gone over every point he has submitted to your notice, and I trust you will think that the report is eminently satisfactory, quite apart from the windfall from the copper plates, which we cannot look to, of course, as a recurrent source of income. It has always been our effort in this company not to make spasmodic but regular returns —not to give a brilliant return for six months, and indifferent ones for a much longer period following. With the present state of the mine we may hope that our efforts will be rewarded. We have

ONE DARK HORSE,

and that is Cecilia, but Mr. Giffard (and I do not think there is any better miner to be found) was strongly of opinion that this mine would eventually be found to pay well. We cannot say that this may be so, but we hope it. It has been a drag in the past, and now if we can only bring it in a paying state it will make all the difference between the losses we have been making recently upon it and a good profit. The lode is large but low grade. Our mines were never better equipped than they are now, and I trust that in the future we shall be able to give you very satisfactory returns. (Cheers.)

VIEWS OF AN OLD MINER.

Mr. PETER WATSON: I think, sir, you alluded to the time that was occupied frequently (35 minutes) in waiting for a quorum at Antioquia meeting. Now, gentlemen, I think to-day we have had 45 minutes of illustration of this property which it will be advisable for every shareholder to read, and which has certainly been profitable for every shareholder to listen to. During that time the chairman has proceeded not so much at railway speed as by electricity. (Laughter.) I think his statement, whatever the motive power, is eminently satisfactory. At the same time he might have said a little more with regard to the development of the property. I hold in my hand the report issued in May, 1888. There I find that the whole of the places worked in Silencio at that time were valued at 4½ ozs., but to-day they are valued at 22½ ozs.. or nearly five times the value of the earlier period. (Cheers.) Cordoba was then worth 4 ozs. to the ton in all places worked, and is now worth nine. I do not think it necessary to call attention to other portions of the mine, but the report of to-day and the report of 1888 are in most promising contrast. I see here Captain Hodge, who was then our manager, and to whose initiative in a large measure Silencio was started, so that the present manager is simply continuing what Captain Hodge commenced, and it is only due to the latter gentleman to say so. When I predicted last meeting that the company would pay 4s. for a year, I was thought by some persons to be unduly sanguine. Now I have been connected with mining for 45 years and upwards, and have seen my sanguine days, and days in which I have not been so sanguine; but if ever I was elated about this property, it is at the present moment, for you have issued the best report that the board has ever presented since the mine was started in 1864, or later on,

WHEN THE SHARES WENT FROM 2*l.* TO 6*l.* 10s.

The truth of what I am saying will be revealed by the returns of the ensuing months. There is no doubt in my mind that Silencio is going to be a very big and rich mine for many years to come. It would be difficult to go into a valuation of the returns, but in the next six months I think the manager might be able to give you some details with respect to them. I hope the directors will not lose sight of this suggestion. I wish to make a further one: I think it is too long to go six weeks after the closing of the accounts of the mine to get at the returns and profits. You have had from time to time the telegraphic messages, and if you cable good news you should cable bad news, or what is termed so. I think as soon as the accounts are closed the shareholders are eutitled to know the result as early as possible, and before any one has it. I have heard certain remarks which ought to be put a stop to, that prior information is obtained in London, and I am sure that it is not your desire that this should be the case. (Cheers.) I have known the directors too long to think for a moment that they would be a party to anything of the kind. It would be desirable to hear a word from the two officers who have returned from the mine, and who are present. Having made these suggestions I have only, in conclusion, to congratulate you on the excellent statement you have submitted to-day. (Cheers.)

VIEWS OF THE FORMER MANAGER.

Mr. HODGE (the former manager), who was heartily received, said: I am not a shareholder—I wish I were. On principle I do not hold a share in this world, because I do not believe that any manager has a right to be a shareholder in any company. All I can say, for the second time, is that I beg to endorse everything that Mr. Donagan has said. He has distinctly stated the position of the mine, and in the report there are one or two things which I, as the late manager, think I have a right to speak of. First as regards the plates. I stated at the last meeting that you had competent officers and thoroughly good directors. That statement has been proved by the results at the mine, and the report submitted to-day. There is a gentleman here who was the assayer when I was at the mine, who knows full well that we have scraped the plates before Mr. Giffard and I discussed this matter in 1888. We had scraped them not to a great extent, and these plates instead of being in use three years had been in use five. We were fully aware of this, and I had reported that I did not think these copper plates were suitable for the treatment of the ores, though I now quite agreed as to the vote of thanks to Mr. Eustice, and permit me to unite my vote of thanks to him with yours. As regards Silencio, I told you when last here that it was opened out, and that we had discovered a very rich lode. I say *we*, because no one there is *I*, and Mr. Eustice is reaping, and has reaped, the benefit of those rich points since my departure. As regards Cecilia, I had a conversation with Mr. Giffard. It was always a source of trouble to us, but I believe there is a bright future for it. That mine has a vertical lode, greasy walls that are always crushing in, and bad machinery, but to-day it has good machinery, and when I left, owing to many inconveniences and stoppages, and at times very little assistance (as my directors know) the mine crushed together to such an extent that the costs went up greatly, and I had to get mineral for the mill by falling back on the reserve, which should not have been touched. I told Mr. Eustice on his arrival the exact state of Cecilia, how sorry I was to have to turn over to him a mine in a state I should not like it to have been in. As regards Cordoba, there is a rich mine which has turned out as I predicted. As regards No. 7 level, I firmly believe the lode holds down to it, but Cordoba has been a series of deceptions on account of the divisions in the lode. Many times in Cordoba previous directors have almost been in despair, and Mr. Giffard was so much in despair that he had actually the papers drawn out to let it as a tribute mine. This will show you that the best miner may be deceived like the best financier. Mr. Giffard had even made arrangements with the directors of the company to let the house at the mine to a tributer. To-day it is the richest mine of the company. As regards Tigrito nothing has been said about it. I spent money there and tried to make something of it. The water is to be taken to Cordoba, and Tigrito will have to stop, because it receives its water from the Rosario mill. The Rosario watercourse works that mill and from thence proceeds to Tigrito. I am sorry for this division, which gives me the idea that your officers are not so competent as I thought. I shall ever have confidence in and respect for the directors, but I think if the water from Pocuné could be used for the Cordoba mill (and I think have spoken about it to the directors lately) it would be well. When Tigrito proves itself to be a mine worthy of consideration and working, the Pocuné water can be brought to it and it can go on. Nothing will be lost by taking the water from Rosaria to Cordoba. If Tigrito has not the mineral to be milled at a profit take the water immediately to a mill and a mine that can give profits. I am pleased to say it is being done, but to me it proves, on the other hand, indifference as to Tigrito Mine. It is a wise act, because it is utilising water at a profitable mill, whereas it has been used at a mill previously that has not given profit. I have as much faith to-day in the mine as when I laboured there myself with my brother officers to give our best services to the company. Our services were not in vain, as the results have clearly proved. (Cheers.)

VIEWS OF A COUNTRY SHAREHOLDER.

Mr. G. W. TAYLOR (Stroud) : Although I have been a shareholder for a long time this is the first meeting I have ever attended. We have had some good months' returns, but now we get a blank. March return showed 1,137 tons crushed, with only a profit of 907*l.*, and Mr. Eustice attributes it to the drought. In September he only crushed 875 tons, but he said nothing about the drought. In October he crushed 819 tons, and made a profit of 1,500*l.* In November he crushed 831 tons, and made a profit of 3,400*l.*, and in December, 1,000 tons, and made a profit of 3,500*l.*, but in none of these months did he speak of drought or rain. Now, I consider you should crush the ore as you win it. Look at the expense of the last six months, 25,000*l.*, or, including tributers, 42,000*l.*, with London expenses added. I look upon this not as a speculation but as an investment. Let us all look upon it as we do an industrial undertaking. It appears to me that for the past few months the rich ore has been crushed and the other put aside. Is not that the sort of thing that is very often done Mr. Hodge ?

Mr. HODGE : Very often.

THE TELEGRAM.

Mr. G. W. TAYLOR : On the receipt of the well remembered telegram the shares went to 27s. 6d. and 30s., but no shareholder would have thought of selling at these prices, because there was a return of over 6s. per share, or 30 per cent. on the 1*l.* share. The telegram showed a profit of over 7,000*l.*, which was equal to over 60 per cent. on the 1*l.* shares. But it did not divide the return by stating that so much had been made from the mine, and so much from the copper plates. It ought distinctly to have stated the returns from both sources. (Hear, hear.) Were the results from the copper plates overlooked by accident, or by design ? If by accident, where was the supervision ? that failed to see before that these plates had clinging to them nearly 5,000*l.* worth of gold. I wish to speak in the most friendly way to everybody. I have never bought or sold a share, and when I wrote to Mr. Truran, he replied that

MR. EUSTICE HAD SENT THE CABLE WITHOUT INSTRUCTION OF ANY SORT,

and that the directors had written to him for an explanation of his indiscretion in doing so. I think he should have sent the returns in the ordinary way. Why did he want to sent that sensational telegram ? When the telegram came Mr. Truran explained—"We can now give a possible explanation of that increased return." Mr. Eustice says he was going to borrow a mill from one of the tributers, and that he would be able to crush three times more of the Silencio ore."

A SUGGESTION THAT MEETS WITH NO SUPPORT.

That very month he crushed less that in the previous one. I should like to see a powerful committee appointed to sift this matter to the bottom, and at the same time not to forget to inspect the transfer register to see who sold. I do not believe the directors knew anything at all about it. (Hear, hear.) It would be such a mean and discreditable way of getting money that a beggar in the streets would scorn it, and certainly I do not believe the directors knew anything about it. (Cheers.) I have always had a great opinion of the mines, and remember a director saying that some one offered him 5,000*l.* for 1,000 shares. If we have further cables let the distinct sources of profit be stated.

The SECRETARY : We have had telegrams before—many telegrams—but not with regard to produce.

Mr. G. W. TAYLOR : On Mar. 28 the secretary wrote :—"I think with you that Mr. Eustice ought to have stated that the produce was partly from the mine and partly from the old copper plates. We did not know he was going to telegraph, or that the copper plates were going to be melted down. He did it on his own responsibility, and without any previous advice or notice of any sort."

Mr. S. W. ELDRIDGE : I rise to support the adoption of the report, and to say that although we think it was a mistake on the part of Mr. Eustice to have sent the telegram without explanation, the directors cannot be held responsible for it. It was unfortunate that the sources of revenue were not distinguished, but there is no one in the room who for a moment would dream of thinking the directors knew anything about it. (Cheers.)

CHAIRMAN REPLIES.

The CHAIRMAN (warmly) : I cannot allow such a tissue of misrepresentations as Mr. Taylor has indulged in to go without reply. He says this is the first time he has attended one of our meetings, and that may account largely for his ignorance on the matters of this company. I am sure if I have explained once I have explained 20 times, that when there is plenty of water at the mill all the heads are going at full speed and can be lifted to their fullest extent to crush the hard and rich ore, but when the water is scarce the power of the mills is reduced and the heads can only be slightly raised so that nothing but the soft ore can be dealt with. Therefore it is necessary in the dry season to crush the soft ore and in the wet season we crush the hard ore which is the richer and which gives the better returns. That is the explanation of the whole affair.

Mr. HODGE : That is a full and complete explanation of the difference in the returns. (Cheers.)

The CHAIRMAN : Yes ; and I have said it many times, but that is only one of the statements made by Mr. G. W. Taylor that is incorrect. With regard to the profits and the telegram, I feel almost inclined to paraphrase Shakespeare. King Lear (although I must say that Mr. Eustice, with his short cropped black hair, is not like the ancient monarch with his white and flowing locks as generally represented)—King Lear says : "Ingratitude—thou miserable-hearted fiend—more hideous when thou showest (in a shareholder) than the sea monster." (Laughter.) Yet there are persons, with all the dividends they have had, who stand up and find fault with Mr. Eustice because his telegram did not contain every information, but my experience of telegrams is that when once they begin to explain they become ambiguous. I can quite conceive that Mr. Eustice was so pleased with this news that he sent it off that we might know it, not thinking for a moment that the consequence would be speculation. That telegram arrived 20 minutes or so after I had left the office, and Mr. Truran sent it on to my house. I returned from a concert at five minutes to 12, and it took my breath away. I sat down instanta and summoned a board meeting for the next day at 12, and waylaid the postman (our last clearance is at midnight), and got him to put the letters into his bag, by which means notice was sent out. I did not go to bed till half-past two. I wrote the circular, and we attended the board meeting the next day. That afternoon the circular was in print, and in the post, and if somebody else happened to have a telegram before us how could we help it. Telegrams are to be depreciated. This is how they are sent. A messenger on horseback. A sealed message comes to the board, is opened by the board, and is made the subject of communication to shareholders and newspapers simultaneously ; but if a telegram is sent it becomes public property. A telegram is sent on muleback, and there can be a dozen sent off at the same time, and ours may be the last. I say, let us have no telegram. If it comes to a stoppage of the monthly returns we will discontinue them, and give the news half-yearly at each meeting. I do not mind a printed statement, but as to a monthly telegram—it is a perfect farce, because everyone can get one before us. Therefore, we will not have anything of the kind. With regard to the question of the committee, I was never more annoyed in my life. I stand here to-day with this report in my hand as the result of eight years' hard work during which this mine has been brought into its present highly prosperous condition. If anybody proposes ; if anybody dares to propose ; I will go further, and say if anybody has the impudence to propose a committee of investigation, I will attend at everyone of its meetings ; I will give every information ; I will treat its members with the great consideration, and the shareholders shall have its report ; but whatever that report may be, whether favourable or unfavourable, whether finding fault or giving credit, directly that report goes out I resign. (Cheers.) I should leave you, because I should consider that you had acted ungratefully, and that you were not worthy of such further services as I could render you. In fact, I could not render them after I had been submitted to such a stigma as would be implied by investigation. (Loud cheers.) As to directors selling their shares—we met you on Dec. 4, 1890, and then the directors held a certain number. They are held by them to-day and they are the same shares. They have neither bought or sold anyone of the shares that stood registered in their name on that date. As the telegram only arrived on Feb. 11, there is no occasion to go further back than the Dec. meeting. I will communicate with Mr. Eustice what has been said about the Tigrito Mine and also the reserves. I only hope I have not spoken too warmly, but I felt acutely that anyone should propose the appointment of a committee of investigation. (Loud cheers.)

The report was unanimously adopted.

The CHAIRMAN proposed "That a dividend of 9d. per share, free of income-tax to this day, be declared payable on June 12, making with the interim dividends already paid 1s. 9d. per share for the half year.

The Hon. F. C. DRUMMOND seconded the motion which was carried.

The CHAIRMAN proposed : "That a bonus of 6d. per share be declared, payable on the 12 inst."

Mr. LOWE (director) seconded the motion and said : It was I who stated that 25 years ago Mr. Peter Watson offered me 5,000*l.* for 1,000 shares, and I have those shares now.

Mr. PETER WATSON : I used to buy these shares in thousands at 5*l.* and 6*l.*, and hope to do so again.

The motion was carried unanimously.

Sir GEORGE HARRIS (director) : In regard to the telegram in that part of the world there are other companies, and at night the affairs at various mines are probably talked over, and very likely a telegram got off before ours. If we had been in Mr. Eustace's place we might have made the same mistake, but bear in mind the telegram says, "remittance is so much, not the profit." You must look at it from all points of view, and not assume too much. We can tell that so far as our own people are concerned there has been no trafficking in the shares, and it is astonishing how few shares changed hands at that particular moment.

Mr. PETER WATSON : I should like to propose a vote of thanks to the chairman and directors. Although Mr. G. W. Taylor spoke with warmth, I did not think he desired to convey any imputation upon the directors, and I can quite understand that Mr. Eustice was so elated that he would have sent off the telegram without distinguishing, as it would have been better if he had done, the different sources of revenue. The matter is now over, and shareholders will understand the explanation. I am sure any shareholder who knows the devoted services of Mr. Donagan to this company, would not think for a moment of casting the slightest reflection upon him. More than that I am perfectly certain that if a committee had been proposed, there was not a shareholder in the room who would have seconded the motion. (Loud cheers.) I hope shareholders will go away perfectly satisfied with the explanation and with the great value of the property. (Cheers.)

Mr. G. W. TAYLOR : I second the motion with great pleasure. (Hear, hear.) Truth is not flattery, and I am bound to say that when I wrote to the chairman for information, I received from him about 12 pages of foolscap. (Laughter.) We went into every detail, and I kept the document and showed it to my friends. I certainly did not mean to cast any reflection upon the chairman.

Mr. ELDRIDGE : I desire to add my congratulations to the chairman and my support to this vote of thanks. I have special reasons, as a large shareholder, to be grateful to him and his colleagues. It was not so long since that we were all in the depths of despair, and it would be the basest ingratitude now that we are in prosperity if we did not acknowledge the services of the board. It will go forth to the shareholders of the company and give them great satisfaction to know that you have not parted with a single share.

The motion was carried by acclamation, and with the brief reply of the CHAIRMAN the meeting was brought to a close.

HOLLOWAY'S PILLS.—Weakening weather.—The sultry summer days strain the nerves of the feeble and decrepit, and disease may eventuate unless some restorative, such as these purifying Pills, be found to correct the disordering tendency. Holloway's medicine gives potency to the nervous system, which is the source of all vital movements, and presides over every action which maintains the growth and well-being of the body. No oue can over estimate the necessity of keeping the nerves well strung, or the ease with which these Pills accomplish that end. They are the most unfailing antidotes to indigestion, irregular circulation, palpitation, sick head ache, and costiveness, and have therefore attained the largest sale highest reputation.

TASMANIAN LAND AND EXPLORATION CO., LIMITED.

A SUCCESSFUL YEAR.

THE directors of this company have issued the third annual report in anticipation of the general meeting to be held on June 12, and we must congratulate them on the promptitude with which this document has been issued. The accounts are made up to May 12 last, and the shareholders are, therefore, in possession of them considerably within one month of the time of closing the books. From the report itself we glean the following facts:—The company has acquired the mining lease of a property at Mount Zeehan consisting of 80 acres, on which, their engineer reports, there is a valuable silver lode, assaying from 65 to 115 ozs. per ton. At the end of last year the company sent out an exploration party under the instructions of their consulting engineer, to search for minerals in the unexplored parts of the north-west coast of Tasmania. They recently discovered two silver lodes near Mount Tyndall, the outcrop of one being 120 ft. wide. The prospectors have secured, on behalf of the company, from the Government, the mining rights over 320 acres of land through which these lodes are expected to run. A few days since the prospectors discovered a large silver lode near Lake Dora. The company's engineer cabled on May 23 that "the outcrop is most promising," and on May 28, "prospectors pegged 800 acres." The directors have had a large number of business proposals made to them. Since the company began operations, a great change has taken place in Tasmania. Capital is flowing in from the neighbouring colonies, and considerable activity is now shown in the development of its mineral wealth. As many as 80 Tasmanian mines have been floated in the Australian colonies during the last two years, which shows the confidence Australian people have in these undertakings. The accounts show a profit for the year of 2,310*l.* 12s. 3d., of which the holders of the founders' shares are entitled, under the articles of association, to one-fifth, leaving the sum of 1,848*l.* 9s. 10d., which, together with the amount carried forward from last year, gives a balance of 2,107*l.* 2s. 10d. available for distribution among the ordinary shareholders, out of which the directors recommend that a dividend of 10 per cent., leaving 561*l.* 2s. 10d. to be carried forward. The directors now recommend the distribution of 1,546 shares in the Tasmanian Silver Mining Co. among the ordinary shareholders by way of bonus, or further dividend, at the rate of 10 per cent., and that the balance of 7,386 shares should be carried forward.

REPORTS OF MEETINGS.

THE ALMADA AND TIRITO CO., LIMITED.

AFTER SPEECHES BY MR. JOHN TAYLOR, THE CHAIRMAN, AND MR. SWAFFIELD, THERE IS A CONSENSUS OF OPINION THAT THE MINE LOOKS FAR MORE PROMISING THAN IT HAS EVER YET DONE.

THE ordinary general meeting was held at the City Terminus Hotel, on Wednesday, for the transaction of the ordinary business of the company, the election of directors, and the appointment and remuneration of auditor or auditors.

Mr. Samuel J. Wilde

(chairman of the company) presided.

Mr. W. F. GARLAND (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I shall make but very few remarks, because you will all be more interested in what Mr. Taylor has to say than in anything I have to tell you second-hand, but I must refer to a few points. Since the last general meeting Messrs. John Taylor and Sons have become the managers of the company—a result I strove to bring about long years ago, but never could persuade them to undertake the matter. Therefore, it was quite in accordance with my view, when Mr. Swaffield was fortunate enough, about a year ago, to arrange with them that they would take the company in hand. As a matter of fact, it is very curious, but everybody knows how skilful they are, though in this case they have had

A PIECE OF REMARKABLY GOOD LUCK;

because the most valuable discovery in the mine for a long time was made soon after they became the managers. That was good luck, but the skill will be to make the most of that and other discoveries which, from the report Mr. Davey sent us, we are all strongly of opinion will follow. Mr. Taylor will, of course, refer to Mr. Davey's report and the different things he recommends, many of which were those which I urged myself when I was liquidator, or one of the two liquidators of the old company, and was very anxious to see undertaken upon the re-constitution of the company, but we were unable to do it. Things are very different now. I have been a shareholder in this company a good many years, and was so a long time before I became a director; but, speaking persoually, I do not think during any time since I have been a shareholder have the prospects of this concern looked anything like as bright and promising as they do at the present time. (Hear, hear.) You will hear what Mr. John Taylor has to say, and after that perhaps you will be very much of my opinion. It is proposed that Mr. Sanchez, who has managed very well in many respects, should carry on the work, but it is a great deal more than one can properly undertake to manage a concern like this both above ground and underground, and the Messrs. Taylor are searching for a man more especially to undertake the mining operations. It is rather proposed that we should go on as now with the workings, with the exception, perhaps, of the sinking of the Dios Padre shaft. That is a new shaft, which was commenced some few years ago. The ventilation is so bad, that Mr. Davey says he was never in a miue iu such a state in his life. Therefore, it will be necessary to spend some money immediately to improve the ventilatiou. You will notice iu the balance-sheet 500*l.* put down to the inspection of mines account. The reason it appears in that particular form is that the money was paid into the Messrs. Taylor's hauds before Dec. 31, as it was intended that Mr. Davey should go to the mine at that time, but he did not go till long after that date, and, therefore, the 500*l.* was really standing on Dec. 31 as an asset. Of course it will be disposed of differently in the current year. I have only one point more to mention,

A GOOD TELEGRAM.

We have telegraphed out lately to know the latest information, so as to lay it before you to-day, and also for the estimated profit or loss, as the case might be, for May. This is the reply:—

"Month's profit for May, estimated !$7,000; shipping bar silver, $6,000; mine looking well; pushing on operations."

So that financially we are comfortably off just now. At the present time we have 600*l.* at the bank, 800*l.* on its way home, which will be here soou, and these bars mentioned as coming forward, which will not be here for some little time, but which are estimated to produce not less than 1,000*l.* (Cheers.) Some question has been raised about the priee of silver, and how far it will affect us. We wrote out to inquire about that, and the result is that except for any bars of silver sent to England, as the Mexican Mint always buys it at a certain fixed price, whatever the price may be, except for bars sent to this country, it makes no difference to us. If, in course of years, a great change takes place, it might more or less affect the question of wages, but for a long time past it has had no effect at all. I will now move "That the report and accounts presented to this meeting be received and adopted. (Cheers.)

VIEWS OF A 20 YEARS' SHAREHOLDER.

Mr. HENRY SWAFFIELD (director): I beg to second the resolution, and in doing so may say that we can fairly congratulate ourselves on the improvement that has taken place in the position and prospects of this company's affairs. When we met 12 months ago we were utterly depressed, for we seemed to be drifting towards another liquidation. Hence a few of us put our shoulders to the wheel in the hope that wo might be able to get the company out of the rut. Now, as the chairman has explained, cverything is changed and everything is cheering. We have the benefit of the help as managers of Messrs. John Taylor and Sons. (Cheers.) We have been

MAKING PROFITS DURING EACH MONTH

of the present year, and notwithstauding the fire, I gather from the telegram, the chairman has just read, that the outlook for the future is very encouraging. I may say it is highly creditable to Mr. Sanchez that he showed so much resource and acted in such a commonı sense way in the means he took to put out the serious fire at the mine. Although not trained as a miuer, Mr. Sanchez is evidently a man of cousiderable ability, and this is shown in his correspondence, and in the abundant statistical information which he sends home. I sincerely hope that tho Messrs. Taylor will be able very soon to secure two suitable agents to send out to Mexico to help him—the one to look after the mining operations, and the other to superintend the reduction works. Mr. Sanchez will then have more time to devote to the commercial part of his work, which he appears to be well suited for. We shall, by and by, have to spend some capital on improvements under the direction of our managers, but for a little while longer we might go on as we are now doiug, and in the interval I believe satisfactory profits will continue to be made. On Dec. 31 we had the heavy balance against profit and loss of 5,800*l.* Already, we have wiped off over 3,000*l.* of this sum, and hope very soon to clear off the balance. When this is done we shall have about 6,000*l.* of capital in hand clear of all liabilities, and this sum will go a good way towards meeting the immediate outlay, and anything beyond will be available for dividends. I have been connected with the Almada and Tirito Mines for nearly 20 years, and can justify what the chairman has stated, for, in my opinion, the mines have never looked so well, nor has the position, generally, been so promising as it is at the present time. (Cheers.)

SHAREHOLDERS GET A CLEAR IDEA OF THE STATE OF THE MINE AND ITS REQUIREMENTS.

Mr. JOHN TAYLOR, who was heartily received, said: I believe, gentlemen, that you will have thought this report which has been circulated amongst you satisfactory, nothwithstanding the occurrence of the fire, which has so unfortunately retarded the works we had in hand. The result of Mr. Davey's examination of your property is to lead us to the opinion that your mines can most undoubtedly be profitably worked. At the same time, he has made it very clear to us in the very long and exhaustive report we have had from him, and in the numerous consultations we have also had together, that there are various matters, both in connection with the miniug works and also in connection with the treatment of ores and their manipulation, which are not at all as they ought to be, and which must be put right by us as time goes on. The silver ores in this mine (as perhaps you may be aware) are found in veins, which are ramifications of a very wide mineral band, lying between walls that are something like 180 ft. apart—of course not all containing silver ore, but these veins that run through it do often contain rich ores, especially oue which you have recently discovered. The walls, whieh are so widc apart at the adit level, are evidently

APPROACHING ONE ANOTHER AS THEY GO DEEPER,

and, therefore, we may hope with some reason for a concentration of the ore bodies as greater depth is obtained, and that is one of the things that I shall strongly recommend you to pursue. A great portion of this large band is, of course, unproductivo, but in it occur these rich pockets and branches, which are sometimes very large, and it is in order to secure anything like continuous working and an ample supply of this ore to the mill that there must bo maintaiued a vigorous system of exploration that fresh bunches may be developed and opened up as those you arc working upon become exhausted. North of the Balvanera shaft, on tho main lode, there is a bunch worked at in the 24-fm. level something like 300 ft. long, from which a great quantity of ore has been taken, and from which Mr. Davey tells us we may anticipate a further considerablo quantity of ore. You are aware of the discovery recently made, which the chairman put down as a pieco of "good luck" to my firm. That is also to the north of the Balvanera shaft, but not upon the same vein, but upon what is called the 100 ft. lode. This is a vein lying to the west of tho main vein 30 to 40 ft., aud it is impor-

tant, because the silver ore is considerably richer than that worked previously—running 100 ozs. and more to the ton. Special attention must now be devoted to following the development of this bunch, and also to the more systematic exploration of the lode on which this bunch has been found. Very little work has been done on this lode, and it is one to which I look with great hope in the future. In addition to that, the Balvanera shaft should certainly be deepened, though it is the deepest already in your mine. It should receive special attention, because of the fact I have placed before you that the vein becomes narrow as it goes deeper, and, therefore, more concentrated in its character. About 500 ft. to the north of the Balvanera shaft is another shaft which is practically a little mine in itself, and of which you have heard a great deal, called the Cruz Verde. The shaft is only 140 ft. deep, and very rich ore has been found. Mr. Davey looks upon this as a most interesting point, and strongly advises you to push on the work there. Since the time of his visit to the mine four months ago, in consequence of the fire, very little work indeed has been done in the mine at the adit level in the original workings, but you will have noticed in Cruz Verde Mine the work has been continued without interruption. I look upon this as an important working and one which is worthy of vigorous prosecution, not only because of the rich ore met with, but because it is immediately above the great stope I have spoken of which has produced such a large quantity of ore in the 24-fm. level below. With regard to the fire—it was a most unfortunate circumstance, and no one could regret it more than I did.

NO "GOOD LUCK" IN THE FIRE.

That certainly was not a piece of good luck for my firm—(cheers and laughter)—coming so soon after we had joined the company. It will not entail such heavy additional cost as we might have expected, because when Mr. Davey left the mine only three weeks before the fire broke out, he had quite made up his mind, knowing nothing of the risk of the fire, that it would be absolutely necessary to drive a loop tunnel round the old Tirito shaft, because there were indications of "creeping," and of a coming together of the ground in the neighbourhood of that shaft, and he saw that it was unsafe, and that the shaft was in danger. You will easily understand what that would mean when I say that that shaft is 1,050 ft. from the mouth of your tunnel, whilst other workings are some 3,000 ft. distant from the same point; therefore, you have a number of workpeople labouring north 2,000 ft. further in the mountain, with no possible means of exit from their work, except through the tunnel, a portion of which is right in this dangerous spot, which led Mr. Davey to say—you must drive this loop line as it were. It is a very simple matter. The tunnel being straight you come round to it at half a circle again, and into it, and beyond all danger of collapse. That work is being accomplished, and I think the greatest credit is due to Mr. Sanchez for the rapid way in which it is being done. (Cheers.) It is not every mine where I can point to 7 ft. and 8 ft. a day, which is excellent work in every way, although, of course, it would have been impossible had the rock been excessively hard. (Cheers.) You will readily understand that we cannot in any proper way conduct a mine of this kind with only one means of exit. It is a most improper and dangerous condition of things, and one that could not be tolerated by persons with a knowledge of such matters. In addition to the exit for the men and access to the mine, there is also the question of ventilation. Now there is no doubt which is the best shaft to sink. A shaft must be sunk from the surface to this tunnel, and then you will easily see that the air will go in from the tunnel and out through the shaft, and you will have a regular system of ventilation. 2,970 ft. from the mouth of the tunnel you have

A SHAFT CALLED THE DIOS PADRE.

Necessarily that must be the most advantageous shaft to sink, because it is the most northerly. The sinking will be in solid rock, and not in treacherous country rock such as you have in the Tirito shaft, and, unfortunately, in one or two others. The Balvanera shaft has collapsed entirely, doubtless in consequence of not being in the hard rock. The Dios Padre, which you will see mentioned in future reports, is now 310 ft. deep, and there is about the same distance to sink to reach the adit level, and by doing this I have not the least doubt we shall have a capitally ventilated mine, and shall all sleep comfortably, knowing that should any unfortunate accident happen in development work the miners will not be entombed. In addition to Mr. Davey's advice in regard to the mines as already mentioned, he speaks at great length with regard to the manipulation and treatment of the ore, and indicates the manner in which various improvements and economies can be effected, but as that is a purely technical question it is hardly one upon which you would like me to enlarge, though I should be glad to do so should such be your wish. Mr. Sanchez, in his report, has pointed out rather forcibly the great disadvantages under which he has laboured, and also indicates that he has not got quite clear of them, but he is evidently a man of immense energy and push.

JUSTICE TO MR. SANCHEZ.

He has, I think, done extremely well recently, and, as I have already told you, I believe we may look with very great confidence to the future of your property. (Loud cheers.)

SHAREHOLDERS ASK QUESTIONS.

Mr. F. R. BLUETT: I observe in the expenditure that we have an item of 24,342*l*. which, after deducting the exchange, 214*l*., leaves 24,128*l*., whereas last year the expenditure was only 11,024*l*., so that in this account it is more than double, and for that reason appears to me to be excessive. There is no doubt the chairman will be able to explain it very fully. The receipts, I observe, are considerably increased. With respect to the 500*l*. you have mentioned—at the commencement of the meeting I gave you notice of my intention to speak about that, and am pleased to learn from you that it is an item to be dealt with hereafter. With reference to that, I think it was mentioned at the last general meeting that that amount would include everything. Will there be any further expense beyond the 500*l*.? With these few remarks, I will conclude by asking the chairman kindly to answer my questions.

The CHAIRMAN: The amount includes all the travelling expenses of Mr. Davey who went out, but no portion of that money goes into the pocket of Messrs. John Taylor and Sons.

Mr. BLUETT: I did not suppose that it did.

The CHAIRMAN: I believe it includes everything.

A SHAREHOLDER: 500*l*. seems a large sum for this mission, and I believe Mr. Davey went out to inspect other mines, so that I should have thought the charges would have been divided.

The CHAIRMAN: He only went out to inspect one other mine, and if he had gone for us alone the outlay would have been larger. (Hear, hear.)

The SHAREHOLDER: I heard of one other, and thought he might have inspected several. (Laughter.) Mines always seem to expend a good deal on management in England, and seem to be conducted more expensively than ordinary commercial companies. I think 1,392*l*. for the management of a mine that does not pay its way seems a very large sum. The audit fee (21*l*.) also seems excessive for a small company like this, and I should be glad to do the work for half the amount. I think we ought to try to keep the expenditure down until we get into a more prosperous condition. I have felt much greater confidence in the company since Mr. Swaffield has joined the board, for I believe his abilities and capabilities to be great. Altogether the position of the company has greatly improved.

ALMADA PATRIARCHS.

A SHAREHOLDER: I am glad to feel that there is such a glow of hope running round the room with regard to Almada affairs. I was glad to hear that the cool English nature of Mr. Swaffield was able to endure the disappointments of 20 years, but now that I come to look back I have been in the company myself 10 years, and still go on hoping. (Laughter.) Seriously, I do feel we are in a more favourable position than we have been for a long time past. (Cheers.) I should like to direct the attention of the meeting and the board to a few matters of practical importance in connection with the accounts, and have no doubt that the chairman, or one of the experts, can give very satisfactory information concerning them. First of all, I should like the chairman to distinguish between salaries and wages, and let us know the amount under each heading and how it is classified. I think it always more satisfactory if the salaries of officers are stated separately from the amount paid for labour. With regard to the item of stores—the expenditure has been 5,838*l*. Now, although I have not very much experience in the details of mining, but I do know this, that in stores careful overlooking may effect a larger saving than can be made in almost any other direction.

IS IT SO?

In Cornwall it is said that many of the mines are run for the sake of supplying stores, and am inclined to think there is a good deal of truth in it. I am far from suggesting that it is so here, but it is a matter to be looked into with very great care. Some of these items might mean the difference between the company earning money and paying it all away in expenses, or paying part in expenses and part in dividends to the shareholders. (Hear, hear). Is that a satisfactory amount spent for stores out of a total of 24,342*l*.? Then, fuel absorbs 3,878*l*., which seems a big item for working a mine where the total expenditure is what I have said. As to the expenditure in England, I find salaries 532*l*., and a little lower down, managers, secretaries, clerks, and rent 230*l*., and take it that these are chiefly for salaries, apart from the rent; but why should the items be distinct? In the balance-sheet I notice that one of the assets is 3,377*l*., and would like to know whether that is excessive for the stores and spare machinery it represents? I am very glad indeed to join the previous speakers in saying that I think the mine is looking very much better.

MEXICAN MINES DEAR TO WORK.

Mr. PULBROOK: I have been interested in Mexican mines for a long time, and know how heavy the expenses are out there. Stores have to be obtained from San Francisco, and American prices paid, which are 30 per cent. or 40 per cent. more than English prices. This company roasts its silver, and that involves a great outlay in salt. In the mine I am interested in we have to use in roasting ore 6 or 7 per cent. of salt to every ton, and we have to use the same here that will account for the expenditure in stores to a large extent. In our mine we pay 8*c*. per lb. for iron, and for ordinary steel 25 and 26*c*. per lb., and that you will easily understand how enormous is the expense, and, in fact, it constitutes one of the great difficulties of working Mexican mines. The only way in which that difficulty may be solved is by shipping stores from England. As to spare machinery, that is one of the advantages of having perfect management. If anything breaks down in your mill you cannot, as in London, send and get it repaired the next day. I was in Mexico last June, and wanted a little tar for one of our ropes, but had to wait three months for it, and paid dearly in addition. Consequently, a well managed mine must have a considerable surplus always on hand, and I do not think the stores here excessive. I must congratulate the directors on

THE VERY LUCID REPORT AND STATISTICAL INFORMATION

they have given. If the ore is roasted in the mine, and reduction expenses amount to the price you give, I think your charges very moderate. There is great loss in the roasting of silver ore through chlorinisation. I do not know the sort of furnace you use, but am sure the Messrs. Taylor will take note of that, and see whether a great deal of the loss cannot be saved. If we can get another ounce or two out of our process it will mean a dividend to the shareholders. I gather from what Mr. John Taylor has said that the position is extremely hopeful. (Hear, hear.)

REPLIES.

The CHAIRMAN: As regards wages and salaries—Mr. Sanchez has 500*l*. a year, and the rest is all paid in wages. As regards stores—I wish we had much more than we have. It is difficult to get them. We use wood for fuel, which is very expensive, and salt is another item that costs us a great deal. Sometimes we have been at a standstill for want of it, and in one or two cases have been obliged to use a smaller quantity than was right and proper, and, therefore, did not extract so much silver. We have a little spare machinery, but, generally speaking, what we have is very much worn out, and we need more new machinery. As to salaries, these have nothing to do with the 213*l*. 15*s*. 4*d*. paid to the Messrs. Taylor, because the 532*l*. was all connected with the former offices. We have had two removals. We were in Finsbury Circus when Mr. Morgan left us, and

though we employed an accountant afterwards, it was not a satisfactory arrangement, and we were put to great expense. Then we moved to Gresham House, but as the company was in a critical state, Mr. Bluett very properly said that it was not worth his while to go to considerable expense to receive it unless he was sure of the appointment for one year, and, therefore, when we removed to our present offices we had to pay him for the balance of that year as we did not remain the full 12 months at Gresham House. Therefore, this item will not recur. The auditor can answer more in detail with reference to the stores. I may here say that

THE REPORT OF MR. DAVEY HAS BEEN MOST VALUABLE.

All the old shareholders know quite well that the old smelting arrangements were not satisfactory; that we always wanted money to re-arrange them, and adopt better plans, and I hope we see our way to do that in due course. There is a railway in contemplation which will come tolerably near us, a certain portion of which has been constructed. It was started by Americans, and their interest was bought up by the Mormons who have come to settle there, aud it remains in the hands of certain financial people in England to see whether they will raise the money to construct the line. If they do not, I am informed that the Mormons will do it themselves. It will be a great advantage to us in bringing fuel to the spot, or sending our ores to where the fuel is to be had. The line, if undertaken, would not occupy more than a year, or a year and a-half, to complete.

THE SPRING OF MR. SWAFFIELD'S HOPE.

Mr. SWAFFIELD: One gentleman referred to the audit fee, 21*l.*, but that seems to me one of the most economical charges we have in this company. Our friend who said he would be prepared to do the work for half the money, was rash. The charge, as it is, is less than one-half what it was in the previous company, of which I had the honour to be one of the auditors, and that buoyed me up when others despaired, and you now have the explanation. (Laughter.) I received 25 guineas and Mr. Elliot a similar amount, and he did most of the work—(laughter)—but now the latter gentleman does the whole of the work for 21*l.* (Cheers.)

STORES.

Mr. ELLIOT: The stores are put down at 5,838*l.*, and represent those used in the mine during the year. The accounts began with a balance on hand last year, against which go the purchases of the year. The accounts come over from the manager, signed by him, showing the purchases made. Then comes the expenditure, which shows the amount of stores used and on hand at the end of the year, for which we have certificates.

A SHAREHOLDER: It would be satisfactory if Mr. Taylor would tell us whether the expenditure on stores is a proper one.

Mr. TAYLOR: The consumption of stores is purely a question of the magnitude of your operations. You have very large operations in hand, as the list of stores consumed which I have here shows. You are, of course, in the hands of the gentleman who controls the business out there, but accounts are sent forward, which we see and which Mr. Elliot sees. It is a difficult thing to check, but I do not notice anything in the accounts that leads me to think there is extravagance.

Mr. CHYNOWETH: I was very much interested in the lucid explanations Mr. Taylor gave us of the workings of the mine, but have always felt in reading the reports about the mining operations that a sketch plan is very much needed. The old plan in Finsbury Circus was very complicated, and I would suggest the preparation of a new one, showing, at all events, the principal workings by which a shareholder can intelligently follow what is taking place. I have been upwards of 50 years connected with mining, and fancy I know something about it.

The CHAIRMAN: Instructions have been sent out to have new plans prepared, which I hope we shall all be able to understand.

IMPORTANT QUESTIONS.

Mr. BRIDEN: Have you had an estimate of the cost of the shaft to be sunk and the time it will take to do it?

Mr. TAYLOR: A rough estimate shows that it will cost about 2,000*l.*, and will take quite 12 months.

A SHAREHOLDER? The chairman told us that to the end of Apl. we made 2,000*l.* profit, but can he tell us what the sales of silver were?

The CHAIRMAN: We have not yet received the full accounts. The 2,000*l.* is a rough estimate.

The SHAREHOLDER: I think the sales must have been much in excess of last year.

The CHAIRMAN: That is so. At the end of last year we had rich ore to deal with, and the 2,000*l.* is after deducting the expenditure in Mexico and London.

COMING EVENTS, &C.

A SHAREHOLDER: That 2,000*l.* to the end of Apl. and 1,200*l.* for May should show a large dividend. (Laughter.) Let us have a little on account. Is there any idea of suggesting an *interim* dividend? (Laughter.)

The CHAIRMAN: We must pay off former losses and do a lot of work.

The motion was carried unanimously.

On the motion of the CHAIRMAN, Sir Henry Cartwright and Mr. Swaffield were unanimously re-elected directors.

On the motion of Mr. REED, seconded by a SHAREHOLDER, Mr. Elliott was elected sole auditor at a remuneration of 21*l.*, after an abortive effort had been made to provide him with a colleague.

MANAGEMENT CONGRATULATED.

Mr. REED: I must express my appreciation of what we have heard to-day. At the last annual meeting I was appointed, with Mr. Swaffield, one of a deputation from a board to consult with them as to taking the company out of the hands of the previous management and putting it into those of the Messrs. Taylor. I think you will feel, after what has taken place to-day, that that was a right move to make. I am exceedingly pleased to see Mr. Swaffield a member of the board, and look to the company's future with great confidence. I am glad to see the reduction of the debit balance, and hope we shall end the current year with a credit balance. I propose a hearty vote of thanks to the chairman and directors.

EXPLANATIONS SATISFACTORY.

Mr. CHARLES BUTTON: I second the motion with great pleasure. I have read the various reports with great care, and should have ventured to criticise them but for the fact that others have done so, particularly in regard to the expenditure in England. It did at first occur to me that it was too large, but the explanations we have had have been eminently satisfactory, and the position in which we have found ourselves as contrasted with last year is most gratifying, and gives us good ground for hope. I do not think Mr. Sanchez has given us anything like too rosy a view of the matter, and, in fact, I have been rather disposed in the light of his reports to regard him as a pessimist. What we have heard to day has been very satisfactory. I hope ere long we shall find ourselves in a dividend position. (Cheers.)

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, said: I feel certainly very hopeful about this concern, and only wish it had been placed in the hands of the Messrs. Taylor years ago.

LATEST REPORT.

Extracts from a letter from the superintendent at the mine dated May 14.—Mine: Operations are now going on briskly, and we shall endeavour to replenish our ore stocks at surface as soon as possible. Work in Cruz Verde Mine was temporarily suspended in order to devote all our energies to the Mina Grande lower works. The stopes generally are looking well, especially the new stope on 100 lode, back of the 24 level (new discovery). We have four pairs of drillers here, seven pairs in the main stope, and three pairs in No. 7 winze stope. In development and exploration work we have the following force:—Two pairs driving north of 36 stope, 100 lode; two pairs driving south at same place; two pairs driving south at 24, 100 lode, on west wall, west of level (on 2 ft. of ore); two pairs cross-cutting west at the 12 level for the 100 lode, and two pairs driving south on 100 lode at tunnel level; total, 24 pairs of hand drillers, and a number of hand labourers, trammers, fillers, &c., pushing the ore extraction. The work on the loop tunnel had to be temporarily interrupted through lack of rails to lay the track in order to remove the waste quickly and cheaply. We ordered rails in Jan. last, and we have not yet got them delivered here. Reduction: We are getting plenty of ore from the mine, but have not been able to run all the batteries for want of water. The hoisting engine is employed in extracting ore in day time and water by night, but the latter is not enough for all requirements, even with the aid of the Calerita pipe, which is now giving us about ¾ in. of water. The whole of our supply at present from different sources is estimated at about 20 gals. per minute, but we require about 30 gals. per minute for all purposes. Bullion account: A clean-up of precipitato from the leaching vats, made on the 9th inst., produced 1,900 lbs. sulphide with an assay value of $7,444.77. From the refinery we obtained, on the 2nd inst., six bars silver; value at Mint, $5,892.59 gross (per cartas-cuentas Nos. 54-169 and 51a-170 enclosed). The cupel is running this week, and we expect to obtain eight bars more.

LONDON AND SOUTH AFRICAN EXPLORATION CO., LIMITED.

ANOTHER YEAR OF PROSPERITY—A DIVIDEND OF 16s. 6D. PER SHARE—A POLICY OF LIBERALITY TO THE SOUTH AFRICAN REPRESENTATIVES, WHO ARE CORDIALLY THANKED FOR THEIR EXERTIONS—THE COMPANY WINS ITS LAWSUITS "ALL ALONG THE LINE."

THE annual general meeting of shareholders of the London and South African Exploration Co., Limited, was held on Saturday, May 30, at the Cannon Street Hotel, Cauuon Street, E.C., to receive the report of the directors, the accounts and balance-sheet, and for other business.

Mr. C. J. Posno

presided.

Mr. GEORGE BROWN (the secretary) read the notice calling the meeting.

The report of the directors, which was taken as read, stated:—"The revenue for the year was 113,585*l.* 10s. 9d., against 110,214*l.* 12s. 2d. in 1889, 85,326*l.* 5s. 2d. in 1888, 83,541*l.* 6s. 6d. in 1887, and 77,864*l.* 7s. 7d. in 1886. The distribution for the year was 82,500*l.*, being 16s. 6d. per share."

The CHAIRMAN said: Gentlemen, I have again the pleasure of meeting you at the expiration of another year, and of moving the adoption of our report and accounts, which will probably be considered satisfactory. We have heard so much of financial disasters; we have many of us suffered so much from depression of trade, that I think it will please best if I merely remark that the past year was not generally a good one, without dwelling upon the subject. I would, therefore, only add that Kimberley suffered as much as any centre of commerce, if not more, from commercial depression. Bearing this in mind, I expect you will not dispute that

IT IS RATHER PLEASANT READING

that the revenue for the year was 113,585*l.* 10s. 9d., comparing with 110,214*l.* 12s. 2d. in 1889, 85,326*l.* 5s. 2d. in 1888, 83,541*l.* 6s. 6d. in 1887, and 77,864*l.* 7s. 7d. in 1886, and that we paid dividends during the year amounting to 82,500*l.* By reference to the revenue account, under the heading of general receipts it will be seen that in 1890 the dwelling sites brought in 24,709*l.* 4s. 3d., business sites brought in 9,639*l.* 19s. 6d., depositing sites 3,883*l.* 10s., the *débris* washing 4,342*l.* 17s. 4d., and other items 3,342*l.* 2s. 7d., making a total of 45,917*l.* 13s. 8d. In the previous year the revenue from the same items was as follows:—Dwelling sites 25,184*l.* 3s. 11d.; business sites, 9,883*l.* 15s. 5d.; depositing sites, 5,985*l.* 8s. 4d.; *débris* washing, 1,221*l.* 13s.; and other items, 3,415*l.* 13s. 1d., making a total of 45,690*l.* 13s. 9d., and showing an increase in those items of 226*l.* 19s. 11d. in 1890 over those of 1889. The leaseholds brought in 1890 763*l.* 11s. 10d., and the surface rents 3,188*l.* 16s. 7d., making together 3,952*l.* 8s. 5d., as compared with 1,012*l.* 12s. 3d. for leaseholds, and 2,002*l.* 2s. 10d. for the surface rents in 1889, together 3,014*l.* 15s. 1d., and showing an increase in those two items of 937*l.* 13s. 4d.

Grouping together all the items of surface rents, we find that for 1890 we received 45,917*l.* 13s. 8d., plus 3,952*l.* 8s. 5d., making a total of 49,870*l.* 2s. 1d., as against 45,690*l.* 13s. 9d., plus 3,014*l.* 15s. 1d., together 48,705*l.* 8s. 10d. for 1889, or a balance of 1,164*l.* 13s. 3d. in favour of 1890, which balance results from increased receipts from *débris* washers 3,121*l.* 4s. 4d., less decreased receipts from surface income 1,956*l.* 11s. 1d., making the balance 1,164*l.* 13s. 3d. The claim rents amounted to 38,640*l.*, against 38,365*l.* 12s. in 1889, an increase of 274*l.* 8s. Then skipping such unimportant items as interest fees and exchange we have 24,750*l.* net for the grant of certain rights to the Kimberley Diamond Mining Co., comparing with sale of claims 22,530*l.* in 1889, making up the grand total of 113,585*l.* 10s. 9d. for the year 1890, as against 110,214*l.* 12s. 2d. in 1889. Turning to the less pleasant side of the account we find an increase of expenditure 3,802*l.* 9s. 5d. at the Cape, but fully one-half thereof had been incurred in the defence of our rights, legal points having been invented and raised against us, for which, as we have ever held, there never was sufficient cause or justification, but the company having been so assailed, we took all necessary steps to vindicate our rights, and I am happy to inform you that one very essential point the Courts have ruled in favour of the company. (Applause.) A letter received this week dated May 4, from our manager, congratulates the company on

THE SUCCESSFUL ISSUE OF THE SIXTH OF THE IMPORTANT ACTIONS AT LAW

we have been engaged in in defence of the company's proprietary rights. You will also notice on the debit side of the revenue account charges on transfer of Orange River property, &c. This property realised in 1888 a profit of 6,799*l.* 19s. 9d., less charges 142*l.* 18s. 1d., net, 6,657*l.* 1s. 8d., but it was not until last year, that is, in the year under review, that we discharged the heavier and last bill of 885*l.* 6s. 4d. It will thereby be seen, that although we had to find 885*l.* 6s. 4d. to settle up this matter, this item belongs more properly to the past than to the year under review. London expenses have not varied materially, and having commenced the revenue account with a credit balance of 14,858*l.* 15s. 3d., we end the year 1890, with a credit balance of 19,828*l.* 16s. 7d., an increase of 4,970*l.* 1s. 4d., which we carry forward, that is the whole of the 19,828*l.* 16s. 7d. to the credit of the year 1891. We have continued to improve the estate, and laid out 1,776*l.* 5s. 2d. on enclosing, planting, and road making, whilst no part of the important amount of 52,000*l.* to which I called attention when I had the honour of addressing you last, found its way into the receipts for 1890, but remains a valuable asset to be dealt with in 1891. I can see no item in the capital account that calls for special remark. We have exceeded our capital by 7,851*l.* 17s. 11d., an increase of 1,045*l.* 7s. 8d. as compared with the previous year, but as our total capital thus increased only comes to 57,851*l.* 17s. 11d., and we have distributed in dividends 82,500*l.*, and increased our profit and credit balance to 19,828*l.* 16s. 7d. last year, there would seem no immediate need to adjust our capital account. The balance-sheet presents no feature that is not explained by the previous remarks, but if on any point of interest I have failed to make myself clearly understood I shall be happy to afford to shareholders such further information as may lay in my power. The majority of our claim leases fell in in the autumn of last year. They were all renewed for a further period of five years. I will now just say a word or two on the *débris* washing. Whilst comparing 1890 with 1889 I have shown the growth of *débris* washing when I stated that it brought in 4,342*l.* 17s. 4d., against 1,221*l.* 13s. in 1889, but I do not think that the mere mention of these figures can give you the smallest idea of the importance of *débris* washing in other respects.

DÉBRIS WASHING

on our property originated in the laudable desire of our Mr. Currey to find employment for those who had lost their occupation by reason of the progress made by the De Beers Co. with their consolidation scheme, but what seemed at first to us an excellent desire or idea to countenance, developed and degenerated into what, to our reut-paying claimholders, had all the appearance of encouraging an unfair competition for a small production not likely to hurt anybody, grew or rose into an important production likely to affect seriously the existing industry, for not only had the holders of the *débris* permits to pay no rent (they paid only a small royalty of 10 per cent.), no capital to find, no reef or water troubles to contend against, no dangers to face, but by their weekly sales of diamonds to pay their weekly wages affecting the diamond market, they enacted over again some of the very evils from which our rent-paying claimholders had suffered so much and for so long in the past, and undoing at one blow all the advantages gained in that respect by the patient labour of years of consolidation. *Débris*-washers on our estate found diamonds in 1889, I estimate, to the value of 15,000*l* or 20,000*l.* In 1890 I should think their finds exceeded 60,000*l.* Now, just see how this effects the rent-paying claimholder, who cannot work except at considerable depth, who has to find capital for an organised system for the maintenance of an efficient staff, and who produces at risk of life, whereas the *débris*-washer has what is in the nature of a mine, all on the surface, ready hauled, deposited disintegrated (ready cut and dried), wherefrom he can produce diamonds at his leisure at small cost, and wherewith he can easily undersell the rent payer, who, as I have shown, can only produce at great cost and peril. It is true *débris*-washers found at first only very small diamonds, but presently they came to what seemed better ground, for they produced not only small but medium sizes, in fact, at times diamonds of very respectable size. Their finds which at first were worth, say 10s. per carat, rose in a falling market to be worth 20s. per carat, and can anything show more clearly how their finds improved. We have put a stop to *débris* washing on our property; but we see no difficulty in making better use of the remaining *débris* heaps, or turning them to better account, for it does not seem reasonable, when once the matter is properly understood, that we shall be expected to continue to pay 90 per cent. of their value for the removal of diamond heaps, and to injure thereby our old-established rent-paying claimholders and ourselves alike. We sympathise with those whose occupation is gone, who suffer because the De Beers Co. have ceased for the moment to work the claims whereof our former tenants have transferred to them their leases, but our former tenants had full liberty to hold or sell their leases without let or hindrance on our part, and they have so parted with their leaseholds without consulting us in the matter, as they had a perfect right to do. For the sake of those who seek occupation at Kimberley, we hope that operations at Dutoitspan and Bultfontein will soon be resumed in the claims now lying unworked. You will be pleased with the following and latest item of intelligence.

A TELEGRAM RECEIVED FROM KIMBERLEY, DATED YESTERDAY,

May 29, contains the announcement that the De Beers Co. have withdrawn their action against us and the Gordon Co., and paid the costs in the suit. (Cheers.) This, we believe, is the last of the pending cases, and we congratulate the shareholders upon what we may look upon as the happy termination of a series of lawsuits into which we were driven, that were forced upon us. Claim rent on some 900 more claims will now commence to come in, in addition to what we have been receiving hitherto. (Cheers.) Gentlemen,

I CONGRATULATE YOU MOST HEARTILY,

and thank you for the patient hearing you have given me. I now beg to move the adoption of the report and accounts as presented.

Sir GEORGE PRESCOTT, Bart., seconded the motion.

Mr. DRESDEN said it appeared to him that the revenue for both years—1890 and 1889—was the same. If they deducted the 25,000*l.* extra, the price paid by the Kimberley Diamond Co., the receipts, instead of 113,000*l.*, would be 88,000*l.*, which was about the same as in 1889.

The CHAIRMAN: Yes; that is about right.

Mr. DRESDEN said that he did not wish to make any invidious remarks, especially when he bore in mind the interest taken in the company, and the results achieved by the directors here, and especially by Mr. Currey out there, for they all knew the great interest that Mr. Currey had taken in the concern, and how he had managed to bring it to a state of perfection; but, at the same time, he thought he (the speaker) might give this advice to the shareholders :—

AS THE FRENCH SAY,

"Do not put your finger in your eye and fancy you have more than you have." (Laughter.) They had, as the chairman, Mr. Posno, had told them, the rent of 900 extra claims, and he could do nothing but congratulate them upon this matter—(cheers)—but at the same time they would not have that 25,000*l.* next time, and the 25,000*l.* was equal to about 25 per cent. of the total amount that they had received as income. He would like now to refer to the matter of the *débris* heaps, and what was to become of them. Those who had not been out to South Africa (as he had) had no conception—no idea—of what a *débris* heap was like.

PRIMROSE HILL WAS NOTHING TO IT,

and there were any number of them all over the place, and they contained thousands upon thousands of carats of diamonds. He did not know whether there was any possibility of the company undertaking the washiug of these heaps, but there must be an enormous amount of diamonds that could be taken out of them. Heretofore the *débris* heaps in South Africa had been worked without any system, and greatly to the disadvantage of the mines and wholly to the advantage of the Kaffirs, who were a commou lot of low people, and did not appreciate anything that was done for them. Mr. Dresden, continuing, said that the allowing of the kaffirs to wash the diamonds from the *débris* heaps heretofore had given a very great opportunity for

ILLICIT DIAMOND BUYING.

If asked where he got his diamonds that he offered for sale, all a kaffir had to reply was that he had washed them from the *débris* heaps himself. He had only to get over into the Free State to effect a sale. (Hear, hear.) He (the speaker) felt it would be a great advantage if some arrangement could be arrived at in regard to the washing of these *débris* heaps, because there could be no doubt that they would prove a source of very great income without very much outlay, and with no disadvantage or danger at all. (Hear, hear.)

A STRING OF QUESTIONS TO WHICH SATISFACTORY ANSWERS ARE GIVEN.

After a few remarks from Mr. Lopez dealing with the same subject,

Mr. DIXON HARTLAND, M.P., said that he wished to ask some questions, but not in any captious spirit, but before he proceeded to put those questions he wished to preface them by asking for information as to why that meeting was called for a Saturday, a day which he considered was most inconvenient to people in the City, and it was a day that the meeting being called upon brought people to town who had no intention otherwise of coming. There were a lot of meetings called at the Canuon Street Hotel during the week, but the notice board showed theirs was the only Saturday meeting. He had no doubt that the directors had a very good and sufficient reason to give, but he hoped it would not occur again. He spoke not for himself alone, but for several absent shareholders, whom he represented, and who had found it inconvenient to attend.

The CHAIRMAN said he would like to be allowed to reply to that remark at once, and the reason why the meeting had been called for the last day of May was, "it was the first day in May that they were ready with the accounts." It was purely a question of accounts, and they had no choice in the matter. The accounts were made up in South Africa, and then remarks had sometimes to be made. They were made up to Dec. 31 last, but they could not be sent over till the month after that, or even Feb., and when they did arrive in this country they had to be submitted to the London accountants to be audited, and they had to go through the accounts before the meeting could be summoned. Before the accounts became so voluminous as they were now they used to hold the meeting in Apl., but they were, as time went on, much to their regret, driven into May, and they had made a great effort this time not to be landed into June. (Laughter and Hear, hear.) He was very sorry that the last day of May happened to be a Saturday, for it was not only inconvenient to the shareholders, but also extremely inconvenient to the directors, and one reason why they chose that day was that it might be

A KIND OF PROTEST TO THEIR KIMBERLEY FRIENDS,

to let them have the accounts earlier.

Mr. DIXON HARTLAND thanked the chairman for his explanation, and hoped the circumstauces would not occur again. He next proceeded to deal with the amount received from the Kimberley Company, and he said that he could not agree with the amount being put

to income—he should have thought that it ought to have gone to capital account. He thought it ought to have been taken towards writing down the capital.

A VOICE: Writing down—you mean extending.

Mr. DIXON HARTLAND: You want more capital; it is the same thing.

The CHAIRMAN: We understand your meaning.

Mr. DIXON HARTLAND maintained that the amount was applicable to capital. The next point he wished to refer to was the question of commission, and he would like to ask why any commission had been granted on the sale, which appeared to him to be a sale to themselves from themselves. They existed as the present company, and they formed the Kimberley Co., and took up the shares; therefore, he failed to see how any commission was payable. He would like an explanation of this. He next referred to the salaries in South Africa, and complained that there was also included an amount of 150*l.* for entertainment expenses. It seemed to him that there should be no such item, and he wanted that explained too. Having gone through in detail various other items of the accounts, during which process some considerable impatience was evinced by the meeting, he proceeded to deal with the question of the houses and offices in South Africa. He stated that their manager occupied a house that cost 8,000*l.* to build—he should think it was a palace—(laughter)—and there had been some outlay of 562*l.* in making this dwelling more comfortable. He wanted some information with regard to that item. Then there was Lennox Street offices, costing 9,000*l.*, and the house in Dutoitspan Road, 1,418*l.* Altogether he thought a very large sum had been expended in offices at the Cape. Another point which he wished to raise was the item of 5,251*l.*, sundry creditors in London, and then the cash balance at the bankers, 11,759*l.*, seemed to him very large. He wanted to know whether it was the average balance, or an exceptional amount. He thought it a too large amount, especially as they appeared to be charged for interest and discount, 51*l.* 19s. 4d. He did not think that the chairman would object to give him the information he sought on these points, and he felt that the board was only too willing to afford the fullest information to any shareholder who desired it. (Hear, hear.) Then, as regarded the remarks of the chairman in reference to the future, he had told them that the claims had been renewed for five years, but he had not stated upon what terms, or whether they were better than heretofore.

The CHAIRMAN: It was a renewal of the lease.

Mr. SYDNEY (the solicitor): The original lease is renewable every five years.

Mr. GODEFROI asked if there was any special reason why the company's shares were depressed in the market. They now stood at the low price of about 12*l.*

A VOICE: You had better ask the Stock Exchange, where you are a member, I should think.

The CHAIRMAN, replying to the various remarks, said that in the first place, with regard to the capital, no commission had been paid on the 25,000*l.* received from the Kimberley Co. One per cent. commission had been reserved, because their manager and principal accountant in South Africa had been hitherto in the receipt of 1 per cent., which the directors had credited them with from time to time.

A SHAREHOLDER asked for a clearer explanation.

The CHAIRMAN: I have stated that no commission has been paid on the item of 25,000*l.* to which attention has been directed. Our manager, Mr. Currey, receives, together with the principal accountant out there (and has been receiving for years), 1 per cent. on our net profit, and when the amount has been collected here and not at Kimberley we have asked them to treat the amount received in London as if it were a remittance to the head office. There is no obligation on our part to do this, but it is a compliment that we have hitherto paid them. (Cheers.) Continuing his answer, the chairman said that as regarded the capital account and the various buildings to which reference had been made, he must ask them to believe that the cost of these buildings was fully represented by real and valuable property. They might not be aware that the cost of building houses at Kimberley was extremely costly. They had had to build a large house for their manager, Mr. Currey, because he had a large family, and it was somewhat difficult to accommodate them in a small house. They fully appreciated the services of Mr. Currey. He was a very valuable man to them, and their desire was to see him comfortable. As to the question of the premium from the Kimberley Co. being carried to the revenue account, and not to capital, they looked upon it as revenue. Besides, it was extremely difficult to write anything off capital account, the capital being so small.

Mr. DIXON HARTLAND, interrupting, thought that they might have divided the money to making the shares more paid.

VOCES: They are fully paid now.

The CHAIRMAN said that

THE SHARES WERE FULLY-PAID.

As regarded what they had sold to the Kimberley Diamond Co., he wished to point out that they had sold to that company certain rights and they had not sold them any property any more than they had sold property to claim owners. Proprietary rights all belonged to this company. The amount of money that they had received from the Kimberley Co. was really a premium on the lease. It was nothing else, and such money had always been received before willingly enough by the shareholders, and

HE HAD NEVER YET KNOWN A SHAREHOLDER TO SEND BACK HIS CHEQUE,

because part of the money was derived from premiums on leases. As to the very small item of 150*l.* for entertainment expenses, their manager had a certain position to keep up. He was much liked and respected, and whoever visited him was made thoroughly comfortable. Mr. Currey always was allowed a certain amount of "table money" at his disposal, and he (the speaker) was reminded by the solicitor that it was a part of Mr. Currey's contract that such should be allowed. As to a point raised about formation expenses, they were so small that he had hoped they would have escaped observation; at any rate, they were not worth discussing—a few hundred pounds in a company of the magnitude of theirs, and dealing with thousands of pounds. (Hear, hear.)

The SOLICITOR: They were the only costs we have had in connection with the formation of the company, and no one has noticed them before.

TO THE RESCUE.

Mr. DRESDEN said he would like to be allowed to come to the rescue of the directors at this point if the board would not think it presumptuous on his part in stepping in to assist them.

The CHAIRMAN: No, no.

Mr. DRESDEN said well, he could assure the meeting that building was extraordinarily dear in Kimberley, and when it was borne in mind that every bit of timber and every bit of iron had to be brought 600 miles by railway and other conveyance, they would understand why this was the case. Then as to the question of labour, it was three times as expensive as it was here in London; and as to white labour, which was necessary, that was most expensive. With reference to the small item, about which there had been discussion, of 150*l.* for entertainment expenses, he thought that this must refer to something special when Sir H. Loch was on his visit to South Africa, and stayed at their place. No doubt some special festivities took place at the time. Mr. Currey, he was certain, spent ten times as much as the 150*l.* about which the fuss was made, for Mr. Currey had the reputation of being

THE MOST HOSPITABLE MAN YOU COULD POSSIBLY IMAGINE.

Everyone who came in contact with him said this, and those who went out on business connected with this company, and who were introduced by a director, and he (the speaker) went with a letter of introduction from the chairman, Mr. Posno, were treated like princes. Mr. Currey was really the "boss of the show."

The CHAIRMAN repeated that Mr. Currey had a right to claim this money under his contract, and that he spent much in excess of what he received for this purpose. As to the other questions that he (the chairman) had not yet answered, he might state that the balance at the bankers was so large, because it included the money for the payment of the dividend. They kept a large balance at the bankers on deposit, and not on current account.

Mr. LAWSON, M.P., pointed out, in reply to other remarks, that this company had a benefit in the success of the Kimberley Co.'s operations under the lease taking a certain proportion of profit, so that there was a lasting and permanent advantage beyond the premium paid. (Cheers.)

The CHAIRMAN, replying to other questions on the matter of the payment of commission on the 25,000*l.* received from the Kimberley Co., said that the 1 per cent. was not yet paid, and the matter was one for the shareholders if they so chose to argue it. He would submit to the vote of the meeting, but if carried against him he would feel much grieved. He advocated

A LIBERAL POLICY TOWARDS THE STAFF IN SOUTH AFRICA.

(Hear, hear, and applause.) The money—250*l.*—was reserved, but not paid.

Mr. DIXON HARTLAND proceeded to discuss the matter further, and to give reasons why the money should not, in his opinion, be paid, but his remarks were listened to with much impatience and some interruption. He pointed out that the money was paid the directors in London, and not to the manager on the spot, and, therefore, he did not think Mr. Currey should share in it. and he would even go the length of a resolution to the effect that 1 per cent. should not be paid. (Signs of dissent.) He would be prepared to move that the 1 per cent. commission on the sale to the Kimberley Co. be not paid.

Mr. LAWSON, M.P.: Not sale now, the lease.

Mr. DIXON HARTLAND said: Well, the premium on the lease. They knew what he meant. He would move that the 1 per cent. be not paid.

The CHAIRMAN: Does anyone second it? (Laughter.)

Mr. LAWSON, M.P.: It is a very small matter.

No seconder was found and the amendment, therefore, fell through.

Mr. GODEFROI said that the chairman had not stated if there was any cause that he could attribute for the fall in the value of the shares.

A SHAREHOLDER: One reason is that the meeting has been called on a Saturday. (Roars of laughter.)

The CHAIRMAN said he could give no reason; he was not answerable for the Stock Exchange. Perhaps a needy friend was selling some of his shares.

MR. POSNO WILL NOT PROPHESY.

A SHAREHOLDER: Can you give us any encouragement for the future?

The CHAIRMAN said that he did not know that he could go into more detail as to the future. He had already, in his opening remarks, briefly sketched out the future. He had told them the position. They had still to receive 52,000*l.*, which was delayed, and might take some little time to come in. He had told them of the rental of 900 additional claims, and what more could he say? They endeavoured in that company to abstain from prophesying, for prophecies had an extraordinary aptitude for falsifying themselves. He did not want to be a false prophet. He had stated already that the outlook was bright and encouraging, and had given them particulars, and that was all he could do without prophesying.

After a few remarks from other shareholders of an unimportant character,

The CHAIRMAN put the resolution for the adoption of the report and accounts to the meeting, and it was carried with only one dissentient, viz., Mr. Dixon Hartland, M.P.

In reply to a question from the chairman,

Mr. DIXON HARTLAND said that his opposition only related to the matter of the 1 per cent. commission.

The CHAIRMAN said that his next duty and pleasure was to propose the re-election of Mr. Louis Schott as a director of the company.

The motion was seconded by a SHAREHOLDER, and carried.

Mr. LAWSON, M.P., then proposed the re-election of the other retiring director, Sir George R. Prescott, Bart.

Mr. MARTIN seconded the resolution.

The motion was carried.

Sir GEORGE PRESCOTT: I beg to return thanks, on behalf of myself and my colleague, Mr. Schott, and to assure you that we will always use our best endeavours to further the interests of the company.

Mr. HARRIS then moved the re-election of the auditors, Messrs. Mardon, Mosley and Co.

The motion was seconded and carried.

The CHAIRMAN : I have

ONE MORE PLEASING DUTY TO DISCHARGE.

I ask you with very great pleasure to join with me in thanking our manager, Mr. Currey, for his untiring zeal and ability displayed in the past year ; also to thank Mr. Ronald Jones for the very excellent work that he has done for the company, and the staff both abroad and at home for their ready assistance, aud especially our London secretary, Mr. George Brown — (cheers) — for his most valuable services. (Cheers.)

Mr. LOPEZ seconded the motion, which was carried.

Mr. GEORGE BROWN (secretary) : I beg to return my very sincere thanks to the chairman for his remarks, and to you gentlemen for passing this vote, and I only hope that I may continue to deserve it. (Applause.)

Mr. DRESDEN said that he wished to be allowed before the meeting separated to propose a vote of

THANKS TO THE CHAIRMAN AND DIRECTORS

for the way in which they had managed the affairs of the company.

Mr. LOPEZ seconded the resolution, and referred to the law-suits, now happily ended, and the manner in which the company had been attacked at the Cape, more severely, he thought, than since they won their case in the Privy Council here. They were much indebted to their manager and the solicitors out in South Africa, aud also to their chairman and board in London. He (the speaker) was glad to hear from the chairman the success they had achieved. They had

WON ALL ALONG THE LINE.

and he begged to second the resolution. (Cheers.)

The motion was carried.

The CHAIRMAN : Thank you gentlemen most heartily for the compliment that you have paid us. Rest assured that our best attention will always be devoted to furthering the welfare of this company. Gentlemen, I thank you.

The meeting then separated.

THE ALABAMA COAL, IRON, LAND, AND COLONIZATION CO., LIMITED.

CONTINUED PROGRESS OF THE COMPANY—GRATIFYING STATEMENTS BY THE CHAIRMAN.

THE ninth ordinary general meeting was held on Tuesday, June 2, 1891, at Winchester House, "to receive the report and accounts for the year ended Dec. 31, 1890 ; for the election of directors and auditors for the ensuing year ; and for the transaction of the general business of the company."

Mr. Augustus B. Abraham

(chairman of the company) presided).

Mr. EUGENE COX (secretary) read the notice of meeting.

OPTION SCHEME IN ABEYANCE.

The CHAIRMAN : Gentlemen, it is quite clear that your time is precious, and, therefore, I shall not make a heavy drain upon it to-day. It is fittiug, however, I should mention, in the first place, that we have the advantage of the presence amongst us to-day of our esteemed friend and colleague, the President of the Alabama State Land Co. Mr. C. Schiff is uow in England, from America, and his presence here is exceedingly opportuue, because we shall have the advantage of consulting with him as to proposals that may be made in reference to the resumption of the scheme for the sale of the whole of the lands, and also in the settlement of our future policy. Now, gentlemen, we did hope, when we met you ou July 10 last at our extraordinary general meeting, that the work of liquidation of the old bonds represented by our certificates would be in a fair way of coming to an end, and that we should be able to report to you on this occasion that the scheme was being carried out, that the option had been given and accepted, and that the consideration was in course of payment. We trusted also that we, as directors, would be discharged from the duty of further selling lands and reporting the annual sales to you. We fully expected that that duty would be cast upon the projected American Co., and that all that we should have to do would be in the future to pay off the A shareholders, to report the operations of that American Co., and to distribute what remained amongst the B shareholders. Owing, however, to extraordinary and certainly unexpected financial events nothing conclusive has been done for carrying out that scheme, simply on account of the intervention of those financial difficulties, and we at the present moment are

FREE TO SELL OUR LANDS TO ANY OTHER PARTIES

who may offer for them. The scheme is at the present moment inoperative, and we are told that it must be adjourned, so far as the parties who made us the late offer are concerned, until better times. Now, I wish to impress upon you at the outset that this difficulty does not arise in any way whatever from the value of the lands being depreciated, or from there being any interruption to the progress of the State of Alabama. It arises entirely from the difficulty in which the whole of the financial world is at present placed, the indisposition, or hesitation, on the part of capitalists to enter into new enterprises of such magnitude as this, iuvolving very large capital, and reliable organisation, and with, as far as present prospects go, the possible chance of their not being able to realise immediately that profit which otherwise they would certainly have been able to have obtained. Speaking, however, for myself, I may say that having closely watched all that has taken place in the United States since July last year, and that is now going on in Alabama, I am perfectly satisfied that the value of our laud there has considerably increased, if it has not been doubled. Well, as far as regards the A shareholders—I am to day addressing only the shareholders, but if there arc any certificate-holders here they will have the benefit of hearing what I have to say besides reading the report. The A shareholders, I think, have no reason to complain because they will have the benefit of enjoying for some time longer the 6 per cent. on their shares, and they have the certainty not only that we have the capital in hand (as I shall show you) to pay them off when the time arrives, but also that we have the further security of the 30 per cent. from further sales of land. As regards the B sharcholders, I confess that they have reason to feel disappointment, because their interests would have come into possession. whereas they must be, I trust only for a short time, in reversion. The B shareholders may very fairly say to us, as a board, "But when will these better times arrive?" Well, gentlemen, we all know that we are told not to prophesy, and certainly it is difficult to form an opinion as to how soon affairs may right themselves, especial regard being had to the interdependence which exists between this country and the United States, and as the carrying out of this scheme by the parties depends upon British capitalists as well as American capitalists, the difficulty is considerably enhanced. But this, gentlemen, I venture to say, from what I see going on in the United States, that I think it very possible the difficulty will be cleared up there, as far as regards investments in Alabama, before financial matters clear up here. People may say, "Oh, but the difficulty in Wall Street must first be cleared up." I rather imagine, gentlemen (and I hear, and read, that able men connected with Wall Street have a strong feeling) that when their crops are paid for, and the time arrives for them to make new investments, after the great losses they have made during the last nine months in Wall Street, they will be looking for more solid investments, and that

A GREAT DEAL MORE MONEY WILL GO DOWN SOUTH TO ALABAMA.

Before concluding I will add a few more words as to our prospects, and future policy. I will now take you through the accounts, showing what has been done during the past year. If you look to page 3 of the report, you will find there the result of thc sales, and you will recollect that these sales, in point of fact, are simply for the half-year, because in July this scheme was known, and then there was a stoppage to individuals coming forward with any other proposals for purchase, while there was a chance of that scheme being carried on.

INCREASED PRICES FOR LAND SOLD.

The general result is that in this last year of 1890 we sold 6,861 acres at the price of $9 85c., whereas in 1889 we sold 6,760 acres at the price ouly of $6 68c. ; so that you see, gentlemen, upon the whole of the sales of the year there was, first of all, an increase of 101 acres in the sales, and there was an increase of $3 17c. upon every acre that was so sold. (Hear, hear.) Then, if we look in detail to the character of the different lands sold, I think it comes out even more satisfactory than tnat general view of it. As regards the fee simple lands, we sold last year 2,040 acres, realising $45,800. In the previous year we sold 1,400 acres, realising $22,800. There was thus an increase of the sale of fee simple land of 640 acres, and an increase in the price of $23,000. That $23,000 gives us $23 per acre instead of $16 in the previous year, or an increase of $7 per acre for the fee simple lands. If we look to the mineral rights—in 1890 we sold 120 acres, which realised $2,600. In 1889 we sold 160 acres, realising $2,400. There was a decrease of 40 acres thus sold, but there was an increase of $200, that is to say, that the mineral rights fetched $21½ per acre, instead of $15 —an increase of $6½ per acre. If we turn to the surface rights, again also we sold in 1890 470 acres, realising $19,174. In the previous year we sold 5,200 acres, realising $19,948. There was a decrease both in the acreage and in the price, but still the sales of the surface rights (and this shows the demand for land for agriculture)—the increase in the price was up to more than $4 per acre, instead of, as it was in the previous year, $3 33c., per acre. Now, gentlemen, I hope that that statement of detail will be satisfactory to you. (Cheers.) If you turn to pages 3 and 13 of the report you will find that the total receipts in respect to the year's sales, and note collections and interest were less than they were last year, being only $52,286. The reason of that was that in the previous year some of the lands that had been sold so far back as 1887 were taken upon the Fort Payne Company, and the notes unpaid, instead of being left to accrue, were taken up at once, but that amount which we so received was sufficient, after payment of the expenses in Alabama, to pay one more coupon on the certificates, namely, coupon No. 21. Then, gentlemen, after so paying that No. 21 coupon there remained undistributed in the hands of the Alabama State Land Company, as you will see on pages 12 aud 13 in the State Land Company's account, a cash balance of $11,442, and, in addition to that, you will see on page 13 that there were notes not then due of $84,687. That, in point of fact, left property undistributed amounting to 19,000*l.* in value, which in due course will be distributed. Well, but, gentlemen, this state of things as given you in the report does not quite represent the position at the present moment, because I am happy to say that the position now is still better than what it appears here. Hear, hear.) It is so for the reason that on Jan. 1 our friend, Mr. Schiff, sold (when it was clear that this scheme was not coming off) 7,920 acres at more than $9 65c. per acre—very nearly 2*l.* per acre, and a remittance was made to us of 2,052*l.*, enabling us to pay off another coupon (No. 22), and there were accretions in respect to that remittance to our own general fund, as well as to the share sinking fund and also to the bondholders' sinking fund.

GRATIFYING STATEMENT AS TO CAPITAL AND OTHER FUNDS.

If you go to the capital account, pages 8 and 9, you will find we have received as capital from the shareholders 38,900*l.*, and I may tell you at once that that capital is in our hands at the present moment, almost intact. We have investments in land and in our own bonds, 21,347*l.* ; in other general investments, 9,970*l.*, which gives 31,318*l.*, as against that capital of 38,900*l.* ; but as far as regards the lands in which we have put that large amount, we have taken that estimate at their cost value, though we know, as a matter of fact, that they are worth more than double that investment, so that as far as regards our capital account we have not only the capital which you as shareholders paid, but the additional increase in value of the investment so made. (Hear, hear.) That 9,970*l.* is slightly reduced by payments that have been made. Then I come to the

SHARE SINKING FUND

at page 8. You will see that is stated as being 19,456*l.* At the preser

moment it stands at a little less than that—at 19,105*l.*—but the reason of that is we have just paid a half-year's dividend out of that share sinking fund amounting to 1,167*l.*; so that you see we have, after allowing for that payment, an increase upon the share sinking fund, and I call your attention to this fact, that that sinking fund is the one out of which you receive your 6 per cent. interest, and that taking it with the 4 per cent. interest, which accrues only upon its investment, it is more than sufficient to secure and guarantee to you the payment of your 6 per cent. interest for 12 years, if not more. (Hear, hear.) Then I come to the

BONDHOLDERS' SINKING FUND.

That was on Dec. 30 (see page 8 of the report) 2,429*l.* It is reduced now to 160*l.* 14s. 2d., after payment of coupon No. 22, already referred to, which amounted to 3,692*l.*, so that there again we have had the benefit of the accretion in respect to the recent sale. But, gentlemen, the great increase is in the fund that we now have in hand, for which we are awaiting the distribution. You will see that on Dec. 31 last, as appears in the present account, page 13, there was only $34,687 due on the old notes. There has been received since the above-mentioned remittance a further sum of $5,000 on account of our instalments due on that sale, which Mr. Schiff effected in Jan., which sum remains in the hands of the Alabama State Land Co., and there are three other instalments of $15,500 and two of $25,500, the payment of which will accrue during the next three years; so that we have instead of $84,687, in point of fact $155,687, due on notes which in due course will be paid, and equally in due course will be distributed amongst yourselves and the certificate-holders through these different funds.

MORE PROPERTY NOW THAN AT THE BEGINNING.

Now, I have the pleasure of telling you that the trust lands remaining, after deducting the 7,920 acres sold in Jan. last, amount to 512,717 acres, and amount, gentlemen, as I have stated on previous occasions, and which I repeat now, to considerably more than the acreage we had to deal with when we commenced, nearly 10 years back, the operations of this company. (Cheers.) The expenses of the English company during the past year were 1,260*l.* 19s. 10d. In the previous year they were 1,225*l.* 8s. 6d., showing the small increase of 35*l.* 11s. 4d. on the year's expenditure, but, gentlemen, that amount has not come out of your capital fund, because it has been met in part by the interest on our investments, and it stands, as you will see in the report, only for expenses 766*l.* 7s. 2d. Gentlemen, that is really the position of the company, and I do not know that it is necessary for me to detain you longer. I have a quantity of materials here from which I could give you facts bearing on what may be the prospect of better times, but, as I have said, I think it is clear from these facts that there will be a revival of investment in the United States in Southern lands probably some time before the financial crisis is over here. We shall have the opportunity of conferring with our friend Mr. Schiff, whose practical knowledge of United States affairs will assist us most materially in forming a judgment on passing events, and also as to what shall be our future policy. If I am right in my conclusion, that applications will be made to us by other parties, resulting very possibly in a series of sales, if this scheme be not carried out within a reasonable time, we are free, as I have told you, to deal with them, and we shall decide here, on the spot, as to the policy to be adopted; but, of course, we shall give, as we state in the report, a reasonable time to these capitalists, who so kindly and considerately, I may say, did come forward last year to make this proposal to us. They have set a value on our lands, which favourably affects everybody concerned, the certificate-holders as well as the shareholders, and I do not think there will be any receding from that estimate—on the contrary, it may possibly be increased. We, in the meanwhile, will view the position of matters with the greatest circumspection. We shall keep in view everything that takes place there, and everything that takes place here, but certainly we have it in our minds to make further investments in the way of consolidating some of those blocks of land that we have, and particularly one block of land which is likely to be a very desirable site for a township. I am happy to say that that township of Fort Payne which we sold has been developed with great success, and that they are active both in mining and other industries. With regard to another block of land, now known as the Blockton Mines, which we sold to Mr. Aldrrich—that gentleman is carrying on most successful works. He is

RAISING MORE THAN 2,000 TONS OF COAL PER DIEM,

and is supplying the Southern Pacific and Texas Pacific Railways with coal and, more than that, he is supplying the West Indian Islands, and contracts have been entered into for the export of Alabama coal to Mexico, Nicaragua, and also for works that are about to be resumed, they say, on the Panama Canal. Take it altogether, I think you may safely leave the future of this company in our hands. We shall exercise (as we have had to do in the past) the greatest amount of forethought and the best judgment we can give to the management of this great property, and I trust before long we shall be able to meet you with a still more satisfactory account than that I have had the pleasure of giving you to-day. I beg to move, gentlemen, "That the report and accounts of the directors up to, and including, Dec. 31, 1890, be, and the same are hereby approved and adopted."

Mr. GEORGE WEBB MEDLEY (director): I second the motion.

The CHAIRMAN having invited discussion, and after a pause, put the resolution to the meeting, and it was carried unanimously.

IMPORTANT RESOLUTION.

The CHAIRMAN: As we say in our report, we think, seeing that scheme included the company's lands as well as the trust lands, it is desirable for us, as shareholders, to pass a resolution, which will distinctly give us the authority for what we are proposing to do in the event of the scheme not being carried out. As regards the trust lands, we, of course, under our general powers have distinct authority to do whatever we please, but as far as the company's lands are concerned, the scheme as adopted combines them and links them, as it were, to the trust lands; and in case it should become necessary for us to separate any of this company's lands from the trust lands, in any separate sales that we may make, we should like to have this resolution, which has been settled by our solicitor, formally passed:—"That, in the event of negotiations for an option as sanctioned by the extraordinary general meeting of July 10, 1890, not being resumed within a reasonable time, the directors be, and they are hereby authorised to enter into similar arrangements with any parties, subject to such modifications as they may think fit, for the sale or granting of options in respect of all or any part of the trust lands, or the company's lands, or either of them."

Mr. SCHIFF (director): I second the motion.

Carried unanimously.

The CHAIRMAN: The next resolution is one which I have the greatest pleasure in moving, "That Charles Schiff, Esq., be and is hereby re-elected a director of this company." (Cheers.)

Mr. RILEY (director): I second the motion.

Carried unanimously.

Mr. CHARLES SCHIFF: In expressing to you my sincerest thanks for the confirmation of your confidence in me in re-appointing me a director of this company, I have now the pleasure of moving the re-election of our chairman, Mr. Augustus B. Abraham. I need not say many words about him. Everybody here knows with how much heart and with how much thoroughness, under the guidance of Mr. Abraham, the ship of this company has been sailed through all the difficulties it had to go through, and I have no hesitation in saying that but for his assiduity, and but for his ingenuity, we would not have the results before us which we have. Therefore, gentlemen, I may say you will vote with acclamation the re-election of our friend Mr. Abraham. (Cheers.)

Mr. MEDLEY: I have much pleasure in seconding that motion, and beg to corroborate all that Mr. Schiff has said about what Mr. Abraham has done for the company, and the great ability he has shown in doing it.

Mr. SCHIFF put the motion to the meeting, and it was carried by acclamation.

The CHAIRMAN: I am very much obliged to you, and will continue to exert myself on your behalf in the future as I have done in the past.

Mr. TOMLINSON proposed, and Mr. KARCK seconded, the re-election of the auditors, Messrs. Price, Waterhouse and Co., at a remuneration of 20 guineas, and it was carried unanimously.

Mr. SATTERTHWAITE: I think before we separate we should not omit to pass a vote of thanks to the worthy chairman and board of directors. I do think this business has been conducted in a most marvellous manner. I happen to know somewhat intimately the way in which this concern has been conducted, and especially the force and intelligence Mr. Abraham has brought to bear upon the management from its very initiation, and if it had not been for some such knowledge I should scarcely have ventured to have voted for such a sweeping resolution as we have passed to-day, giving the board such extraordinary and full powers, but I have done it with perfect confidence, knowing that those powers will not be abused, but will be used only for the benefit of the association. (Cheers.)

The motion was seconded and carried by acclamation.

THE BRITISH EQUITABLE ASSURANCE CO.

26 YEARS' WORK REVIEWED—SATISFACTORY POSITION, AND BRIGHT PROSPECTS—A TRIBUTE OF REGRET IS PAID TO THE LATE CHAIRMAN—THE STAFF AND AGENTS PRAISED FOR THEIR EXERTIONS.

THE ordinary annual general meeting of the shareholders of this company was held on Tuesday, at the Offices, No. 1, Queen Street Place.

Dr. Edward Bean Underhill

presided.

The CHAIRMAN said: Geutlemen, I will now ask the managing director to lay before us the report and balance-sheet, and then to perform his usual kindness of expouuding such portions of the balance-sheet and report as he may think requisite.

The MANAGING DIRECTOR (Mr. Deputy Sutton Gover, F.I.A., F.S.S.) said: Mr. Chairman and gentlemen, this is our thirty-sixth annual report. During the year the company has laid by 30,695*l.*, which has been satisfactorily invested at an average interest of 4*l.* 17s. 5d. per cent. The accumulated fund has been increased from 1,297,535*l.*, at the commencement of the year, to 1,328,230*l.* at the end of the year. It is invested in safe, profitable, and improving securities. The Government securities and freehold ground rents are set down at their original cost, which is greatly below their present value. Claims and bonuses paid during the year amount to 111,518*l.* The amount paid for the surrenders was 9,676*l.*, being less than the amount in the preceding year by 3,743*l.*

A REDUCTION OF EXPENSES

was effected during the year of 1,966*l.*, aud it is hoped that the effect of various arrangements that have been made will show a further reduction of expenses in the coming year. The new insurances effected from May 1, 1890, to Apl. 30, 1891, consisted of 1,174 polices, assuring 201,457*l.*, the new annual premiums being 6,435*l.* The twelfth triennium of the company having terminated on Jan. 31 last, the usual vaiuation of the policies and investigation of the affairs of the company has taken place; and as the result the directors recommeud that 3,000*l.*, being profits arising from non-participating busiuess, should be carried over to credit of shareholder's profit accouut, and that in future 12s. 6d. per share per annum be paid, iu addition to thc original interest of each share. The directors also recommend that out of the profits in the mutual department a reversionary bonus should be allotted on all policies in the mutual department effected on or prior to Apl. 30, 1890, which shall be in force on Juue 1 next, as follows:—On policies for the whole term of life effected on or prior to Jan. 31, 1888, a reversionary bonus of 3*l.* per cent. on the amount of such policies, and on policies effected between Feb. 1, 1888, and Jan. 31, 1889, inclusive, 2*l.* per cent., and on policies effected between Feb. 1, 1889, and Jan. 31, 1890, inclusive, 1*l.* per cent., and on policies effected between Feb. 1, 1890, and Apl. 30, 1890, inclusive, 10s. per cent., and on other policies effected on or before 30th April, 1890, and entitled to participate, a proportionate bonus to be calculated by the actuary. The directors deplore the loss by death of their esteemed colleagues, Fountain John Hartley, chairman of the company during 22 years,

and William Potter Olney. These gentlemen have rendered great and valuable services to the institution.

AS THEIR SUCCESSORS MR. ALFRED CONDER AND MR. DEPUTY ROBERT PARKER TAYLOR HAVE BEEN ELECTED; ALSO MR. ROBERT RAE, SECRETARY OF THE NATIONAL TEMPERANCE LEAGUE, AS AUDITOR.

The policy-holders are requested to assist the directors by introducing as many policyholders as possible during the year. Our auditors' report, dated London, May 28, 1891, addressed to myself, says: "Dear sir,—Having concluded our audits of the company's accounts and securities of the British Equitable Assurance Co. for the past year, we have great satisfaction in reporting to the board of directors and yourself as managing director our united judgment as to the clear and accurate manner in which the business is recorded and accounts rendered. We have carefully examined all the deeds and securities of the company, and have found them in perfect order, and the whole accounts admirably kept. We are, dear sirs, yours faithfully, Alfred H. Baynes, T. H. Wells, and Robert Rae." The revenue account of the British Equitable Assurance Co. for the year ending Jan. 31 is as follows: The funds at the beginning of the year (I am speaking in round numbers only) were 1,297,000*l.*; premiums, 139,600*l.*; interest on dividends, 53,500*l.*; other receipts, 299*l.*; making a total of 1,491,000*l.*; claims under policies, after deductions of sums reassured, death claims, 84,000*l.*; matured claims, 27,000*l.*; total, 111,517*l.*; surrenders, 9,600*l.*; annuities, 34*l.*; commissions, 7,900*l.*; expenses of management, 30,000*l.*; dividends and bonuses to shareholders, 3,100*l.*; bad debts, 281*l.*; funds at the end of the year as per second schedule, 1,328,230*l.*, making a total as before of 1,491,000*l.* Shareholders' capital paid up, 53,000*l.*; insurance fund, 1,275,000*l.*; total funds as per first schedule, 1,328,000*l.*; claims admitted but not paid, 8,000*l.*; sundry persons, 700*l.*; depreciation provision account, 4,300*l.* Assets: Mortgages on property within the United Kingdom, 154,000*l.*; loans on companies' policies, 64,000*l.*; Indian and Colonial Government securities, 85,000*l.*; house property, 84,000*l.*; ground rents, 822,000*l.*; agents' balances, 29,000*l.*; cash, 26,100*l.*; loans to clerks, 300*l.*; furniture and fittings, &c, 4,000*l.*; making a total of 1,341,775*l.* The first item in the balance sheet is balance from last year, 1,297,775*l.* Deducting that from the accumulated fund at the end of the year the balance carried forward to next year is 1,328,000*l.* We show that we have increased the accumulated fund in the year by 30,695*l.* The investments of the year were 52,119*l.*, the interest produced by these investments being at the rate of 4*l.* 17s. 5d. per cent. The accumulated fund was invested thus: ground rents, 822,000*l.*, being 66½ per cent. of the entire funds; mortgages, 238,000*l.*, being 17¾ per cent. of the entire funds; Government securities, 85,700*l.*, being 6½ of the entire funds; and cash, 26,100*l.*, just 2 per cent. of the entire funds. Those four items give us 1,242,000*l.*, or 92.6 per cent. of the accumulated fund. We then come to loans on policies, 64,800*l.*, which is 4.8 or just under 5 per cent. Loans to clerks, and loans ou shares, .06 per cent.; these three securities of that class, give us 65,600*l.*, or 4.89 per cent. The agent's balances, 29,000*l.*, give us 2.1 per cent., and the furniture one-third of 1 per cent.

THE TOTAL PREMIUMS RECEIVED ON ALL POLICIES IN FORCE IS 1,882,636*l.*

The company has in hand 9.51, or nine and a half years' premiums. 70.55 per cent. of the gross premiums ou all policies in force, and 84 2-3rds per cent. on the net premiums on all polices in force. The assets of the company will, one of these days, have to be re-valued. They are set down simply at their cost price. I made a re-valuation for my own information, and I will give you the result of it. I valued the freehold ground rents at 25 years' purchase, with the result that they gave an excess of 87,187*l.* over the cost price, at which they are set down in the balance-sheet. I take the value of the leasehold ground rents to be in excess of the cost price by 5,500*l.*, and valuing the Government securities at the price of the day, that is, Feb. 1, 1891, the excess over cost price was 4,141*l.*, so that on those three classes of securities the actual amount—the market value is 96,875*l.* greater than they are set down in the balance-sheet. The interest of the company stands at 53,800*l.*, and the revenue at 193,500*l.* I also ascertained, as we valued at a certain rate of interest in our valuation, how that looked. Practically, I find that we earned in the year 4,903*l.* more interest than was necessitated or expected by our calculations in our valuations. (Checrs.) Turning to the other side of the balance-sheet, we find the claims 111,500*l.*, being 14,000*l.* in excess of the former year. There has been an unusual mortality under the heading of lung disease, and there is no doubt but that a great deal of this excess over the prior year was owing to

THE INFLUENZA AND OTHER ILLNESSES LEFT IN THE SHAPE OF BRONCHITIS, PUEUMONIA,

&c. For the first time since the commencement of the company the claims exceeded by 1,600*l.* the provision. It has always fallen short of this amount in every one of thc 35 years since the company has been in exisieuce; at the same time the number of deaths was 36 less than in the previous year. The surrenders were 9,600*l.*, against 13,300*l.*; that is to say, they were much less in amount, and about one-third less in percentage of premiums, or 6 per cent. against 9 per cent. The payments under policies were 111,500*l.*, and under surrenders 9,600*l.*, or a total of 121,000*l.* The expenses were 38,100*l.*, against 40,100*l.*, being about 2,000*l.* less. I trust we shall be able to make a considerable reduction again on this account during the current year. The new business of the year consists of 1,174 policies, assuring 201,400*l.*, the net annual income being 6,400*l.* I have said that I have seen a further substantial retrenchment in the expenditure of the office, and we shall in future endeavour to retrench all expenditure in working as far as possible. Our office, in comparison with others, maintains and stands in a very respectable and substantial position. The basis or method of valuation has been the same as at the last valuation, and it has shown that the company stands in a firm and prosperous condition, and the rigid valuation which we have subjected the company to shows a satisfactory bonus. The triennial valuation of the company's affairs made shows a surplus of 59,898*l.*, out of which is recommended a bonus of 1 per cent. for the policyholders, as I have read more in detail, and 3,000*l.* to shareholders. making an increasc of interest to shareholders of 1s. 2d. per share. The average age of policies terminated by death was 18.01 years in force, ditto on policies surrendered 9.38 years in force, and ditto on policies forfeited 3.99 years in force. The average age of the lives assured is 46 years; the total business in force on Apl. 30, 1891, was 26,400 policies, assuring 4,847,734*l.*, the annual premiums thereon being 143,843*l.* One of our annuitants holding a small annuity has died, and the annuities come to the small sum of 22*l.*, that is, the company's liability. Our total claims during the year, in number, were 594, and our matured claims were 190, leaving death claims 404, of which death from lung complaints was 137, a little over one-third. As this is the 36th year of the company's existence, I traced in four periods of nine years each the progress of the company. In the first nine years of the company's existence we laid by 61,000*l.*; in the second nine years, 249,000*l.*; in the third nine years, 492,000*l.*; in the fourth nine years, 525,000*l.* The average lay-by of the first nine years was 6,900*l.*; of the second, 27,000*l.*; of the third, 54,700*l.*; and of the fourth nine years, 58,400*l.* (Cheers.) The accumulated funds stood at the end of nine years at 61,000*l.*, at the end of 18 years 310,000*l.*, at the end of 27 years 802,000*l.*, and at the end of the 36th year 1,328,000*l.* We have laid by in the year, 30,600*l.* Our interest has been increased by 1,600*l.*, our surrenders decreased by 3,600*l.*, and our expenses by 2,000*l.* I think that is a pretty complete exposition of the facts contained in the report and balance-sheet, Mr. Chairman. (Applause.)

The CHAIRMAN: Gentlemen, it now becomes my duty as your chairman to-day to move the following resolution:—"That the report and balance-sheet now read be adopted, and that the recommendation contained in the report be carried into effect." I hardly know how to express the feelings with which I enter on the duties of this chair to-day. They are very mingled feelings, especially one of

DEEP REGRET AT THE LOSS OF THE LATE CHAIRMAN,

who for 22 years presided over the meetings of the company. Mr. Hartley was a man whom to know was to esteem and to reverence—a man of profound religious feeling, guided by wisdom and thought, and he was also a man on whose judgment very much reliance might be laid, for he was always guided by unselfish motives and actuated by a clear intellectual perception of the points in view. I feel that we have lost a friend and helper, and staunch supporter of our company, and I could not let his name pass from us to-day without just one or two words expressing what I think I may say is the feeling, not only of your chairman, but the feeling of the whole board with whom he has so long worked iu perfect harmony and brotherhood. I will also say that his loss will be felt by all the members of the company, whether they be shareholders or policyholders, or agents, or the staff in this house, by his absence from our midst. I must just mention also the loss we have sustained in the death of Mr. William Olney, a man well known in many circles, both in the metropolis and in the country—a very diligent and active man in every duty of life to which he was called, and a very admirable man of business, impulsive in nature, but which was always governed by excellent sense and good judgment, so that his presence amongst us was productive of the interests of the company, and activity of the agents, and in all departments of work in which he was engaged. I hope it will be found that the gentlemen who are invited to take their places will be found to emulate them, and be an honour to the company and an honour to themselves. I stand here for the first time as your chairman, and I feel to a certain extent incapacitated for it. Perhaps my early life and training did not altogether fit me for such a post, but in the course of providence I have been brought hitherward, therefore I have taken and accepted the choice of my brother directors.

OUR MANAGING DIRECTOR HAS GIVEN YOU A MASS OF FIGURES

which render it perfectly unnecessary for me to go over them and present them to you as he is capable of doing. What I have to say I will confine to a few general observations on the history of the year, and our prospects for the future. I think we are to be congratulated at the result of the year's working. You have an accumulated fund of nearly 1,500,000*l.* to meet all subsequent demands; you have already demands to the amount of 1,500,000*l.* No one, until we have wiser knowledge of results, can tell what a boon insurance companies have been in alleviating pain, and bringing comfort, peace, and joy to many families. We have this year to be very grateful for the exertions of our agents. I am sorry that one, whom we all esteem, is not here to-day—Mr. Balfour. We are very much indebted to the agents for having done so well. They have not lost heart through recent events, but I think have taken heart to enter on a new campaign, and a new departure, which will not only emanate, but go far beyond their exertions in the early years of the company. All occupations have their ups and downs; they have times of prosperity and times of adversity. We have been passing through a time of adversity, but I am not going to enter into particulars, for they appear to be passing away. I heard the other day what I have never heard before—that the bonus of the company should be the ground of choice of a company in which to insure, and this was an all-sufficient principle to govern insurers in the choice they made. I had not met with the idea before. I have heard a great deal of expense and lowness of premiums, but not that the bonus system was to be the crux and the test by which the success of a company might be determined. One word on the securities in which our large funds are invested. We know from the course of the money market and our experience of life that interest varies very much;

IN OUR YOUNGER DAYS

very few imagined that they would have to take less than 5 per cent. on their investments, but have now to be satisfied with about 3 or 3¼ per cent. Our securities are invested, as you know, very largely in ground rents, and once acquired, these securities remain unchanged from year to year until the property falls into our hands at the close of the lease. The interest is a permanent one, and ranges from 4 to 4½ per cent. on the freehold securities. Your valuation is based on an interest of 3½ per cent., so you have acquired a security which cannot diminish in value as long as your company shall last, and for 70 or 80 years to come you will have this rate of interest permanently secured, even though the value of mouey should come down to 2 or 2½ per cent., as some great statisticians in money matters anticipate that it will. There have been many policyholders' meetings held during the past few months, and we are greatly indebted for the success of these meetings to our new directors, Mr. Taylor and Mr. Conder. Our managing director has also been a help at some of these meetings, but the point is this—the good service rendered and the success of these

meetings without one exception. They have always been well attended, and have always ended to the complete approval of our policyholders. The figures undoubtedly show the basis of a good security, and I hope that there will be future progress, high results, and yet more ample returns, so that business may accrue and money be brought into the coffers of the company. (Loud applause.)

Mr. SMITH, a director, said he had much pleasure in seconding the resolution which had been so ably laid before them. The report had been so ably laid before them by their manager and succinctly illustrated in its various aspects by their respected chairman, that there was no need for him to comment at length upon the report.

The resolution was then put to the meeting and carried unanimously.

The CHAIRMAN then moved that Mr. William Smith be re-elected a director of the company. He need not say a word as to the ability of Mr. Smith. He had been most active in promoting the interests of the company.

The motion was carried unanimously.

Mr. GOVER proposed the re-election of the chairman as a director. He was glad when he secured Dr. Underhill as a director of the company, and he had always found him

POLISHED AND COURTEOUS.

Mr. SIMMONS said that he had known Mr. Underhill for about 40 years, and confirmed every word the managing director had said in reference to Mr. Underhill.

The resolution was passed unanimously.

The CHAIRMAN moved the election of Mr. Alfred Conder as a director of the company.

Mr. SMITH seconded, and the resolution was carried unanimously.

The CHAIRMAN moved the election of Mr. Deputy Robert Parker Taylor as a director of the company.

Mr. CARTER seconded the resolution, which was passed unanimously.

Mr. TAYLOR returned thanks.

The CHAIRMAN moved the re-election of Mr. Robert Rae as auditor of the company.

The resolution was carried unanimously.

Mr. MONTAGU HOLMES proposed a hearty vote of thanks to the directors of the company.

Mr. MATTHEW SMITH seconded, and the resolution was passed unanimously.

The MANAGING DIRECTOR, in reply, said that he had always done what he could for the best interests of the company, and he thought it was a matter for thankfulness that he had been allowed for 36 years without interruption to attend these annual meetings to make clear statements, so that they might thoroughly know the affairs of the company.

THE PRESENT POSITION OF THE SOCIETY,

with its excellent lives, low mortality, excellent investments, and excellent body of agents, together with his colleagues, who devoted themselves thoroughly, earnestly, wisely, and painstakingly to their duties, was a subject for congratulation.

Mr. CONDER proposed a vote of thanks to the auditors, medical officers, and solicitors for their valuable services to the company.

The resolution was carried unanimously.

PRAISE WHERE PRAISE IS DESERVED.

Mr. TAYLOR moved a hearty vote of thanks to the agents and the office staff, stating he had had special opportunities of seeing the valuable work done by them, and which deserved a high tribute of praise. (Cheers.)

Mr. BACON seconded, and the resolution was passed unanimously.

Mr. SIMMONS briefly returned thanks.

Mr. J. A. SMITH proposed, and Mr. BAUGH seconded, a hearty vote of thanks to the chairman, which was passed unanimously.

The CHAIRMAN briefly replied, and the meeting terminated.

THE CAPITOL FREEHOLD LAND AND INVESTMENT CO., LIMITED.

SPEECHES BY THE CHAIRMAN, MR. FARWELL AND MR. SETON-KARR SHOW THE PROGRESS OF THE COMPANY TO BE BOTH RAPID AND SATISFACTORY.

THE sixth annual general meeting was held at the Cannon Street Hotel, on Thursday, to receive and consider the statement of accounts and balance-sheet to Dec. 31, 1890, with the report of the directors and auditors.

The Most Hon. the Marquess of Tweeddale

(chairman of the company) presided.

Mr. HERBERT MOIR (secretary) read the notice of meeting.

POSITION FULLY EXPLAINED.

The CHAIRMAN: I have the pleasure to move the adoption of the report. I am glad to be able to state that the agreement under which the herds and lands of the company were leased continues to work very satisfactorily. Our cattle have increased in number and value. Bulls of the finest quality have been introduced, and the calf brand has come up to our expectation, as the following figures will show:—1887, 10,286; 1888, 16,664; 1889, 24,000; 1890, 29,500; whole herd, 147,000. It is very gratifying to be able to report a substantial rise in the value of range beef cattle, a rise which all competent observers are of opinion cannot fail to be maintained for some years to come. Turning to sales of land, it will be noted that 7,567 acres of land have been sold up to date for 9,281*l*. 14s. 6d., giving an average price of 1*l*. 4s. 6d. per acre, payment being made partly in cash and partly bills, payable at future dates, the company meanwhile holding possession of the lands until the entire indebtedness is discharged. There are now two towns on the company's property—both on the line of the Denver and Fort Worth Railway—one called "Texline" and the other "Channing," and remunerative sales of town lots have been held at both places. 158 town lots, or 22 acres, have realised 3,012*l*. 4s. 6d. at "Texline," and since Dec. 31 last 481 lots, or 49 acres, have been sold at "Channing" for 625*l*. 18s. 3d.

SALES OF LAND.

These sales of lands cannot be regarded as otherwise than most satisfactory, showing, as they do, that buyers are ready to take advantage of the coming prosperity in North-western Texas. Building is now being actively carried on in both the above-mentioned towns, and the fact of these pioneer settlements becoming populated, and forming new centres of civilisation on our property, must naturally enhance the value of our lands in the vicinity, which, to the extent of 105,000, acres have been surveyed and made ready for the occupation by farmers and cattle-breeders. The improvements in the value of our lands would have been no doubt more rapid but for the check which railroad building on the Western States received soon after our company was started. This check is only temporary. One railway of the many surveyed through the Panhandle has been constructed and others will be taken in hand before very long. The accounts do not call for any special comment. It will be seen that the whole of the year's expenses, including debenture charges, have been provided for, leaving a balance of 8,213*l*. to be carried forward. The debentures issued amount to a million pounds, and are for five, seven, or ten years. Having regard to the improving value of our lands amounting, as you are aware, to 3,000,000 acres, as well as to the present value of our cattle and improvements, amounting to nearly 600,000*l*., our debenture-holders can have no such apprehensions as invariably attach to investments in industrial enterprises in America, which are often depressed by causes that can never attach to landed security at prairie valuation—a security which must inevitably augment in value at a very rapid rate, as new lands are opened up for settlement by farmers and by the building of new lines of railway; nor will it be overlooked that the personal property of the company, apart from its freehold land, is worth 60 per cent. of the debenture issue.

LAND AS AN INVESTMENT.

It is well known to careful investors that life insurance companies and kindred institutions invest their funds more largely in land mortgages than in any other securities, because of their comparative immunity from fluctuations in value and the regularity with which the interest is met. The largest life insurance companies in the world—those of the United States—give such investments the preference over all others for safety and profit combined, and when foreclosures are necessary (which is rarely the case) the companies almost invariably gain by the operation. The enhancement in value of our freehold property in Texas will be so much greater than the interest accruing on monies realised by such sales of land that can be made until fully developed by railways, that it has been, and will be the policy of the directors—in the interests of shareholders—to hold them as long as possible, consistent with the growing demands for farms and new settlements. This demand is now, as I have said, on the increase, especially in Texas, where our property is situated, and within the last year a very large amount of State lands have been disposed of to actual settlers directly east of our property. In fact the State has practically disposed of all its holdings in that part of the country at prairie prices, and this notwithstanding that they are 50 to 100 miles distant from a railway. If our lands were sold at the same price, they would yield a very considerable surplus over the whole of our debenture charge. The security being of so solid a character our debentures have been taken up freely, when offered, and we may, therefore, reasonably expect to renew them without difficulty, even at lower rates, as they fall due during the next five years. I should not omit to refer to the further guarantee we possess for the continued success of the company in the able men who are conducting our affairs in Chicago and on the plains of Texas.

JUSTICE TO THE MESSRS. FARWELL.

In the Messrs. Farwell, of Chicago, who are so largely interested in the future prosperity of this vast land enterprise, we are fortunate to have men of great wealth and ability, and of the highest standing in the world of business. In conclusion, I think I am entitled to congratulate the shareholders upon the encouraging position of the company's affairs. With continued good management, with the lands and the cattle both undoubtedly rising in value, I think we may, with every confidence, anticipate for the company a bright and prosperous future. Gentlemen, I beg to move the adoption of the report. (Cheers.)

MR. FARWELL SUPPLEMENTS HIS REPORT.

Mr. FARWELL said: A few general statements of facts given in my report may be of interest to this meeting. The State of Texas has practically disposed of all her lands on the Staked Plains east of us to settlers, leaving only lands bought by speculators to compete with us in the future, and they are asking 10s. to 20s. an acre, according to location as to railroads. While the demand for our lands has been delayed, it is also quite true that every year adds to their value while we are waiting for it, and the longer we can keep them the more the shareholders will realise out of them, and the better the security to debenture-holders. With personal property in our hands, and improvements on our lands of a value of 600,000*l*., and 3,000,000 acres of the best of land in Texas, it would seem that the security of our debentures was exceptionally safe and sound. If the personal property was all wiped out the whole debenture charge on the land alone would leave a large margin at prices now prevailing in Texas for similar lands. I have dealt in my report for the last year, more than ever before, with the prospects of our cattle business, in quoting from editorials and reports of commercial bodies and the United States Bureau of Agriculture, all agreeing in the opinion that the markets are to remain high and firm for at least five years. Since I have been in London these ideas have been more and more confirmed in the minds of American dealers. That this advance has come to stay is the consensus of opinion from all quarters.

GROUNDS FOR CONFIDENCE.

This advance in range beef cattle, which must continue for five years, before an increase in numbers can again affect the market, has given rise to the inquiry, both from share and debenture-holders, as to the probable result of the lease made by the directors Jan. 1, 1889, and it is only fair to investors to give some figures from the results of the first two years' increase in the herd, from which to calculate the total results. Taking the past three years as a guide, as to our future calf brand, and the increase last year of 25 per cent. over the

previous year, as the average percentage of increase for the next five years, will give the increase for the life of the lease at 362,000 head, and taking out the sales that will be made in the meantime, say, 158,000 head, will leave a herd of 300,000 at the end of the lease, in round numbers, of which 150,000 will belong to the company, and 150,000 to the lessees. I see no reason why these results should not be reached with the same management we have had for the past three years. With a system for maturing our beeves by feeding on corn and cotton-seed cake, which we are now considering it is thought that they can be marketed one year earlier than from the range, and produce a larger net result. In either case the lessees expect to realise a large margin over the rent paid if present prices are fairly maintained. I have also been asked, as managing director of our company's business in America, when are you going to pay dividends on shares? I have as often answered, "When the money is in hand, either from sales of land, or from our temporary cattle business, under the lease, and not before." Our shareholders will be abundantly satisfied when our lands are sold. Meanwhile we can probably pay a dividend out of this year's earnings, and keep up necessary improvements for our increasing herds, and continue it during the lease, and increase it afterwards. (Cheers.)

VIEWS OF A DIRECTOR WHO HAS SEEN THE PROPERTY.

Mr. SETON-KARR, M.P. (director): I do not think it necessary for me to refer to the land question which has been amply covered by the chairman's remarks, but I shall be glad, indeed, at Mr. Farwell's suggestion, to say a word or two about the cattle and the property viewed as a cattle ranch, because, of course, although we have leased the property, yet we have a contingent interest—a considerable contingent interest—in these cattle at the end of the agreement, and, therefore, it is a matter of considerable interest to us that we should know how the lessees stand. Before coming into the room Mr. Farwell showed me the figures, and also his calculations of the increase of the herd at the end of five years. Now, I should like to say that I have been all over the property, and reported on it in 1887, and, from the observations I made at the time, I think his figures are based on a fairly moderate and reasonable estimate. Now, for instance, if we only take our breeding stock at the present moment at 60,000 head, I calculate that the increase from this, with a fair amount of good luck and reasonably fair management, would amount at the end of 1895 to 280,000 head, but, besides that we have of course something like 10,000 or 15,000 yearlings and heifers which would come in for the purpose of increase, and which would show the increase to the figure Mr. Farwell has given you (95,000). I think I can confidently say, from what I saw, that the estimate Mr. Farwell has given is fairly moderate and reasonable. There is one other thing I should like to remind you of, which is that a great change has come over the cattle market in America during the past six months. I am interested, as the chairman has said, in several private enterprises in America, and I have information from other quarters, and what has been foreseen and hoped for, for some years by cattlemen, is now happening, namely, that the supply of cattle in America is decreasing. The breeding stock during the past few years, when prices were low and men were suffering losses, was sold and largely sold, and the consequence is that at the present moment the receipts in Chicago, which is the great test of the number of cattle in America, are very largely diminishing. Looking at that fact from the point of view of the cattle owners, it is a most satisfactory indication that the present rise in the price of cattle will be maintained, at all events, for several years. I have here the report of some commission agents in Chicago with whom I am acquainted, and with whom I have done a great deal of business. The figures for the second week in May give the following result:—The estimated receipts for that particular week were 56,000 head of cattle in Chicago.

CATTLE DIMINISHING.

For the same week last year the receipts were 70,000 head, showing a falling off of 14,000 head. That decrease has been steadily maintained from the commencement of the year. What does it mean? It means this—that the supply of cattle has gone down owing to the breeding stock having been sold, and therefore cattle at the present moment moment held by owners on the ranges in Texas and elsewhere are enormously increased in value. I have no doubt that the price Mr. Farwell will get for his steers will be largely increased on the price of last season. There is only one other thing I should like to say before I sit down, and that is that I consider we have a ranch manager in Mr. Boyce in whom we may have every confidence. I have met in the course of my visits and travels in America with a good many ranch men—Western men—but I never met a man who inspired me with greater confidence than Mr. Boyce. In fact, I have kept up a correspondence with him to the present time, and think Mr. Farwell is singularly fortunate in having Mr. Boyce at the head of our ranch management in Texas. The land is the most important object of interest to us, but about that you have heard from our chairman. I think it very satisfactory to us to know that we have at the back of the land a second string to our bow in such an extremely valuable herd of cattle, which is so well managed, and which we have every reason to believe will go on largely increasing in value. (Cheers.)

The report was unanimously adopted.

The CHAIRMAN moved, and Mr. BUTTERWORTH seconded, the re-election of Mr. Seton-Karr as a director, and it was carried.

A NEW DIRECTOR.

The CHAIRMAN then proposed "That the Right Hon. John Young be elected a director of this company," and Mr. FARWELL seconded the motion.

Mr. MASON asked what were the qualifications of this gentleman.

The CHAIRMAN replied that he was an exceedingly able man, and specially qualified in this particular business.

Mr. JAMES C. STUART added that he had known him for a long time as a gentleman of the highest character, and one well-fitted to occupy any position of trust. He expressed satisfaction that the directors had been able to add to the list of trustees the name of Sir W. Quartus Ewart, of Belfast.

The motion was carried unanimously.

Mr. MASON proposed the re-election of the auditors, Messrs. Cash, Stone and Co., for London, and the Hon. A. S. Northcote, for America, and Mr. SHAW PHILLIPS seconded the motion, which was agreed to.

A cordial vote of thanks to the chairman and directors closed the meeting.

THE HOUSE PROPERTY AND INVESTMENT CO., LIMITED.

PROPHECY REALISED—A SUCCESSFUL YEAR GIVES AN INCREASED ½ PER CENT., AND THE SHAREHOLDERS ARE TOLD THEY MAY LOOK FOR ANOTHER ½ PER CENT. TO BE EARNED THIS YEAR.

THE annual meeting of the shareholders of the House Property and Investment Co. was held at the City Terminus Hotel, Cannon Street, on Monday last.

Mr. W. S. Gover

(chairman of the company) presided,

Mr. C. FRUEN (the secretary) having read the notice convening the meeting,

The CHAIRMAN, in moving the adoption of the report, which was taken as read, said: I have much pleasure in meeting you this morning. I think we have brighter prospects than when we met a year ago, and I think the report sets forth very plainly all the facts of the progress made during the year. I will touch upon a few of the items. I ought to say about the year itself, first of all, that it was characterised by the general high price of money, and that more especially during the period when London was within measurable distance, apparently, of a panic. During the latter part of the year, through the great fogs and frost, and snow and blizzard, and uncomfortable weather generally, we had hundreds of our tenants who were for about six weeks entirely out of work; the trade disputes also tended in an adverse direction. But there was one thing steady during the year, and that was the decrease of pauperism, which has gone on now for about three years. If you compare the numbers of the paupers with those of the corresponding week of the year before you will find a large reduction, and, in fact, I believe that at the present time the pauperism in London, notwithstanding the increase in the population, is less than it was 10 years ago. (Hear, hear.) And, as working men have better wages, they occupy more house accommodation, and that is a thing greatly in our favour. From the end of our twelfth year our empties have been continuously reduced, until, at the end of the fifteenth year, the percentage of empties is smaller than it has ever been from the commencement of the company up to the present time. (Cheers.) The number of houses empty at the end of the twelfth year was 386; it was reduced at the end of the thirteenth year to 328, and at the end of the fourteenth year to 191, and at the end of the fifteenth year to 118—that is equal to 4 1-3 per cent. There are 73 houses fewer empty than there were at the beginning of the year, and a reduction from the mean of the fifteenth year of 2 1-3 per cent. in the amount of empties. We thus start our sixteenth year with a nett rental of 1,928*l.* more than we started with in the fifteenth year; and I may say that the rents of the first quarter of this year have been in excess of those of the first quarter of last year. And it is noticeable that in the second half of the fifteenth year the nett rents exceeded the first half of the year by 1,206*l.* (Hear, hear.)

THE RESULT OF THE YEAR'S WORK WAS AN INCREASE IN THE NETT RENTAL OF THE COMPANY OF 38,500*l.*,

and we began the year with a balance from last year of 201*l.* 7s. 8d. After earning a 4 per cent. dividend—3 per cent. of which has been paid for the first half of the year—we have a balance to carry forward to the next year of 247*l.* 11s. 10d. This will admit of the board declaring a bonus of 1*l.* per cent., or 5s. per share. (Hear, hear.) I hope that, commencing the sixteenth year as we do, with a lower number in the amount of empties, than we have yet had, this steady improvement will be still continued. There is also another source of improvement which, I expect, will prove to our advantage during the coming year. During the many years of bad trade, the rentals of many of the company's estates were reduced, in order to secure tenants. Now that we are letting up the property, we are able to raise the rents, in some cases, to what they were before the period of the bad trade. This will be a gradual progress and a very beneficial one to the company. The company earned less than 4 per cent. in the fourteenth year by 3,174*l.*; more than 4 per cent. in the fifteenth year by 39*l.*—that is, the increase of the fifteenth year's earnings over those of the fourteenth year were 3,200*l.* (Hear, hear.) The board have devoted their attention sedulously to the improvement of the company's affairs. The properties of the company have been well and thoroughly visited and looked after, the board themselves being qualified in the case of five of the members, who have a thorough knowledge of what should be done and how to do it. It will be seen by the report that a certain amount of expense has been incurred during the past year for the purpose of getting the property closely let up. Those expenses were of a temporary character, and have proved a good investment, and as a result we have been able, since the commencement of the sixteenth year, to dispense with the services of two collectors and several of the caretakers. Then, again, we shall not have to spend so much money in advertising, because we have fewer properties to let, so that there will be a good reduction under the head of expense in the current year. (Hear, hear.)

THE REDUCTION OF THE HOUSE DUTY

is also favourable to the company. We have lost, during the last year, our colleague, Mr. Fountain John Hartley, one of the original directors of the company, and also our auditor, Mr. William Potter Olney. In selecting a director to succeed Mr. Hartley until the annual meeting, the directors were actuated by one feeling alone, and that was to get the most efficient man to do the work of the board which had to be done. (Hear, hear.) Their selection fell upon Mr. Frederick Carter, the well-known land and estate agent in Chancery Lane, whose knowledge and experience have rendered his services to the board of great value. For the post of auditor they have elected Mr. Thomas Henry Wells, the secretary of the Anglo-American Telegraph Co., an experienced accountant and first-class man of business; and I find also that he happens to be the largest shareholder in the company at the present time. That is not a disqualification in the

case of an auditor, because when a man has a real stake in the company as an auditor he is likely to look sharply after its affairs. Of the eight original directors five have been removed by death.

DR. UNDERHILL, MR. DEPUTY R. TAYLOR AND MYSELF ARE THE ONLY THREE ORIGINAL DIRECTORS LEFT.

I take this opportunity of saying that I consider the company never had an abler body of directors, qualified in every respect to conduct the business of the company in the most efficient manner. (Hear, hear.) They spare neither time nor attention in their efforts to promote its interests. The average rate of interest paid by the company to its shareholders during the 15 years of its existence has been a small fraction over 5 per cent.—5.016—the gross amount being 390,000*l*. The amount of net rent received by the company in the thirteenth year was 32,000*l*., in the fourteenth year it was 34,000*l*. and in the fifteenth year it reached 38,000*l*. And of the estates generally it may be said that they have been everywhere improved. We have a more respectable class of tenants on most of the estates, the repairs have been well maintained, and it is probable that we shall not need to spend so much on repairs during the coming year. I take it that I see an emblem of the company in the character of the year. We have had a long and bitter winter; we have had a cold and slow spring; we meet on a beautiful bright day on June 1. We have the expectations of a glorious summer, and I believe a prodigal harvest. May it be so with our company. I think you are on the road for it. (Cheers.)

Dr. E. B. UNDERHILL (vice-chairman) seconded the motion, and, after expressing regret at the death of Mr. Hartley and Mr. Olney, said: It will be remembered by many of the shareholders that one of the hopes and objects of the company at its formation was the desire to improve the dwellings of the lower classes. That has always been kept in view, although I think I may say that we have met with greater obstacles than at the time we expected, and they come from a quarter from which one would hardly expect an obstacle—I mean from the tenants themselves. We find, as a rule, that many of the tenants leave our property much worse than they receive it. (Hear, hear.) And it is a very difficult thing to reach those who, either by caprice or by negligence, or something worse, damage the property which they have occupied; and curious tales could be told you of the condition of houses after certain tenants have left them; but still, I am glad to say that, on the whole, those who are accustomed to go amongst this class of the population, and to visit, as we have done, the houses which are occupied by our tenants, observe a very gratifying improvement; and, taking them on the whole, there is no doubt an improvement in the character and bearing of such persons as occupy the large proportion of the property which we hold. (Hear, hear.) And thus our efforts at the improvement of their dwellings are now better received and better understood, and I trust also that with the growing improvement in the education of the people, the desire for tidiness and for occupying good homes, the care of them will likewise improve with the improvement of the children now growing into years. And I think it only fair to say that, going amongst our tenants as we have done, we have seen

A MARKED IMPROVEMENT

in the children; we have seen that they are healthier, that they are better dressed, and that they behave better than they did 10 or 12 or 15 years ago. (Hear, hear.) And while, perhaps, some of us may have some objections against the course taken by the Board of Education, nevertheless, it is telling upon the class which they aim to instruct and to improve. (Hear, hear.) There is only one other point I just want to mention. We have another obstacle in our way in the success of the company in the growing expenses of the maintenance of houses by the increased taxation. Now, I daresay all here have votes, and can, perhaps, influence both the County Council and the public expenditure of the country by the votes you can give at the elections; and I do not think we have need to hold a very strong check on the public expenditure, both of the nation and of the municipal bodies of the country. (Hear, hear.) There is a great tendency to expend money—I do not say on inappropriate objects. For example, those of you who live in London know well how large a number of parks and gardens have been opened to the people, and how largely these are enjoyed by the very class for whom we seek to provide good and wholesome dwellings. I cannot condemn the expenditure which this occasions, but it is a very large one. You pay for a park 200,000*l*. or 300,000*l*. and you must know that that comes out of the taxes, and in some form or the other it will bear upon all owners of landed property in London. I do not say that is not right. Perhaps it is quite right as a general principle, but still it needs to be watched carefully. Well, then, there is other expenditure, which I need not go into at length, which the County Council and the State make in various ways, which are also heavy burdens on landowners. There are laws which interfere with the construction of our houses to an arbitrary and capricious degree, with which very few are really acquainted. We sometimes get notices from the board of works to make changes in our buildings, which to us, sometimes, seem capricious and utterly unnecessary, but their powers are so absolute, that we cannot contradict them. We hardly dare open our lips in remonstrance, lest we suffer worse, and in this way there is a constant burden laid on house property in this vast metropolis. (Hear, hear.) I do not know where it may end, but it seems to me that by and by it will lead to a great increase of rents, and the cost of occupying houses and maintaining them in London. There must, some time or other, be a stop put to the great expense of housing the population, to the great increase in the population of this great city. I mention one or two of these matters because they are very important in their way, and throw some light on the course of our business at the board from week to week. We have to encounter these difficulties, and we have, to the best of our ability, to endeavour to surmount them, and we have not lost sight of

THE GREAT OBJECT WE HAD IN VIEW.

It is not altogether personal gain, but the profit and the advantage of the vast population which has gathered in this great continent of cities, the metropolis of the British Empire. I hope the result of the year's working will be considered satisfactory to you. (Hear, hear.) It has come by fair means—it has come by the course of diligent business dealing. It has not come by any forced construction of your balance-sheet, but as a result of the improved character and influence of the property which we hold. I hope, therefore, that the proposal of ours at this meeting to give you a bonus of 1*l*. per cent. to the dividend of last year will meet with your most cordial approbation. With these words I second the resolution. (Cheers.)

THE QUESTION OF A QUOTATION.

Mr. THOMAS BEARD congratulated the shareholders upon the satisfactory report which the directors had that year placed before them. When they met last year he had asked the shareholders to place confidence in the directors, and he was pleased to find that that confidence in the directors had been realised by the very satisfactory report which the directors had placed before them. He would, however, suggest to the chairman that now they were in such a satisfactory position they ought to obtain a quotation on the Stock Exchange, which he thought was a desirable thing.

The Rev. Mr. BATES hoped and trusted that the directors would not endeavour to maintain a Stock Exchange quotation. He was a shareholder in another company, and he was sorry to say that since they had had a quotation their company had not been in such a good position as it was originally.

Mr. HOGG also congratulated the directors on the improved position of the company.

Mr. LATTER said it might be of interest to the shareholders to know exactly where their estates were situated, so that they could see for themselves whether they were improving or not.

Mr. LAZIER remarked that Mr. Carter, the new director, only held 10 shares, and therefore he considered that the directors ought to have selected a gentleman who held a greater interest in the company.

The CHAIRMAN, in replying to the various questions put, said that the matter of the Stock Exchange quotation was one upon which they were not unanimous, but he should say that they would take the matter into their consideration, although he could not say that they should take immediate action. With regard to the situation of their estates he considered it was not desirable that they should publish that information, as they were not only a buying company but a selling company, but any shareholder could see the whole details, where the estates were situated, and what were the latest reports with regard to them.

The CHAIRMAN then put the motion for the adoption of the report and accounts to the meeting, and it was unanimously carried.

The retiring directors, Messrs. Wm. Abraham Colls, Robert P. Taylor, and F. C. Carter, were re-elected.

The retiring auditors, Messrs. John T. Bedford and T. H. Wells, were then re-appointed.

Mr. BEDFORD then returned thanks for his re-election.

A SUCCESSFUL PROPHET.

Mr. ROBERT PARKER TAYLOR, in returning thanks for his re-election, and also for his colleagues, stated that he could tell the shareholders with all sincerity that not he nor one of his friends had parted with a farthing's worth of shares in the company, and from the first, himself, his family and friends had held and continued to hold 20,000*l*. worth of shares in the company. He would like to make a few remarks as regarded their prospects. They would recollect that upon the last occasion he expressed the view that this year they would get another ½ per cent. Well, they had got that ½ per cent.—(cheers)—and he now wished to say that if their shareholders would bear with the board of directors and support them in what they were doing, he conscientiously believed that they would

MAKE A FURTHER ½ PER CENT. NEXT YEAR.

(Applause.) In regard to the remarks of various shareholders, he must state, as his own opinion, that the board was a great deal stronger now than it was when the company was originally formed.

THANKS.

Mr. Under-Sheriff BEARD then proposed a cordial vote of thanks to the chairman and his brother directors, to the secretary, accountant and staff for their services during the past year, and for the successful result presented that day.

Mr. J. T. GLAZIER seconded the motion, which was carried.

Dr. E. B. UNDERHILL, LL.D. (deputy-chairman), briefly returned thanks, and in so doing paid a tribute to the services rendered by the staff, whom, he stated, richly deserved the vote of thanks which had been accorded to them. He also spoke hopefully as to the prospects of the company.

The proceedings then terminated.

AT the first meeting of the newly-elected Council of the Institution of Civil Engineers the following officers were re-appointed:—Mr. H. L. Antrobus, as treasurer; Dr. Wm. Pole, F.R.S., honorary secretary; and Mr. James Forrest, the secretary.

The best Ore Granulator for leaching and concentrating in the world.

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ¼ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

THE TWO-REEL LOCK-STITCH SEWING MACHINE COMPANY, LIMITED.

(DANIEL JONES' PATENT.)

Incorporated under the Companies Acts, 1862-90, whereby the liability of Shareholders is limited to the amount of their Shares.

CAPITAL, £200,000, IN 200,000 SHARES OF £1 EACH.

FIRST ISSUE of 126,000 Ordinary Shares, of which the Vendor takes 42,000 in part payment of purchase consideration (this being the largest amount allowable by the Stock Exchange rules), leaving 84,000 for public subscription. Payable, 2s. 6d. on Application; 7s. 6d. on Allotment; and the balance as and when required. The Vendor has agreed that he and his nominees will retain for at least three years the whole of the 42,000 Ordinary Shares to be taken by them as above-mentioned. £10,000 in Six per Cent. Debentures will be secured as a First Mortgage on the property of the Company (exclusive of uncalled Capital). The subscription for the whole of these Debentures has been already guaranteed.

PROSPECTUS.

THIS Company is formed to acquire the patent rights granted to Mr. Daniel Jones, of Cardiff, for the United Kingdom, the United States of America, Germany, Belgium, France, and Switzerland, in respect of improvements in Lock-Stitch Sewing Machines, and also the right to take out patents for the same in any other part of the world, and either to work the invention or to grant licenses to sewing machine manufacturers and others.

The Company's machine is similar in appearance to all first-class lock-stitch sewing machines; but it entirely dispenses with spools and shuttles, two ordinary reels of silk or cotton being placed direct in the machine.

The upper reel is placed on the arm of the machine, and the under reel is lodged in a holder below the needle-plate.

The following advantages are claimed for this invention over the ordinary type of lock-stitch sewing machines:—

No spool or shuttle required.

A perfect lock-stitch, the same on both sides of the fabric, is produced direct from two ordinary reels.

Two ordinary reels of cotton or silk may be supplied instantly when the existing ones become exhausted, thus saving the time and expense necessarily spent upon winding spools or the hobbins of shuttles now used in other lock-stitch machines.

Reels, containing any number of yards up to 600, may be placed direct in the machine and worked until exhausted, thus avoiding the waste which occurs in other machines of the unused silk or cotton remaining on the spool or bobbin when the work is finished.

The most delicate work can be sewn without being soiled, as the cotton does not touch any parts that require oiling.

It has few frictional parts; is durable, rapid in its operations, and the simplicity of its mechanism renders it not likely to get out of order.

There is no friction whatever on the lower thread, and the friction on the upper thread is reduced to a minimum, thus transferring the thread or silk to the fabric with unimpaired strength and finish.

It can easily be understood and worked, and is especially adapted for domestic and manufacturing purposes.

The outlay of introducing this machine into factories and workshops will, it is believed, be speedily repaid by doing away with the great expense of employing persons exclusively for winding spools and bobbins for the machinists.

Its simplicity of construction materially reduces the cost of production as compared with other lock-stitch machines.

NOVELTY OF INVENTION.—The specifications of the English patents have been submitted to and examined by Mr. J. Fletcher Moulton, Q.C., the eminent Counsel and Authority on Patent Laws, who states:—

"I am of opinion that Mr. Jones' Patents, 5375 (1887) and 9089 (1889), are good and valid in all respects. From the results of the search that has been made by Mr. Lloyd Wise, and in which I have no doubt all relevant patents were examined, I am of opinion that the invention of Mr. Jones, as covered by his patents, is novel.'.

Mr. Lloyd Wise, M.I.M.E., President of the Institute of Patent Agents, in his report, states:—

"Having considered the specifications submitted to me, as the result of your search, which I understand to have been a complete and exhaustive one, as well as those found in the course of the independent search amongst English patents which I caused to be made, I am of opinion that . . . . the inventions described in the specifications of your three English patents, No. 3128, dated March 17, 1885; No. 5375, dated April 13, 1887; and No. 9089, dated June 1, 1889, ... are for novel subject matter and can be supported."

UTILITY OF INVENTION.—Sir Edward Reed has also reported as to the utility of the invention, and writes:—

"I have carefully exsmined the specifications of your several patents, with respect alike to the novelty of your improvements, the validity of your patents for the same, and the manufacturing and commercial value of your machine. I have likewise . . . . made repeated examinations of the machine, and of all its parts . . . . I am glad to find myself in complete agreement with your eminent counsel, Mr. Fletcher Moulton, Q.C., as to the novelty of your invention, and the validity of your patents . . . . I would beg leave to compliment and congratulate you upon having worked out with marked and even striking success a series of very ingenious improvements, the *ensemble* of which provides a machine that, if I judge the matter rightly, will come into very extensive use both at home and abroad, because of its convenience and of its great economy, both of first cost and of operation."

Copies of the above reports *in extenso* appear on a separate sheet, accompanied by a few of the many others that have been obtained.

Machines can be seen at work at the Offices of the Company in London and Birmingham.

FOREIGN PATENTS.—The directors anticipate that considerable profit will accrue to the Company from the sale of or granting of licences under the foreign patents.

ANNUAL SALES.—The annual sales of sewing machines not possessing the advantages and improvements claimed on behalf of this machine are stated by the editor of *Sewing Machine Gazette*, in a letter to Mr. Jones, of January 23, 1891, as follows:—

"As to the number of machines made annually, there being no official statistics, I cannot tell exactly, but, from the inquiries I have made, I should think that the world's total production exceeds 2,500,000 per annum."

PROSPECTS OF THE COMPANY.—It is reasonable to expect a fair proportion of the trade, considering the advantages of the Company's machines; but the directors base the following estimate of profits upon the output of only 30,000 machines per annum:—

WORKS: ESTIMATE OF PROFITS.—The directors propose to erect works in Birmingham with plant capable of turning out 30,000 machines per annum. They have had prepared a careful estimate of the cost of producing the machines, and this estimate justifies them in believing that they are largely below the mark in anticipating a profit of £1 per machine.

On this basis 30,000 machines at £1 each would yield a net profit of		£30,000
which may be applied as follows:—		
To pay 6 per cent. on £10,000 first mortgage debentures	£600	
To pay 15 per cent. on £126,000 ordinary shares	18,900	19,500
Leaving for reserve		£10,500

The whole of the £10,000 raised on the debenture issue will be applied in the purchase of freehold land and in the erection of buildings and plant for the Company's works.

The price to be paid to the vendor for the British and foreign patents, &c., is £90,000, payable as to £48,000 in cash and £42,000 in fully paid ordinary shares (which is one-third of the total capital proposed to be issued—being the largest amount allowable by the Stock Exchange rules). The vendor has agreed that if there be insufficient capital subscribed to pay the whole of the said £48,000 in cash, and to leave £30,000 cash for working capital, he will accept such part of the £48,000 as there shall be insufficient cash to pay in fully paid up shares. The vendor has agreed that he and his nominees shall not sell any portion of the 42,000 shares for a period of at least three years. The vendor bears all expenses of the formation of the Company and the present issue of capital to the first allotment of shares.

The Company have secured the services of Mr. Daniel Jones, the vendor and inventor, for a period of at least seven years, upon such terms as may be fixed by the directors.

The following contracts have been entered into, viz., an agreement dated April 10, 1891, between Daniel Jones (the vendor) of the one part, and Joseph Williams McPherson, as trustee on behalf of the Company, of the other part. An agreement dated May 1, 1891, made between George Cookes, of the one part, and the Company of the other part. An agreement dated May 9, 1891, between Daniel Jones, of the one part, and William Uppington of the other part. An agreement dated February 3, 1891, between Daniel Jones, of the one part, and Lewis Hopkins of the other part. During the negotiations for the purchase of the property and the formation of the Company, arrangements have been entered into in connection therewith, and as to the payment of the preliminary expenses, the guaranteeing of the necessary working capital, &c, and applicants for shares shall be deemed to have due notice thereof, and to have assented thereto, and also to have expressly waived all right to any further particulars thereof, whether under Section 38 of the Companies Act, 1867, or otherwise, and any application followed by allotment shall be deemed a special contract with each applicant to the effect above stated.

The statements of fact contained in this prospectus are based upon reports and estimates, copies of which and of the memorandum and articles of association, and of the first two contracts above mentioned, may be seen at the offices of the solicitors to the Company.

It is intended to make an early application for a settlement on the London Stock Exchange and a quotation in the Official List.

Application for shares should be made on the form accompanying the prospectus, and sent, together with the amount payable on application, to the Company's bankers. Where no allotment is made, the deposit will be returned in full, and where fewer shares are allotted than the number applied for, the balance of the deposit will be applied in payment of calls due on the shares allotted.

Prospectuses, with forms of application for shares, may be obtained at the offices of the Company (London and Birmingham), or of the bankers, solicitors, auditors and brokers.

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

A DULL WEEK—THE SETTLEMENT—SPECIAL REMARKS AS TO ETHERIDGE, EBERHARDT, LA PLATA, &c.—THE EFFECT OF GOOD NEWS.

The members of the Mining Exchange might almost have joined the 'bus strike this week for all the business they have done during its currency. The lethargy of the public in mining matters would be extraordinary were it confined to this industry alone, but a grain of comfort may be gathered from the fact that it has communicated itself to every section into which Stock Exchange matters divide themselves. The general opinion is that the Mining market is suffering from causes with which it has had nothing to do, and that instead of the sins of the fathers operating upon the children alone the shortcomings of the Barings and other firms, whose names have been prominently before the public of late, have been visited upon mining shares. The connection between cause and effect is difficult to trace in such matters as these—as difficult, in fact, as it sometimes is for the "faculty" to detect the origin of a particular disease. The disease is there, just as the dulness in mining shares is there, but the cause is difficult to ascertain.

One cannot look at the condition of some mines, with whose affairs we specially deal this week, and some of those whose meetings we reported in our last impression, without feeling that quotations do not represent values. Most quotations at present scarcely represent the break-up value of the respective concerns. Some shares quoted at 1s. and up to 5s. are within measurable distance of paying dividends; others are making returns of a satisfactory kind, and most are in an infinitely better position than when quotations were much higher. We suppose that at some time or other the public will wake up to these facts; but at present they are knitting up the ravelled sleave of care in a sleep almost as profound, though we trust it will not be so prolonged as that of Rip Van Winkle.

The perusal of the various telegrams which will be found below will show real progress in some cases, and considerable returns in others. From this section of the Mining World, let the reader turn to our latest quotations, and a true and just verdict give of whether the one bears any proper relationship to the other. We have pointed this out before, but facts such as these require a good deal of emphasising, and one of these days the proper inference will be better drawn than it is to-day. At all events it will be better acted upon.

Several causes have been at work to produce a dull week, and the chief of them has been the settlement, which was one of the lightest on record, but which passed off satisfactorily. Etheridge has to re-construct after all under circumstances set forth in the short leader we devote to the subject. The committee did not believe those at the recent meeting, who saw further than they did. They were told that they must re-construct first, and "report" afterwards, and when they came to look into matters, to use their own words, they found "they had no alternative."

The meetings of the week have not been numerous. Perhaps the most important was that held by Eberhardt, to the satisfactory position of whose affairs we devote space in our leader columns. The shareholders of Blue Spur and Gabriel's Gully were surprised to hear so good an account from the chairman at the meeting yesterday. The Tasmanian Land and Exploration Co., whose meeting was held to-day, is now a 10 per cent. concern. The progress of Garfield Mine is slow, and the West Indian Gold Corporation held a stormy meeting, at which a proposition to appoint a committee was severely defeated. Southern India Alpha has granted a fresh lease of its property to the Indian Gold Mines of Glasgow. The Flameless Explosives Co. held a meeting at which they cannot be said to be making much headway, and even the working expenses last year were not met. The special resolutions previously passed by Durban Roodepoort were confirmed on Wednesday.

The Metal Markets have remained fairly firm, copper being quoted about 56*l.*; English lead averaging about 13*l.*; and fine foreign tin, 93*l.* The "bears" seeing the slackness of business took a nasty advantage of the market and tried to force down prices. In a few cases they were successful. One broker sent out a circular helter skelter, quoting Emmas at 1s. 4½d., though he could not have bought them at 2s. 3d. His manœuvres were helped by the statement that the mill would not start so early as had been expected. There were active dealings in Eberhardts after the meeting which the market read favourably. Montana, Palmarejo, and Guston are quoted fractionally better.

Tesoro shares, about which we wrote favourably a week ago, close firm, and appear, as then remarked, "on the rise."

Colons have fallen. A most determined effort has been made to depress Gravel Gold shares, and success has attended it to a certain extent, but shareholders are well advised to hold on as good news is shortly expected. Let them read for their encouragement the report of the recent meeting. Efforts have also been made to depress American shares generally, with some success in the cases of Yankee Girl, Elkhorn, and Frontino. The returns from Yankee Girl and New Guston are very remarkable. Monte del Oro has received an unfavourable telegram.

The "Kaffir Circus," as it is called, would have displayed but poor horsemanship this week but for the notable advance in Ferreiras to-day of 1*l.*, being 30s. on the week. It is long since we have seen such an advance in any African share. Generally speaking, Kaffirs are a shade firmer, but this remark does not apply to Jubilee, Piggs Peak, City and Suburban, and a few others. Neither does it apply to Land shares, which generally are quoted lower, nor to De Beers, which have lost 8s. 9d. on the week. Vogelstruis publishes a good telegram.

Our readers may not have observed the progress being made by La Plata Mines. The following are the results from Jan. 1 to May 31, 1891 :—

Months.	Mineral sold.			Sales from Slag Dump Leases.		Net Profits at Mines.	
	Tons.	Value.					
		$	c.	$	c.	$	c.
January	412	5,460	71	1,031	68	1,253	70
February	430	5,353	35	1,043	61	1,172	16
March	454	5,310	94	735	65	1,217	30
April	487¼	5,567	09	638	42	882	17
May	not yet advised	5,000	00	720	00	850	00

The latest report from the manager shows that there is no falling off in the output and the mine is looking well, but as the smelters having raised their charges for treatment of the ore, the net value to the company shows a decrease. The workings on the White Cloud Mine (Red Mountain district), the bonding and working of which has received the approval of the great bulk of the shareholders, are also most promising, and the ore in the shaft is improving as the mine is being deepened. Mr. Argall writes: "I never had a doubt of the success of the White Cloud, and since we commenced sinking, I am, if possible, more sanguine of success." La Plata shares, under these circumstances, look like what the brokers would describe as "a good purchase."

In the Australian department, with the exception of Gympie Great Easterns, which are fractionally better, all the shares have been on the down grade. Australian Broken Hill Consols have been active, but are weaker. Wentworth Proprietary and East Broken Hills have scarcely been mentioned.

When all other help fails, brokers usually expect some relief from the Indian section, but even this has been disappointing, and all shares are a shade lower. No! There has been one exception —Colar Central—which at one period advanced to 2s. 3d. buyers, but do not close so good. In the Copper section the price of the metal has justified the general rise that has taken place, though it has not been of a very pronounced character.

The Mysore Harnhalli directors disclaim any responsibility for statements made concerning the mine, other than those published by the authority of the board conveyed through the secretary.

It is positively appalling to the true patriot to have week after week to record a steady decline in Cornish shares. With the solitary exception of Phœnix United, all descriptions are down, led off by Carn Brea and Wheal Agar, each with a 1*l.* call. The present must be an exceedingly trying time in Cornwall, and we trust that the worst has now been seen, and that the tide will turn. It is high time it did.

It is difficult to speak with any assurance of the outlook for next week. For one thing we shall have no settlement to contend with, and possibly there may be some good news, but then in these days this scarcely matters. Good news does not affect the market as it did in former times. Some of the telegrams published this week would in the "good old times" have advanced the shares of the companies receiving them by pounds. Now the receipt of news of the cutting of a valuable lode is followed by a fall of 3d., and a good meeting is succeeded by a substantial drop. The markets, like the seasons, seem to be changing, but how are we to change with them?

DIAMONDS.

A fair amount of business was transacted early in the week, and at one time De Beers changed hands at 14 15/16. They have since been offered and show a decline on the week of 8s. 9d. per share. Other changes are only fractional.

Business.—A rise is shown in Gordon of 6d., and Ottos Kopje 3d., but a fall has taken place in De Beers of 7/16. Others remain as last quoted.

3/4	Burma Ruby Mines	par 1/8 pm.

KAFFIRS.

There has been more business doing, but prices have not been maintained, several of the crushings not being considered good. Ferreiras have been freely dealt in, and show a rise of 30s. on the week—in fact, they have risen 20s. to-day. The only other rise of note is in Wemmer. Amongst those that have receded Jubilees have been foremost, City and Suburban coming next.

Business.—A rise is shown in Aurora of 1/16; Durban-Roodepoort, 1/16; Ferreira, 1/2; Forbes Reef, 6d.; Great Gold Zone, 6d.; Heriot, 1/8; Kleinfontein, 1/16; Salisbury, New, 1s.; Simmer and Jack, 1/16; Wemmer, 1/8; and Witwatersrandt (Knight's), 6d.

The following have fallen:—Piggs Peak, Ordinary, 6d.: Piggs Peak, Preference, 1/16; Thomas Reef, 1s.; Battery Reef, 1s.; Bothas Reef, 6d.; City and Suburban, 1/8; Crœsus, 6d.; Dornkop, 6d.; Geldenhuis, 1/16; Glencairn, [illegible], 1/2; Langlaagte, 1/16; Langlaagte, Block B, 6d.; Moss Rose, 6d.; Royal 1/16; Vogelstruis, 1s. 6d.

AUSTRALIANS.

This market has suffered from lack of support, and shares are mostly lower. Scottish Australian and Australian Broken Hills are both down 1/8. A slight inquiry has sprung up for Gympie Great Eastern, but the very satisfactory return from Day Dawn Block failed to enhance the price of the shares in that company.

Business.—A rise has taken place in Gympie Great Eastern of 6d.; whilst a fall is noted in Australian Broken Hills of 1/8; Bonnie Dundee, 6d.; Day Dawn P.C., 6d.; Mount Morgan Extended, 6d.; New Queen, 9d.; and Scottish Australian, 1/8.

INDIANS.

There has been very little doing in this description of shares with the exception of Colar Centrals, which changed hands at one time as high as 2s. to 2s. 3d. They, however, close lower, but show a rise on the week. Nundydroogs and Ooregums are marked lower.

Business: A rise has taken place in Colar Centrals of 6d., whilst a fall is noted in Goldfields of Mysore, 1s.; Indian Consolidated, 3d.; Nine Reefs, 3d.; Nundydroog, 1/8; and Ooregum, Ordinary and Preference, 1/8 each.

SOUTH AFRICAN LANDS.

There has been a slight advance in a few of these shares this week, Exploring, London and South African Exploration, and Oceana appearing to be the favourites. But at the close Oceanas were freely sold, causing them to drop.

Business: A rise is shown in Bechuanaland of 1/16; London and South African, 1/8; Read's Drift, 1/8; whilst a fall is noted in Gold

Estates (Transvaal), 1/16; Nooitgedacht, 6d; Grahamstown, N ew, 6d.; Oceana, 1/8; Ophir, 6d.; and Zoutpansberg, 6d.

COPPER.

A rise is shown in several of this class, although prices do not close at best, the price of the metal having declined slightly. Buying has come chiefly from Paris, and it is supposed the dealers there are covering in shorts.

Business.—A rise is shown in Capes of 1/8; Mason and Barry, 1/4; Rio Tinto, 1/4; and Tharsis, 3/8; whilst a fall has taken place in Copiapo, of 1/8. This completes the alterations for the week.

GENERAL FOREIGN SHARES.

Dulness has characterised this market and shares are in several instances lower. Colombian Hydraulic and Gravel Gold have been offered and have fallen, but no legitimate cause for the decline is known at the office. Dickens Custers were enquired for on receipt of the satisfactory cable announced elsewhere. Eberhardts have been bought, and it is believed they will advance considerably.

Business :—A rise is shown in Barrett's of 3d.; Montana, 6d.; Palmarejo, 6d.; and Tesoro, 3d. The falls are in Colombian Hydraulic, 1/8; Colon, 9d.; Elkhorn, 1/16; Flagstaff, 3d.; Frontino, 1s.; Gravel Gold, 1/16; New Viola, 3d.; Pahang Corporation, 1/8; Pinos Altos, 6d.; Richmond, 1/8; and Yankee Girl, 1/16.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director at Broken Hill, June 12 :—"9 tons of ore, containing 82,107 ozs. of silver, raised during the fortnight; thirteenth shipment. consisting of 9 tons of ore, containing 82,107 ozs. of silver, will be shipped for London per steamer leaving Adelaide on June 24."

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 6th inst. :—"Tons crushed, 480; yield of gold, 658 ozs.; approximate value, 2,270*l*.; fortnight's expenses, 850*l*."

DAY DAWN P.C.—The result of this company's crushing for the fortnight ending June 6 was 1,120 tons, 854 ozs. (Estimated value, 2,903*l*.).

KAPANGA.—Telegram from the manager :—"We have crushed 65 tons of quartz; the yield has been 40 ozs. of gold."

MILL'S DAY DAWN.—The crushing of June 6 is as follows :—Fortnight's return : 1,030 tons crushed, 1,077 ozs. of gold obtained, 3,715*l*. approximate value.

MOUNT LEYSHON.—Cablegram, dated 9th inst., from the manager at Charters Towers gives the fortnightly crushing :—"750 tons crushed, 305 ozs. gold; 20-stamps mill ran 288 hours; value, 700*l*."

NEW QUEEN.—A cablegram from the mine, June 9, gives result of the past fortnight's crushing :—"320 tons, yielding 275 ozs. gold."

MOUNT ZEEHAN.—The 48 tons of silver-lead ore ex Duke of Devonshire assayed 68 3/4 per cent. of lead and 117 1/2 ozs. of silver per ton.

TASMANIAN (SILVER).—The company has received, to-day, the following telegram from their engineer :—"Commenced pumping. Everything working smoothly."

VICTORIA.—Messrs. Arthur Forbes and Co., as agents of the Victoria Gold Mining Co., Charters Towers, have received the following cablegram :—Crushed for past four weeks 267 tons, for 1,689 ozs. gold; value, 5,900*l*. Dividend of 2s. per share declared, after paying for new machinery."

FOREIGN MINES.

ALMADA AND TIRITO.—Cablegram from the mine :—"Actual profit for May, $10,000. Labour now extremely scarce."

CORTEZ.—A cablegram from the superintendent shows the results for the month of May :—Production, 47,073 ozs.; expenses, $15,200; tons crushed, 775; development expenditure, $4,300.

DE LAMAR.—During May the mill crushed 1,360 tons, producing bullion of the value of $47,000; estimated value of selected ore produced, $11,000; total produce, $58,000; total expenses, $23,000.

DICKENS CUSTER.—Cable from Mr. Axford, the managing director at the mines :—"Shipped bullion amounting to 2,130*l* after a run of 21 days."

ELKHORN.—The board have declared a fifth interim dividend of 2s. per share, free of income tax, for the three months ending May 31. A balance of about 8,000*l*. is carried forward. Dividend warrants will be posted on the 22nd inst. to all shareholders appearing on the company's books on the 11th inst. The transfer books will be closed from the 11th inst. to the 15th inst., both days inclusive. Cable :—"Bullion shipped during the month of May, $36,970; smelting ore sold, $13,750; total produce, $50,720; total expenses, $22,240. Bullion shipped for week ending June 6, $8,670."

EMERALD (COLUMBIA).—Manager's report Apl. 19 :—This week we have continued widening the lower part of the canal. We have opened up 45 metres' length more, making up to now 82 metres; the width varies from 3 to 12 metres, according to the height we have to work down. In the upper part I had to take 40 of the hands in order to work down ground from the one side, preventing big landslips, which threatened to cover the veins, and which were caused by the heavy rain-falls of late. Hands at work, 120.

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, the manager at Oroville :—"The river is now only 6 ft. above low water mark. Last year, at the same date, it was 20 ft. above low water mark. Flume (to connect with the Golden Gate flume) is well under way. Everything is going all right."

GOLDEN GATE ALLUVIAL.—Cable from Col. Frank McLaughlin, the manager at Oroville :—"All foundations of flume finished, and water running through 500 ft. of flume. Everything going all right."

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for month of May :—"3,000 tons of ore crushed, 580 ozs. of bullion produced, value $7,000; 47 stamps running 30 days." The company have sold, through Messrs. Pixley and Abell, the bullion produced during the month of Apl., which realised 1,627*l*. 19s. 4d. nett.

Gold Hill.—A meeting of shareholders in the Gold Hil Mining Co., Limited (in liquidation), was held on Thursday, at 141 George Street, E.C., to receive the liquidator's report. The accounts,, which showed that the total receipts were 936*l*., and disbursements, 727*l*., were adopted.

Monte del Oro.—Telegram, June 9, from the mine manager :—"Heavy rains, mine flooded; all operations suspended, all labourers on strike; letter explains."

Ouro Preto.—Telegram (June 11) gives last month's return of gold as follows :—"3,225 tons quartz, produced 9,003 oits. of gold (1,038 ozs.).

Pinos Altos.—The out-turn for the week ended 30th ult. was $7,000.

Quebrada Railway, Land and Copper. — The dividend warrants on the company's preference and ordinary shares for 1890 have been posted.

Raub Australian Syndicate. — The manager cables as follows :—"Singapore, June 11. Crushing finished. 1,350 tons crushed, yielded 925 ozs. smelted gold." A correspondent, well qualified to speak, says :—"This is quite as good as can be expected, as in Mr. Bibby's (manager) report of April 30 he states that five-sixths of the stuff going through the batteries this time is much broken up and mixed with mullock."

Home Mines.

Leadhills.—The meeting of this company is called for next Tuesday. The managing director has lately visited the property.

Ticketing for Tin Ores.

A tin ticketing took place at Redruth on Tuesday last, when 304¼ tons were offered, with the following results:—

Value of Ores Sold from each Mine.

	Tons.	Cwts.		Per ton. £	s.	d.		Value. £	s.	d.

LATEST FROM THE GOLD AND DIAMOND MINES.

Simmer and Jack.—May profit, 15,000*l*.

United Langlaagte.—Crushing for May 890 ozs., from 5,600 tons.

New Primrose.—"May crushing, 1,853 ozs. from 3,655 tons; 50 stamps running 25 days."

Witwatersrandt (Knight's).—May results :—"3,200 tons crushed; 790 ozs. of gold won; 24 days working."

Wemmer.—May results :—"1,000 tons crushed; 920 ozs. of gold won; 21 working days; and 246 ozs. of gold recovered from tailings."

Moodies.—Cable from the head office :—"351 claims rented or leased; 2,510 tons crushed by claimholders yielded 1,987 ozs. of gold."

Stanhope.—Cable: "Have declared a dividend of 10 per cent. payable to all shareholders registered on June 11, 1891. Will be paid July 13."

Jubilee.—Results of last month's crushing is 708 ozs. of gold; will not pay a dividend; very considerable expenses probable for refractory ores.

May Deep Level.—Cablegram:—"May: 24 days milling; 494 tons crushed; yieldiug 713 ozs. of gold; concentrates, value 875*l*.; everything working well."

North-Eastern Bultfontein.—This company has telegraphic advice announcing 8,300 loads washed, producing 1,500 carats of diamonds, for the week ending 6th inst.

Edwin Bray.—A cablegram from Barberton gives the result of the crushing during May :—"800 tons crushed, yielding 209 ozs.; will probably do better during the month of June."

Oriental and Sheba Valley.—Through an error, the quantity of concentrates for last month was stated to be 6 tons, assaying 15 ozs. per ton, whereas it should have been 24 tons, assaying 11 ozs.

Transvaal Mortgage Loan and Finance.—The coupons of the Five per cent. Debentures due 30th inst., are payable on and after that date at Messrs. Prescott, Dimsdale, Cave, Tugwell, and Co., Limited, 62, Threadneedle Street, E.C.

Central Montrose.—Advices have been received that the result of the crushiugs for May with a 10-stamp battery was 485 tons, yielding 252 ozs., of which 110 ozs. should have been included in the Apl. returns. Expenses on revenue account, 590*l*.

Robinson.—A cablegram dated Cape Town, June 11, says :—"A summons has been served upon the company claiming the forfeiture of their tenure of the mining property. The directors regard this attempt as frivolous, and it is their intention to resist it to the utmost."

South Vogelstruis.—A second and final return of capital of 10d. per share, making a total return of 9s. 4d. per share, on the shares 12s. 6d. paid, has been declared by the liquidator of the South Vogelstruis Gold Co., Limited, payable at the offices of Messrs. H. Woodburn, Kirby and Co., 19, Birchin Lane, E.C.

Geldenhuis.—A favourable arrangement has been come to with the Jumpers Co., whereby they have the use of 50 stamps of their battery for crushing. It is expected that this arrangement will hold good until the Geldenhuis battery is ready to start. When full work is reached monthly reports will be issued to shareholders giving full details of operations.

Vogelstruis.—Cablegram from the mines :—"Mill tests show—from No. 4 shaft, 169 tons crushed, 11 dwts. per ton; from No. 2 shaft, 325 tons crushed, 6 dwts. per ton; from ore from the dump, 368 tons crushed, 4½ dwts. per ton. The gross yield being 277 ozs. gold smelted. Struben returns immediately. Pascoe will examine the mine and report at once.

Crown Reef.—The crushing for last month during 27⅞ days was 5,754 tons, which yielded 3,082 ozs. of gold. The revenue for the month was 11,018*l*. 3s., and the working expenditure was 7,106*l*., leaving a balance of profit for the month of 3,912*l*. 3s. The expenditure on capital account for the month was 1,158*l*., making a total expenditure for the month of 8,264*l*.

Jumpers.—The development of the mine (say the directors) continues to show a steady improvement in the value of the reefs. Native labour has been in fair supply, but of inferior quality—most of the boys offering being thoroughly raw. The board has ordered complete rock-drilling plant, and the manager will shortly start the erection of the necessary buildings in connection with the same. Obtained 2,396 ozs. during May.

Transvaal Gold Exploration.—The following are the figures for Apl. .—Mined, 514 tons; average assay, 2 ozs. 18 dwts. per ton. Battery working 531½ hours, crushed 459 tons. The ore and 189 tons Theta ore, yielding 551 ozs. retorted gold– 17 dwts. per ton. Pans working 518½ hours treated 523 tons blanketings, yielding 329 ozs. 17 dwts.—6 ozs. 6 dwts. 7 grs. per ton; 158¼ tons mixed tailings, yielding 121 ozs. 10 dwts.—15 dwts. per ton; and 10½ tons Theta and Nu ores, yielding 118 ozs. 15 dwts.—11 ozs. 6 dwts. 4 grs. per ton; sundries, 9 ozs. 7 dwts. 9 grs.; total for month, 1,130 ozs. 9 dwts. 9 grs.

Piggs Peak Estate and Gold.—Mine report for week ending May 9.—Devil's reef: Drive on top of the hill. Driven for the week, 25 ft.; total, 82 ft. Ground about the same; shows no gold in panning. Winze: Sunk for the week, 10 ft.; total, 60 ft.; lode the same as reported last week; cuttings, 182 ft. Same shows gold in panning. Six boys cutting firewood, also wood for timbering mine. Tamblyn reef: tunuel: Driven for the week, 7 ft.; total, 36 ft.; shows no gold in panning; ground getting harder. Shaft: Sunk for the week, 3 ft.; total, 18 ft. No gold in panning; amount of cuttings, 461 ft.; no gold in panning. Peak, Piggs drive: Driven for the week, 15 ft.; total, 42 ft. No change since last report. No. 1 works: Driven for the week, 12 ft.; total, 222 ft. Ground getting harder, and does not require timbering. Cuttings, 100 ft. Prospecting: Nothing new to report from the prospectors; there are two parties in the field.

Horo Concession Exploration (May 4).—Report from superintendent :—I beg to send you below the report of the work done here during the month of Apl. last :—No. 2 tunnel winze: The drive from the bottom of the winze towards the intermediate tunnel has been advanced 18 ft. 3 ins. Intermediate tunnel: The distance driven in this tunnel is 30 ft. 2 ins. There is now 4 ft. to drive to connect with the drive from the bottom of the No. 2 tunnel winze. Tramways and ore trucks: The tramways from mine to battery have been partially constructed. I hope to complete them by the middle of this month. I expect to finish the trucks required to convey the ore to the battery during the present week. Pipe line: Sufficient pipes have been rivetted for the pipe line, and these are, as regards the larger part, already in place. Six waggon loads of pipes of the large lot have arrived from Delagoa Bay, and I hear that more are on the road, so I hope there will now be no further delay in the construction of the pipe liue. The settling tank has been completed, and the small dam required for the stream which the 3 in. diameter pipe will take will be finished in a few days. Prospectors: The men out prospecting have reported nothing of importance during the month.

May Consolidated.—During Apl. the results of both mining and milling show a considerable improvement as compared with those of the previous month, especially as regards development work, the total footage in driving, rising, and siuking being 647 ft., as againat 302 ft. for the month of March. This improvement in development works, is in the main due to the use of the rock-drills on the 165-ft. level, May end, the re-starting of which was reported last month. Scarcity of labour, of a good class, is still experienced, and, had this not been the case, even better work would have been done. Both mills ran steadily. Much of the ore crushed came from stopes which still remaiu very wet, and was in consequence heavy and difficult to feed. Both mills are maintained in good working condition, and continue to run well. Although natives continue to arrive, labour of a good class has been scarce, at current rates of pay, and some difficulty in maintaining an adequate supply during the coming winter may be expected. Results :—The following are the figures and results for the month: Sunk and driven May block, 237 ft.; sunk and driven Annie block, 410 ft.; total, 647 ft.; stoped 4,230 tons; stopes filled in, 969 tons; timbered, 60 ft.; mullock raised, 363 tons; quartz raised, 4,645 tous; quartz sent to mills, 4,755 tons; ore at grass, 7,050 tons; tons milled, 4,760 tons; smelted gold, 2,267 ozs. 18 dwts.; average per ton, 9 dwts. 12.70 grs.; value of gold, 8,221*l*. 3s.; average per stamp, 2 tons 9 cwt.; time running, 70 head, 28 days 2 hours 41 minutes; time running, 50 head, 28 days 5 hours 37 minutes; time running, 20 head, 27 days 18 hours 49 minutes.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (June 11).—Wheal Maria, Capel Tor lode, eastern shaft: In the 112-fm. level west the lode is 1½ ft. wide, composed of capel and quartz, with peach and a little mundic. Watson's engine shaft: In the 172-fm. level west the lode is 3½ ft. wide, composed of capel and quartz with fluor, and is yielding 2 tons of copper and mundic ores per fm. In the 160-fm. level east the lode is 4 ft. wide, composed of capel and quartz with fluor, and yields 3 tons of copper and mundic ores per fm.—I. RICHARDS.

DRAKEWALLS (Jan. 10).—We expect the arsenic soot will be all taken away by to-morrow evening. We sampled on 5th inst. computed 60 tons copper ore. We expect to complete everything for starting the new jigging machinery on Friday or Saturday next.—H., RODDA.

EAST GRASSINGTON (June 10).—Mine manager's report:—Hammond shaft: In the 47-fm. level a strong feeder came in obliquely on the south side, west of which the encasing rock is more congenial, with an improved cleavage, and the ore-bearing part of the vein is fully 12 ins. wide, carrying soft, sugary spar, gossan and lead ore, worth 16 cwt. per fm., and improving. We are now in advance of Amy's workings with 20 fms. of backs whole to the water level, tending westwardly towards Isabelle shaft, and beneath the shale beds where the richest shoots of payable ore are invariably found in this formation. Stope in back of level yields 10 cwt. of lead ore per fm. No. 3 sump is sunk 15 ft. upon the vein, which is 2 ft. wide, carrying lime spar, barytes, and lead ore, worth 22 cwt. per fm. Stope in intermediate level continues in easy ground; yields 9 cwt. of lead ore per fm. Stope in back of 37 east in spare ground; yields 10 cwt. of ore per fm. Harris main engine shaft: We have resumed deepening this part of the mine below the 47 by 12 men, carrying the shaft 12 ft. by 7, in hard, compact limerock, and some 6 fms. south of the main lode, gradually underlying in our direction. In the 47 east we are clear of the cross-vein, and the main lode is 2½ ft. wide, the filling matter being chiefly calcspar and gossan, well mixed with lead ore, worth 12 cwt. per fm. Stope behind the end in a vein 2 ft. wide, worth 16 cwt. of ore per fm. In the 37 east the lode is easier for progress, letting out water freely, and producing good saving work for dressing. On surface excellent progress is being made at all points. Produce for May has been smelted, sold, and delivered, realising a fair profit upon the month's operations. We are daily carting ore towards another smelt.

LEADHILLS (June 8).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, nicely mixed with spar and quartz and ore, worth 30 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 30 and 70 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, mostly spar and quartz of a kindly nature, and mixed with spots of ore not to value. The two stopes above the 130 north of Jeffrey's shaft are worth 15 and 30 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The stope above the 130 south of Jeffrey's shaft is worth 25 cwt. of ore per fm. The winze below the 115 north of Jeffrey's shaft shows a kindly vein 3½ ft. wide, but without ore at present. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing nice spar and quartz with ore, worth 10 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, and also without noticeable change, otherwise being without ore. The 70-fm. level south of Wilson's shaft is in a vein 3 ft. wide, charged with stone, too dried for producing ore. The two stopes above the 35 south of Flat Rod shaft are worth 70 and 40 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein shows a vein 2½ ft. wide, and without ore.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending June 5:—The 275-yd. level: No. 2 rise and stope up 16 yds.; worth 6 tons lead ore and 2 tons blende per fm. No. 3 winze down 5 yds.; worth 4 tons blende per fm. The 255-yd. level west improved; worth 2 tons blende and 1 ton lead ore per fm. The 295-yd. level west: This has been varying in value, and is now worth 2 tons blende and 1 ton lead ore per fm. The winze below the 295-yd. east level is down 6 yds., and worth 5 tons blende per fm. The 315-yd. level in 40 yds. from the cross-cut. The bearing ground has been intersected, and driven on 6 yds., and appears to have lengthened about 40 yds. from the discovery in the 275. The end is now yielding good saving work for dressing. Dressing: For some weeks the country has been deluged with rain, which has interfered with outdoor work. The round buddles will be put to work next week, and arrangements are being made to work at night.

PRINCE OF WALES (June 10).—The shaftmen have completed the sundry work in shaft and got the whim kibble to the bottom, and we are drawing stuff therefrom. The men are now engaged taking down the lode east and west at the 180-fm. level, and find it about 2 ft. wide, composed of capels, peach, and saving work for tin, and is altogether a promising-looking lode. This will apply to both ends. At the 166-fm. level west the men have finished taking down the lode, which is 3½ ft. wide, in tinny capels, quartz, and white prian, with indications of any early improvement. They have resumed driving by the side of the lode. During the past week in the cross-cut at the same level we have gone through a small branch of flucan, otherwise there is no alteration.—J. PROWSE.

ROMAN GRAVELS (June 11.)—The 155 north is driven 3½ fms. the vein in present forebreast being 6 ft. wide, composed of carbonate of lime and stones of lead ore. We are still going forward on the middle division of the vein, and do not expect to reach a productive lode until we find the junction of the three parts seen in the cross-cut. There is absolutely no change anywhere else in the mine since the date of last week's report. We had hoped to communicate the winze from the 125 to the 140 south before this, but progress in sinking has been very slow in consequence of the great quantity of water. The 20 tons of blende sold to-day realised 138*l*.—A. WATERS.

SOUTH CONDURROW (June 10).—The skip-road is made complete to the bottom of Marshall's shaft; we have six men opening out east at the 138-fm. level to intersect the cross-course, and six men cutting plat and sinking the shaft. The flat lode in the winze in the bottom of 123 is worth 10*l*. per fm. We have suspended the winze on the new lode as it is hard and poor. The stope in the back of the 123 east is worth 10*l*. per fm. The 40 end east of engine shaft is worth 6*l*. per fm. Three stopes in the back of this level are worth together 32*l*. per fm.—W. RICH, W. THOMAS.

SOUTH DARREN (June 11).—The shaft is 32 ft. 6 ins. under the 142 level, having been deepened 4 ft. this week. The 130 end west contains nice strings of lead worth 10 cwts. of silver-lead ore per fm. On Saturday next we intend to sample 15 tons of silver-lead ore.—J. MITCHELL.

WEARDALE.—Report on mines for week ending June 6:—Ore raised for week, 80 tons; ore dressed for week, 67 tons; ore, slag, and fume smelted for week, 136 tons; producing 68 tons of pig lead.

WEST WHEAL GRENVILLE (June 9.)—In a costean pit about 195 fms. north of engine shaft we have struck the outcrop of a lode on which we have now sunk about 5 fms. from surface. The lode is about 20 ins. to 2 ft. wide, with a regular dip or underlie south having well defined walls, and samples from same show edge of tin. There is no alteration to notice since writing on Saturday last. We have sunk about 6 ft. since then, and find the lode going down much the same.—J. SKEAT, N. TEMBY.

WHEAL CREBOR (June 9).—The part of the lode carried in the 156 end driving east of shaft is not looking quite so well; now yielding 4 tons of mundic and some good stones of copper ore per fathom. The mundic and copper ore it produces is still of the best quality. We purpose continning the drivage east a few days more, and then cross-cut the lode south to ascertain its full size and value. The stopes and pitches throughout the mine continue to yield their usual quantity of ore. The copper ore we have for sale assays 9½ per cent.—P. D. HOLMAN.

WHEAL METAL AND FLOW (June 10).—During the past month we have driven the 27 end, east of Watson's engine shaft, 2 fms. 1 ft. in a lode from 6 ins. to 2 ft. wide. In this drivage the lode and country have been very chaugeable, and become very hard; composed of peach, mundic, prian, and a little tin, and showing similar indications, that made the rich courses of tin in the eastern part of this sett on the same lode. The Flow is producing its usual quantity of tin.—S. P. CURTIS.

WHEAL UNY (June 10).—We are again in fork to the bottom, and sinking Hind's shaft and driving the bottom level. The changing of the H piece will be of great service to us in our pumping. No change in the mine since last report.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (May 16).—Extracts from a letter from the superintendent at the mine:—Mine: We have things running lively underground, and good progress is being made in the different works. At the 24-fm. level, 100 lode, we have been for some time driving south on the western wall, and we have found pay ground at a point about 5,033 north and 4,883 east, where the western wall of the 100 lode is very well defined, and runs south 11 degs. west approximately, so that this ore has not been touched anywhere southward. The breast being driven south from the long San José cross-cut at tunnel level is showing encouraging indications for ore. Reduction: All the batteries have been running in the last two days, and we expect soon to get ahead of the furnaces, and make a stock of stamped ore. The chlorination furnaces are running as usual, roasting 150 tons weekly. At the leaching department we are increasing the volume and strength of the stock solution, so as to obtain weekly clean-ups of precipitate. From the refinery we obtained eight bars silver, worth about $8,400, which are being taken to Alamos to-day for coinage.

ALMADA AND TIRITO (May 19).—Extract from letter from the superintendent:—Mining, week ending May 16: The drive south from the long west cross-cut at tunnel level, on 100 lode, was driven 5.3 ft.; total drivage, 30 ft. The western wall continues unbroken, and the lode looks favourable for ore. The cross-cut west at 12-fm. level, 45 ft. north of No. 5 winze (from centre to centre) was driven 3.1 ft. on hard limestone. Stones of black ore were found in the last day or two, indicating the proximity of the 100 lode. At the 36-fm. stope, 100 lode, we drove north from its north end (35 ft. below the 24) 3.1 ft., on partly mineralised ground, but the breast impoverished and driving was discontinued. South of same stope we drove 5.9 ft. on the western wall, on a branch of ore about 2 ft. wide. At the 24-fm. level west of the winzes going to the 36, 100 lode, we have found a branch of black ore left encased in the western wall; we drove on it 5.5 ft., carrying from 2½ ft. to 3 ft. of ore. Further south there is no work on this branch at this level, and we hope the ore will hold out, and we may develop a new section of ore-ground southward. In the stopes we had 16 pairs of drillers, and the ore ground taken away is estimated as follows:—In the 24 stope, 100 lode (new body), 6 cubic fms.; in the main stope above 24 level, 10 cubic fms.; in the 31 stope, north and south of No. 7 winze, 4 cubic fms.; total (estimated), 20 cubic fms. The only change noticed in the stopes is that the ore has become a little more scattered in the last-named one. Reduction: The ores sent to the mill were:—Week ending May 2, estimated, 81.4 tons; week ending May 9, estimated, 39.9 tons; week ending May 16, 153 tons; total in three weeks, 274.3 tons. The greater part was low-grade ores and smalls from the dumps. The ores chloridised in three weeks ending May 16 amounted to 441 tons. The roasted ores served to the leaching vats were 410 tons. From the leaching vats we obtained on May 9 1,900 lbs. precipitate, with an assay value of $7,444.77. Another clean-up was made on the 16th, and produced 1,220 lbs. precipitate, which is being assayed to-day.

ANGLO-MEXICAN.—The superintendent at the mine, writing on Apl. 4, says as follows:—Extraction of ore: Stopes worked above 814, 646, 572-ft. levels. Number of cars of ore extracted and sent to the Patio, 655. Extraction of waste rock: Number of cars of waste rock hoisted and sent to the dumps, 182. Nabor winze: 814-ft. level was sunk 7 ft., making the total depth 73 ft. There is absolutely no change since last report. We are sinking outside the ore in the hanging wall. As far as we are able to judge there has been no change either in the extent or value of the ore body on which we are sinking. Angel winze: 814-ft. level was also sunk 7 ft., making the total depth 32 ft. In the bottom of this winze there is a small streak of ore about 10 ins. wide. In appearance the ore coming from this streak is very encouraging. I regret to find, however, that the result of samples taken during the past week does not confirm the opinion I had formed of this ore in

place. Estrada upraise, 646-ft. level, advanced 12 ft., making the total depth 57 ft. We are pushing ahead this work as rapidly as possible, as I am anxious to have a block of ground on the foot-wall vein below the 572-ft. level opened up for stoping as speedily as possible. The prospect in the upraise, I regret to say, is by no means encouraging. The small streak of ore I was able to report as being in sight at last report, has filtered out entirely; in connection with this fact, however, it is only fair to remember that the main body of ore in the foot-wall vein, above 572-ft. level, was almost entirely to the east of this upraise, and, therefore, it is only to be supposed that the ore has followed the same course below the level.

ASIA MINOR.—Chief Mine: The lode in deep adit is carrying spots of lead ore and looks more favourable. We are about to cross-cut through the lode in main adit to prove its width and value. The lode in intermediate air shaft is becoming small and poor in the end east, but in the end west looks more favourable. We have just intersected a well-defined lode in the cross-cut south in Michael carrying a mixture of lead and blende. The stopes are about the same as last reported. Production to May 29: 5,178 tons crushed, yielding 297½ tons rich silver-lead ore.

AUSTRALIAN BROKEN HILL CONSOLS. —The manager reports by mail for fortnight ending Apl. 30.:—Engine shaft, 520 level: Chamber about half completed. The 280 level rise on rich vein: Vein strong, and yielding even richer ores than before, output for fortnight being 5½ tons of sulphide of silver, chlorides, and native silver, containing in all 44,077 ozs. silver, now being cased for shipment to London. Incline following rich vein driven 8 ft.; total, 50 ft. No change of importance has yet occurred here except that flow of water is very much stronger. Winze to intersect incline sunk 13 ft.; total, 13 ft. This is being sunk to fully prove lode west side of incline and south of main drive. Lode here very strong and fully 7 ft. wide. North-west cross-cut completed, and men engaged stoping during fortnight. Block 95: Sinking on underlay of lode sunk, 9 ft. Formation widened to 6 ft., and rapidly improving. Bulk assays already give 8½ ozs. silver per ton. Block 97: North shaft sunk, 9 ft.; total, 65 ft.; lode more strongly charged with iron.

BRATSBERG.—Mining report for week ending May 30.—Hoffnung Mine: At No. 2 adit level the lode is looking exceedingly favourable for making ore, and is at present yielding ¾ ton per fm. No. 1 rise in the back of this level is carrying a lode worth ¾ ton per fm., but being rather small, is difficult to rise. No. 3 adit level fluctuates very much in value, and the present end is showing only saving stuff, but we notice a quartz leader strongly intermixed with ore making against the footwall, and have, therefore, hopes of this leading to a more productive lode. We have resumed the rise here which is yielding 1 ton per fm. At No. 4 level we have recently had a lode worth ¾ ton per fm., but just now it is unproductive, being comprised almost entirely of quartz. The trial level at Murchison's is still worth ¾ ton per fm. At this mine 45 miners were employed during May month. Johannes Mine: The western level on Howard lode here is producing ¾ ton per fm., and the eastern end of the same level about the same quantity; nine miners employed here last month. Surface work and remarks: It having been necessary to change rolls on one of the crushers, and following this, two or three small hindrances consequent on same, the duty done during the past week has been under average. All is going smoothly now, however. The past month being the one in which so many changes in the miners and workmen generally take place, some leaving us altogether, and some for military service, and others again on leave to visit their homes, the amount of ore mined has been affected, the estimated quantity being 80 tons 20 per cent. ore. We find it has been widely circulated that remunerative work for miners is obtainable here, and we trust that we shall now speedily get a better supply, which will ensure better returns. We beg to report that the Mary Owens has sailed with a cargo of ore, and we are preparing for a second cargo end of this month. P.S.—The Whitsuntide holidays also interfered with the returns this month, the men having been out three working days.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending May 30:—Since last report the work about the roaster foundation has been finished, and the men have delivered over their contract, which has been measured and settled. The other work about the roaster itself was also finished, but, unfortunately, on lighting a fire in it to dry the masonry, the crown arch, owing to having been built by a man who was not a proper mason, sunk some 3 ins., thus necessitating its re-construction, which will take some eight days. The timber work is going on rapidly and satisfactory, and half of the galvanised iron roof is now on, and the rest will be finished in the course of a day or so. The rails are laid on the inclined plane, and the rails and turntable connecting the roaster with the smelting house are also in position, and the concreting of the floor to receive the roasted ore is being proceeded with. The worm and shaft for connecting the same with the main shaft from the second turbine are bored and turned, and are now ready for fixing, and there now remains only the rebuilding of the crown arch, and some other detail work before a start in earnest can be made.—T. F. SMITH.

CAPE COPPER.—April report:—Ookiep: The ground in the 117-fm. level east of 72 winze at the present is only producing stones of copper ore, but we think the falling off is temporary. The 117-fm. level south towards the new shaft is in massive quartz, containing spots of copper ore. Nothing of value has yet been met with in the 117-fm. level north of 72 winze; the rock is composed chiefly of quartz. The 105-fm. level (No. 6) north-west of main-east level is yielding 2 tons of copper ore per fm. The ground in the 92-fm. level (No. 8) north-east of 45 winze is a little easier for progress, but is without copper ore. There is no change to notice in the character of the rock in any of the other drivings since last report. The stopes throughout the mine continue to yield well. Trial Mines, Springbok: Nothing of importance having been found in the 59-fm. cross-cut north of north-west level, and the rock being hard and spare for driving, it has been suspended. The men are still engaged in stoping back and side of the 59-fm. level north-west of south-west cross-cut where we have a little more productive ground standing worth proving. Good progress has been made in driving the 59 fm. cross-cut north-east of south-east level. Nababeep north: The ground in both cross-cuts north and south of the 31-fm. level east of shaft having become unfavourable for copper ore, all operations have been suspended at this station. Nababeep south: The rock in the 59-fm. cross-cut north-west of north-east level is disseminated with purple copper ore throughout, and occasionally it produces rich stones. The 59-fm. level south-east of north-east level maintains its yield of 1 ton of copper ore per fm. We have started a cross-cut southward, back about 4 fms. from the present forebreast, in ground worth 1 ton of copper ore per fm. Spectakel: The stope in bottom of 86-fm. level around winze having fallen off in yield, it has been suspended. The stope in back of 86-fm. level south-east of No. 1 winze is worth 1 ton of copper ore per fm. The ground in the 46-fm. level south-east of incline is still yielding stones of copper ore. The stope in the 36-fm. level south-east of Kelly's shaft is producing about 2½ tons of copper ore per fm. The rock in bottom of Landsburg's shaft is yielding saving stuff.—Capt. HENWOOD.

— Returns for Apl.: Ookiep, 2,600 tons of 20 per cent. Arrivals at Swansea: The Cicero, Douglas Castle, and Serena. Arrival at Port Nolloth: The Glanrafon. Bills of lading received: 710 tons of ore per Golconda and 1,000 tons per Taunton.

DAY DAWN P.C.—Report for the fortnight ending Apl. 25:—The output of quartz is 1,012 trucks mineral stone, and 28 trucks of brown stone. Sent to the Excelsior mill 954 tons of mineral stone. Your underlie shaft has been sunk a further depth of 7 ft., making a total depth of 130 ft. below the No. 12 plat. The number of trucks of quartz hauled from the shaft and levels is as follows:—Shaft, 23 trucks; No. 12 level, 396 trucks; Nos. 10 and 11 levels, 447 trucks; stopes under No. 5 west level, 25 trucks; stopes over No. 5 west level, 121 trucks; total, 1,012 trucks. The 240 ft. level east has been extended a further distance of 10 ft., making a total distance of 38 ft. from the shaft; the stone in the face is about 2 ft. thick, of fair-looking quartz. We have hauled 28 trucks of quartz from this level this fortnight. No. 2 underlie shaft: The No. 5 east level has been extended a further distance of 18 ft., making a total distance of 371 ft. from the shaft. No further change has taken place in this level since last report.—T. LESTER.

EAST BROKEN HILL CONSOLS.—Manager reports by mail for the fortnight ending Apl. 30:—Block 98: Foundations for winding plant well forward, and will be quite ready for machinery on arrival. The engines, a pair of horizontal high-pressure, 16 h.p., by Ruston, Proctor and Co., of Lincoln, are now on the way from Adelaide, and boiler will leave there in a day or two. Meantime shaft No. 2 will be enlarged from 6 ft. by 4 ft. to 10 ft. by 4 ft., and timbered in three compartments. A contract for this work has been let to start May 1. Block 99: West cross-cut from shaft driven 6 ft.; total, 6 ft. This cross-cut will be driven till it strikes cross lode running north and south by this shaft, when a level will be driven south on cross-lode to intersect main lode. Contract let to excavate dam.

EMMA (May 25).—In the south-east part of the mine being developed from Emma tunnel, we are still troubled with water; however, we are about through the break, and unless another break occurs, we will be working in face of hanging-wall drift; this week worked four men timbering and removing waste rock. The foot-wall drift advanced 20 ft.; total, 148 ft.; worked four men; this drift continues in most favourable ground; the rock is much broken and seamy, carrying low-grade ore. In the north-west part of the mine, on the Illinois tunnel level, we raised 18 ft.; total, 107 ft.; worked four men; the pay seam continues from 8 to 12 ins. wide, besides from 18 to 24 ins. low-grade ore. In the drift south-east from Illinois tunnel level we worked but one man; advanced 4 ft.; 33 ft. The face of this drift is still filled with small pockets of iron, besides quite frequently small particles of ore appear. In the drift from point of connection with raise from No. 4 level, we advanced 10 ft.; total, 248 ft.; worked two men: the vein here is 2 ft. low-grade ore; the ledge is fully 6 ft. wide. In the cross-cut towards hanging-wall from No. 3 south-east (Bay City level) worked one man; advanced 4 ft.; total, 150 ft.; the rock is still hard, but much stained with iron. On the Illinois tunnel level we mined about 2 tons first grade ore, making about 30 tons first-grade now in hand. We also mined about 10 tons low-grade ore from Emma tunnel level, making about 320 tons on hand. The weather the past week has been very cold and stormy; in consequence, we were unable to start mill on 20th, as anticipated; we will, however, start either to-morrow or the day following. The weather is still bad for working the mill; we may have some trouble at first, but no doubt within a very few days will be working well. Tramway will not be open for 8 or 10 days yet.—H. C. WALLACE.

ETHERIDGE UNITED (Apl. 15). — Fortnightly report:—Caledonian No. 1 South Mine: During the last fortnight the cross-cut at the 130 ft. has been advanced 22 ft. There is a little water coming in the face, which leads me to think that we shall cut the reef within the time I stated in my last report. I expect to get the trucks and cage working to this level to-morrow, and the pump refixed by the end of the week. The 80-ft. level has been advanced 12 ft.; the reef here is about 3 ft. in thickness, but after the last breaking down of the reef it has all broken up into leaders, but the indications in the face at present are that it will soon make again. I shall start two men more to stope over this level, where the reef appears to carry heavy mundic, to get a trial crushing out and see if it has improved in quality.—M. FERGUSON.

FLAGSTAFF (May 23).—I received yours of May 1. You spoke of writing to me on 25th ult. I have not yet received that letter, so I do not know what its contents were. As regards the amount of ore that is left standing, that is a hard question to answer. I will give you the dimensions as near as I can. There is one body of low grade ore that is 34 ft. high and 80 ft. long, and 3 ft. wide; also another that is 20 ft. wide, 3 ft. thick, and 20 ft. deep. This ore is between sixth and seventh levels. We have quite a body of fair grade ore on sixth level that we are now working on. We are down 37 ft. on incline; it is quite flat in going this distance; we are not more than 10 or 12 ft. below the level. There is ore left in bottom all the way down from 18 ins. to 2 ft. wide. The ore improves at every foot we go. In breast of incline the ore is as good as any we have taken out last fall and winter. It is full of the yellow crystallized carbonates with silver lead, and 2 ft. wide, and full height of incline. I have one man at work on this seam above the sixth level; he is now up 6 ft.; the ore seems to improve as we go up. I am still driving the main level ahead. I am trying to get under where the big ore body was on fifth level. This is now in 130 ft. Seventh level: This is now in 37 ft. It is looking fine. I think that we will find ore here. Number of tons mined the past week, 20.—A. L. SWOPE.

GOLD HILL (May 25).—Ore on hand reported May 20, 125 tons; ore mined from winze, 3 tons; ore mined from Martin shaft, 5 tons; total amount of ore on hand this date, 133 tons.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Apl.

23.—I have to report that the rise on the March reef has been carried up a total distance of 126 ft. from floor of 240-ft. level, at the 105-ft. driving north and south on the slate break, has been commenced, the north drive has been carried in 20 ft., and the south drive 12 ft.; the reef averages about 12 ins. in thickness and is showing a little gold. The north drive and stopes over the 240-ft. level are being continued, but the stone being raised at present is poor. Lease 777, 2 miles: Main shaft: Driving south on the Peter and Paul reef is being carried on as usual. The reef is about 1 ft. in width, of good quartz, showing a little gold. The north drive is being continued, but the reef has not yet been met with. At the eastern shaft the cross-cut east has been advanced 20 ft.; total, 132 ft. The rise on the Peter and Paul reef has been carried up 24 ft. The reef continues about 1 ft. in thickness. The slate should be met with in this during the next fortnight.—T. RAMAGE.

HARRIETVILLE (May 1).—Fortnightly report:—Returns: During the past four weeks the following ore has been crushed and gold produced, viz.:—Mons Meg, 502 tons of ore and 70 tons of sand, yielding 308 ozs. 8 dwts. of melted gold. New lease, 300 tons of ore, for 31 ozs. 12 dwts. of gold. Pyrites and blanketings, 51 tons, for 125 ozs. 17 dwts. of gold; making a total of 465 ozs. 17 dwts. of melted gold. Machinery: Although the late rains enable us to crush with the full battery, the present heavy frosts and drought have compelled us to hang up 10 stamps, so that only 15 stamps are now working. We hope, however, soon to be able to put the whole mill to work again.—T. G. DAVEY.

KANGARILLA PROPRIETARY (May 5).—Manager's report:—Kangarilla Aclare:—No. 1 winze has beens unk 16 ft., and is now in a splendid body of ore. No. 2 winze is producing more ore per foot; when sunk 8 ft. more we shall be in solid ore. No. 3 winze: The plat for this work is completed. No. 4 winze: The ore still continues of excellent assay value. Every foot sunk here is of the greatest importance to the mine, proving that our lode does not decrease in value in depth. At the Mount Barker tunnel there are excellent chances for finding some payable ore in a short distance. The two engines will be on the ground in 10 days, and after that the balance of machinery will follow on rapidly. The general prospects of the mine are excellent, and every indication points toward having a permanent and remunerative mine.

LEEDS COPPER (May 28).—Herewith please find report for week ending as above:—Kent's shaft: The 20-fm. level driving west of shaft is in a vein of ore 2 ft. 6 ins. wide, and worth 2½ tons of 15 per cent. ore per fm. No. 1 stope in the back of the 20 west level is in vein 1 ft. 6 ins. wide, producing 1½ tons of 15 per cent. ore per fm. No. 2 stope in the back of 20-fm. west level is in vein 2 ft. 4 ins. wide, and producing 2¼ tons of 15 per cent. ore per fm. The 15-fm. level driving west of Kent's shaft is in bed 3 ft. wide, producing 2 tons of 15 per cent. ore per fm. The stope in the back of the 15-fm. level is producing good ore, worth 4 tons of 15 per cent. ore per fm. In the stope in the back of the 10-fm. level, knowu as Steam Drill stope, the vein is still split, and of less value than when last reported. I am expecting this to again improve as we advance; worth 1 ton of 15 per cent. ore per fm. McGee's shaft: We have now pumped the shaft clear of water; shall put some men to work on this part as soon as we get them. Adit: We have now cleared this part of ice, and everything is ready for starting men. The bed vein in the roof of the adit contains good patches of ore, and well worth a vigorous treat. We have completed the shoots and tramways at the 10-fm. level, 15-fm. level, 20 and 30-fm. level; as well put in footway from the 10-fm. level to the bottom; also placed steam pump to tank the water out of the bottom of Kent's shaft. We are generally getting things more workable, and for the future shall be in a better position to cope with the stuff than we have been. Surface: Operations are carried on with all possible vigour. Masons making good progress with beds for mill and crusher. Gravitation, tramway, double track will soon be complete to the mill.—T. R. DAVEY.

MINE OWNERS' TRUST.—The following report wasireceived from Mr. P. Argall on the 8th inst.:—I confirm my cable of the 20th from Ouray, viz.:—"Colorado Boy: Struck a rich body of ore, new vein; the vein is fully 3 ft. wide: ore struck; assays show $400 per ton, second class $100 per ton. Vein compact and well defined, 40 yds. east of last strike." The point where the new vein was intersected is in the drift, extending in a south-easterly direction 100 ft. from the shaft. The course of this vein is not yet determined, but it is about parallel with the ore in short drift pointing towards the creek called in former letters the south drift. This new vein is what I call the Irish girl reef. I have traced it at surface over 500 ft. My letter of the 16th inst. intimated that a reef would be cut at 110 ft. from the shaft; it was cut at 100 ft. The knoll has yet to be explored, and I expect another strike will be made on the east of it. The Irish girl vein is 3 ft. wide, where it is intersected in the tunnel of the Colorado boy. It is mostly quartzose material, having mineral scattered through it. Near the bottom of the drift a solid streak of mineral is showing for a width of 10 ins. Four stones broken from this streak were forwarded to you by Wells Fargo's express to-day, and I now enclose assay certificate. The total commercial value of the samples at current rates is: No. 1, $353 per ton; No. 2, $186; No. 3, $270; No. 4, $303. As far as my information goes, it is about the richest ore discovered in Red Mountain at a similar depth—60 ft. from surface. The strike has caused considerable excitement in the district, and has been telegraphed all over the State to the leading papers.

MOUNT ZEEHAN (Apl. 27).—The manager writes as follows:—Argent section: The work of erection of timbers for pumping engine is completed, and the plant is being placed thereon. The erection of the winding engine foundation is being prepared. The boiler is in position, and the setting is nearly completed. Silver Queen Extended section: The 110-ft. level west cross-cut has been extended a further distance of 4 ft.; total, 226 ft.; country formation, mixed sandstone and slate. A large quantity of water coming in face. South drive on course of No. 1 lode has been extended a further distance of 11 ft.; total, 143 ft.; lode 3 ft. 6 ins. wide, carrying some good ore; about 6 tons second-class. North drive, No. 1 lode, has been driven 6 ft.; total, 172 ft.; lode formation 2 ft. wide, carrying carbonate of iron, caulk, and white slate. The underlay of strata is east, having been previously west. Montana section: West cross-cut has been extended a further distance of 6 ft.; total, 325 ft.; country formation, slate. No. 2 lode—West cross-cut: North drive has been extended a further distance of 15 ft.; total, 48 ft.; lode formation 3 ft. wide, carrying galena. About 1 ton first-class and 5 tons second-class ore have been taken out here. No. 3 lode: North drive has been extended 8 ft.; total, 52 ft.; lode here is broken up at present. No. 3 lode: South drive has been extended 5 ft.; total, 21 ft.; lode formation 4 ft. wide, composed of slate, carbonate of iron, a little quartz, and some second-class ore. No. 3 lode: Back stope from air shaft north has been extended 11 ft.; lode 2 ft. 6 ins. wide; 3 tons 12 cwt. first-class ore and about 6 tons second-class ore taken out. Britannia section: West cross-cut has been extended 3 ft.; total, 122 ft.; formation, black slate, carrying pyrites. Ore forwarded to Trial Bay, 8 tons 16 cwt. Ore shipped from Trial Bay, 20 tons 15 cwt.

MYSORE (May 20).—Mining operations for the fortnight ending May 15:—The rock-drills continue to do excellent service, and the progress made in the different bargains during this part of the month has been unusually good. The 780 north of Rowse's shaft has been driven 37 ft.; total distance, 260 ft.; the lode is 3½ ft. wide, and assaying 2 ozs. 9 dwts. 15 grs. The 550 south of incline shaft (on wide lode) has been driven 8 ft.; total distance, 46 ft. 6 ins.; the lode is 1 ft. wide, and assaying 2 dwts. The 250 north of Glen's shaft has been driven 21 ft.; total distance, 214 ft. 4 ins.; the lode is 1 ft. 6 ins. wide, and assaying 3½ dwts., and looking promising to improve. The 250 cross-cut east of Glen's has been driven 9 ft. 9 ins.; total distance, 40 ft. 6 ins.; the ground is mixed with strings of quartz, and very hard for progress. Tennant's shaft: The 360 north of shaft has been driven 35 ft.; total distance, 431 ft. 5 ins.; the lode is 1 ft. wide, and estimated to be worth 5 dwts. We have commenced to drive the 360 south of shaft on a lode 9 ins. wide, and assaying 3 dwts. 22 grs. The 290 north of shaft has been driven 30 ft. 6 ins.; the total distance, 760 ft.; the lode is 1 ft. wide, and assaying 5 dwts. 12 grs., and looking very promising to further improve. The 290 south of shaft has been driven 26 ft.; total distance, 391 ft.; the lode is 1 ft. 3 ins. wide, and assaying 7 dwts. 3 grs. In the 180 north of shaft we are still engaged in clearing through the old men's workings. Schaw's shaft: The 450 north of shaft has been driven 32 ft.; total distance, 342 ft.; the lode is small and unproductive. The 450 south of shaft has been driven 4 ft. 6 ins.; total distance, 83 ft.; the lode is 9 ins. wide, and assaying 1 dwt. 7 grs. The 320 north of shaft has been driven 4 ft. 3 ins.; total distance, 161 ft.; the lode is yielding occasional stones of quartz, but not sufficient to value. The 320 south of shaft has been driven 4 ft. 9 ins.; total distance, 211 ft. 6 ins.; the lode is 6 ins. wide, and assaying 2 dwts. 14 grs. Rising: The rise in back of the 400 north of Rowse's shaft, the lode is 3 ft. wide, and assaying 4 dwts. 13 grs. The rise in the back of the 450 north of Schaw's shaft has been put up 2 ft. 6 ins.; total distance, 9 ft., in a lode 3 ft. wide, and assaying 7 dwts. 19 grs. Stopes: The lode in stope in bottom of the 700 south of incline shaft is 2 ft. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 700 south of incline shaft is 2 ft. 6 ins. wide, assaying 2 ozs. 12 dwts. 6 grs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 5 ozs. 3 dwts. 8 grs. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 7 dwts. 3 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and estimated to be worth 10 dwts. The lode in No. 3 stope is 2 ft. wide, and assaying 3 ozs. 11 dwts. 13 grs. The lode in No. 4 stope is 3 ft. wide, and assaying 1 oz. 3 dwts. 12 grs. The lode in stope in back of the 550 north of Rowse's shaft is 3 ft. 6 ins. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in bottom of the 550 north of incline shaft is 2 ft. wide, and estimated to be worth 1 oz. The lode in stope in bottom of the 466 north of Rowse's shaft is 2 ft. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 400 south of Taylor's is 3 ft. wide, and assaying 5 dwts. 21 grs. The lode in stope in the bottom of the 400 north of Taylor's is 1 ft. 6 ins. wide, and assaying 5 dwts. 12 grs. The lode in stope in the back of the 400 south of Plummer's is 2 ft. 6 ins. wide, and assaying 3 dwts. 22 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 4 dwts. 13 grs. The lode in stope in back of the 296 north of Rowse's is 3 ft. wide, and assaying 11 dwts. 17 grs. The lode in stope in back of the 290 north of Tennant's is 2 ft. wide, and assaying 2 ozs. 16 dwts. 9 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, assaying 1 oz. 0 dwts. 21 grs. The lode in stope in back of the 180 north of Tennant's is 2 ft. 6 ins. wide, and assaying 2 ozs. 10 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. 10 dwts. Sinking: Rowse's shaft has been sunk 16 ft.; total distance below the 780 level 92 ft.; the ground is interspersed with seams of quartz and looking very congenial for the production of gold. The lode in No. 2 winze sinking below the 700 north of Rowse's shaft is 3 ft. 6 ins. wide, and assaying 6 ozs. 10 dwts. The lode in winze in bottom of 290 north of Tennant's shaft is 1 ft. wide, and estimated to be worth 10 dwts. Gilbert's shaft has been sunk 10 ft.; total distance from surface, 92 ft.; the progress here is very good indeed for coolie labour. Mill samples: New mill quartz, Rowse's and Tennant's: 3 ozs. 10 dwts.; Old mill quartz, Taylor's, Tennant's, and Rowse's: 1 oz. 10 dwts.

MYSORE REEFS (May 20).—Fortnightly report.—Harvey's shaft: This shaft has been sunk 4 ft., now 60 ft. 2 ins. below the 460-ft. level, or 520 ft. from surface. A week since we commenced to drive the 520-ft. level north; 9 ft. have been advanced in this direction. The end is letting out a great deal of water; in fact, most of the water in the mine is now coming from this level. We shall commence a cross-cut west at this level in a day or two. The 400-ft. level south has been extended 9 ft., now 106 ft. 11 ins. from shaft. I hope to get on a little faster with this end in future, as we are now able to work a rock-drill here a portion of the time. The lode is 2 ft. wide, composed of quartz, black rock, and arsenical pyrites, worth, according to assay, 3 dwts. of gold to the ton. The 400-ft. level north: We commenced to drive this end a week since with a rock-drill, since which 14 ft. 6 ins. have been driven, now 148 ft. 1 in. from shaft. We have no regular lode, but the rock is changed, and looks congenial for gold. Small branches and patches of quartz are crossing it which contain a little gold; one assay gave 2 dwts. 12 grs. to the ton. I am hoping, by pushing on this end, another shoot of quartz will be met with. Air shaft: The stopes in the bottom of the 140-ft. level; the lode is about 9 ft. wide, and worth from 4 to 5 dwts. of gold to the ton.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports for the fortnight ending May 20:—North shaft: This shaft has been sunk 7 ft. 9 ins., making a total depth of 137 ft. 6 ins. from surface. The rock in the bottom is much harder; it changed during

the last week ; this may prove, to some extent, an advantage, as I do not think we shall have to timber so close down in it. There is no other change in the shaft. South shaft : This shaft has been sunk 4 ft. 9 ins., making a total depth of 92 ft. 6 ins. During the last week we have cut a small stream of water, and it appears likely to increase. Surface work is making satisfactory progress.

NEW DEVALA MOYAR (May 19).—No. 1 winze has been sunk 3 ft. ; total depth, 63 ft. The reef is of no value, the quartz having cut out. The 116-ft. level, drive west : We have driven 9 ft. at this point ; total distance, 175 ft. Quartz is low grade. Main shaft : The surface frame has been fixed in position. Crushing is being carried on at the mill, and 108 tons of quartz have been sent during the week to the mill.—R. B. JOHNSTON.

NEW HOOVER HILL.—Report for May.—Driving south of the Briol's shaft at the 130, advanced for the month 14 ft. The end is very hard, but I hope very soon to get a change of ground, and when we do I think that we shall be able to drain the water. There is some quartz in the end, but it is poor. The vein below the 50-ft. level south of Provost shaft is looking well in the bottom, but we still have a good deal of water to contend with. We are still breakiug some ore around the old workings. The mill ran for the month 12 days, crushed 278 tons of ore, yieldiug 65.33 ozs. of gold, which I am shipping you in usual manner.

NUNDYDROOG (May 20).—Report of work done for the fortnight ending May 16 :—The 520 north : Driven 23 ft. 6 ins., by two Italians with a rock-drill ; total length of level, 86 ft. ; the lode is not quite so large, being now 1½ ft. in width, but the quartz is of good quality, assaying 2¾ ozs. per ton. The 520 south : Driven 25 ft. 6 ins., by one Englishman with a rock-drill ; total length of level, 84 ft. 6 ins. ; the lode has opened out again considerably, being now 4½ ft. wide, and assaying 4 ozs. per ton. The 480 north from Webb's winze : Distance driven 33 ft., by two Italians with a rock-drill. We hope to connect this with Webb's shaft during the month, and shall then drive to connect with the winze in the bottom of the 450 south. We shall then sink to the 520 south as rapidly as possible, and so do away with the lift in Webb's shaft. The 450 north from Taylor's rise in back : North stope 5 fms. 3 ft. and south stope 10 fms., by one Englishman and five coolies, with two rock-drills. The lode in the north stope is 2 ft. wide, and assays 14 dwts. 6 grs. ; in the south stope it is 2½ ft. wide, and assays 1 oz. 3 dwts. The stopes, &c., working by hand are as follows :—The 450 north, No. 2 stope in back ; lode, 3 ft. wide ; assay value, 1 oz. 5 dwts. The 450 south, winze in bottom : Lode, 2½ ft. wide ; assay value, 2 ozs. 2 dwts. 12 grs. The 370 north, stope in back : Lode, 2 ft. wide ; assay value, 2 ozs. 11 dwts. 6 grs. The 300 north stope in shaft : Distance sunk 10 ft., by three Italians with a rock-drill ; total depth, 555 ft. ; we have been hindered a little by putting down a lift ; there is no change in the rock. North shaft, cross-cut west : Distance driven, 12 ft., by two Italians with a rock-drill ; total length, 104 ft. ; we were forced to suspend this cross-cut last week owing to our cutting a lot of water. Kennedy's shaft : Distance sunk, 9 ft., by two Italians with a rock-drill ; total depth, 126 ft. 6 ins. ; we have still a good deal of water to contend with here. Mill : The stamps are doing good duty. Health : I am glad to inform you that the health of the camp and field generally is good. Mill samples : Rough quartz (through stonebreaker), 3 ozs. 11 dwts. ; smalls, 2 ozs. 4 dwts. 12 grs.—F. W. GREY.

OSCAR (June 5).—Hodgkinson's shaft : Owing to the opening of new levels we have stopped sinking this shaft for a short time, but hope to resume operations about the end of the month. The 300-ft. levels : These are being driven by the men who were in the shaft. The quartz is at present averaging about 2 ft. wide, and assays 3½ dwts. By the end of July we shall be in under the rich shoot which we have followed from the 150-ft. level, when a much higher assay value will be reported. The 200-ft. level north has been disturbed by a depression in the country rock. It is improving, and the quartz has the appearance of being identical with that on which the shaft was first sunk on at surface. Should this prove to be the case we shall have two gold bearing shoots to work on instead of one. The 200-ft. level south : The quartz is only 12 ins. wide, assaying 2½ dwts. The winze in 200-ft. north is being sunk in a very fine lode, assaying 6 to 7 dwts. to the ton. Other places show no alteration to note. We have crushed from the workings in the 200 north 60 tons which gave 19 ozs., or nearly 6½ dwts. to the ton. From the workings south 170 tons were treated ; result, 35 ozs., or a little over 4 dwts. to the ton. We shall send result from another small crushing as early as possible.—J. DAW, junr.

PACHUCA SILVER.—Extracts from reports received from the manager :—May 16 : I am glad to say the west drift has somewhat further improved during the week, and now looks very promising. The east drift is just as last reported. May 23 : In No. 3 end, driving east, the vein is now 1½ ft. wide, and assays about 8 ozs. of silver per ton. This is not the main veiu, but a branch leading to it, by driving on which we shall reach the shoots of ore met with in the level above in a less distance ; we shall cut the main vein in 9 metres more drivage. The appearance of this branch leads me to believe that when we intersect its junction with the main vein, we shall have something good to report. I am forcing it day and night, but the ground is hard. West drift : In this drift we have met with a junction of the main and a branch which has slightly disordered the vein, but it is now becoming more settled, the vein is very large. I cut into it during the week to the extent of 12 ft., and yet we have no south wall. It is one of the fiuest lodes I ever saw. I took several assays during the week, which gave from 27 to 35 ozs. per ton, picked stones, but I shall be better able to judge its worth next week.—F. W. BAWDEN.

PAKKER (May 30).—Manager's report :—Since last reporting to you that I had made arrangements for the laying of 7,000 ft. of 20-in. steel pipe, in place of that portion of our 12-in. pipe line nearest the river, I am sorry to have to report many obstacles which I had not foreseen, and which have prevented the prompt carrying out of rectifying the defects in our main line. Through the unduly prolonged rainy season the roads became impassable for some considerable time, which not only prevented the hauling of the pipes, but also threw the farmers (upon whom we have to rely for hauling) so far behind with their crops that it has been impossible to get but very few of them to undertake to haul any of the pipes, even now when the roads are considered fairly good, as they have no wish to jeopardise their chance of making a crop by leaving their farms now when they most require attention. Until a very recent date, therefore, I continued deliveriug the water for hydraulicing through the 12-in. pipe, removing the dead or unproductive ground in gulch, until such time as I had a sufficient number of the 20-in. pipes delivered. I have now very nearly finished the taking up of the old pipes, and hope to start next week to lay the 20-in. pipe. I am pleased to say that before I ceased hydraulicing I had brought the cut or gulch up to that portion of the Red Hill, when we again commenced to find gold, and, judging from a very close inspection, I am of opinion that the greater part of it was vein gold, and that the gulch must now be very close to that belt of veins which are known to cross the top of the Red Hill. This being so, I have every reason to think that as soon as we are ready to re-commence hydraulicing, we shall from that date again be in a position to make regular returns of gold.

PINOS ALTOS (May 11).—The manager writes as follows :—The following work was done in the mine during the last two weeks :—The main shaft was sunk 4 ft. 5 ins. last week, and 5 ft. 5 ins. the week before. There has been no change in the ground. The west winze below the 17th level was sunk last week 6 ft., and the week before 7 ft. ; assays gave $3.79 per ton. The cross-cut to the south on the 16th level was run 7 ft. 6 ins. ; assays, $4.27 to $22.00 per ton. The 16½ level west was run 3 ft. by hand and 3 ft. by machine drills, and during the previous week it was driven 9 ft. by machine drills. The face has been in such uniformly poor ground that I have now turned it diagonally towards the hanging-wall, and when it cuts through shall prospect along the hanging, as in the levels above. The 17th level east drift was advanced 4 ft. 6 ins. last week. Since starting up again I have not sampled it. The 16th level east raise was advanced 3 ft. last week and 7 ft. the week before ; assays average $22. I have now stopped the raise, as it has holed into the old stope above. On account of the holidays last week we had fewer men in the stopes than usual, the average being 17½ pairs of drillers, and during the week before, 20 pairs. I have had most of the men working in the east stope No. 2, below the 16th level, and only a few pairs in the stopes in the west, as the ore there is so poor. For the latter reason we are trying to increase the crushing as much as possible, and have cut down the time of amalgamation in the pans. So far, we have found no perceptible difference in the percentage, and the only doubt I have is whether the stopes in their present state can produce the extra amount of ore required. Since the rock has become so poor, I have shut down the roasting furnace and concentrators, and in this way the milling expenses will be reduced considerably, not only in the mill, but also on the sorting floor. From the appearance of the rock, the face of the tunnel is fast approaching the hanging-wall of the ledge, and although we have cut a large body of quartz so far, the ore has been generally poor, with an occasional piece of better class ore, assaying as high as $38.00 per ton. As the tunnel was pointed towards the eastern end of the western ore body, and in the stopes above, the ore is particularly poor at this end. I am not surprised that we should not have cut good ore immediately in the tunnel, cross-cutting the ledge, but it is probable that, on drifting, we shall find ore that will pay within a short distance towards the west. A strong body of water is flowing from the face of the tunnel, which further leads me to believe that we are nearing the hanging-wall.

RUBY.—Report upon the miues for the week ending May 23 :—Duuderberg : We have nine tributers at work here. The quartz in the Home Ticket is now about 6 ft. square, with a small streak of fair ore in the middle of it. The 500 cross-cut still continues about the same as in my last report. On the 800 level we are raising to make connection with the old works for air, and are sinking on the streak of ore below the level. Lord Byron : We are still extracting ore, and will start next week to open up the caves at the head of the winze. We have 21 tributers at work here.

— Telegram received from Eureka June 9 :—" 22 tons ore on company's account smelted, realising $221."

WEST ARGENTINE (May 18).—Extract from manager's letter. "In the bottom of the shaft the rock is changing from the flesh coloured to a white porphyry which has seams of iron through it. We have a streak of low grade mineral alougside of this, how wide it is no one can tell, as it is on the east side of the shaft. We had this ore over 25 ft. in sinking. I have to get a waggon as the snow is off, and we have to get timbers, and get the coal down from the railroad, also have to take the ore to the railroad as soou as we have enough to ship."

GOLDEN LEAF, LIMITED.

THE LATE CHAIRMAN—THE MAY RETURNS.

THE secretary announces the following telegram received from Mr. J. Henry Longmaid, the company's general manager :—" During May the mill at Empire worked 60 stamps for 29 days, crushed 4,700 tons, and the yield was as follows :—Bullion, $11,300 ; sundries, $1,050 ; total, $12,350. The working expenses for the month were, $9,250—$3,100. Expended on capital account, $2,500."

[It is with deep regret that the directors have to announce the death of their esteemed chairman, Mr. W. George Cavendish, which occurred suddenly and unexpectedly on May 17, and they feel sure that this sad news will be sympathetically received by the shareholders. Mr. J. Stewart Wallace has been elected chairman in succession to the late Mr. W. George Cavendish.]

The following extracts from Mr. Longmaid's letters for the month of May will afford the shareholders the latest information at the disposal of the directors :—Golden Leaf Mine : We cut a fiue body of ore in the No. 3 raise yesterday, assays varying, on a 4 ft. breast, from $55.00 to $152.00. We are passing this as we must make connection with surface on account of air being poor. Owing to bad air we were obliged to stop No. 7 raise in our south ore shoot, ard are now pushing No. 3, about 75 ft. to the south of No. 7, as fast as possible to the surface. Of 225 ft. to raise, we have completed 170 to 175 ft., and hope to go through to surface within the next three weeks. For the last 20 ft. we have raised in a fine-looking bunch of ore, and 19 samples taken in that distance vary from $10.60 to $221.00 in silver, and $1.50 to $46.00 in gold per ton, averaging per ton silver $76.43, and gold $9.84 equal to $86.27 per ton. There is no means of estimating the quantity or the size of the ore body, and drifts would be valueless as a means of exploration. In stoping for the mill we shall know from day to day, and not be able to foretell value or quantity in such a formation as exists in the Golden Leaf. In the

main south drift we cut into a large seam, at a depth of about 400 ft. from the surface, through which a steady current of air is blowing, leading us to believe that we are in the close vicinity of large caves, and presumably, in connection therewith, ore bodies. The small quantities of ore reported in this drift led us to this last discovery, and we may at any time now have most encouraging news to report. Pioneer placer: This is ready for work, and we hope to start in two or three days to sluice. Work will be continued as long as pay dirt is found, providing we have dumping ground for the tailings. The creek is very high and is washing away large quantities of tailings, and on this score we will have very little trouble this season. Deep placer: The water ditch is completed, and in a day or two we hope to have the dam ready and water running. New mill: The most important part of the grading is done; the timbers and lumber are arriving at the rate of about 4,000 ft. per day; the millwright has, under my supervision, completed all plans for mill, and last evening six carpenters arrived, and will start work to-morrow, a heavy snow squall preventing work to-day. Two pans and settler from Chicago will be on hand in time, and all machinery of use at Empire has already been shipped out. The other machinery near Empire has been taken down, and is being hauled as fast as possible to Marysville for shipment by railroad to Golden Leaf. No pains are being spared to have mill running at an early date, so as to enable me to earn a dividend before the season is over. The mill is to be as nearly automatic as possible, and will be so, owing to the splendid natural site we have located. (In a former letter Mr. Longmaid stated that he hoped to have the mill running sometime in August.) Bannack expenses: All at present is outlay; but I anticipate a very light monthly cost when all is in thorough working order. Empire Mine: We have discovered a vein of ore branching from the Empire about 80 ft. east of west end line, and going into the Puritan claim in a south-easterly course. Assays so far have averaged $75 to $100 per ton, but the vein is small and may prove to be only a larger stringer than usual. Smithville: We are opening out a splendid ore body in the upper level, containing besides the gold very large quantities of lead ore. The ore is soft, easily crushed, and very easily mined; the output per stamp in bullion is consequently increased at much less cost per ton. There has been an output of $735.00 bullion for 20 stamps, 4 days crushing of sundry Smithville ores, or at the rate of $185.00 per day, or for 60 stamps, $16,500.00 per month. Besides this at a daily cost of three extra men and a little power, say costing $18.00 per day total, we are producing from the 20 stamps one full ton of concentrates, worth net not less than $30.00 per ton at Empire. The Smithville vein is not wide, but so much ground has been worked open or opened out by old managements, that we can afford to push developments a great deal faster than otherwise. The winze below No. 4 tunnel still continues in ore, low grade, but very promising. Whipperwill: All development work has so far been so very discouraging, and the Smithville promises much quicker returns for development work, that no dead-work is being done at present in the Whipperwill. I do not intend this as a final suspension of such work, but only for the present, or until our means permit work on a much larger scale there. Placers: Pioneer Placer is working, and first clean-up of bedrock proves fully equal to best of last year. Pumps are at work on "south side," and the water is nearly out of shaft. The ditch is completed, and carries an ample supply of water for our wheels and sluicing. Golden Leaf Mine: In No. 3 raise, assays on May 9 assayed, for an average of three samples, gold $15.50 and silver $75. On May 10, an average of four samples, gold $10, silver $67. On May 11, an average of three samples, gold $6, silver $28. On May 12 and 13, an average of seven samples, gold $4, silver $21. On May 14 and 15, an average of six samples, gold $8, silver $17. On May 17, an average of two samples, gold $18, and silver $126. (Average of all the above samples, gold $8.66, silver $43.12.) Do not take these assays as an average of what ore we are now breaking, but it shows we have good material. South drift: A cavity blowing air has been cut, but no ore as yet, though I think we are in ore bearing ground, the gangue carrying more silver and gold than usual.

REPORT OF MEETING.

THE CAUSTIC SODA AND CHLORINE SYNDICATE, LIMITED.

THE PROCESS SCIENTIFICALLY AND PRACTICALLY COMPLETED—SHAREHOLDERS WILL SHORTLY BE INVITED TO INSPECT THE COMPANY'S WORKS AT BATTERSEA.

The first general meeting of The Caustic Soda and Chlorine Syndicate, Limited, was held at Winchester House, Old Broad Street, London, E.C., yesterday.

Col. Burnaby

presided.

Mr. CHARLES O. GREENWELL (secretary) read the notice calling the meeting.

The CHAIRMAN said: Gentlemen,—It is my pleasant duty to take the chair here to-day, at the first general meeting of this syndicate. You are all aware that this is merely the statutory meeting of the company, held in conformity with the Company's Acts, which provides that the meeting must be held within four months of the registration of the company. It was the desire of the board, and all of those connected with the organisation of this syndicate, to have been in a position to-day to inform you that we have absolutely manufactured the caustic soda and chlorine by Mr. Greenwood's process at our works in Battersea.

EVERY CREDIT IS DUE TO MR. GREENWOOD

for the manner in which he has endeavoured to complete the erection of the plant, so as to put us in the position of being able to demonstrate before this the first meeting, and it was hoped that during the past week this demonstration would have taken place. Owing, however, to the delays in the manufacture and delivery, especially the delivery of certain portions of the machinery, without which Mr. Greenwood was unable to proceed as he had intended, this demonstration did not take place. Your directors have been to the works several times, and they have watched with the greatest interest the progress made. We hope, at a very early date, to be in the position to ask you to meet us at the works to fully demonstrate this very valuable process. There appears little or no doubt as regards the result. Mr. Greenwood is now more than ever assured of his success, which, I need not mention, is undoubtedly one of the most important inventions of the day. I take this opportunity of informing you that

THE POSITION OF THE SYNDICATE IS MOST HEALTHY.

The shares offered to the public were in a very short space of time over-applied for, and the capital allotted. The directors have caused the patents to be applied for in those foreign countries and colonies wherever the process is likely to be of commercial value, and, when obtained, they will, no doubt, prove to be extremely valuable to the syndicate. Although it is some little disappointment to your directors to have to say that they have not absolutely proved one success, I am satisfied that in working up to now it has been the general desire of all parties concerned to assist in the one common object of making the syndicate a success, which we firmly believe it will shortly prove to be. I thank you for your attendance here to-day, and I hope shortly to have the pleasure of meeting you again, either at the works, or at the meeting which will be convened in order to enable us to give you further information as the work proceeds. Mr. Greenwood is here, and I am sure he will be most happy to answer any questions you may put to him upon the technical and scientific points in this interesting matter. (Applause.)

Mr. GREENWOOD said he had very much pleasure in meeting the shareholders who were identified with him in the success of this process. The process was a very simple one, and Mr. Aston, the eminent counsel, had remarked that it was

ONE OF THE MOST SIMPLE PROCESSES

he had ever seen. As the gentlemen present were well aware, the more simple a process was the more valuable it became. It did not follow, however, that a simple process was simply and quickly erected, but the reverse was often the case, and a simple process frequently required more elaborate and careful application. That had been the case with them. It was one thing to overcome the scientific difficulties, but quite another thing to overcome the engineering difficulties, and during the last few months they had quite overcome the engineering difficulties. He would like to give an illustration of the engineering difficulties which they had had to contend with, which had prevented the perfecting of the process and the demonstration of it before the statutory meeting. He had never known, and he did not think that any gentleman present had known, an instance where an original process had been developed, and started in working order between the registration of the company and the statutory meeting, and he thought that in not being ready by the statutory meeting they were only following in the wake of other companies. The difficulty with regard to anoids was the cause of delay in the progress of electrolysis, and only the other day he had been asked by an eminent electrical chemist for an anoid which he could recommend, which was wanted for a special purpose. He thought that that proved there was a world-wide want for anoids, and he could claim that they had produced an anoid at last after considerable expense, which was unique of its kind, and placed the company in a position that they would have no fear as regarded rivals. Having placed out the anoids to be made at two or three firms according to the specification after some time they were returned—the firm having tried their best to make them—in an entirely unsuitable condition, and they were obliged to take up the making of the anoids themselves. He put up a costly plant, and introduced an invention in the making which he had patented, and had been successful in making anoids which he considered were more valuable than any which had been introduced before. (Applause.) Another feature was the diaphragm, and he thought that they had produced a perfect diaphragm with little or no trouble. They had expected to have had most trouble with the diaphragm, but they had had little or no trouble, and they considered it to be as perfect as it was possible to make it. That was based, he might say, on a well-known pneumatic law, and all sorts of devices had been attempted in order to separate the products of electrolysis—which had been the thing aimed at by every scientific inventor for the last 40 or 50 years—and they had now introduced a diaphragm which for cheapness, efficiency, and quality render it the most serviceable and unique of its kind, altogether and in advance of anything that had been before undertaken. As regarded the details of the process, he was sure that when the shareholders came to the works, and they would do in the course of a month, they would be pleased and astonished at such remarkable results being achieved by such simple means. He was sure that they would consider that

THE RESULTS WERE REMARKABLE

by such a simple method; and those results had entirely exceeded his expectations. In conclusion, he said that the shareholders had a very valuable property, and if he were a rich man he would not mind buying every shareholder out. (Applause.)

The proceedings then terminated.

RUBIES.—Next week will be sold three remarkable rubies, the property of the Burma Ruby Mines, Limited. These stones are among the largest rubies in the world, one weighing 1,185 carats, another 302, and a third 281, and whatever their intrinsic value may be, are interesting in the highest degree as cabinet specimens.

THE WIRT FOUNTAIN PEN CO., LIMITED.—The annual general meeting was held at the Offices, 1, Gresham Buildings, Basinghall Street, on Monday last, under the presidency of Mr. E. K. Burstal, who congratulated the shareholders upon the result of the past year's operations, which enabled them to declare the usual dividend for the half-year ending Mar. 31, at the rate of 10 per cent. per annum, and to carry forward a small balance to profit and loss account of the current half-year. This dividend, with the interim dividend already paid, making a total distribution of 10 per cent. for the year. He moved the adoption of the report. Mr. R. Jarvis seconded the motion, which was carried. Mr. T. H. Baylis, Q.C., proposed the re-election of the directors, who retired under the articles. Mr. Condy seconded the motion, which was carried. Mr. A. S. Hicks, the auditor, was re-elected, and a vote of thanks to the chairman closed the meeting.

REVIEWS.

THE STOCKBROKER'S HANDBOOK, A PRACTICAL MANUAL FOR THE BROKER, HIS CLERK, AND HIS CLIENT. By E. E. Kennedy. London: Effingham Wilson and Co., Royal Exchange.

The author of this work has had for his object to enlighten the public as to the technicalities of the Stock Exchange, the jargon of which is almost as bewildering as a medical prescription. The reader is initiated into those mysteries respectively termed "bull" and "bear," and he has explained to him the taking in and lending of stock, backs and contangoes, making up and making down, tickets, splits, selling out and buying in. Sometimes when these expressions are used to the uninitiated dealer in Stock Exchange matters, he is, to use a colloquial expression, "struck all of a heap," and the dictionary only adds to his perplexities. The hope of the author is that this little work "may serve a useful purpose," and we can assure him it will, for in one or two amusing instances that have come to our notice, a country client, who has been told that stock has been bought in against him, has passed a sleepless night only interspersed with nightmares, in which he could perceive the dark form of the bailiff walking up his garden path, and police constables summarily ushering him off to a punishment, due to his "enormous" crimes.

THE MINING MANUAL FOR 1891-2. By Walter R. Skinner. London: 4, Birchin Lane, Lombard Street, E.C.

The Mining Manual has now appeared, and the only fault we have to find with it is that its advent was not at the commencement of the year. The value of the work is somewhat diminished if those who are looking for it at the commencement of the year are unable to obtain it until about the time they are beginning to think of their summer vacation. Apart from this plain hint to the compiler, we have only words of commendation for his admirable and exhaustive work, which has come to be an almost indispensable addition to the office literature of persons in any way connected with mining. In a short preface Mr. Skinner the compiler points out that the fresh appeals for capital during the year suffered a great diminution as compared with 1889, which was a period of excitement in mining, particularly accentuated from its South African side. His figures in this respect deal with 1890, and are practically a reproduction of our own, published at the commencement of the present year. Mr. Skinner's observations have led him to speak of the year as one of consolidation and re-organisation, and he is right in saying that Australian ventures have received more attention than for some years past. The progress of the mining industry, in spite of all that is said and written against it, is exemplified by the pages of this volume, for the number of companies with whose affairs it deals is larger than in any previous issue. Every effort has been made by the compiler to secure accuracy and fulness of detail, and from the few tests we have made we are disposed to think the work can be relied upon with perfect confideuce. There is a copious index at the commencement, but practically the book is so arranged that it is its own index. In many cases a synopsis is given of the last report of the directors, and in notable cases a *résumé* is given of the prospectus. There is a full list of the names and addresses of all directors of mining companies, and of the concerns under their care. The compiler has evidently asked himself the question, "What will be most useful to my readers," and having determined the sort of matter to supply, he has spared neither trouble nor time in furnishing it. The book is a monument of industry, aud we hope it will have a large circulation.

THE NEW GENERAL AND MINING TELEGRAPH CODE, Alphabetically Arranged, for the use of Mining Companies, Mining Engineers, Stock Brokers, Financial Agents, Trust and Finance Companies, Bankers, &c., &c. By C. Algernon Moreing and Thomas Neal.

The Telegraphic Mining Code, edited by Mr. C. A. Moreing, of the firm of Bewick and Moreing, and by Mr. Thomas Neal, the esteemed secretary of the Montana Co. and the Mines Co., Limited, originally appeared in 1888. and the present is a revised and considerably enlarged edition of that most useful work. Whereas the book, as originally published, contained only 18,318 words, the present one contains 36,898, or more than double the number, whilst the number of sentences has been increased from 15,110 to 29,632. The tables for money have also been extended, as for example —English money has been increased from 600 to 1,650 words, and many new tables have been added. A most important feature is the complete revision of the code words to satisfy the rules and requirements of the Telegraph Convention and the various Cable Companies. For this purpose the right has been acquired, at considerable expense, from the proprietors of the "Telegraphic Convention Code" to use the words in the English section of that work. The code words are alphabetical from beginning to end, thus avoiding waste of time and the possibility of mistakes and repetitions. For foreign money and mining and other companies, such a code as the present must in the course of a year save its cost many times over, and without professing to have subjected it to a minute examination, we can only say that out of the ordeal of such tests as we have been able to make, this code has come triumphantly. The work seems most complete, and can be safely recommended as a useful, if not indispensable, addition to the literature of any commercial office.

REMOVAL.—The office of Balkis Consolidated Co. has been removed to No. 9, Gracechurch Street.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Miuiug Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful informatiou as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

K. Mellington.—There is nothing else to be done. You must simply wait events.

S. A. B. R. (Market Rasen).—A good prospect for the company. Hold on to your shares.

Speculator.—In our opinion they are worth much more than the present price.

Dormouse.—Sell.

S. M. Hutchison.—No. 1: Sell. No. 2: Unsaleable. Nos. 3 and 5: Good to buy, but leave others alone.

Striker.—A very limited market; hence the wide quotation. You have received a fair price we think.

Doubtful Holder.—Take your profit by all means.

Investor (Aberdeen).—We should not care to recommend them under the circumstances.

Mortlock (Kew).—It will enable them to proceed with the further developments We think you should give it another chance.

Querulous.—Cannot advise a "bear" transaction in those named. Rather too risky.

S. D. M. (Antwerp).—Buy while they are so low. It is certainly a good time to lock up a few of these low-priced shares.

Psycho.—A fair speculative purchase.

A. B. Jolin.—We will endeavour to obtain the information and acquaint you.

B. Brownson.—Cannot advise a purchase. We have never had a good opinion of the management of this concern.

Paul Pry.—You are right. The rise cannot be maintained, in our opinion. Get out of them while you can.

Colonial Reader.—Certainly sell. There are various reasons why they sho uld *not* be held.

Politician.—A sharp rise is expected. Perhaps you had better hold on.

Simpleton.—They are at their worst, and should not be sold.

Country Client.—The firm named is respectable. The delay is, no doubt, the fault of others, as represented by them.

J. S. Smethurst.—You broker will, we suppose, claim the dividend from you in the ordinary course. The company's books were made up to a certain date, no doubt before the transfer had been registered.

Branxholme.—One or two hundreds in the last-named would not hurt.

A. M. Todd (Brighton).—Keep your shares. We think they will improve in price. The report is certainly encouraging.

The Mining World.

LONDON: SATURDAY, JUNE 13, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

RANDT CRUSHINGS.

FOR several weeks the Kaffir circus, once all too lively, has been about as dead as the deadest of door-nails. Every now and then there is a little professional gamble, a few fictitious purchases, or a small raid by "bears," but directly either operation is over, the market lapses into somnolence. The Stock Exchange dealers have, in fact, made many attempts to induce the public to speculate, but there is little or no response. Investors and speculators alike have almost ceased to notice the fluctuations from day to day. For this coudition of apathy the local wire pullers are no doubt mainly responsible. They havc dealt so unscrupulously with people on this side—forcing on returns unduly, raising capital and amalgamating when and with whom they pleased—that whether the monthly yields be good, bad or indifferent, British investors have come to regard them with unconcern. But even if the market had been animated instead of depressed, the aggregate production of the district last month would have proved a disappointment. With the increase of producing mines and the augmentation in the stamping power employed, it might naturally be supposed that the gross output would exhibit a continuous expansion; but, as a matter of fact, the total production for May was nearly 2,000 ozs. less than in the preceding month. In the following table we give particulars of the gold returns for each month since the beginning of 1888:—

	1888.	1889.	1890.	1891.
	ozs.	ozs.	ozs.	ozs.
Jan.	11,269	24,986	35,038	53,205
Feb.	12,161	25,800	36,886	50,073
Mar.	14,706	23,705	37,600	52,949
Apl.	15,853	27,131	38,799	56,362
May	19,002	38,298	38,844	54,672
June	16,328	31,272	37,412	—
July	19,966	32,497	39,452	—
Aug.	19,877	32,142	42,861	—
Sept.	20,219	34,369	45,467	—
Oct.	27,775	31,914	45,250	—
Nov.	27,336	36,116	46,795	—
Dec.	26,148	39,600	50,352	—
Totals	230,640	377,740	494,756	

We are far from saying that 54,672 ozs. is in itself a poor showing for a district that is barely out of the infant stage; but we do say emphatically that it is an exceedingly disappoiuting result when it is measured by the prices at which Randt shares were selling a couple of years ago. We still believe that the district is a rich one, and that with honest and capable management it will give a good account of itself, though it is never likely to warrant anything like the quotations ruling when such handsome returns were being made by iudividual mines. If it were worth while to go through the whole list of crushings, it could easily be shown that, as compared with the percentage of gold obtained in the early months of 1889, the recent results have been exceedingly discouraging. We may, however, take a few prominent examples. Two years ago the City and Suburban Co. extracted 1½ ozs. to the ton; it is now getting less than ½ oz.; the Crown Reef yield has fallen from 15 dwts. to about 11 dwts.; the Durban-Roodepoort from 1¼ ozs. to a little over ½ oz.; the Langlaagte Estate from 1½ ozs. to about ¾ oz., or less; the May Consolidated from fully 1 oz., to less than half that amount; and the Simmer and Jack from over 15 dwts. to about 9 dwts. These are only a few instances, but they go to show either that in the early days the "eyes were picked out of many of the mines" or that the auriferous deposits become poorer as depth is attained. Whichever explanation be the correct one the result cannot but be regarded as unsatisfactory. In the leading Indian mines, as our readers are aware, the percentage of gold obtained is steadily increasing; and yet we have been reproached for preferring the shares in these undertakings to those of the best of the Randt companies.

A CONTRACTION IN TRADE.

THE unexpectedly favourable returns of trade for April last have been reversed by those for May just issued. The contraction shown cannot be traced to the Whitsun holidays, but the number of Sundays gave one less working day than for the corresponding period, and money was high in value, and financial uneasiness prevailed. The navigation returns show a decrease all round in the tonnage of vessels entered and cleared. Although, however, this may coincide with the decline of nearly 14 per cent. shown in our home exports, it does not tally with the augmentation of even only 3 per cent. in our imports. So far, the year 1891 shows a decrease of 3¼ per cent. in our exports, and an increase of barely ¾ per cent. in our imports. The re-shipments for the month have fallen off 16 per cent., giving an average reduction for the five months of 2¼ per cent. The diminution in our exports is general, and perhaps most conspicuous in regard to yarns and textile goods. The results, however, are affected by the McKinley tariff in the United States, and by the financial collapse in the River Plate. Metals exhibit a reduction of 508,000*l.*, and machinery and millwork 233,000*l.* Coal has been in greater demand, and the lower price is attributed to the smaller home requirements. Chemicals have also declined, and iron and steel have been much less, the decrease, however, being more in quantity than value, but tin plates exhibit an increase, due to the larger shipments to the United States in view of the tariff.

On the import side the chief increase is shown in regard to raw materials for textile manufacturcs—raw cotton and sheep's wool especially. Arrivals of cereals have been large, and with the higher price have swelled the total; but there is a great diminution in arrivals of cattle and fresh beef from the United States. The imports of metals have been just upon 70,000*l.* less, but, although copper ore fell away, it will be seen below that the value was greater, while lead also improved. The imports of tin fell off, and the shipments were less.

The following table in our usual form shows the results for the month in regard to the imports and exports of metals, &c.:—

IMPORTS.

Article.	Quantity Tons.	Value £	Increase or decrease per cent. Quantity.	Value.
Copper ore	8,835	76,200	— 3.3	+ 18.9
,, reg. and precip.	11,453	319,802	+ 21.1	+ 28.4
,, un. and pt. wrought	2,428	130,877	— 5.9	— 6.8
Lead	14,913	187,647	+ 2.	+ 1.
Tin	1,538	141,135	— 26.3	— 17.5
EXPORTS.				
Copper, unwrought	3,000	170,282	—26.3	—22.5
,, wrought	1,223	82,190	— .8	+ 1.6
,, mixed	1,285	70,448	—23.5	—24.
Lead	6,278	85,769	— 6.2	— 8.
Tin	477	45,181	— 2.4	— 4.1
Coal and coke	2,863,656	1,727,317	+ 2.7	— 2.4
Iron aud steel	321,452	2,796,438	—23.8	—10.7

THE IRON TRADE.

THERE are signs that the "corner" in Scotch pig iron warrants is collapsing, if it has not actually come to an end. From 58s. 6d. per ton a fortnight ago, the quotation for cash has fallen to about 47s. 6d., or only about 7s. per ton higher than the price of Middlesboro' "pigs," instead of nearly a pound a ton. The gamble has inflicted very heavy losses upon the Scotch gamblers for the fall, who sold freely in the belief that the "bull" clique in London was less wealthy and less powerful than it has proved itself to be. On the other hand, the purchasers, though they have no doubt netted large profits, have yet to collect a good many of their differences, and it remains to be seen how they will come off in that part of the business. Meanwhile, consumption has been considerably lessened, and taking the Cleveland and Scotch districts together, stocks have increased through production is still greatly restricted. We are no advocates for grandmotherly legislation, and therefore we could not see our way to support the Bill which proposed to make gambling in iron warrants illegal. All the same we should not be at all sorry if the speculators, whether for the rise or the fall, were to burn their fingers in such a way that for the future they would leave this most important commodity alone. As it is we can only say "a plague on both your houses."

DE LAMAR MINES.

INTERVIEW WITH THE DISCOVERER.

CAPT. DE LAMAR, the discoverer of the group of mines that bears his name, and that he sold a few weeks ago to an English company which has also received the same christening, is a shrewd business looking man, who speaks with great directness of purpose, and has the faculty of never leaving his hearer in any doubt as to what he means. Capt. De Lamar scarcely has the appearance of one who, like Othello, can speak of the "distressful strokes that his youth suffered," or of one who at an early age fared hardly at sea, and whose maturer years have been passed in the rough surroundings of an American mining camp, with the vicissitudes of which English readers have been made so familiar by the writings of Bret Harte. Capt. De Lamar is now iu London, and a representative of the MINING WORLD had the pleasure of an interview with him early this week—the immediate object of the visit being to inspect some very remarkable specimens of ores, with gold and silver in combination, which are now open for the inspection of the shareholders at the offices of the company.

We may briefly remind our readers that it is scarcely more than a month since De Lamar prospectus appeared, and we did not at the time hesitate to speak of the issue in terms of approbation rather stronger than we usually care to employ, and for reasons which were then set forth. In the first place, confidence was inspired by the fact that most of the gentlemen connected with De Lamar had also been previously concerned in the flotation of the successful Elkhorn Mine, whose record has been so gratifying to the shareholders. When taken over by the English company, De Lamar was a going concern. Since the date the company took possession, we unhesitatingly assert that the property has exceeded prospectus estimates, and bids fair to continue to do so for a period yet indefinitely remotc. The profit for Apl., working only 25 days, was 6,000*l*., and that for May, working 29 days, was equal to 7,000*l*. Shareholders must be hard to please if results like these fail to bring them satisfaction.

Our representative found Capt. De Lamar busily engaged in re-arranging that which veritably seems to be the "god of his idolatry"—the numerous specimens of the products of De Lamar Mines, which he has brought with him. Here, he said, in reply to the first question put to him, is what is called "sugar quartz," from the resemblance it bears to ground loaf sugar. We have a vein of this, about 77 ft. wide, which runs about $25 of gold to the ton, and anything from $2 to $30 of silver. The average for gold and silver together would be about $35. The mining and milling together will cost about $11 to $12, which includes all expenses to market. This sugar quartz has never been met with except in two other mines—the Comstock, and the Veta Madre. This argentite contains from 82 to 85 per cent. of pure silver, and the balance is volatile matter, but there is no lead or copper. This is the highest grade of shipping ore, and it is the stuff that the Consolidated Virginia had in the days when it was taking out $100,000 per day. Mr. Clarence King, whose name, I believe, is well known to English mining investors, said, "This is the first mine, apart from the Comstock, I have seen that has given this sugar quartz." The only other miue that has had it is the Veta Madre in Mexico, which has produced $500,000,000, and the Comstock, $300,000,000. We have in De Lamar a clay dyke carrying iron pyrites, which pitches at an angle of 45 degs. away from the vein, and which really forms its hanging-wall. In the Veta Madre and Comstock the dyke was the real index to the wealth of the property, but in each case they had only a dyke of from 30 to 40 ft., whereas we have one of 120 ft., much stronger and better defined. We find our richest ores coming from under the dyke, and the secret of working this mine, as it was that of working the Comstock and Veta Madre, is to keep close to the dyke, and it is surc to guide you aright.

Now, here, said Capt. De Lamar, taking up another specimen, is ruby quartz with free gold that we strike on the contact. This runs from $80,000 to $90,000 to the ton, but it is only found in small bunches, though we expect to get more of it as we go down. Here again are specimens of horn silver, the result of mineral vapours.

What development work have you done?

We aie now at a depth of 250 ft., and we remember always that it was at 600 ft. that the Comstock made its greatest riches. There is an adit tunnel being driven that will strike the lode at 458 ft. deep, and I may say that as all the workings are on a mountain we work by adit levels, save in the case of winzes, and that we have no need of expensive hoisting and pumping gear. According to Clarence King, we shall soon be in still better ore. He says, "Bonanzas, like the Comstock, may be found in this vein 300 ft. lower." That gentleman offered me $2,000,000 for the property, but as he was late in making his arrangements, and as he would not give me half the shares which I wished to retain, I let the English company have it, and they will have no cause to regret their bargain. I should not have made terms with Mr. Bratnober and the English company if I had not been allowed to retain one-half the shares, for I meant to have a decided interest in the future of the mine, and that is exactly what the Clarence King Syndicate did not feel wishful to let me have. Instead of the comp[illegible]rely what is called "a mining claim," it has veritably a belt of mineral ground I mile long and ¾ of a mile wide. The tunnel, just finished, which is 3,800 ft. long, goes in on one side of the mountain and out at the other, and the mountain itself is called after me because I was the locator. We have veins 18, 28, and 77 ft. wide, and on the "Summer Camp" claim, also belonging to the company, another vein 18 ft. wide and two or three 6 and 7 ft. wide, respectively, but to crown it all, we have a big reef quite 100 ft. wide still unexplored. The property bids fair to have a long life, and is going to pay dividends for many years.

Are you going to sell your shares?

No, I have been buying since I came here. I may add that the company owns all the water and mill sites and the whole town, which has a population of between 600 and 700, and I expect by the fall it will be about 1,000.

If the property is so valuable as you represent, why did you sell it?

I have had a hard life, so far, and I wish to take it more easy now. When seven years of age I was working for my living at sea, and led what I call "a regular dog's life." I continued there until I got some vessels of my own to trade between New York and the coast of Senegal. I sold out my shipping interest and became fascinated with mining, but tried to proceed to work in a practical way. I saw that one in mining could as easily lose a fortune as gain it. Now, in order to avoid the former and make sure of the latter I went to study chemistry and the reductiou of ores before I put a dollar into mining. When the professor told me he could teach me no more, I thought I would try mining from the point of view of business as distinguished from study. I bought a claim for $1,500, a great lead vein, in Custer County, Colorado, which was only running $4 to the ton. I put up concentration works, and handled about 250 tons a day, and everybody said I was mad. I saved the lead by concentration, and put 12 tons into one. This gave me about $48, and the concentrates being in the shape of crystallised lead, the smelters smelted it for nothing, because they wanted it as a flux for the silver ores. I reduced about $60,000 worth of that ore, and then sold the business for $360,000, whereas the whole affair, mine plant and everything, had only cost me $75,000. I decided, as lead was subject to market fluctuations in a great degree, henceforth to devote myself to ores containing gold and silver. I travelled three years before finding this property, and then went to work gradually, buying portions here and there, until I became master of the whole mountain. I was my own mining superintendent and everything, but though money came pouring in I was working harder than ever. My first idea was to form a syndicate; then came the negotiations with Mr. Clarence King, and, finally, those with Mr. Bratnober, which resulted in the handing over of the entire concern—stick, stock and barrel—to the English company about five or six weeks ago. It took me four years to geographically complete the boundaries of the property as handed over to the company, and you already have heard what during all this time I did for its development.

THE SETTLEMENT.

THERE have been few lighter settlements in mining shares than that which has taken place this week. At this period of the year the market is usually active; but for weeks past there has been exceedingly little business doing, even by professional operators. Hence the unimportant character of the account. Copper shares and a few of the Kaffir lot had moved about spasmodically; but even in these the rates were light. Upon Rio Tintos the contango never exceeded 1 per cent., at one time, indeed, there was a slight backwardation; while upon De Beers the charge for postponing payment was about 6d. a share. The following are the more important changes between the "making up" of May 26 and June 9:—

	May 20.	June 9.	Difference.
Almada and Tirito	1/16 ...	3/32	+ 1/32
British Broken Hill	2 7/8 ...	2 5/8	— 1/4
Cape Copper	3 3/8 ...	3 5/8	+ 1/4
De Beers	14 11/16 ...	14 12/16	+ 1/8
Frontino and Bolivia ...	1 3/16 ...	1 5/16	+ 1/8
Linares	7 3/4 ...	7 5/8	— 1/8
Mason and Barry	5 1/2 ...	5 3/4	+ 1/4
Mysore	5 7/8 ...	5 11/16	— 1/16
Ooregum Preference... ...	2 7/8 ...	2 3/4	— 1/8
Rio Tinto	21 ...	23 3/8	+ 2 3/8
Tharsis	5 3/4 ...	6 1/4	+ 1/2

Upon the general run of low-priced mining shares the contangos ranged from ½d. to 1d. in the £—more often the latter. Broadly stated, that does not seem a high rate for the speculators for the rise to pay for continuing their transactions; but, after all, a penny in the £ for a fortnight means 10 per cent. per annum; and we know that in a great many cases the rate really charged amounts to 20 per cent. per annum, and over. If anything like these rates were levied upon the "bulls" generally, what a howl there would be. However, in the opinion of the Stock Exchange, no mercy should be shown to those who dabble speculatively in cheap mining shares. The moral, of course, is that people should only buy what they intend to take off the market.

WEST I[illegible]W GOLD AFFAIRS.

THE secret of the past failure of West Indian New Gold Corporation was unfolded by Mr. Nelson Boyd in almost the last of the observations that were made at Tuesday's stormy meeting—that the property is valuable, but that the present company must not act like its predecessor—begin with a big nominal capital, and with no cash in the till. Still, amidst the discords that prevailed at Tuesday's meeting, out of which even Wagner would have failed to make any harmony, the one point steadily before the eyes of thinking shareholders must have been this, that the property is well spoken of by everybody, and particularly by those who have seen it. Read Mr. Nelson Boyd's speech, and then say if the estate is one that should be thrown away. Read the excellent remarks of Mr. Buckley, the chairman, as to its 530,000 acres, and let any reasonable man declare whether it is one that ought to be sacrificed. We gather this, however, that the quartz is not exceptionally rich, and that to be treated profitably it must be dealt with in large quantities. There must be vigorous, prudent, and economical management, and there must be harmony at home. The board are striving to secure the former, and the shareholders seem pretty determined that the latter shall not be wanting.

The meeting of Tuesday was called on a requisition signed by Mr. Mackay and some other shareholders. Mr. Mackay made a clever opening speech, in which two questions were ever pregnant to his mind, and made so by him to the shareholders—what had the board done with the 20,000*l.* they were alleged to have received, and how had the debentures been issued? In reply to the former, the Chairman reduced the amount received to 17,000*l.*, and gave a full account of how it had been disposed of so far as it has been spent. The meeting received this explanation with satisfaction, and it is difficult to see how Mr. Mackay himself, if he had been in Mr. Buckley's position, could have refused to pay the just debts of the old company as well as the legitimate claims of the new. As to the debentures, these were issued before the chairman came into office. In fact, he was only induced to become connected with the concern when it was at the cemetery door. A few friends urged him to save the moribund affair from an interment that was deemed to be premature, and the chief battle he has had since to fight has been with these veritable debentures, which he has now succeeded in reducing to within manageable limits. The 22 questions with which Mr. Mackay closed his speech all hovered round the two we have named, but we must express our regret that he should have stated, on the authority of some person whose name he did not give, that the board had received large sums apart from the moderate payments made to them as directors. Mr. Mackay on this point lost the sympathy of any portion of the meeting which he might previously have had, so that it was not difficult subsequently to defeat his proposal of a committee with its cut and dried list of members, by an amendment which practically expressed confidence in the directors, and simply requested them to call the annual meeting, and present the accounts of the year within the next three or four months. The meeting was a triumph for Mr. Buckley, and his colleagues, who are largely interested as shareholders, and who for their own interests, if for no more honourable reason, will naturally do the best they can for a property, which, under efficient management, promises to make satisfactory returns to its shareholders.

THE SATISFACTORY MEETING OF BLUE SPUR AND GABRIEL'S GULLY.

IT is always with extreme pleasure that we refer to any concern which, after having surmounted the ills to which mining, like flesh, is heir, has decidedly turned the corner. We referred to several such enterprises last week; but at that time the facts connected with Blue Spur and Gabriel's Gully were not within our knowledge, or we should decidedly have included it in the list. The directors, with Sir John Stokes at their head, have been, so far as this company is concerned, figuratively fighting for dear life. They have not always received from the shareholders the sympathy they deserved, whilst in the colony they have in certain quarters been met with the most determined opposition. This opposition has even gone the length of removing their materials from the mine and "stacking" them elsewhere. The winter of their discontent has happily now passed, and though the summer has not yet been made glorious, the chairman can see daylight through the clouds for the first time in the company's history. Blue Spur and Gabriel's Gully appears to be on the threshhold of substantial success. For the first five months of the present year, under considerable difficulties (particularly in Jan.) the manager has made returns of gold equal to 6,505*l.*, and the expenses being only some 300*l.* per month, the shareholders may regard the net profit as about 5,000*l.* Remittances are on their way home (hitherto in the experience of Blue Spur and Gabriel Gully, the remittances have been the other way), and a dividend will be paid in all probability to the preference shareholders in July. Later on the ordinary shareholders, Sir John Stokes hinted, will be in the running, and then all interested will be participating in the prosperity of a concern which but for the delicate handling of the board and their most skilful piloting must certainly have been on the rocks We heartily congratulate the directors on this happy issue out f all their troubles in connection with this company, and commend the good example they have set to the directors of other concerns which may be iu similar difficulties, but which peradventure may be extricated from them by management of a similar kind.

ETHERIDGE.

ANY child could have told the Etheridge Committee that their first duty would be to find money to save and work the property by reconstruction, and that afterwards they might sit as long as they liked and report to their heart's content. Mr. Campbell told them this at the meeting, and the directors emphasised it; but the advice was rejected, though the wisdom of it is shown in its tardy adoption now. The calls in arrear are bad, but the property is unencumbered. The committee recommend "an independent board," but the old board was as "independent" as any could be. They were not successful, it is true, but that they worked hard and according to the best of their lights for the company we positively assert. They mastered all the details of the business, and the shareholders will not act wisely if they refuse to avail themselves of the knowledge of some, at all events, of the members of the former board—of course, if after the vote of the recent meeting any of its members can be induced to serve again. The committee exonerate the Messrs. Taylor from any of the mistakes of the past, though it is difficult to know how they could do otherwise, seeing that the firm only accepted the thankless office of managing the company a few months ago. A meeting to carry the re-construction resolutions will be held on Tuesday, when we sincerely trust those who attend will do so in a more judicial frame of mind than did the majority present at the gathering some three weeks ago.

A FEW WORDS ABOUT THE "COLORADO BOY" SILVER GROUP.

THE Red Mountain district of Colorado has a history that bears to be told. It has been prolific in almost phenomenally successful mines. It is in this district that is found the famous New Guston, Yankee Girl, and American Belle mines, with whose great success our readers must be familiar; but we may be permitted to remind them that Guston paid 37½ per cent. for 1889, 60 per cent. for 1890, and at the rate of 80 per cent. for the first quarter of the current year. Yankee Girl has shown a profit of 79,000*l.* on the first six months' working, and American Belle, formed only six months ago, has declared a dividend of 15 per cent. out of its first two months' working. Mining in this district generally has been profitable. The blanks have been fewer, and the prizes more numerous than in most other mining camps that can be named. The Mine Owners' Trust has been the means of introducing to notice from this region several important properties, and notably White Cloud, which has been secured by La Plata Co., and which bids fair to redeem the fortunes of that enterprise. Still more recently it has introduced the Colorado Boy Silver Mines, Limited, the capital of which (120,000*l.*) is being privately subscribed—a large proportion of the disposable amount being already bespoken. Before the directors of the Mine Owners' Trust felt themselves warranted in introducing the Colorado Boy Silver group to notice they caused their manager to conduct certain operations, which have resulted in the discovery of two important ore bodies. We should remark that a reference to the published map will show that the Colorado Boy Silver Mines are contiguous to those of the American Belle, New Guston and Yankee Girl group, and Mr. Argall, who first of all reported upon the former, was of opinion that similar success would attend them, and certainly there is no geographical or geological fact against his view. In his first report Mr. Argall said that the surface outcroppings showed indications of riches below, and his original experiments were encouraging to a degree. But far better than any experiments have been the results of actual working, as reported by him on Apl. 14, when he was able to announce the striking of a fine body of ore in the south drift of Colorado Boy, which was improving as he advanced. On May 20 he struck an entirely new vein fully 3 ft. wide, 40 yds. east of the former strike, the first-class ore from which gave on assay 400 ozs. per ton, and the second-class 100 ozs. Subsequent reports have more than confirmed the original importance attached by the directors to this discovery. Mr. Argall was most anxious that an independent inspection of the property should take place, and this was made by Mr. Vezin, of Deuver, Colorado, a telegraphic summary of whose report was received yesterday, which is so important that we quote it *in extenso*:—

"I have carefully examined the property consisting of the Colorado Boy, Ord, Triangle and Irish Girl Claims; the situation is all that can be desired; the surface indications are similar in appearance to the Guston and other pay mines; the developments in the mine show two veins containiug the best ore found in the district so near the surface. I consider it a most valuable property, which will become as good as any mine in the district when devcloped.—(Signed) VEZIN."

This telegram must be regarded as wholly independent of the Mine Owners' Trust, and also as a gratifyiug confirmation of the statements of their own manager. The object of placing the 20,000 shares now, in a sense, available (we are assured the greater

part of them are bespoken) is to provide cash, not for the development of an untried claim, but for the prosecution of two large ore bodies actually discovered.

Now, it so happens that the directors of the Mine Owners' Trust are also directors of the La Plata Company, for whose shareholders they have reserved the privilege of securing an interest in Colorado Boy Silver Mines on unusually favourable terms. La Plata shareholders are well advised to think twice before they let this offer pass them by; if they do so, there will be others who will be only too glad to take advantage of their neglect.

NEW EBERHARDT—ITS POSITION AND PROSPECTS.

THE favourable augury which we drew from the facts laid before the Eberhardt shareholders by their esteemad chairman, Mr. Clipperton, as the result of his visit to the property, has been abundantly justified during the short period of the present year in which the Monitor Mine has been able to work. We have known something of the severity of the winter in this country, but it has been as nothing when compared with the terrible state of affairs in certain portions of the United States, and particularly in those at an altitude, like the Monitor property, of about 10,000 ft. above the sea level. When Capt. Read was able to get to work at the Monitor Mine he rendered a good account of himself and of it. Mr. Oxenford's statement of the results shows that the returns have steadily iucreased, and the general effect of what he said was this, that not only has the balance in hand, with which the year closed, been maintained, but there has been an actual profit on Monitor working of over 500*l*. Put briefly, the Monitor is turning out eveu better thau Mr. Clipperton ventured to forecast at the meeting held on Feb. 11, after his return from the mines. Whilst Monitor is behaving itself so well the directors will continue to work it, but they will not allow themselves to be diverted from the main purpose they now have at heart.

This is the re-working of the old Eberhardt Mine. Preparations have already been commenced with this view on a moderate and yet complete scale — moderate, because it is not intended that the expenditure shall be lavish; and complete, because no reasonable effort will be spared to discover the existence of other ore bodies similar to those of which the company had a foretaste in its earlier days, when its 10*l*. shares were freely dealt in at 42*l*. We may state that 60 tons of ore are already exposed in one of the levels. The policy of the directors may be described perhaps paradoxically as one of prudent boldness. They will with the unflagging perserverance and the dogged determination of the race persevere with the workings in the tunnel, and notably in the vicinity of the Ward Beecher Mine, in which it is coufidently believed by Capt. Read fresh ore bodies will yet be found, but at surface they will only put the mill in order by degrees, a few stamps at a time as the extraction of the ore from the mine may require it. Such will be the policy of the directors abroad, and at home there will be a continuation of that perfect frankness which has won the respect and confidence of the whole of the proprietors. All information of the least importance will be fully given, and shareholders desiring even more than this may be reminded that the chairman is on view daily at the office, and that Mr. Oxenford is in atteudance constantly, and will be ready to supplement by word of mouth auy printed information that may be published. These are the general conditions under which Eberhardt is pursuing a way that, truth to tell, has hitherto been more bestrewn with thorns than roses, though if indications go for anything, and if good management is to count, the latter seem as likely to predominate in the future as the former have done in the past. We draw a hopeful augury from Wednesday's meetiug, and are not surprised to hear that since the meeting dealers on their own account have been steadily buying the shares.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

IN the absence of any control, the Money Market has, during the week, further fallen away, until now, despite the settlemeuts, Bills are quoted $2\frac{5}{8}$, $2\frac{3}{4}$ per cent., and money at call, $1\frac{1}{2}$ per cent. This is the obvious result of the reaction from the attempt to "corner" the market, and raise the value of money by the banks, who, in consequence have millions to employ at the best rates they can obtain. The position of affairs, generally, has improved, and, while dispelliug all the recent fears, is much more reassuring. The Bank return is now a very strong one, the influx of bulliou from abroad, coupled with an influx of coin and notes from circulation, has augmented the reserve by 1,097,000*l*. to 18,758,000*l*., but the proportion has been affected by an increase of liability under both public and private deposits of 900,000*l*., so that it is only $1\frac{1}{2}$ per cent. better at 46 per cent. The stock of bullion is now 27,111,000*l*., or 5,350,000*l*. in excess of this time last year, while the increase in the reserve is not much less. The influx of bullion in the *Gazette* week was on balance 640,000*l*. and 370,000*l*. went in yesterday. Some gold has already been taken for Russia, and half a million is expected to go next week. Altogether here Russia can take four and a half millions, but there are other contingencies which may arise, which make the situation none too strong. With the lower v[illegible] the Exchanges are turning against us.

The settlement at the Stock Exchange has been too small to seriously occupy attention this week, for there has been throughout an important exodus to Ascot, and it may be fitly remarked that the races and baccarat have claimed far more notice than the settling of differences in the arena of stock speculation. However, the tendency was cheerful, and the chief work of the week closing or reducing "bear" engagements. Paris too, has shone brilliantly since Monday, and with the Portuguese difficulty patched up, optimism has to a great extent taken the place of recent pessimism, so that the upward movement has extended daily. The only real exceptions being Canadian and American Railways, and Eastmans Meat shares. The two first-mentioned are so much controlled by Wall Street that apathy here similar as in New York is inevitable, especially as the gold question is still agitating the other side, who are almost oblivious to their more favourable conditions. The Meat shares referred to have fallen sharply on fears that there will be no dividend, yet it was asserted that an American "rig" was being engineered in the property. Bell's Asbestos and Guinness's Ordinary have risen, especially the latter, upou great scarcity. American Breweries are, however, heavy again. Mexican Railways, after being depressed on reports of yellow fever at Vera Cruz, have appreciated, and South American Railway enterprises, like the Government Bonds, have formed a decidedly better market, which is encouraging, even if rates are still high. International were all in short supply, which, entailing "backs," has led to a nice squeeze of the "bears" here by Paris, who, having set Portugal upon her legs again, have run these bonds up to 49. Home Railways are not a settled market, but investment buying of the heavier descriptions has tended to form a steadier market for the livelier lines of the Brighton "A" order. Easy rates have assisted, of course, while the brighter weather is another favourable feature.

The downward tendency in money continues unarrested. Bills are now $2\frac{1}{2}$, $\frac{5}{8}$ per cent., and short loans 1 to $1\frac{1}{2}$, with $1\frac{1}{2}$ to 2 per cent. for a week, and an abundant supply. At the Bank 256,000*l*. was received, while 109,000*l*. was withdrawn for Buenos Ayres. The Silver Market shows no alteration, bars being $44\frac{5}{8}$d. per oz., while Rupee Paper was firm.

All signs of business seem to have disappeared from Public Securities, for to-day utter stagnation existed, and after a dull opening flatness supervened, and the same has once more aroused vague alarms, which, being as usual aggravated, caused a general relapse; but no ground exists as far as we know for suspicion, and the chief reasons for the weakness are attempted realisations upon the recent improvement and lower Continental quotations. The Funds were strong until the last hour when Consols re-acted to previous levels, but Indian Stocks retained the breadth of their rise, and the scrip of the new loan closed at $3\frac{1}{4}$ premium. English Railways are all weaker, the sole exception being Great Northern, which recovered 3 per cent. Great Eastern, North British, and South Eastern and Brighton Deferred were largely offered, falling 1 each, while Metropolitan Stock was maintained owing to the suspension of 'bus traffic. Internationals declined led by Portuguese, which relapsed, notwithstanding rumours of the sale of Goa in West India to England, and there was also a general collapse among Argentine loans on the passing of an Act suspeuding gold contracts for six months. American Railways were satgnant and irregular; Canadian Pacific shares, however, remain firm, while Mexican Railways further recovered 1 to 2. Breweries showed steadiness, with another special advance in Guinness's. Road Car shares and General Omnibus stock continue active, and a strike is apprehended among the *employes* on certain tramway systems.

Annexed are the final quotations to-day:—Consols Account. $95\frac{1}{8}$, $95\frac{1}{4}$; Egyptian Preference, $91\frac{3}{4}$, $92\frac{1}{4}$; Egyptian Unified, $96\frac{1}{4}$, $96\frac{1}{2}$; French Four-and-a-Half per Cents., $103\frac{1}{4}$, $103\frac{3}{4}$; Hungarian, $91\frac{5}{8}$, $91\frac{7}{8}$; Italian, $92\frac{1}{2}$, $92\frac{3}{4}$; Mexican, $31\frac{3}{4}$, $32\frac{1}{4}$; Peru Ordinary, $9\frac{1}{4}$, $9\frac{3}{4}$; Peru Preference, $24\frac{1}{4}$, $24\frac{3}{4}$; Russian, 1889, $98\frac{3}{4}$, $99\frac{1}{4}$; Portuguese, $48\frac{1}{8}$, $48\frac{3}{8}$; Spanish, 74, $74\frac{1}{4}$; Turkish, 1871, $95\frac{1}{2}$, 96; Turkish Defence, $93\frac{1}{2}$, 94; Caledonian, 117, $117\frac{1}{4}$; Great Eastern. $94\frac{3}{8}$, $94\frac{5}{8}$; Great Western, $156\frac{1}{2}$, $156\frac{3}{4}$; Brightou "A," $140\frac{1}{8}$, $140\frac{3}{8}$; North Western, $170\frac{3}{4}$, 171; Metropolitan, 84, $84\frac{1}{2}$; Metropolitan District, $30\frac{1}{2}$, 31; Midland, $152\frac{3}{8}$, $152\frac{5}{8}$; North British, $40\frac{3}{8}$, $40\frac{5}{8}$; North Eastern. $155\frac{1}{2}$, $155\frac{3}{4}$; South Eastern "A," $88\frac{5}{8}$, $88\frac{7}{8}$; Grand Trunk, $81\frac{1}{16}$, $81\frac{3}{16}$; Grand Trunk First Preference, $58\frac{7}{8}$, $59\frac{1}{8}$; Grand Truuk Second, $38\frac{7}{8}$, $39\frac{1}{8}$; Grand Trunk Third, $21\frac{3}{4}$, 22; Canadian Pacific, $80\frac{5}{8}$, $80\frac{7}{8}$; Denver, $17\frac{3}{8}$, $17\frac{5}{8}$; Erie, $20\frac{1}{8}$, $20\frac{3}{8}$; Milwaukee $65\frac{3}{4}$, 66; Lake Shore, $111\frac{3}{4}$, $112\frac{1}{4}$; Louisville, $75\frac{1}{2}$, $75\frac{3}{4}$; Atlantic First, $32\frac{1}{8}$, $32\frac{3}{8}$; Ontario, $16\frac{3}{4}$, 17; Ohio, $18\frac{3}{4}$, $19\frac{1}{4}$; Norfolk and Western, $53\frac{5}{8}$, $53\frac{7}{8}$; Reading, $15\frac{7}{8}$, $16\frac{1}{8}$; Reading Bonds, 80, 81; Union Pacific, $45\frac{5}{8}$, $45\frac{7}{8}$; Wabash Preference, $22\frac{1}{2}$, 23; Ottoman Bank, $13\frac{5}{8}$, $13\frac{3}{4}$; Anglo-Telegraph, $46\frac{3}{4}$, $47\frac{1}{4}$; United Telephone, $4\frac{5}{8}$, $4\frac{7}{8}$; Hudson's Bay, $16\frac{1}{4}$, $16\frac{3}{4}$; Suez Canal, $107\frac{1}{2}$, 108; Guinness, 331, 334; Allsopp's, 30, 32; Bryant and May, $13\frac{3}{4}$, 14; Eastmans, $6\frac{7}{8}$, $7\frac{1}{8}$; Bell's Asbestos, $9\frac{7}{8}$, $10\frac{1}{8}$.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIERRA BUTTES.

SIR,—May I call the attention of the investing, rather than the speculative, public in mines to one company in particular? This company owns three mines, and I may add, without fear of contradiction, has a board of the most able and conscientious men who ever sat to direct the doings of a mine. I refer to the Sierra Buttes Gold Mining Co., Limited. It is hardly known to the outside public that the company possesses the Sierra Buttes, the Plumas Eureka, and the Uncle Sam Mines, and it is principally to the latter mine that the hopes of the shareholders bend, for I fear the good old mine, the Sierra Buttes, is played out, whilst the Plumas Eureka does not return what it did. The Sierra Buttes and the Plumas Eureka are separately quoted, and the one mine is entirely independent of the other, but each has a moiety in the Uncle Sam, which latter divides its profits half and half with Sierra Buttes and Plumas Eureka. The par value

of each share is 2*l*., and each mine has a substantial reserve fund in negotiable securities. We are, by May next year, promised alone from the returns of the Uncle Sam 6d. each share dividend on both classes of shares ; this is a certainty, for the developments of the Uncle Sam at the present moment are sufficient to justify the assertion of the chairman of the company, at the last general meeting of the company, that this would be so, and which you reported in your valuable paper. It is a sin to see such a good property quoted at such prices ; those in the know evidently think so too, for Plumas Eureka has within the past fortnight advanced nearly 50 per cent., from a value that alone represented the amount of the reserve fund, iudependent of the mine itself. At 10s. for Sierra Buttes and 20s. for Plumas Eureka, both will pay a 10 per cent. dividend, and be cheap at this. These were the values put upon the shares in one of the chairman's speeches last year. The Plumas Eureka pays regular half-yearly dividends in May and Nov. of 1s. a share each. At my last purchase at 8s. 9d. they pay me 22½ per cent. per annum.

I enclose my card, and remain, your obedient servant,

A SHAREHOLDER OF 10 YEARS.

June 8, 1891.

P.S.—Since writing the above a telegram of a very satisfactory nature regarding the Uncle Sam has just been received.

PALMAREJO MINING CO., LIMITED.

SIR,—It will be remembered that in the quarterly report issued to shareholders at end of Mar. last it was stated that the new mill was expected to be completed by June 1.

The following is an extract from manager's letter, dated May 14 :—

"I have the mill almost completed, the work well in hand in the mine, and all my calculations made for workiug and stopiug the ore." —I am, &c.,

ROBT. J. SCRIVEN,
Secretary.

ANOMALIES OF THE MINING MARKET.

SIR,—Dickens Custer shares seem to be determinedly depressed by the bears who have put out the rumour of a call to erect more machinery. This is quite without foundation, as no call whatever is contemplated. The splendid returns on the 6th inst. of 2,130*l*. from ore crushed, in 21 days, in ordinary times would have lifted the shares 4s. to 5s., but they ouly rose 3½. This amount of return in 21 days' crushing ought to make the shareholders cheerful.

Emmas have been unduly depressed—the uncertainty of a call hanging over them ; but I have it now from the office that any idea of a call is abandoned, and none will be made this season. Those two shares will, I believe, have a sharp rise.—I am, &c.,

O. B.

UNITED STATES PLACERS—AN APPEAL FOR INFORMATION.

SIR,—Is it possible to get any information about this much vaunted (in the past) property ? I uote a few brokers in their lists still quote them 0d. to 6d., whilst others who helped to puff them to 18s. to 21s. omit them altogether ; but your own paper, amongst others, apparently reckon the company "as amongst the things that were." My object in writing you now is to try to rouse public opinion on the subject once more and obtain some information.

In Nov. and Dec., 1890, a series of ordinary-extraordinary and ultra-extraordinary meetings wereheld : finally resulting in appointment of a committee of investigation ; the respected chairman of which, H. Naidley, Esq., seemed to get a grip upon the details of the company's doings and misdoings, and was appointed by the Court liquidator. By a notice in your paper some few months ago it appeared that the liquidator somewhat suddenly died ; but the remaining members of the committee, who presumably have a large interest in its being secured for the *bona fide* shareholders, have given no notice either of the chairman's death or of any action they may be taking to take up the threads of the investigation which fell from the hands of their chairmau through his lamented death.

If from the committee, or the *Montrose Messenger*, or any source, information is to be secured, I feel sure it would be appreciated by many as well as by

Yours faithfully,

A COUNTRY SHAREHOLDER.

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR MAY—PROFIT OF 13,739*l*.

THE mine superintendent cables to the following effect :—"Ore shipped, 1,110 tons ; value (estimated), 18,595*l*. ; mine expenses (estimated), 3,984*l*. 10s. ; railway freight (estimated), 870*l*. 17s.—4,855*l*. 7s. ; estimated profit for the month, 13,739*l*. 13s."

Mr. Harvey, the mine superintendent, under date May 15, reports on the mines, viz.:—Yankee Girl Mine. No. 4 level—North ore body —Stope : Height of stope over back of level, 24 ft.; length, 30 ft. Ore from 12 to 18 ins. thick, but considerably broken in places Value of ore from 40 to 200 ozs. silver per ton. Orphan Boy : Length of stope, 58 ft. ; height 70 ft. Ore varying in thickness from 1 to 4 ft. Value of ore from 25 to 150 ozs. silver per ton. No. 5 level : The stope brought up from 5½ level (south of shaft) is 18 ft. over No. 5 level ; length of stope, 22 ft. ; width of orc, 10 feet. But little stoping has been done during the past four weeks, cross-cuts having been run into the sides to prove the quartz and ascertain if ore remained in these directions. No. 6 level—North-east drift : Drift driven 135 ft. ; total length driven, 355 ft. This drift is now 100 ft. into the Robinson claim. Stope : Length of stope, 74 ft. ; height, 42 ft. ; width of ore, 16 ft. ; value. from 50 to 1,200 ozs. silver per ton. The 6½ level—Winze : Preparations are being made for stoping from the ends of the winze sunk and communicated with the old stope worked from No. 7 level. No. 7 level—South-west : The south-east cross-drift has been driven 10 ft. ; total length, 29 ft. There is considerable copper in the face, intermixed with quartz. The ore varies from 35 to 125 ozs. silver per ton, copper from 10 to 20 per cent. No work has recently been done in the north-west cross drift. No. 8 level—West ore body : Height of stope, 22 ft. ; length, 28 ft. Average thickness of ore, 10 ft. Value from 20 to 55 ozs. silver per ton. A cross-cut is being driven to cut the ore body met with in the south-east cross-drift, at No. 7 south-west level. No. 9 level : The west drift has been extended 40 ft. ; total length driven, 70 ft. There is a streak of low grade ore from 3 to 8 ins. thick in the forebreast. Shaft : Preparations are being made to pump the water out to the bottom. The pipe column is being lined with wood, and other necessary work done. Robinsou Mine. — No. 2 level — South drift : The south drift has been extended 37 ft., through ore varying in value from 10 ozs. to 70 ozs. silver per ton. No. 1 stope : Height of stope, 76 ft. ; length, 87 ft. Ore from 1 to 6 ft. thick ; value from 30 to 1,100 ozs. silver per ton. This stope looks well. No. 2 stope : Length, 40 ft.; height, 60 ft.; thickness of ore from 1 to 4 ft., value from 35 to 1,000 ozs. silver per ton. No. 3 stope : Height, 13 ft.; length, 90 ft. Tncre is a large quantity of concentrating ore throughout this stopc. Shipping ore is also frequently met with, ranging in value from 30 to 70 ozs. silver per ton. The ground over Nos. 3, 2, and the greatest portion of No. 1 stope is standing intact to surface, as No. 1 level has only been driven to a point immediately over the north end of No. 1 stope. No. 3 level—South drift : Drift extended 54 ft. ; average thickness of ore, 2 ft., ranging in value from concentrating ore (12 ozs.) to 40 ozs. silver per ton. South drift, No. 1 stope : Length, 32 ft. ; height, 81 ft., or 6 ft. above the base of No. 2 level. This stope is going up on the east side of the main drift. Ore is being extracted, some of which assays 2,700 ozs. silver per ton. South drift, No. 2 stope : Height, 38 ft. ; length, 40 ft. ; ore 2 ft. thick ; value, from 15 to 50 ozs. silver per ton. South drift, No. 3 stope : Length, 70 ft. ; height, 17 ft. ; ore from 1 to 2 ft. thick ; value from 10 to 40 ozs. silver per ton. No. 4 level—South drift : Drift extended 59 ft. ; total length driven 177 ft. There is good concentrating ore in the face. North drift, No. 1 stope : This stope has been worked over the south drift ; length of stope, 150 ft. ; height, 20 ft. ; ore for length of stope, 2 ft. thick ; value from 10 to 250 ozs. silver per ton. No. 5 level : Drifts have been driven on the ore break, north aud south. The north drift has been driven 17 ft. ; south drift driven 19 ft. Concentrating mill : Ore varying from 5 to 15 ozs. silver per ton is being put through the mill. The product of this ore is silver 22 to 35 ozs., gold one to two-tenths oz. per ton, with 3 to 10 per cent. lead. About 13 tons of concentrated ore is being made per day. Surface : The plant aud machinery are working well.—B. MCNEILL, Secretary.

THE NEW GUSTON CO., LIMITED.

THE OUTPUT FOR MAY—ESTIMATED PROFIT, 14,049*l*.

ORE shipped, 1,500 tons ; value (estimated), 17,562*l*. ; mine expenses (estimated), 2,583*l*.; railway freight (estimated), 930*l*.—3,513*l*. ; estimated profit for the month, 14,049*l*.

Mr. Harvey, the mine superintendent, under date of May 15, reports on the mine, viz. :—No. 3 level : The cross-drift east has been driven 3 ft. ; total length, 36 ft. The whole length of drift has been securely timbered. 8 ft. back from the face we have opened, on the south side of drift, on ore 4 ft. thick, worth from 50 to 150 ozs. silver per ton. No. 5 level—Midway drift : We have suspended driving this drift *pro tem.* Raise to midway drift—Stope from north end of raise : Ore 3 ft. 6 ins. thick, value from 60 to 150 ozs. silver per ton. Next week I anticipate starting a stope from the south end of this raise. No. 1 winze, north drift : Winze sunk 5 ft. 6 ins. ; total depth, 48 ft. ; thickness of ore, 2 ft. 6 ins. ; value. 90 ozs. silver per ton. We have shipped four cars (approximately 40 tons of ore) from this winze, which varies from 50 to 75 ozs. silver per ton. This point improves as depth is attained. No. 6 level—New stope : Ore from 3 to 9 ft. thick ; value varying from 50 to 150 ozs. silver per ton, gold ¼ to 1¼ ozs. per ton, copper 5 to 9 per cent. This stope continues to look well. Stope on No. 6 ore body : Ore opened for a length of 40 ft. ; width, 10 ft. 6 ins. ; value, 45 to 140 ozs. silver, and gold ¼ to 1 oz. per ton. In sinking the winze from No. 5 level to the back of this stope we have proved that a better class of ore is met with as the stope continues upwards. North drift : We have driven 15 ft. across the "ore break ;" total length of drift, 109 ft. At No. 5 level in sinking the last 25 ft. of the north winze the ore pitched to the east 8 ft. Provided this underlay is maintained to No. 6 level we have got from 10 to 15 ft. further to drive to meet the orc.* No. 7 level : No. 7 level east has been extended 14 ft. 6 ins. ; total length from shaft station, 197 ft. I have brought the men back to open on the ore passed through which is 12 ft. thick, varying in value from 40 to 320 ozs. silver per ton. General : At No. 7 station we have excavated ground 8 ft. by 7 ft. 6 ins. by 7 ft. for tank to take up No. 7 level water. The carpenters are now placing tank in place. As soon as this work is completed and the hoist erected at No. 7 station the sinking of shaft will be re-commenced. We have not got all of our points in operation, being desirous of clearing the mine of a considerable portion of the surplus or accumulated ore, previous to resuming work at these places. No. 7 ore body has every appearance of opening out into a fine body of ore.

* Cablegram received from the mine superintendent Juue 8 states : —"No. 6 level, north of shaft : Have driven on good shipping ore for 15 ft. ; average width, 7 ft. 6 ins. No. 7 level : Ore body opening well. Mine is looking well."—B. MCNEILL, Secretary.

SPURIOUS PILLS.—A trade mark action of considerable public interest and importance came before Mr. Justice Kekewich on Saturday last. Messrs. Holloway, of 78, New Oxford Street, London, the well-known proprietors of Holloway's Pills and Oiutment, had become aware that penny boxes of pills called Holloway's Pills were being offered for sale, although the proper retail price is 1s. 1½d. per box. On aualysing the pills sold, Messrs. Holloway found that the pills were not manufactured by them at all, and accordingly brought an action in the High Court of Justice to restrain Mr. James Best, a chemist and druggist, from selling any pills as Holloway's Pills which were not really made by them. No defence having been put in, Mr. Israel Davis, on behalf of Messrs. Holloway, applied to Mr. Justice Kekewich for an injunction, and counsel for the defendant admitting he could not resist the motion, a perpetual injunction was granted restraining the acts complained of, and, further, awardiug to Messrs. Holloway damages and all costs.

REPORTS OF MEETINGS.

WEST INDIAN NEW GOLD MINING CORPORATION, LIMITED.

SHAREHOLDERS REJECT MR. MACKAY'S PROPOSAL FOR A COMMITTEE, AFTER A LONG AND EXHAUSTIVE DISCUSSION—THE BOARD UNDERTAKE TO CALL THE ANNUAL MEETING WITHIN THREE MONTHS, AND NOT TO MAKE A CALL MEANWHILE.

PURSUANT to a requisition from Mr. J. H. Mackay and other shareholders, an extraordinary general meeting was held at the Cannon Street Hotel, on Tuesday, for the purposes following, viz. :—"To discuss the present position of the company's affairs, and if necessary to appoint a committee of investigation."

Mr. Robert Orford Buckley

(chairman of the company) presided.

Mr. H. EDWARDS (secretary) read the notice of meeting.

The CHAIRMAN: Mr. Mackay and some other gentlemen having called this meeting, I must request them to state what they want.

MR. MACKAY STATES HIS CASE.

Mr. J. MACKAY: At the chairman's invitation I rise to explain the reasons which induced me to issue a circular to the shareholders calling in question the couduct of the board, and of laying before the meeting the reasons which, I think, will completely justify my action, and before I close I will ask the chairman certain questions, on the answers to which will largely depend the course I will recommend those present to adopt. I am constrained to believe that nothing short of the appoiutment of a committee of investigation will save the company. The directors are not compelled to hold the ordinary general meeting until the close of this year, by which time there is ample scope for the final call and another re-construction. Since I have undertaken this duty I have been encouraged by letters from shareholders, all bearing testimony, in language more or less emphatic, that this action on my part is certainly called for. Lord Amherst writes that he "hopes the meeting may be of service to the company." Genl. Barwell writes: "I consider the question you are taking urgently necessary." Another writes:

"STIR THEM UP BEFORE ALL THE CASH IS SPENT."

(Laughter.) Another says: "This concern seems to exist for the directors alone. They have twice told us through the Press that gold was being shipped to this country, but I have never heard of the ships being landed. They were probably overladen and sank." (Laughter.) Another writes: "On the faith of the directors stating there would be no calls this year, I purchased 200 more shares, believing the company was getting into a better position. My idea is not to bother or waste time with a committee of investigation, but to make a clean sweep of the directors." (Oh.) The directors have endeavoured to raise many side issues, with a view of blinding you to the real ones before you. They have given forth that my action has not been dictated by the true and real motives mentioned in my circular, and that I am only a nominee. They have laid stress on the fact that I am only a recent shareholder, and in various ways have endeavoured to depreciate my position and standing. The question is not whether or no I am a nominee, or whether or no I am living at the west end or the south side, or that I desire to be a director, for I can give a complete denial to any such charges, but we have to discuss this question,

WHAT HAS BECOME OF THE MONEY?

I am the nominee of no one. I, my father, my brother, and my friends bought shares with our own money, and paid for them with our own money. I must refer to the arrangements made with certain financiers, or a financier, to provide cash for the company, and save the shareholders another call. What was the arrangement made? We have been told that this financier agreed to finance us by taking off the hands of the directors 100,000 "treasury" shares, and in consideration he received some of the forfeited shares upon which the last call had not been paid. How does it come to pass that this financier was able to sell these shares? The directors state that he failed to keep his engagement, but why did they part with the consideration without having some kind of hold upon him. I say they cannot stand up and claim our confidence for business capacity when they part with shares for 6d., thereby enabling that gentleman to sell them on the market on a handsome premium.

Mr. CAMERON: Were they parted with?

Mr. MACKAY: Yes. I should like to ask, not Mr. Forster but Mr. Forster's brother, a question, and to deny this statement, if such be the case, whether this financier was to receive a certain commission upon what he sold of 3d. per share? I have been informed that it was so arranged. Mr. Forster is not here, but will the board say whether his brother was to receive such commission or any commission? In my circular I mentioned that 320,000 shares were issued. But since then I am informed that there were about 100,000 shares which were not taken upor allotted at the re-construction, in regard to which they could always be disposed of, but our careful and unselfish directors took the call of those shares for six months in the hope that they would go to a premium. They did not go to a premium, and they did not take them up, but the shares remained to-day a white elephant to them and to us. I received many letters askiug me to enquire into the old company, and although Mr. Poggi was a member of the old corporation, and Mr. Buckley for a short time was on the board, I do not know it is wise to go into that matter, though the new company certainly took over the assets and liabilities of the old. It is most important to find out what these were, but the former appear to me to have been *nil*. The

PRESENT DIRECTORS MUST HAVE HAD ABOUT 20,000*l*.

to deal with, and I want to know what has become of that money. For what services did the chairman draw from the company from Aug. 18 to Dec. 23, 550*l*., and why during the same period (as I am informed) did Mr. Poggi draw 450*l*., in addition to their directors' fees, which amounted to 117*l*. 9s. What became of 4,000*l*. which I believe Mr. Poggi admits he received in San Domingo? For what was it expended? I am informed that Mr. Warner, described as a personal friend of the chairman, went to San Domingo professing to be an engineer, but he stayed a sh[illegible], and on his return received 1,000*l*. Was Mr. Warner (as he professed to be) au expert, aud is there a minute authorising this payment? Did he make his report and will they give us a copy? We fail to find the slightest indication of how the money has been spent. We read of two women washing and taking care of our interests. (A VOICE: Dirty linen). We cannot afford to have nothing standing to expenditure, and I want to know what machinery is there?

Mr. GORDON CAMERON: Would you put your questions *seriatim* as we want to get away? (Hear, hear.)

DEBENTURES.

Mr. MACKAY: Now as to the debentures for which, as far as I know, the company has received no benefit. I want to know whether certain items that are down as assets do not bear relationship to the liabilities, so that if the one should be valueless the other should be reduced accordingly. The said debentures, declared to be scattered broadcast, were issued for what would appear to be no services at all. I want to know why some were given to the promoter of the old company, and whether all of them are still covering the property, because you must recollect they are a first charge. It is most pertinent that the meeting should ascertain what has become of the debentures. Mr. Edward Terry appears as a debtor for 5,000*l*. for shares allotted, and in the report which accompanied the balance sheet, it is stated that that debt was not paid. There are 5,000*l*. worth of preference shares which were afterwards exchanged into debentures, and do these still cover the company? Mr. Norton (who was a creditor of the new company) had a claim for which he had debentures as collateral security (3,000*l*.), and are those debentures still in existence? It appears that Count Multedo and the Paris syndicate had a lot of these debentures also for twice the nominal amount of shares taken. How have the debentures been scattered here and there without any consideration having been given for them?

OLIVER TWIST *v.* NICHOLAS NICKLEBY.

The boys in the school of Mr. Squeers always "asked for more," but here the debenture-holders appear to get debentures without asking.

Mr. JACKSON: Solely as a means of saving time, I would say there is a document well known to all professional and legal men called a register, and Mr. Mackay should have fortified himself with this informatiou before coming here and putting the matter in the long way he is doing it. (Hear, hear.)

The CHAIRMAN: The debentures are to bearer, and there is no register. They are scattered over the face of Europe, and though we know some of the holders we do not know the others.

Mr. MACKAY: Has the chairman given no debentures away?

The CHAIRMAN: None whatever.

Mr. MACKAY: If there is anything in the property let us take steps to preserve it. I saw in the papers recently that

SAN DOMINGO IS DEVELOPING IN A SATISFACTORY WAY,

that means of communication are being opened up, and that a reciprocity treaty has been concluded with the United States. I do not know how much cash we have left, but a call must be impending. I cannot close without stating that I have no personal object to serve in this matter except one, and that is the improvement of the property. The property is now in your hands to lose or save it. My questions are as follows:—

TWENTY-ONE QUESTIONS.

(1.) What monies have been received by the company for calls since the re-construction, and how has it been expended? (2.) What is the present average expenditure per month? (3.) What sums have been received by directors for fees? (4.) What sums have been paid to Mr. Buckley and Mr. Poggi beyond the money drawn on account of their fees, and on what account were such accounts paid? (5.) Is there any minute appointing Mr. George Warner to proceed to San Domingo and report on the property? (6.) Did he make a written report? (7.) Is there a minute authorisiug the payment of 1,000*l*. to him for expenses and services? (8.) What was Mr. Warner by profession? (9.) What time did he stay in San Domingo? (10.) What is the value of the machinery and tools uow at the property, and have any been purchased since the re-construction? (11.) What monies are owing to creditors? (12.) Are any proceedings being taken by creditors? (13.) What proceedings have been taken by directors to recover the assets mentioned in Messrs. Spain and Co.'s balance-sheet of the old company upon which the re-construction was based? (14.) Is it a fact that the directors have given debentures for 5,000*l*., without receiving consideration, to Mr. Edward Terry, who is reported as a debtor for 5,000*l*., in respect to those shares? (15.) What steps have been taken to obtain an account from Mr. Tarn of 2,000*l*. deposited with him as mentioned in Spain's report, and is any balance due thereon? (16.) Who are the present holders of debentures, and on what sum is interest payable? (17.) Have the old debentures been exchanged for new. and if not, why not? (18.) Have any debentures been redeemed or cancelled, and if so, by what means? (19.) Is it a fact that with respect to 3,500 shares issued by the old company to Count Multedo, and 735 to the Paris syndicate, the allotments were accompanied by the issue to the allottees, without further consideration, of debentures for twice the nominal amount of the shares taken? (20.) Is it a fact that the promoter, who was owing the corporation 10,000*l*. for shares, and in addition 1,473*l*. for difference of money paid and amount received at the mine, preferred a claim for over 9,000*l*., and received in satisfaction debentures (28,000*l*.) without payiug his indebtedness? (21.) It is a fact that Mr. Edward Terry (*pro tem.* secretary) received 8,000*l*. in preference shares, reduced afterwards to 5,000*l*. which were exchanged for debentures, although he had not paid the money for the said shares? These questions may be difficult to answer, but are sufficient to justify my request for the appointment of a committee. The debentures, sooner or later, will swamp us, and if we cannot recover and cancel them our case is a bad one. You all recollect the words with which

THACKERAY CLOSES "VANITY FAIR,"

which apply in this case: "Come, children, shut up the box with the puppets, for our play is played out." (Cheers.) My resolution is, "That a committee on behalf of the general body of shareholders of the corporation, and consisting of subscribers, be, and the same is hereby, appointed for the purpose of inquiring into the affairs of the said corporation, and reporting to a subsequent meeting to be hereafter appointed and convened."

Mr. HOLLOWAY: A great deal has been said as to the value of the property, and the 2,000*l.* paid to Mr. Tarn to get an independent report. The gentleman selected to make it was Mr. Nelson Boyd, who appears to have substantiated the whole of what was put before the directors by the vendors. He sends by cable this message:—

"The property looks splendid ; representation of the vendors substantially correct."

As Mr. Boyd is here he will verify that message, or the reverse. The speaker went on to read various points from Mr. Boyd's report, which mentioned samples running up to many ounces to the ton ; speaking of an abundance of timber for all purposes, and plenty of water, but as far as he (the speaker) was concerned he could find no timber rights under the concession. If this report was correct the property was valuable, and the shareholders should try to save it from drifting into other hands, and as to those hands, he had certain information. As to the 2,000*l.* entrusted to Mr. Tarn for sending out the engineer—Mr. Boyd gave two receipts for something like 1,050*l.* or 1,100*l.*, but only received half that amount, the other half going to Mr. Lakeman, who was the introducer of Mr. Boyd to Mr. Tarn.

NO NOTICE GIVEN OF THE QUESTIONS.

Mr. OSOSKI : Have the directors notice of Mr. Mackay's questions ?

The CHAIRMAN : No notice whatever.

Mr. OSOSKI : It is most unfair not to have given them notice. (Loud cheers.)

A GENTLEMAN, who, it turned out, was not a sharcholder, made a vigorous attempt to address the meeting, but was not allowed to do so.

CHAIRMAN REPLIES.

The CHAIRMAN : A large number of questions refer to matters of which I have no cognisance. I came into the company at the solicitation of a few shareholders when it was *in extremis*, and when there was not a sixpencc in the till. The first measure I had to take was to put my hand in my pocket to find the money necessary to call a meeting, and two other gentlemen assisted me in that operation, which was not a pleasant one to begin with. (Hear, hear.) We then, in accordance with the wish of the shareholders, drew up a scheme with the aid of our solicitor, Mr. Abrahams, which was laid before the shareholders, carried, and at a subsequent meeting confirmed. I am not cognisant of anything that took place in the old company, though I believe a great deal was done with respect to that which ought not to have been done. The old company was one with a nominal capital of 350,000*l.*, of which 300,000*l.* had gone to the vendor in fully-paid shares, and the other 50,000*l.* was retained as working capital. As no one could be fouud to take up these shares, they tried to raise money by giving, as I have been informed, to each person who took a preference share two debcntures, and that is the way the debentures came into circulation—hence, you may suppose that a very small amouut in cash caue into the hands of the company. There were no shareholders who paid any money to the company at all, for the shares bought on the market were those of the vendor. I bought some at 16s., which I hold still. Mr. Poggi is the largest shareholder by far (15,000), and I hold a large quantity. I am ready to answer all questions satisfactorily and am glad to meet you here, because I wish to say the company has not sufficient funds to carry on the development of this magnificent property. I do not think there is any mine on the market which has such a large future as this one. We have 530,000 acres of land, nearly all of it more or less auriferous, but how is it possible to deal with such an estate with a capital of only 17,000*l.*? We have been asked what have we done with this money, and I will tell you. The property has been starved in consequence of not sending out sufficient to develop it. The average expenditure has been about 300*l.* a month. Mr. Mackay says that Mr. Poggi and I, independently of our fees, have received certain sums. But all we have actually received has been the 300*l.* you voted to us yourselves at the first meeting. (Cheers.) We have never rcceived the othcr sums to which allusion has been madc, and I challenge Mr. Mackay to produce his authority for the statement he made, that we had received other payments than those the shareholders themselvcs voted.

MR. MACKAY CHALLENGED.

I want your authority (cxclaimcd the chairmau, indignantly) for such a statement. (Loud cheers.)

Mr. MACKAY : You have answered the question. (Oh.)

The CHAIRMAN (warmly): Yes, but you have not named your authority. When a man accuses me of receiving money unjustly and dishonestly, I want his authority. I have endeavoured to do my duty to this company, and have attended every day to its business, and this is my reward—ingratitude. It is true Mr. Warner was a friend of mine, and agreed to go out and to remain three years, but, unfortunately, he was taken ill on the road, and suffered from rheumatic gout, so that he was unable to make a report, and therefore we had to come to an arrangement with him to terminate his agreement. He received 800*l.* Thcre are 2,500*l.* of calls in arrear, and about 1,000*l.* in the bank—the total beiug 3,500*l.* if we get all the calls in. In the meantime there are claims against the company — overdue coupons, 500*l.*, 800*l.* due to Mr. Norton, 200*l.* for law costs, about 100*l.* for office expenses, and 600*l.* put down to be remitted to the mine during the next two months—total, 2,200*l.*, which would leave a balance of 1,300*l.*, supposing, I repeat, we get in all the calls. 4,750 debentures of 10*l.* were issued, represeuting 47,500*l.*, of which we have cancelled about 600, leaving 41,000*l.* We have received from Mr. Norton 1,000*l.*, which he held as collateral security, and shall receive 2,000*l.* later on. We have received 2,500*l.* debentures from Mr. Poggi, which he held as collateral security ; 8,000*l.* was in the hands of the receiver to the promoter's estate, who has expressed his willingness to hand them over on affidavits being made. We are in negotiations with other parties to cancel debentures, which, if successful, will bring the total amount down from 47,000*l.* to about 20,000*l.*, but I am afraid this agitation will have the effect of marriug our efforts. We intend to issue new debentures of 7 per cent., instead of the old ones of 10 per cent. We have had a difficulty with the liquidator appointed by the shareholders —Mr. Nightingale. We were not satisfied with the way things were going on, and having handed him two cheques to pay a definite claim of Mr. Norton, one for 600*l.* and the other for 200*l.*, we found afterwards that these had not been paid over. Steps werc subsequently taken (which were successful) to remove Mr. Nightingale from his position as liquidator. I took that action myself and got him removed, and a new liquidator appointed.

Mr. NIGHTINGALE, whose remarks were not clearly heard, was understood to say that he had been called a thief and all sorts of things, but his accounts were lodged at Somerset House with affidavits, and the shareholders could have them if anyone would pay the printing expenses. He had accounted for all he had received. He was prepared to go before the committee and answer all questions.

Mr. PULBROOK (solicitor to the new liquidator) : I prefer to take you before the Chief Clerk in Chancery to account for your actions. (Cheers.)

Mr. NIGHTINGALE : Oh, you want to make a job. (Laughter.)

The CHAIRMAN (continuing) : We have now at the minc Mr. Cambiaso, who is acting, without remuneration, as our agent at San Domingo ; or rather, he prefers to receive his remuneration in shares instead of cash. We have also entered into a firm

AGREEMENT WITH A SYNDICATE

to lease a portion of our concessions. They go out about July or Aug. at their own expense to wash the alluvials, and will, I understand, incur an outlay of about 5,000*l.* They are also bound to form two companies, one with a capital of 90,000*l.*, of which we shall have one-sixth, and the same proportion in any subsequent company they form. They pay us a clear 5 per cent. on all the gold taken out. I repeat, I should like to have Mr. Mackay's authority for the statement he made with regard to the money we have taken out of the treasury. (Mr. Mackay did not respond.) The chairman (continuing) : I now proceed to state what we have done with the 17,000*l.*—debenture interest, 2,000*l.* ; professional costs, 500*l.* ; liquidator's account, 7,600*l.* ; new machinery, 340*l.* (we have two mills on the property, a 10 stamp and a 5 stamp) ; remittances to the mine, 2,700*l.* ; salaries of trustees to debenture-holders, 100*l.* each ; salaries generally, 993*l.* ; travelling expenses, 440*l.* ; commission, 229*l.* ; directors' fees, 300*l.* ; interest, 50*l.* ; and sundry expenses, 2,000*l.*

A SHAREHOLDER : Can we get the accounts from the liquidator ?

Mr. PULBROOK : There is a deficiency of 3,000*l.* which I cannot discover, but I am trying to get at the facts.

A CALL TO ACTION.

A SHAREHOLDER : Shall we proceed to business or not ? If we proceed to appoint a committee let us do it, and if not I will propose a vote of thanks to the chairman, and we will all go away. (Cheers and laughter.)

Mr. MACKAY moved as the members of the committee Mr. H. T. W. Safe, Mr. Richard Hewlett, Mr. W. A. Allen, Mr. William Ward, and Mr. Theodore S. Jones.

The motion was seconded by a GENTLEMAN, who admitted that the board were doing their duty honestly by the company, and who characterised the committee as "a hole and corner oue." He wished an "independent committee" to be nominated.

The CHAIRMAN : I think a committee will do the company harm, and the board will strenuously oppose its appointment. (Cheers.)

EFFECTS OF "COMMITTEES."

Mr. DAVID OSOSKI : Unfortunately I have been of late in 10 or 12 meetings of companies where the idea of re-construction or of committees of investigation has been to the front, and some of the gentlemen present may recognise me as having attended them. About 12 months ago I was at the meeting of an unfortunate gold mine, and although at 11 a.m. on the day of the meeting the shares were quoted at 2s. 6d. or 3s., I believe that at about three o'clock, when the meeting terminated, they were quoted at 9d. Why ? Because there was not confidence showu by the shareholders in the management, and because a proposition of a committee was put forward. What was the result ?

THE RESULT WAS THAT WHICH ALWAYS COMES ABOUT—

since that time there has been a re-construction ; I have paid 1s. 6d. in calls, have almost thc immediate prospect of paying another 6d., and the shares themselvcs are quoted at 6d. to 1s. (Hear, hear.) You see what a meeting of this character means. It means "bearing" the shares. They go to pot, and we go to pot with them. (A VOICE : We are at pot already.) (Laughter.) I say *no* to a committee. (Loud cheers.) These questions were sprung upon the chairman and no notice was given to him, although they should have been sent to him at least a week ago. I say if we have a committee of investigation we are lost. The first point to be gained by these gentlemen is to get a committee, and then having got the committee to put people on it of their own nomination. (Loud cheers.) Therefore, I say *no* to a committee, and I hope to have the chance of proposing a vote of confidence in our directors, in which I will ask you to join me, for how can we expect other people to have confidence in our affairs when we do not entertain it ourselves ? (Cheers.)

AN AMENDMENT IS CARRIED.

Mr. PERRYMAN : I propose, as an amendment, "That the board should give an undertaking to hold a fresh meeting three months hence, and then render the accounts, and that no call be made in the interval."

Mr. OSOSKI seconded the motion, which was carried by a triumphant majority.

The CHAIRMAN then put, as a matter of form, the motion of Mr. Mackay, which was lost, and a poll that was subsequently demanded was withdrawn.

IMPORTANT STATEMENTS AS TO THE VALUE OF THE PROPERTY.

Mr. NELSON BOYD, F.G.S., was asked to give his views as to the property. He said : Having only returned from a long journey I have not had time to bring a copy of my report with me, or any of the documents relating to this miue, with which I had a small connection some years ago. It has been said that I received an abnormally large fee to make a report in a certain direction, which I utterly deny. (Cheers.) I received an ordinary engineer's fee of 500*l.*, which I do not think too much to spend three precious months iu such a place as San Domingo, however good the climate may be. I also received my expenses, which I believe amounted to 110*l.* More than that did not go into my pockets. Thcre were two receipts given for the 2,000*l.* spoken of, but the balances went to somebody else, who found me in Westminster, and who assisted in the promotion of the company. With regard to the timber, it is abundant, and can be had for nothing, or next to

nothing, and is suitable for mining and general purposes. Some of it, in fact, is mahogany. With regard to the analyses made in Paris at the school of mines there, I can only say that I studied there for three years, both chemistry and mining, and believe that that school is as accurate and precise as any can be, though whether the samples were really sent from San Domingo I cannot say. I have taken no responsibility with regard to them—only in regard to the one I took myself. I brought away 2 kilos of ore from Santa Rosa, which I saw brought up. I took it to the town, and had it crushed in a pestle. I had it washed with a batea in my bath, and the gold I weighed came to nearly 1 oz. to the ton, but not quite. If you can get gold out in that way you may accept it as a gold reef. There are

UPWARDS OF 20 QUARTZ VEINS

that I rode over, and though there are some valueless, there are eight or 10 that ought to be auriferous, and some very much so. There is not a stream in the district in which we do not find gold. The Spaniards extracted large quantities, and the facts are historical, and cannot be gainsaid even by dissatisfied shareholders. An American engineer went over the ground before me, and took samples to New York, and in all the quartz reefs he found gold in considerable quantity. His report is in print, and in my possession. I had the reef blasted, and took haphazard a quantity of quartz which was then and there sealed before my eyes. One sample was sent to England, and the other left in charge of the Vice-Consul at that time. I have seen, and read, and heard nothing that has in the least altered the extremely favourable opinion I took of that country as a mining territory, particularly for gold. I took more fancy to the reefs than to the alluvial gold. You have in the higher grounds reefs enough to last for many hundreds of years. I should not despair of this property, but it must not be worked as the last company did it, with a large nominal capital and no real cash in the till at all. (Cheers.)

A cordial vote of thanks to the chairman closed the meeting.

THE BLUE SPUR AND GABRIELS GULLY CONSOLIDATED GOLD CO., LIMITED.

THE POSITION OF THE COMPANY GREATLY IMPROVED—£6,505 RETURNED IN FIVE MONTHS—PROSPECT OF A DIVIDEND ON THE PREFERENCE SHARES IN JULY, AND ON THE ORDINARY SHARES LATER ON.

THE ordinary general meeting was held on Thursday, at Winchester House, Old Broad Street, London, E.C.

Lieut.-Genl. Sir John Stokes, K.C.B.

(deputy chairman of the company), presided.

Mr. J. FOSTER (secretary) read the notice of meeting.

THE COMPLETION OF THE ARRANGEMENT WITH THE BANKS.

The CHAIRMAN: Gentlemen, since we last had the pleasure of seeing you in general meeting we have been able, as you have been informed by circulars from time to time, to complete the arrangement with the Colonial Bank of New Zealand, and the Bank of New Zealand, under which the affairs of the company have been placed on a footing which allows of our now properly working the mine, and I hope of ultimately bringing it to a successful issue. I should think it hardly necessary for me (as the whole matter was so fully explained when we last met, and from time to time since by circular) to go into the details of the arrangements, but, still, if you wish me to do so I will give further particulars, though I gather from your silence that you do not desire me to go over that ground again. I must say one word on the subject of our not having been able to summon you to an ordinary general meeting last year, as we should have wished to do. We had not the accounts necessary in the shape to present to you. There were no vouchers with them. For that matter, we are still without vouchers, but we had not the accounts in proper shape, and, besides, we were assembling from time to time in extraordinary meetings, and, therefore, you knew the state of the company's business so thoroughly that even if we had summoned you we should have had nothing to say in the absence of the accounts beyond what we had formerly communicated. The absence of those accounts is explained by the necessity of keeping the vouchers in the colony on account of transactions that were going on with the banks, and their being wanted for further scrutiny; they, therefore, were not sent home. They are now on their way, but we have already got the accounts into a certain shape and submitted them to the auditors, so that we thought it not desirable to postpone further holding the general meeting; and instead of bringing the accounts to Mar. 31, 1890, we have brought them to the end of Dec., 1890, which, we think, a very convenient date from which to make a fresh start with our balance-sheets in the future. This brings us down to a calendar year, and the new accounts presented will show the operations of the company under the new arrangement, which I think will be a more satisfactory one to you than were they to be presented with a half period under the old system and a half period under the new. Since the arrangement with the banks was made

OUR AGENT HAS HAD UNCONTROLLED POWER OVER THE GROUND,

which is our property. As you know, for some months before the operations of our manager had been hindered by the claims of the mortgagees. Works had been suspended, pipes had been removed, every possible obstacle had been put in our way, and the wonder was that any gold at all was won in the year 1890. Some gold was won, but nothing like what ought to have been, as is proved by the returns we have had this year. As you have seen from the report, the yield has gone on steadily increasing from month to month. The yield of 167 ozs. in Jan. is explained in a letter thus: Half the month of Jan. was occupied in bringing back pipes and other plant from where the hostile mortgagees had stacked them, and in getting them into the position they are in. Therefore the yield of Jan. was less than what some previous months had been, but since Jan. every month has been higher. Feb. was higher, the yield being 267 ozs.; in Mar., as you have seen, we had 326 ozs.; Apl., 413 ozs.; and May the great increase was to 523 ozs., which, I think, you will all consider a very satisfactory result. In fact, the

WORKING OF THE FIVE MONTHS PRODUCED GOLD WORTH ABOUT 6,506*l*.

I say *about*, because in this circular we said to you that the duty of 2s. per oz. had been taken off from the end of Feb., but we learn more exactly by correspondence that it was taken off on Mar. 9. We think that nearly the whole of the Mar. yield did not pay this tax, because Mr. Howard Jackson said he had kept back a good deal of the washing, knowing that the duty would be taken off, until this was actually done. You have 6,506*l*. for the yield of the first five months of the year, and I think I am not far from the right figure. We have not had the accounts for the expenses of these months, but the chairman in writing stated that roughly he estimated them at 300*l*. a month. Therefore you can say you have had

A CLEAR PROFIT OF 5,000*l*. IN THE FIVE MONTHS.

I put it in that way, because we have not the absolute returns from the colony. We know the gold actually returned, and approximately the expense of raising it.

A SHAREHOLDER: Do the expenses include interest payable?

The CHAIRMAN: No, but the interest has been paid. We know that the interest to Feb. 28 was paid out of the winnings of this year. The money raised by the preference shares is being strictly confined to the purchase of plant for attacking the cement. At one important part of your property, by increasing the Beaumont water race, we shall do much better. That we found on inspection was susceptible of having its power doubled by certain works along its course, wideniug the channel and damming certain water back into it. That work has been completed at a cost of 300*l*., and Mr. Jackson, writing on Mar. 24, says: "Of this I am sure, that the extra supply of water derived from this source will more than pay for itself within a very short time." We now, of course, are anxious to know what the very large increase of gold in Apl. and May is due to. We have, in previous reports (before we wrote our own report) gathered from them that it was mainly from the tailings, but I think it will interest you to hear an extract from a letter written by the general manager to the chairman, Sir Walter Buller, dated Apl. 21, and it is the latest written account we have from the colony:—

"Although no gold has yet been won from the main body of cement, both the Mar. and Apl. returns have been from solid ground on its edge—only a very small proportion coming from tailings. The preliminary works for opening the body of cement to the greatest advantage in the way of economical handling are going steadily forward, whilst good results are being obtained by the present sluicing and elevating operations. Had I started to sluice the cement two months ago (here he is rather defending himself, for we understood he would be ready to attack the cement on Mar. 1, and he is giving the reason why he did not do so), although very possibly a good return of gold might have been won, the process would have been hurried, and lost the gold now being saved, a waste which nothing could justify."

I think we shall all agree with that. He goes on to say:—

"A wise axiom in mining is, 'Being on pay dirt stick to it, until worked out,' and unless I receive from you very imperative instructions to abandon it, I shall do so, at the same time in no way relaxing the effort to speedily start on the cement. The ground from which the gold now being saved is won is a soapy blue clay, with narrow or thin bands (horizontal) of fine gold, bearing wash dirt. It has all been more or less worked many years ago by sinking and driving on the bed rock bottom, but the ground must have been very treacherous and dangerous to work in a country where timber was scarce and dear, consequently a considerable quantity of gold was missed. I am credibly informed that 8 lbs. weight of gold was taken from one barrow load of dirt close to where the present sluicing operations are proceeding in 1865-66, and then the drive caved in. Before this letter reaches England, unless something altogether unforeseen occurs, the water now used in working one set of elevators will be employed in the main body of cement in crushing and sluicing, leaving the balance of the water to clear up what will then remain of the ground now being worked, and the gross quantity of water will be considerably increased by the enlargement and improvement of the head races now almost finished."

I have not much to add to what I have already said to you or to what I have read to you. I think it is very evident that

WE ARE WORKING NOW ON VALUABLE GROUND.

No one can say how long the rich returns we are getting will last, but with respect to the "Dead Dog" claim, which we told you had been bought last autumn for 150*l*., Mr. Jackson mentions in one of his letters that though he had not worked half the claim, that he had already extracted 750*l*. from it. Therefore, I hope, there will be another 800*l*. to be got out of the "Dead Dog," which, of course, will swell our receipts for this year. I think also I am justified in saying that the money already won entitles us to believe that early letters will enable us to declare an

INTERIM DIVIDEND ON THE PREFERENCE SHARES, SAY IN JULY.

From a telegram we had saying that the money we required was being sent home, we believe that that refers principally to this money for dividend. As we pointed out, even by the receipts of Apl., there ought to be sufficient when all the money due to the banks is paid (which is being done) for a dividend, and they could not object to our paying an interim dividend on the preference shares for the six months. I think we have before us a good prospect of bringing the company to a successful termination. (Cheers.) I move the first resolution—"That the report of the directors and balance-sheet as presented be, and are hereby, received and adopted." I, perhaps, ought to say, with reference of course to the balance-sheet, that it is a record of the unfavourable conditions under which we were working prior to this agreement, and I think any future balance-sheet will show a very much more favourable result than this one does. (Cheers.)

Mr. T. J. HAUGHTON (director): Gentlemen, in seconding the adoption of the report the chairman has so fully dealt with the subject

matter of the company's business up to the present time that it is unnecessary I should take up the time of the meeting with any comment beyond congratulating the shareholders on the very satisfactory prospects that we have at the present time.

The CHAIRMAN having invited discussion, but no one rising, he put the motion to the meeting, and it was carried unanimously. It is now (he said) my duty to leave the chair for a short time, as by ballot I fall to retire on this occasion, but, as I have said in the report, I offer myself for re-election.

UNANIMOUS RE-ELECTION OF THE CHAIRMAN.

The Hon. WILLIAM GISBORNE (director) : I beg to propose the re-election of Sir John Stokes, who has acted as our chairman for some time. Of course, his retirement is fortuitous—it is by ballot—but he offers himself for re-election. I may say we owe a great deal to Sir John Stokes for the position he took in the matter of the arrangements made by Sir Walter Buller in New Zealand. In carrying them out, we were altogether dependent upon our raising 2,400*l.* or 2,500*l.* at a very critical time, and it was greatly attributable to the energy and judgment shown by Sir John Stokes as chairman at that particular time that we were able to raise the money so as to avail ourselves of the favourable arrangements that were made on that express condition in New Zealand. I beg to propose the re-election of Sir John Stokes as a director of this company.

Mr. T. J. HAUGHTON seconded.

The motion was carried by acclamation.

The CHAIRMAN : I thank you for my re-election. I am glad you have re-elected me, because I have taken a very keen interest in bringing this company through its difficulties, which have been great and many. We never really have seen daylight through the cloud until the beginning of this year, and now that we do see daylight, I should be glad to bring you into the position of getting dividends not only on our preference, but on our ordinary shares. That I do think possible, if the value of the ground is as represented to us, and if it continues to be worked as it is at the present time. I do think that there is

A FAIR PROSPECT OF DIVIDEND ON THE ORDINARY SHARES

within a reasonable time. (Cheers.)

A SHAREHOLDER : As to the 2,000*l.* paid to the bank annually in liquidation of their debts—what interest does it bear? I believe we pay 8 per cent. for the money.

The CHAIRMAN : That will go in reduction of the debt. That means the cessation of the payment of interest on that money.

The SHAREHOLDER : It was not previously very clear, and I am glad to have had your explanation.

The CHAIRMAN : It is necessary for the shareholders to appoint auditors for the ensuing year, and the present ones offer themselves for re-election.

Mr. ARBUTHNOT proposed the re-election of Messrs. Whinney, Hurlbatt and Co., at a remuneration of 20 guineas.

Mr. BAYNES seconded the motion, which was carried.

A SHAREHOLDER : I presume that when they get the vouchers from New Zealand the auditors will certify that the accounts are correct, because at present they simply say that they agree with the books.

The CHAIRMAN : That is all they could do till the vouchers come home. We have no doubt it is all right, because the vouchers have been before the auditor in the colony. It is not as though they came straight from the accountants. Of course they will certify that the accounts are correct when they get the vouchers. Everything at home they have had before them.

The motion was carried.

THE CHAIRMAN AND BOARD THANKED.

Mr. MEAD : I think we ought not to part without acknowledging the services of Sir John Stokes and the board. I therefore propose a vote of thanks to the chairman and the board for the kind attention they have given to this company from its formation.

The motion was carried.

The CHAIRMAN : I am much obliged to you for your vote of thanks and confidence, and we will strive to continue to merit it.

GARFIELD, LIMITED.

THE POSITION OF THE COMPANY AND ITS PROSPECTS—VIEWS OF MR. ALFORD—THE DIRECTORS ONLY DRAW HALF THEIR FEES.

THE second ordinary general meeting of this company was held at the Cannon Street Hotel, on Thursday, to receive the report of the directors and statement of accounts to Mar. 31, 1891 ; to elect a director and auditors ; and to transact the general business of the company.

Mr. Samuel Green

presided.

Mr. ALFRED L. PENNY (the secretary) read the notice calling the meetiug, and the report of the directors was taken as read.

The CHAIRMAN said that he did not think that it would be necessary to detain the shareholders very long. They all knew of the state of things, and he could not express the sincere regret which he felt that their efforts had not been attended with a larger amount of success. The detailed report of the consulting engineer, Mr. Edward Hooper, contained the description of the whole of the work done since the re-construction of the company. They were told in the report that the Great Western vein had been intersected by the cross-cut from tunnel No. 3, and had since been explored for a distance of 455 ft., and according to the last report received, 502 ft. The report presented was not a satisfactory one. They had met there on that occasion in annual meeting, but what concerned them most was the circular which had been sent out to the shareholders some months ago ; he thought it was in June last year. That circular intimated that though there was another shilling to be called up, in consequence of the reports which had been circulated amongst the shareholders,

THE BOARD WOULD NOT MAKE ANY FURTHER CALLS WITHOUT CONSULTING THE PROPRIETORS.

The board had most unhesitatingly come to the conclusion that it would be most unwise to abandon work at the present moment, when a very considerable amount of work had been done, and a very long tunnel cut in order to carry on the explorations in the Great Western Mine. They considered it would be folly, for the sake of the small amount of money yet to be called up on the shares, not to carry those explorations still further, especially as they had got to a point upon the vein, and that vein had already been shown to be in some degree ore producing. And although they had not got to the best point of the reef, the directors hoped that they would shortly come upon ore which would recoup them for their efforts in the past. They had now got through some good development work ;

THEY HAD A LARGE AND VALUABLE PROPERTY ;

and before they had spent the small sum remaining of 1s. per share in prosecuting those developments he thought that they had a chance of coming upon a good find, and Mr. Moreing was of the same opinion. He had received the following letter from that gentleman :—

" Dear Sir,—I have been cabled for from the continent on a matter of urgent importance, and am obliged to leave to-day, and consequently cannot attend the meeting to-morrow, much to my disappointment. My partner, Mr. Alford, will be present, and will express my views as well as his own. I am one of the largest shareholders, and I have never sold a share since the flotation of the company. I have seen them go up and down. The mine has been bunchy, and latterly most disappointing, but I do not despair that we may yet come upon a rich deposit such as we have worked in the past, and which will recoup us for sticking to it. I entirely approve of the proposed call of 6d. per share.—Yours truly, C. ALGERNON MOREING.

He (the speaker) would call attention to the fact that they had cut across the vein where they had found rich ore, and he thought that the best thing they could do would be to continue the developments. They had a very valuable mill on the spot, and, as they knew, in the Lincoln and Bell Mines, there was a large quantity of low-grade ore exposed. That ore, in the judgment of the board, they would be able to work if silver rose in value, but not until it reached its standard value. They had a large quantity of ore, but it was not of sufficient value to be milled or to pay the transport to other reduction works, or to sell for smelting purposes. They would, however, have to consider what the case would be if they called in a liquidator. It was necessary to have some one to look after the property, and the mill, which was valuable, would fall to ruin if no one was there to look after it. There were many other properties round their mine, and their manager would be able to dispose of the mill, if, eventually, it was found necessary, and it was kept in good working order. Continuing, the chairman said that it must be borne in mind that this mine was not singular in its circumstances, and that there had been many other mines, now successful, and paying well, that had suffered from adversity in the past. For instance, the New Guston and the Yankee Girl Mines had been in exactly the same position as this company. There was a time when the shares of those companies would not fetch 6d. each in the market, and the shareholders knew the high value at which they stood that day. There was another mine in the neighbourhood of this company's property which at one time was very unsuccessful, but which, withiu the past few weeks, had yielded most satisfactory results. It was quite possible that this company might in a few weeks assume a similiar position. It would always be the policy of the directors to keep the shareholders fully informed upon all points. He hoped that the shareholders would see that in finding a little more money they were

CONSULTING THEIR OWN INTERESTS,

and that they would readily raise the additional capital for which the board asked in order to properly develop and prospect the mine. He (the chairman) would be glad to reply to any questions that any of the shareholders desired to ask, and Mr. Alford was also present, and, having visited the property, was better able to speak upon it from an expert's point of view than he (the chairman) was. He (the chairman) had also visited the property, but he did not pretend to be a mining expert or able to go iuto the matter technically. However, whatever information he could give he would, as he had already said, be only too willing to afford, and where he fell short, Mr. Alford would supplement it, and he had only, in conclusion, to move " That the directors' report and statement of accounts to Mar. 31, 1891, be, and are hereby, received, approved, and adopted, and that the recommendations contained therein be carried out." (Applause.)

Mr. JOHN ALLEN seconded the motion.

The CHAIRMAN invited discussion.

Mr. HOLLAND said that he thought that it would be interesting to the meeting if Mr. Alford, being present, would make a few remarks, giving his opinion of the prospects of the property. He (the speaker) personally considered that the prospects of the mine were very favourable. There was one point upon which he specially desired information. It was stated in the directors' report :—" On the Ida Co.'s claim (which adjoins the Lancashire claim on the west) high-grade ore is now being extracted within 40 ft. of the west end line of the Lancashire claim. It is extremely probable that this ore, which averages about $250.00 per ton, may be found to extend beyond the Ida Co.'s claim into the Lancashire Mine." He would like to know whether the directors had any further information on this point since the report of Mr. Edward Hooper, dated Nevada, Apl. 29, 1891. The ore seemed to dip in the direction of this company's property. As to the question of expenditure, it seemed to him, as far as he could judge, that the average rate of expenditure was about 400*l.* per month, and he calculated roughly that a call of 6d. per share —which, speaking for himself as, perhaps, the largest shareholder in the company, he would most willingly pay—would carry them on for about six months. He wished to state that he had very great confidence in the company and its future.

PRAISE FOR THE BOARD.

He did not think that the affairs of the company could be in better hands than at present, and he must certainly say the prospects under the present management and directorate were favourable. (Applause.)

No further questions were put.

Mr. ALFORD, in reply to Mr. Holland, stated that it was about four years since he first visited the Garfield Mine, and he made his

original report for a few private shareholders, and he had read that report carefully through that day, and he saw

VERY LITTLE TO ALTER

if he were making it fresh to the shareholders of the company now. (Cheers.) He had prepared a small section of the mine (which he handed round). It would be seen that when they reached the 160-ft. level they lost the vein, that is to say, it was cut off, and they commenced to drift to the north, and to try and find the vein again. It was not a very long drift, and in the cross-cut made from the Atherton, they did find the vein again, but it had dipped in the opposite direction to which they expected it would. The vein more or less continued ore bearing right through, but ore below a certain value could not be worked at a profit.

ORE OF LESS VALUE THAN $30 TO $35 PER TON DID NOT PAY

for the expenses. The worked out patches marked on the map might be taken to represent the ore in excess of that value per ton which had been taken out. Having given some technical descriptions upon the plan, and pointed out where the lode was found in the 180-ft. level, he proceeded to refer to the Lancashire Mine, which, as stated in the report, adjoined the Ida; it was really separated from the Ida by a fault in the rock forming on the surface a kind of gulley. A great deal of work was done upon that property formerly, but the work had of late been confined to the Great Western part of the property. In conclusion, he expressed his confidence in the future of the property, and announced his willingness to reply to any questions that any of the shareholders might like to put.

The CHAIRMAN said that before the resolution was put, he would like to be allowed to make a very few observations, and, first of all, he desired to express his thanks to Mr. Holland for his very kind expressions (as a large shareholder) of confidence in the board. He (the speaker) assured the shareholders that the position of a director upon that company was

NOT A BED OF ROSES.

They had been working under very difficult and trying circumstances. The directors were all very large shareholders in the company, and of their own accord, and for their own interest, would naturally devote every attention to the affairs of the company. It might interest the shareholders to know that Mr. Alford (whom they had heard speak that day and express his confidence in the future) was a very large shareholder, and had bought his shares at a premium. The chairman then alluded to the Lancashire Mine, adjacent to the Ida, and stated that they had not worked it very much of late, having, in order to economise all expenditure, concentrated their energies on the Great Western property. In restricting their operations they had acted under the advice of Mr. Hooper, who advocated the cutting down of all expenditure for a time. At their present rate of expenditure he (the chairman) thought that the call should carry them on for another 12 months. With regard to the management, they had every reason to be contented with Mr. Hooper overlooking things generally, as they had not desired to employ a man at an extravagant wage. (Cheers.) Mr. Hooper was very wide awake, and kept an eye on matters generally. In regard to the Lancashire Mine, he would like to be allowed to say that that mine proved a very valuable one indeed for their predecessors, they finding no less than

70,000*l.* IN ONE POCKET,

and then no more. The directors were in hopes that one of these days they would light on another pocket.

Col. TYNDALL asked the amount of the directors' fees at the present time, and where the money came from to pay them?

The CHAIRMAN, in reply, said that the directors at the present time were

ONLY DRAWING HALF THEIR FEES,

and had been only drawing half the sum that they were entitled to under the articles for many months past. (Cheers.)

Col. TYNDALL said that he did not see that in the accounts. He supposed the money was paid from cash in hand.

The CHAIRMAN: Yes.

Col. TYNDALL: The mine seems to be earning nothing just now.

The CHAIRMAN: Practically nothing.

Col. TYNDALL: Then the directors' fees come out of the cash in hand?

The CHAIRMAN: Of course; you will see by the articles what the directors are entitled to in the re-constructed company, but the directors have reduced their fees voluntarily—only taking half. (Cheers.)

In reply to further remarks upon the same point,

The CHAIRMAN said that the directors had reduced the fees to what they considered the minimum, consistent with due attention to the affairs of the company. He was at the offices three or four times a week. He always devoted his time and attention to the affairs of the company, and for the two last years he had practically

GIVEN UP HIS SUMMER HOLIDAY

to look after the company's affairs. Under these circumstances he did not think the shareholders would begrudge the fees paid, or desire the directors to work for less. (Hear, hear.)

A SHAREHOLDER: What is the minimum you have reduced it to?

The CHAIRMAN: It is fixed by the articles: 175*l.* per annum for the chairman, and 125*l.* per director. We only take half those fees (Cheers.)

The resolution was then put and carried.

FORMAL BUSINESS.

The CHAIRMAN then proposed "That Mr. John Allen should be re-elected a director of the company." Mr. Allen had always, he said, given the most careful attention to the affairs of the company, and his services had been of the greatest value to his colleagues. He hoped that they would re-elect Mr. Allen.

Mr. ALFORD seconded the resolution.

The motion was carried.

Mr. HOLLAND moved that the auditors, Messrs. Rait and Kearton, should be re-appointed at a remuneration of 15 guineas. He knew the firm personally, and could speak highly of them.

Mr. CREW seconded, and the motion was carried.

The CHAIRMAN: That concludes the business.

Mr. HOLLAND thought the meeting should not be allowed to separate without a vote of

THANKS

to the chairman and directors. He hoped that at the next meeting the chairman would have a very good statement to lay before the shareholders, and to tell them that they had got on to a good course of ore.

The motion was seconded and carried.

The CHAIRMAN briefly responded, promising that the efforts of the board should be devoted to furthering the interests of the company, and he hoped to bring things to a success.

The meeting then separated.

THE TASMANIAN LAND AND EXPLORATION CO., LIMITED.

THE POSITION AND PROSPECTS—THE COMPANY HAS ACQUIRED MORE SILVER PROPERTIES OF A VALUABLE NATURE.

THE third ordinary general meeting of the shareholders of this company was held at the Cannon Street Hotel, yesterday; and notice was also given that an extraordinary general meeting of the company would be held at the same place and on the same day, or so soon thereafter as the ordinary general meeting shall be concluded, in order that the subjoined resolution might be proposed:—

RESOLUTION.

"That the articles of association of the company be altered in manner following:—'1. That article 3 be cancelled.' '2. That the following words be added at the end of article 46, namely:—"Subject, nevertheless, to the provisions of the company's memorandum of association as to the share of profits applicable for dividends on the founders' shares, and to the provisions of Article 49, as to the modification by agreement of any other rights and privileges attached to any class of shares where such agreement is necessary." '3. That the following words in Article 83 be cancelled, namely: "At any meeting held after the expiration of three months from the first general allotment of shares, unless he has been possessed of the share in respect of which he claims to vote for at least three months from the first general allotment of shares." '4. That the following words in Article 86 be cancelled, namely: "The qualification and their remuneration shall be fixed by a majority of the said subscribers," and that the following article be inserted after Article 86, namely: "86a. Each director shall be paid out of the funds of the company, by way of remuneration for his services, the sum of 100*l.* per annum, and the chairman of the directors shall, in addition to such sum, be paid a further remuneration of 150*l.* per annum. The company in general meeting may increase or reduce the amount of such remuneration, either permanently or for a year or longer term. The qualification of every director shall be the holding in his own right of shares or stock of the company of the nominal value of 100*l.*" '5. That the following words be added at the end of article 121, namely: "And they may, without placing the same to reserve, carry over any profits which they think it expedient not to divide." '6. That the words, "arising from the business," in article 122 be cancelled.'"

Mr. E. J. Walford

presided.

Mr. F. A. ABRAHAM (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

PROPERTIES ACQUIRED.

The CHAIRMAN: It is pleasant for this board to have to meet you again with such bright prospects as are now before this company. The report goes so fully into the state of the company's affairs that it leaves little for me to say. This company has been extremely fortunate in having acquired since our last meeting what the directors believe to be very valuable and extensive silver-mining properties. The first is the silver property of 80 acres acquired at Mount Zeehan, close to the Tasmanian Silver Mining Co.'s Mines. Our engineer (Mr. Provis) thinks very highly of this property. The lode assaying as it does from 65 to 115 ozs. of silver per ton speaks for itself, and I am pleased to say that the lode improves very rapidly in width as it is sunk upon. It is a great advantage to the working of this property that a tramway already traverses it, and, in the judgment of our engineer, this mine can be worked at a very low rate of expense, owing to the existing great facilities, and returns can be made from it at an early date. The directors, before the assay of the ore on this property was known, agreed to permit the West Australian Exploration Co. to participate to the extent of one-third interest in this property, and an agreement was entered into with that company to that effect. It was agreed that the price to be paid by the West Australian Exploration Co. should be determined by arbitration. It is greatly to the interest of the Tasmanian Land and Exploration Co. that other companies should join it in its enterprises, and that it should have the co-operation and the benefit of their capital. It was partly with this view that this arrangement was made. The exploration party sent out by the company to explore the North West of Tasmania, as you know from the report, has been very successful. The directors have information which leads them to believe that these extensive argentiferous properties, one of them containing a lode 120 ft. wide, recently secured by this company, contain vast silver deposits and are likely to become of enormous value. I do not know whether any of you reflect on the extent of selected ground, viz.,

1,100 ACRES ACQUIRED

by the company, and what it really means in mineral wealth, pegged out, as is the custom by experts on the line of these silver lodes, so as to get the lode running right through all the blocks. A few miles from Mount Zeehan, there is a silver mine which has been valued by Melbourne people as worth over five millions sterling, and it would never surprise me to learn that the future value of these properties possessed by the Tasmanian Land and Exploration Co. will be measured in millions. In any case it will be remembered the trifling sums they have cost this company to acquire, and that they represent the pluck, energy, and enterprise which has enabled your prospectors by indomitable perseverance to secure them for you. The last 12

months has not been the year one would exactly select for financial business in the City of London in launching new undertakings, and we have not attempted to do so. We have examiued into a very large number of business proposals, which entailed great devotion of time and attention on behalf of your directors. By the mail that has recently come in we have the very satisfactory news that

MELBOURNE AND BROKEN HILL CAPITALISTS

have found the capital to erect two large smelting works close to the Tasmanian Silver Fields, which will each be capable of smelting 500 tons per day. It is satisfactory that these Broken Hill people, who are practically experts in silver, are prepared to erect extensive works of this description, and it shows that they were thoroughly satisfied as to the existence of large deposits of silver on the spot. As the report tells you, capital is flowing into Tasmania from all the neighbouring colonies. When we began operations there the population was only about 150 at Mount Zeehan. It now numbers nearly 5,000 inhabitants, and it is expected before long to reach 20,000. You will notice that, pursuant to the articles of association, the board have treated the amount standing to the debit of exploration account as an asset. This small amount represents the acquisition of the 1,100 odd acres of argentiferous ground before referred to. We do not take up these lands without knowing something of their value. Every acre of land acquired by this company is picked land, on which our experts have found valuable silver deposits before we acquired them.

ACCOUNTS.

The company's accounts for the year ending May 12 last have been audited, and are annexed. Pursuant to the articles of association, the board has treated the amount standiug to the debit of exploration account as an asset, as it represents the acquisition of the 1,100 odd acres of argentiferous ground above mentioned, upon which no value at present is placed in the accounts. The accounts show a profit for the year of 2,310*l*. 12s. 3d., of which the holders of the founders' shares are entitled, under the articles of association, to one-fifth, leaving the sum of 1,848*l*. 9s. 10d., which, together with the amount carried forward from last year, gives a balance of 2,107*l*. 2s. 10d. available for distribution among the ordinary shareholders, out of which the directors recommend that a dividend of 10 per cent., namely:—2s. per share free of income tax be paid, and that the balance of 561*l*. 2s. 10d. be carried forward. Last year, 12,557 fully paid shares of 1*l*. each in the Tasmanian Silver Mining Co., Limited, were carried forward as undivided profits to a suspense account—of these, 1,392 have been allocated to the reserve fund—11,165 shares remain, of which the holders of the founders' shares are entitled, under the articles of association, to one-fifth. The directors therefore recommend that one-fifth of the year's profits, and of the 11,165 shares aforesaid be divisible by way of dividends amongst the holders of the founders' shares as provided in the Company's memorandum and articles of association. This leaves a balance of 8,932 of these shares. The directors now recommeud the distribution of 1,546 of these shares among the ordinary shareholders by way of bonus, or further dividend, at the rate of 10 per cent., and that the balance of 7,386 shares should be carried forward. In conclusion, taking into consideration the large extent of silver properties acquired by this company, their small cost, and the small amount of this company's capital, I know of no company dealt in in the City of London the shares of which have such great chances of profit in the future as the shares of this company. The company own, as you are aware, a considerable interest in the Tasmanian Silver Mining Co. We think very highly of the future of this miue, and this appears to be the opinion of the local shareholders in Tasmania, as our solicitors wrote us—received June 2:—"There are no declared sellers, all desiring to hold, having a high opinion of the property." (Cheers.) The chairman closed by moving "That the annual statement of accounts and balance-sheet, together with the report of the auditors thereon, be received and adopted."

DISCUSSION.

Mr. C. KING SMITH: I rise to second the motion, and may, perhaps, take the opportunity to ask the directors one or two questions. Evidently our directors have, as they suppose, some very good things in prospect in these new companies when the proper time comes to float them. I should like to ask the directors if they have made up their minds whether in issuing new companies they will issue more shares of this company, and, if so, I presume they will only do it at a premium, or whether they purpose issuing the new compauies from the capital they have in hand at the present moment. I think it will be interesting to all shareholders to feel assured that the item on the credit side of the balance-sheet, "sundry debtors, 4,544*l*." is all sound aud good, and that nothing need be taken off that amount for depreciation. I make that observation, not because I have any doubt myself as to the amount being perfectly good, but it will be a satisfaction to the shareholders to kuow that it is so.

The CHAIRMAN: I beg to say at the present time the company has no intention of issuing any more shares—therefore, the premium upon them has uot been considered. Although we have power to make the capital of this company 50,000*l*., our feeling is that the early shareholders ought to benefit who helped us, and we waut to

KEEP THE SHARE CAPITAL AS SMALL AS POSSIBLE.

With regard to the 4,544*l*., the greater part of that is for securities sold and not yet delivered, but which we arc getting a rate on, on the Stock Exchange, so that is a solid asset.

The motion was carried unanimously.

SERVICES OF MR. WALFORD ACKNOWLEDGED.

Mr. PRICE: I rise to propose the re-election of Mr. E. J. Walford. The number of directors on this board is excessively small, and the amount of labour in consequence excessively large, but Mr. Walford is a man I have never known miss a board yet, and the company will get on very badly without him, for, as you are aware, he has been practically the vendor and pioneer of the compauy. He has steered it through all its initial difficulties, and brought it to the great success it has attained at this moment. I, therefore, feel sure you will uot only re-elect him with pleasure, but with acclamation. (Cheers.)

Mr. C. KING SMITH seconded the motion, and in doing so, said: I know how assiduous Mr. Walford is in all his business, for I meet him on another board. I apprehend his office in this company is more that of managing director than that of an ordinary chairman, and that it involves a great deal of time, thought, and energy in many ways.

The motion was carried unanimously.

The CHAIRMAN: I have to thank you for my re-election, and hope that when I have the pleasurc of meeting you again I shall have, perhaps, a story of absolutely ascertained results from the properties, of which I have only had the opportunity of speaking to you to-day.

Mr. LOMER proposed the re-elcction of the auditors, Messrs. Cape and Dalgleish, at a remuneration of 20 guineas.

Mr. BUCKLER seconded the motion, which was carried.

The CHAIRMAN proposed the declaration of a divideud as named in the report.

Mr. WOULFE seconded the motion, which was carried.

EXTRAORDINARY MEETING.

The notice was read by the SECRETARY, as above.

The SOLICITOR explained the effect of the alteration in the articles as given above, and said that whilst most of them were clerical and had been necessitated by certain cases of recent date, the only important one was as to the qualification and remuneration of the directors.

The CHAIRMAN explained that the fees at present paid to the directors (33*l*.) each were so purely nominal that it was difficult to get a board meeting, and therefore he thought, in fairness to the directors and in justice to the company, they should be raised as proposed.

Mr. C. KING SMITH repeated what he had said about the valuable services of the directors, and pointed out that the directors were fairly entitled to increased pay, and the shareholders could offer it in any way they thought fit, as the new articles left them with full powers. He thought

THEY HAD DONE EXTREMELY WELL

in view of the increased capital, which used to be 10,000*l*., and was now over 15,000*l*. They had given 10 per cent. to the shareholders, and they would divide amongst them also a portion of the shares in the Tasmanian Silver Mining Co., which had been carried forward.

Mr. BARTON seconded the motion.

Mr. BUCKLER suggested that the qualification of the directors should be raised, because 100*l*. interest for a director to have in a company like this was too small; but, of course, he did not oppose the resolution.

The CHAIRMAN replied that the directors, as a matter of fact, held many times more shares than their qualification. Personally, he held a very large proportion of the capital; whilst Mr. Price held three times, and Mr. Lomer five times the amount of his qualification; but, at all events, the board would give the matter consideration.

A cordial vote of thanks to the chairman closed the meeting.

THE FLAMELESS EXPLOSIVES CO., LIMITED.

A GRADUAL IMPROVEMENT IN THE COMPANY'S POSITION.

THE ordinary general meeting of the shareholders of this company was held on Tuesday, at Winchester House, Old Broad Street.

The Right Hon. the Earl of Albermarle, K.C.M.G., presided.

The CHAIRMAN stated that when they met last year they had only just commenced business, and, as shareholders, well knew there had been great outlays. At their last meeting he had told the shareholders that the development of a business such as theirs was a very slow and arduous proceeding, and he had also added that there was every anticipation that the good beginning thus made would be maintained during the year, and that the business would show a progressive improvement. It was true that they had not made their working expenses that year, but it was also true that that anticipation of his had been fulfilled, and that busiuess was gradually but slowly developing each month. They had begun the year with a debt of about 2,100*l*., and the shareholders would see by the accounts before them that it was now 563*l*. Last year the deficit on the trading account was 1,171*l*., so that the shareholders would therefore see that although they had not yet got to the turning point of their expenses, when they would begin to make profits for the benefit of the shareholders, still they were diminishing their losses month by month. Although their business had, month by month, been slowly and surely progressing, the increase showed uo sign of diminishing, but rather the reverse. Whatever good result they had obtained, they were mainly indebted to their managing director, Mr. McPherson. The turning point in the history of the company dated back to when Mr. McPherson joined the board. He thoroughly understood all the circumstances which surrounded them, and he was quite sure that no one could by any possibility administer the affairs of the company with greater satisfaction to the shareholders than Mr. McPherson. and he thought that his colleagues would agree with him that, putting themselves on oue side, they ought to give the main credit of their present position to Mr. McPhersou. The company had, during the year, been awarded

TWO GOLD MEDALS

for the excellence of their manufactures. The directors had foregone five-sixths of their fees in order to lighten the expenses of the company. The company's works at Denaby were in a very satisfactory state, and they have been pronounced by the Government inspectors to be fully equal, if not superior, to any other explosive works in the kingdom, and the shareholders might rest assured that the expenditure made upon their works at Denaby certainly fully justified that the works themselves were intrinsically worth a great deal more than the expenditure which had been made upon them. He (the speaker) did not wish to offer himself for re-election. He moved the adoption of the report.

Mr. WHITE seconded the motion, which was agreed to.

The other formal business being transacted, the proceedings closed with a vote of thanks to the chairmau and directors.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been steady during the current week. Bank Rate remains 4 per cent. Bar silver closes 44⅛d. per oz.

COPPER has been quiet. G.M.B. warrants have been slightly easier, declining from 55*l.* 15s. to 55*l.* 2s. 6d. cash, closing yesterday at 55*l.* 2s. 6d. cash, and 55*l.* 12s. 6d. three months. To-day's prices are 55*l.* 3s. 9d. cash, and 55*l.* 15s. three months. We quote English tough, 57*l.* to 59*l.*; best selected, 59*l.* to 60*l.*; strong sheets, 66*l.* to 67*l.*; India sheets, 61*l.* 10s. to 62*l.* 10s.; yellow metal, 5⅝d. to 6d.; ore, 10s. to 11s. 3d. per unit.

Tin has been easier. Straits after improving to 94*l.* 7s. 6d. cash, and 94*l.* 12s. 6d. for three months, has declined to 93*l.* 2s. 6d. cash, and 92*l.* 15s. three months. To-day's prices are 93*l.* cash, and 92*l.* 10s. three months. The Straits shipments so far this month have been about 1,000 tons. Australian, 93*l.* 15s. cash. The Dutch Market has been firm. We quote banca, fl56¼, and billiton, fl55½. English ingots, 96*l.* 10s. to 96*l.*

TINPLATES still unsettled. We quote ordinary coke for prompt shipment 16s. 3d. and July-August 13s. 6d., Liverpool.

REPORTS OF MEETINGS.

THE NEW EBERHARDT CO., LIMITED.

SHAREHOLDERS GREATLY ENCOURAGED TO LEARN THAT THE MINE IS MAKING STEADY PROFIT—OLD EBERHARDT BEING VIGOROUSLY OPENED UP.

THE third ordinary general meeting was held at the City Terminus Hotel on Wednesday.

Mr. J. Russell Clipperton

(chairman of the company) presided.

The notice of meeting was read by the SECRETARY (Mr. A. H. Oxenford), and the report of the directors was taken as read.

MONITOR MINE STEADILY MAKING PROFITS.

The CHAIRMAN, who was received with cheers, said: Ladies and gentlemen, such a short time has elapsed since we had the pleasure of meeting you on the occasion of my return from the mines, that I think we need not detain you long to-day—in fact, the only business before us is the approval and adoption of the directors' report and accounts for the year ending Dec. 31, 1890, which I hope you have all received. As regards the Monitor Mine, we are very pleased to be able to state that the results have in every way been more satisfactory than the previous year, which was also an advance upon the preceding one, so that whilst we continue to improve, I think we none of us have much cause to complain. The output in Jan., 1890, varied from 10 to 12 tons weekly, of an average value of $34 per ton. The output for the same month of this year has increased to between 24 and 30 tons, and the value to $42 per ton. During the latter part of last year, at the time I was out at the mines, the ore being won was of poorer character, the rock being very hard, and the outlook at Monitor not very encouraging. It was therefore proposed to partially discontinue the active working and only keep some three or four men prospecting. Since then a very marked change has occurred for the better. The output has increased by 10 tons, and also proportionately the quality of the ore.

SEVERE WINTER.

I am greatly pleased to say this improvement has been maintained to the present time. so that your directors have not thought it expedient to partially close the mine as was proposed. Capt. Read (our manager) has been able to go through the past very severe winter without asking for financial assistance from this side, and when the weather moderated sufficiently for him to start milling, on Apl. 6 had between 500 and 600 tons of ore on the dump ready for working, of an average value of $45 per ton.

FAVOURABLE ACCOUNTS.

The accounts are, I think, so plainly and efficiently set out that shareholders will thoroughly comprehend them, and if they compare them with those of the previous year, will see for themselves how very favourably they show for the past 12 months, the total loss in working being only 791*l*., as against 2,445*l*. for the year 1889. This alone brings us within a measurable distance of a substantial dividend. There was a very considerable increase in the tonnage worked during the year (1,133 tons as against 956), and Capt. Read has also earned a good amount of money for us by means of custom milling.

READ THE MANAGER'S REPORT.

I would ask every shareholder to read our manager's report very attentively, as I feel sure it must convince him of the high-minded and conscientious man we have to guide our affairs at the mines. Now, gentlemen, you will naturally expect me to say a few words about our old Eberhardt property, but I have very little to add supplemental to that I told you at our meeting on Feb. 11 last. Your directors lost no time in cabling instructions to the manager to at once proceed in resuming work in the Eberhardt and Aurora tunnel, in accordance with Messrs. Bewick, Moreing, and Hooper's report, as soon as the weather permitted, but it was not until the end of Mar. that he could travel to San Francisco in order to procure the necessary stores.

EBERHARDT AT WORK.

Everything had to be supplied at Eberhardt as for a new undertaking, such as steel rails, powder, caps, iron, timber, coals, candles, &c. (for remember the property has been lying idle since the year 1885). Even then he could not depend upon speedy delivery. You know for yourselves what the severity of the past winter has been in England, but no one who has not visited Nevada can imagine what such a winter is in the United States of America, amongst mountains 9,000 or 10,000 ft. above sea level. No communication but the mail, and that of a very primitive character, passed between Eureka and Hamilton for more than three months. Capt. Read wrote me that the first team passed through Eberhardt canyon on May 4 only, and hoped very soon to get his stores on the spot. We cabled him for latest information to be submitted to this meeting. I will now read you his answer, and cannot doubt you will think it as satisfactory as we do.

SATISFACTORY TELEGRAM.

"Mine prospects are encouraging; weekly output quantity, 32 tons. The average is $40 per ton. Mill worked 25 days during the month of May; net yield, $10,500; expenses, $4,000; net profit, $,6,500. I have closed mill May 25; roads bad. I estimate 200 tons on mine dump. I have commenced at Eberhardt May 22."

Your directors are unremitting in their attention to the welfare of the company. I myself am daily at the office, and am very pleased to see any shareholder personally who may wish for such information as I can give. Our secretary is at all times available. We have nothing to conceal and keep nothing of the least importance from you. Reports and cables are sent to the newspapers the same day that we receive them, so that if you are not cognisant of what is doing at our mines, the directors are not to blame. I now beg to move "That the report and accounts be received and adopted." (Cheers.)

Mr. OSMUND GIBSON, C.E. (director): I beg to second the motion. I do not think there is any necessity for adding anything to the statement of the chairman.

Mr. CRANE: Can you tell us what the profit has been since Jan. Of course, the report only deals with the last year to Dec., but still shareholders take an even greater interest in the present condition of the mine, and I understand that we have made a fair profit for several months since Christmas. Can you tell us the number of tons treated and the returns?

PRESENT YEAR'S RESULTS.

Mr. OXENFORD (secretary): Since Dec. up to Apl. 6, when the mill was shut down, the expenses of Jan., Feb., and Mar. were as follows:—Jan., $2,650; Feb., $3,000; Mar., $2,800; making a total of $8,450, or. roughly, 1,690*l*. Against that, of course, you may put the Apl. profit, which was, roughly, 900*l*. net, and the last cable received puts it at $6,500 net, making, I suppose, about 1,300*l*. Against that also we had in hand on Jan. 1 last, as per balance-sheet, 1,200*l*. and 78*l*.

A SHAREHOLDER: Is there any ore body in sight in the old Eberhardt?

The CHAIRMAN: There is some ore in sight, but not an ore body. There is some ore lying at the surface. There are good indications of an ore body in the vicinity.

Mr. CRANE: Do you mean that there is ore at surface ready to be treated?

The CHAIRMAN: Yes, $60 ore, but it has to be taken to a mill. There is no mill of ours ready to receive it at present.

Mr. HIBBERT: When do you expect to commence milling at Eberhardt?

The CHAIRMAN: It is quite impossible to say. We have yet to find the ore in sufficient quantity.

Mr. HIBBERT: Have you a mill there?

The CHAIRMAN: The mill is there, but it will want a good deal of repairing before it can be used.

Mr. HIBBERT: Is it in course of being repaired?

THE MILL.

The CHAIRMAN: We are not yet going to that expense. When we have sufficient ore to mill we will commence the repair of the mill, and do part of it at a time. We shall commence with five stamps, and put them in order first, and then proceed with the other parts as they may be required. (Hear, hear.)

The report was then unanimously adopted.

Mr. HERBERT A. HAMMOND (director): I have the pleasing duty of proposing the re-election of the esteemed chairman, Mr. John Russell Clipperton, as a director of the company. (Cheers.) We, as his colleagues, well know his value, and how efficiently he performs his duty. I am sure some gentleman on the other side of the table will be only too glad to second the motion.

Mr. EDWARDS: I second it with very great pleasure. (Cheers.)

Mr. HAMMOND put the motion to the meeting, and it was carried by acclamation.

The CHAIRMAN: Thank you, gentlemen; I am very much obliged to you for this renewed mark of your confidence, and I hope I shall always deserve it—at least, I shall always do my best to do so. The next business is the re-election of the auditor, Mr. Samuel Slater. That is a motion that must come from your side of the table.

Mr. BOLTON: I have great pleasure in rising to propose the re-election of Mr. Samuel Slater as auditor of the company, at the same remuneration of 25 guineas as before. I believe he has been connected with the company from the beginning, and, therefore, when a servant does his duty faithfully the best thing we can do is to retain him in the position he occupies.

Mr. HIBBERT seconded the motion, which was carried unanimously.

The CHAIRMAN: Mr. Slater has been with us for many years, and

is worthy to be re-elected, for he does his duty well. That completes the business, and I only hope on the next occasion I shall have an even more favourable report to make to you.

A PROFIT OF 520*l*.

Mr. CRANE: The expenses for Jan., Feb., and Mar., were 1,690*l*., but I wish to point out that in Apl. and May we not only covered them, but made a profit over and above of 520*l*., which I regard as very satisfactory indeed. (Cheers.)

The CHAIRMAN: It is precisely in that light the directors consider it.

The SECRETARY: That was what I intended to convey by the figures I read out.

CHAIRMAN AND DIRECTORS THANKED.

Mr. BOLTON: I thiuk we owe a very cordial vote of thanks to the chairman. In any case he would have been worthy of our thanks, but he is specially so when he presents to us so favourable a report of the past year, coupled with such a satisfactory outlook for the present one. I have, therefore, great pleasure in proposing a vote of thanks to Mr. Clipperton and his colleagues for their services during the past year. (Cheers.)

Mr. EDWARDS: And I have great pleasure in seconding it.

The motion was carried by acclamation.

The CHAIRMAN: We thank you very much for your kindness and also for your attendance here to-day.

LATEST REPORT.

The mine manager reports, under date May 24, as follows:—During the week we have extracted and assorted 35 tons of ore; assay value of same, as per mine samples, $34 per ton. There is no change in the mine worthy of note. Mill: Our mill has run steadily during the week, crushing 107 tons of ore. Assay value of same, as per battery samples, $40 per ton. Ore team: The ore team brought down from the mine to the mill during the week 36 tons of ore. The falling off in the amount delivered to the mill this week was occasioned by the severe snowstorm which we had on May 20 and 21. Bullion shipments: Please find herewith shipping receipt for four bars bullion; total 6,288.49 ozs.; standard value, $6,489.37.

ELMORE GOLD, LIMITED.

STATUTORY MEETING — IMPORTANT DEVELOPMENTS—BRIGHT OUTLOOK—THE TITLE DEEDS.

A (STATUTORY) GENERAL MEETING of the shareholders of the above-named company was held at the Guildhall Tavern, Gresham Street, London, on Friday, June 5.

Mr. J. R. Armitage

presided.

Mr. C. HARRISON SMITH (secretary) read the notice convening the meeting.

SUCCESSFUL RE-CONSTRUCTION.

The CHAIRMAN: Gentlemen, this being, as you are all aware, a statutory meeting, that has to be held within four months from the date of the registration of the company, it frequently happens, as it happens in this case, that there is not very much to say. We are this day three months old. It was on Mar. 5 that we registered, and on Jnne 5 we have asked you to meet us. As I have already told you, we have not very much to say to you. The share capital of the company, as yon may be aware, was fixed at 300,000 shares of 5s. each. Out of these 300,000 shares, 248,000, in round figures, were taken up by, and 55,000 shares were tendered for by, the shareholders of the Elmore Gold Co., at varying amounts of premium, down to par—that is to pay the liabilities to the new company—or, in other words, 3,000 shares over the 300,000. At the present time the whole of the shares have been allotted, some of the applicants at par having to take a few less than they applied for. Out of the 7,500*l*. which those shares would realise on application and allotment—that is 6d. per share—we have received nearly 7,000*l*., there being in default at the present time about 555*l*., and that I may tell you is accounted for, the great bulk of it by one very large shareholder being laid up with influenza, and up to yesterday he was not at business, and had not been able to send in his cheque. We know, however, that the cheque will be forthcoming, and that the deficit on the whole of that 7,500*l*. will not amount to more than 60*l*. (Hear, hear.) On the 26th of last month the board sent out a notice to the shareholders who had not paid that they would be liable by the end of the month to forfeiture of shares, *and I take this opportunity of intimating to those shareholders who have not paid that at the next meeting of the directors those shares will be forfeited without further notice.* (Hear, hear.)

FINANCE.

As I tell you, we have 7,500*l*. on the application and allotment; we have also received, but it does not benefit this company in the least, about 450*l*. for premiums on shares allotted to applicants by tender. That, of course, will go to the old company, and will be distributed amongst the old shareholders who have let their interest lapse. We have received at the same time for transfer fees and other small matters a little over 60*l*. That makes 7,560*l*. that we have to account for. We are not laying any accounts before you, but I thought it would be of interest to you to know how we stood, and what our prospects are for financing. We have paid 500*l*. on account to the liquidator for the debts of the old company, and for the expenses of re-construction, registration, &c.; we have remitted 1,236*l*. to the mine; and there have been something less than 200*l*. of expeuses up to the end of last month in London for office expenses, directors, &c. Practically, the balance standing at the bank is 5,680*l*. odd—that includes the premiums, and we have 100*l*.. in round figures, more to receive on the shares than the preminms that we have to pay away. So that if you take the balance at 5,800*l*., it practically comes to this—that on the basis of the present expenditure, without saying anything about improvement, we can go on comfortably up to the end of the year, which will, in my opinion, thoroughly prove the mine one way or the other. Of course, we hope and expect that we shall not require to go on spending money in this way, but I put it before you on the present basis. At the present time we are incurring an expenditure of altogether about 700*l*. or 800*l*. a month both at the mine and here, and we are hopeful that in a very short time we shall be able not only to cover the expenditure, but to begin making some profit.

RESULT OF THE MONTH OF APL.

The result of the working during the month of Apl. was decidedly encouraging. I think on an expenditure of $2,336 for prospecting and development work there was only a deficit of about $1,500 that had to be made up. There are some expenses going on I imagine though we have no actual report from the manager, but he has received authority to buy stores, and he is probably spending a little more money than he would otherwise require. We have this morning received from Mr. McCornick, our manager, a cable asking for a remittance of $3,000, which if he is buying stores, is very reasonable, and we have every reason to think he is. I may say that the cable says nothing besides asking for the remittance, which is according to our manager's usual practice. But we have received a letter dated May 22, and I will read you that portion of it which is really interesting. He says:—"Since my last report the east drift"—he is speaking about the drift on the Alturas lode, which we cut some time ago—"the east drift has been advanced 25 ft.; total distance now in from the cross-cut, 105 ft. The west drift has been advanced during the week past, 30 ft.; total distance driven on the vein, 60 ft. We also started an upraise on the vein east, about 40 ft. from the cross-cut. The quality of the quartz is improving in both drifts."

QUALITY OF THE QUARTZ IMPROVING.

Really, the last paragraph in the letter is the one that is of most interest to us—"The quality of the quartz is improving." I think you have all had notice of a trial that he made in the mill some time ago when we got into the Alturas lode. That was encouraging in one respect, but discouraging in another. I had been led to expect by the late manager that we would get $10 or $12 stuff right through. The trial that he made in the mill only yielded him $3. That will not pay expenses; but if the stuff, as we are informed, has to be taken out of the mine in the way of prospecting, it will pay very well to go through the mill. It will go towards reducing expenses, at any rate; and that cable, with the statement made here, that the quality of the quartz is improving in both drifts, is very encouraging. I will, later on, read you an unofficial private letter that I have received from Mr. Woodrow, who is on the mines, and knows something about mining generally—he was the vendor of the Vishnu property to the present owners, that being the property that is at the present time worked through our shaft. As I say, there is a good deal of discouragement, but at the same time a good deal of encouragement from the fact that we have got into a big lode, from 10 ft. to 14 ft. wide, and that we are driving on it, and the quartz is improving both east and west.

THE CONFEDERATE STAR.

In February last, the last occasion on which I had the honour of speaking to you from the chair, I spoke about these matters and about the Confederate Star. Well, we found also a Confederate Star lode in another direction, but it pinched into a very small lode, and the manager deemed it wisest, instead of trying to work it for ourselves, to let it on tribute, and two men on the spot took it over, paying to the company one-third of all that was realised, and also $3½ a ton for working the stuff up. The results were very favourable, and have a good deal of encouragement in them. These men took out during the month of Apl. 60 tons, and the yield from those 60 tons was 210 ozs., or about 3½ ozs. per ton. We do not know what that lode may do in the future—whether it will pinch out or widen out. More expert miners might be able to give us a better idea about it; but there is the fact—that these 60 tons did yield 145 ozs., and that we received one-third of that, besides charging them for their 40 tons $3½ per ton, or $140 for working it. The expenses in the mine are being kept down by working the mill, which is now running 20 stamps. There is a report from the Vishnu this morning. We have heard nothing from our own manager lately, but they are running 20 stamps on Vishnu ore, and paying us a very liberal price for the working of it. It is doing a good deal towards keeping down expenses. We have no advice as to what the tribnters are doing, but if they are going on, that also is doing something in the way of reducing expenses. I have very little further to add.

PROSPECTS.

The mine is looking quite as well, and the prospects of the mine are quite as bright, or brighter, despite the low assay that we had from the Altnras lode, than it was four months ago. For my own part, I intend to stick to the mine and see it through. Onr late manager spoke very strongly to me about the junction of the Alturas and the Elmore lodes in depth, and said that that was where we might hope for a bonanza. Unfortunately, when the old company fell short of funds the manager deemed it best to cut off at 550 ft. instead of going down to 600 ft. or more to strike the lodes at junction. The two veins—the Alturas lode and the Elmore lode—are now within 10 ft. of each other, and, according to calculation, they should come together and run into one lode at 50 ft. or 60 ft. further down. They should also come into the direct line of the shaft. If what we are told proves correct, it will be an exceedingly good thing for this company; but at present we have not instructed the manager to go down. He is first aiming—and he thinks he has every chance of succeeding—at finding good pay ore on the present level; and if he does that, he will go down in depth and find the junction of these lodes. I can only express a certain amount of regret that it is still a good deal in the future, and that it is not in the present tense that I am able to speak to you. It is hoped, however, that we may soon be able to earn dividends, but at the present time there are no absolute facts to go upon.

PRIVATE TESTIMONY.

I will now read you a portion of the letter from Mr. Woodrow, which I received from Rocky Bar in reference to this. He begins:—"I trust you will not think I am officious in writing you a few words about the Elmore, but I am so pleased with what I have seen since

my arrival that, if possible, I want to impart my feeling of satisfaction to you, since you have had to carry a load of disagreeable news for a long time. They have cut the Elmore lode 14 ft., if an inch, and yesterday they commenced to prospect, and before this reaches you I feel confident that Mr. McCornick will be milling the ore. He is very conservative, and will not express any opinion about it. I am not in an official capacity, and my opinions must be taken for what they are worth." I want you to do the same, gentlemen, but I thought it was only fair that you should have the same news as I have. He continues: "In short, I think you have a splendid mine, and you will be pleased to be its chairman before you are much older." (Cheers.) I am sure I shall be very pleased when the shareholders are pleased, and when they are earning dividends. You must take that letter for what it is worth.

THE TITLE DEEDS.

I have only one word more to say, and that is in reference to the titles of the property. In Feb. last there was a rumour going round the room — I heard of it at the conclusion of the meeting—that there was some question about the titles. The board did not think it wise to ignore those remarks, but they took cognisance of them, and at once instructed the solicitor of the company, Mr. Verden, to investigate the matter, and to confirm as far as possible what was their impression—that everything was in order. That investigation has not yet been completed. Mr. Verden is here, and I think he can speak with absolute certainty of five out of our seven important concessions, some of the deeds being in the possession of his firm, and one other deed being registered in the name of a shareholder, who I see is present in the room to-day. With regard to the Tip-top—that stands in the name of Mr. Hodgkinson on behalf of the owners, whoever they may be, he being an American citizen. At the time the concessions were granted it was necessary to put them in the name of an American citizen, Idaho being at the time a territory, and aliens not being allowed to hold a mining property. That, however, is altered now, and steps are being taken to put the thing in proper form. Mr. Verden has been working very hard at it, but you can easily understand that the distance from Hailey to England being some 7,000 or 8,000 miles—Hailey is the county town of Idaho—it is a very slow business investigating these matters. As far as he has gone, the investigations have, on the whole, proved satisfactory. There are certain matters that he cannot understand at present, and that will necessitate further correspondence with America; therefore he would prefer delaying any full statement of the matter to another time, but I tell you this to assure you that your property is being carefully looked after, and that, on the whole, the investigations, as far as they have gone, are perfectly satisfactory. (Cheers.) I shall be glad to hear if anyone has anything to say. There is no resolution to place before the meeting.

LOCAL PEOPLE BUYING SHARES.

Mr. HEWLETT: Might I ask a question with reference to some reports I have heard? It is, perhaps, not a question that I should put to the directors, but I am told that people connected with the mine have recently been very large purchasers of the shares. If that is so, I think it would give a great deal of confidence to the shareholders to know it, because people over there must know what they are doing.

The CHAIRMAN: I have heard the same statement. It has not come before myself or the board officially, but I have heard—in fact, I have reason to know that there is a certain amount of truth in it. I know that some of the leading officials of the mine have been buying Elmore shares on this market. I do not know that they have been buying largely; I do not imagine that they would be in a position to do so; but if they are buying at all, it certainly is encouraging. They are the people who must know better than anyone what the mine is worth, and they are not, at any rate, going to throw their money away. (Hear, hear.) It may be only the straw that shows which way the wind is blowing; but I do know indirectly from the broker who has had the order in hand that such is the fact. (Cheers.)

SUGGESTION TO APPOINT ANOTHER DIRECTOR.

There is one matter I should like to put before you in an unofficial way—I rather would ask your advice than put it before you as a resolution. It has been suggested to the board that one gentleman, who is a very large shareholder, should have the nomination of another director. There are already four of us, and the limit is five. As far as the board are coucerned, on the one side they do not want to spend any more money than is absolutely necessary to the well-being of the company, and, on the other hand, they are willing to accord all consideration to a shareholder of such magnitude as about one-sixth of the whole of the shares. We do not, however like to throw another 100*l*. a year away, for that is what it really means at the present time as we are not earning money. If we had been earning profits I think we should have put before you a formal resolution to appoint this gentleman—(hear, hear)—but as we are not, I should like to hear the feelings of the shareholders upon the question. We do not feel the necessity of having another director. We admit that a large shareholder to that extent has some claim upon the board, but we are very much in your hands.

EXPRESSION OF OPINION.

A SHAREHOLDER: We do not want another director; we are quite satisfied to work with yourselves.

Mr. LAKE: Would that large shareholder like to nominate a director who would work without money until the mine is paying? They say that in the multitude of counsellors there is wisdom; but perhaps there would be too much wisdom then. (Laughter.)

A SHAREHOLDER: Too mauy cooks will spoil the broth.

A SHAREHOLDER: Don't you think that might stand over until the next annual meeting which will take place iu about six months?

The CHAIRMAN: Without taking an actual count of votes, I will ask those who think that we should increase the number of the board to hold up their hands, and I will ask those who think that we ought to leave it as it is to hold up their hands to the contrary. I am merely asking for au expression of opinion. (A show of hands was then taken.) Continuing, the chairman said: The contrary is carried, and we have, therefore, to remain as we are for the time being.

A SHAREHOLDER: It really rests with yourselves whether you admit a new director or not. There is no responsibility attaching to this meeting in acting as they have done.

The CHAIRMAN: We have the privilege of electing another director no doubt, but we do not care to do it without having, at any rate, an informal consultation with the shareholders. (Cheers.) That is the plain truth of it. If the gentleman in question did come on the board after what you have signified as your views of the matter, we should simply make room for him—we certainly would not increase the number of directors until we met together again. (Hear, hear.) Gentlemen, that concludes the business before us to-day.

THE SEATS OF THE PRESENT BOARD.

I can only say that I wanted at the same time to have placed the resignation of the present board in your hands and to have allowed you to elect all the directors, but I find that it is contrary to the articles of association, so I have not brought it before you. We are, therefore, retaining our seats for the present, and you may rest assured that I and the rest of the board will do all that we can to economise expenditure, and bring the mine as speedily as possible into a dividend-paying condition. I have hopes in that respect, and certainly our efforts will be directed towards that happy result. I thank you for your attendance.

A vote of thanks to the chairman was passed, and the meeting then separated.

BIG CREEK MINING CO., LIMITED.

THE STATUTORY MEETING, AT WHICH THE CHAIRMAN GIVES "A FEW FACTS."

THE first ordinary general (statutory) meeting of this company was held at the Cannon Street Hotel, London, E.C., recently.

Mr. W. B. Marcus

presided.

Mr. C. G. MARCUS (secretary) read the notice convening the meeting.

NEWS FOR THE SHAREHOLDERS.

The CHAIRMAN: Gentlemen, you all know that this meeting is convened to comply with the law, and little is expected from directors as a rule in the way of news, the meeting being a statutory necessity within four months of the incorporation of the company; but when your directors have news that must be pleasing to shareholders, it is as well that all the information they possess be it good, bad, or indifferent, should be communicated to them. If you will carry your minds back to the prospectus you will remember that brilliant prospects were foreshadowed, so brilliant in fact for the small capital that those other than the friends of the directors felt dubious, but it is my good fortune to-day to be able to say that there is not one word in that prospectus or the accompanying reports which are not more than fully realised. I therefore feel very pleased in presiding and in meeting the shareholders here assembled. (Cheers.) I will now proceed to give you a few facts which will be interesting.

A FEW FACTS.

The two remaining shipments belonging to the vendors duly arrived, and assayed 64 per cent. and 64.50 per cent. respectively, bringing up the 100 tons shipped to an average percentage of 65.26 per cent., and I venture to say, gentlemen, that having regard to this 100 tons of 65 per cent. ore having been obtained solely from running the three small tunnels is ample evidence of the value of your property; very far in excess of any antimony mine in existence, notwithstanding many have spent 20 times the amount on development that has been spent on the Big Creek property. The two blocks of ore weighing 234 lbs. and 200 lbs. came safely to hand, and are the pride of the secretary, at 2, Pancras Lane; many experts have been to see them, one and all expressing their admiration at its phenominally rich character. I would ask those shareholders who have not paid a visit to the office to do so to-day. It is but a few steps from here. It was suggested that the blocks should be exhibited here, but carting 2 or 3 cwt. about of nearly sold metal is not so easy, so the secretary invites you to his sanctum at Pancras Lane. Whilst speaking of lumps of ore I would like to read you what was said by our mine superintendent at the end of Mar.:—"When we commence stoping we will try to get out a piece that will weigh 1,000 lbs.; larger than this could not be safely sent. This will put the much advertised wonderful find in Cornwall, of a 9-12 in. thick vein in the shade, I think. It clearly demonstrates the enormous size of our vein or lode.

LATEST REPORTS FROM THE MINE.

I will now read you extracts from the monthly reports of our superiutendent, the one is dated Apl. 1, which goes on to say:—

"On Mar. 17 the ledge was in full view, exposing a rich streak of ore 35 to 36 ins. in width, perfectly pure, without a particle of quartz showing in it, and that it goes down boldly in the bottom of the drift, it is now proved beyond a doubt that we have a deep ore chimney in the mine. The winze has been sunk 6 ft. so far, and is in rich ore, not less than 18 ins. solid 70 per cent. stuff. If the ledge holds on to the level below, as there is every indication of doing so, an immense body of ore will be in sight. We have sacked 367 bags, and 15 tons are being sacked at the mine, ready for sending so soon as snow will permit. The ore is comiug out very fast. We are getting our aerial tramway ready, and when fixed and another sorting-house crected large regular shipments can be relied on."

The other is dated May 1:—

"During the month drift No. 3 has been extended 44 ft., and is now in from mouth to face a distance of 222 ft. The drift carries good ore, the ore vein going down boldly in the bottom of the drift, and being better at bottom thau at top. As this has been the characteristic feature of the vein it gives us the assurance of the permanency of the mine. The winze from drift No. 2 has been extended during the month 28 ft., being now a depth of 34 ft., the winze is in very good ore. The completion of the winze will put the mine in excellent shape for stopiug, giving complete ventilation. As soon as

winze is connected with drift No. 3 and preparations completed for active stoping, it is my intention to push the winze down through the fine body of ore disclosed in drift 3 to as great a depth as is consistent with economical raising of the ore. As the winze from lower drift No. 3 will be driven down through a good ore body, there should be much more ore extracted therefrom than enough to pay the cost of sinking, and the result of such exploration will determine the advisability of driving a tunnel at some future time to cut the ledge at a point lower than that cut by drift No. 3."

A COMMERCIAL, NOT A SPECULATIVE MINE.

To sum up all this, and from other information to hand, your directors are able to assure you that your property has proven itself by development to be very valuable, and be you a large holder or only a small one, you may rest your head happily on your pillow, for your capital invested will surely multiply, as you have a sound commercial mine, not a speculative one, and this, at the present moment, is a sweet feeling—it is to me, at any rate. I might here remind you that all this good news is from the working of the Beulah claim only, what is in the Genesee claim the future can only tell, but that future is not far distant, as with the breaking up of the snow and the return of spring exploratory work has commenced. Your directors much regret that the long and hard winter at the mine has somewhat retarded shipments, but you will have noted the remarks of our superintendent in this respect. Now for the bad and indifferent news—it is that regarding the now low ruling price of regulus (star metal), which, of course, governs the price of ore. but your directors are happy in the knowledge of possessing such an exceptionally rich grade of ore, between 60 and 70 per cent., and with such stuff as this no contracts need be made, there being always a demand, and a large one too. This then puts our company in

A UNIQUE POSITION.

and will enable us to stay when mines producing 40 to 50 per cent. ore will long cease to exist. You are all no doubt by this time aware that antimony is a fluctuating metal, and is regulated the same as other things by supply and demand, and I am sorry to say sometimes by "rings." It is to be surmised that some factor other than "large supplies" has brought the price down from 72*l*. to 54*l*. within a period of four to five months ; however, be that as it may, your directors are watching everything most closely, and they have no doubt that holding such rich ore as they do, should prices fall below a paying point, they will be approached by other mine owners with a view to some commou ground of action, for now-a-days profits are small enough at the best of times, but there are few who see the fun of working for others to get all the cake. Perhaps I should say here that although the reduced price may

NECESSITATE SOMEWHAT SMALLER DIVIDENDS THAN EXPECTED,

there is no reason to doubt but that the decline may be only temporary, the fall being possibly in sympathy with all markets? In conclusion, I desire once more to point out that we are possessed of a very rich property, and we may rest quite content in that knowledge. There have been many offers made to your directors to refloat publicly the company, with a largely-increased capital ; and again as to the company becoming their own smelters ; but these are at present Cabinet secrets. You may rest assured everything is well in their grip, and your substance will not be wasted. Just another word or two with respect to the working capital. It is ample for our needs, and I am pleased to say there is a considerable sum on deposit at our bankers. The vendors are very largely interested in the success of the company and its ecouomical working, and they being the managers on the other side, is it to be wondered at that your directors are sanguine of communicating with you before long as to an interim dividend, and they are quite content to wait that time before asking your vote for their remuneration. I shall now be pleased to answer auy question, if it can be answered without harm, but I will first ask the secretary to read a cablegram just to hand from our superintendent, who has evidently thought you should have Big Creek up to date. It is most gratifying, and fully bears out all I have desired to convey.

A TELEGRAM.

The SECRETARY then read the telegram, which was as follows :—"Ore body gaining width ; very high grade. Work about to begin Prospects are very good."

(Cheers.)

The CHAIRMAN (continuing) said : Everything has gone on splendidly at the mine. The prospectus was very favourably received at the time the company was brought out. The directors did not push it, for it was purely a private subscription. Had the price of metal remained at 70*l*., as it was then, the shares would have been worth 10*l*. each instead of 1*l*. to-day. (Cheers.)

Mr. BYER : What was the last price paid for the 50 per cent. ore?

The CHAIRMAN : As far as my memory serves me, it was 23*l*. 10*s*.

A SHAREHOLDER : Is there a prospect of dividends ?

The CHAIRMAN : Yes. It is only a question with me as to the amount—anything between 5 per cent. and 50 per cent.

The proceedings closed with a vote of thanks to the chairman.

SOUTHERN INDIA ALPHA GOLD MINING CO., LIMITED.

A NEW AGREEMENT WITH THE INDIAN GOLD MINES COMPANY, LIMITED.

THE ordinary general meeting of the members of this company was held at 17, Victoria Street, Westminster, S.W., yesterday, to receive the directors' report and the audited balance-sheet ; to elect two directors in the place of those retiring by rotation ; to appoint anditors for the ensuing year ; and to transact other ordinary business. And notice was also hereby given that an extraordinary general meeting of the members of the said company would be held at the same place, and on the same day, at the conclusion of the ordinary meeting, to approve the agreement with the Indian Gold Mines Co., Limited, which would be submitted to the meeting.

Mr. L. C. Probyn

presided.

Mr. RICHARD LOAM (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN having reviewed the position as between this company and the Indian Gold Mines Co., said that he had one encouraging piece of information to give the shareholders, which was that 11 tons of concentrates had been received, and had been divided into several portions for treatment, and they hoped in a short time to know the results. The Indian Gold Mines Co. had carried out a successful re-construction, and under the scheme there was 25,000*l*. of cash capital available which they expected would be spent in the further development of the Alpha property. The many thousands of pounds that had been spent by the Indian Gold Mine Co. had, as a matter of fact, been spent upon the development of this company's property, and so sanguine were the Indian Co., that notwithstanding the large amount they had spent already, they were prepared to devote this further sum to the development of the Alpha Mine. The Alpha Mine expenses were very small, and this company was incurring no risk. He moved in conclusion the adoption of the report.

Mr. FERGUSSON seconded the motion.

In reply to Sir Charles Lawson,

Mr. SCRATCHLEY (a director) said that the result of the testing of the concentrates would be made known to the shareholders if it were satisfactory and trustworthy.

The resolution was carried.

The retiring directors and auditors were re-elected.

The meeting was then made special for the purpose of considering the new agreement.

The CHAIRMAN explained that by this new agreement the maximum, which in the original agreement was 3 dwts., was now increased to 4½ dwts., and while they were about it they had also inserted a clause in anticipation of the time when they would have to divide the gold as between the two companies.

Mr. W. DE CAUX having read the agreement,

A resolution approving of the same was put to the meeting, and carried, and the proceedings terminated with a vote of thanks to the chairman.

A DYNAMITE STRIKE AT LEVANT MINE.—All the tributers and tutwork men in this mine refused to go down on Monday morning. Their grievance was bad dynamite and fuse. They say that the dynamite, for which they pay 7*s*. 6*d*. a packet, fails to do execution, and the "rad" is so bad that many holes are missed. This renders their work unsafe and jeopardises their lives. This is the miners' version of the story. Until the managers' is heard the public will hardly be able to draw correct inferences.

HOLLOWAY'S OINTMENT AND PILLS. — Abscesses, Erysipelas, Piles.—Unvarying success attends all who treat these diseases according to the simple printed directions wrapped round each pot and box. They are invaluable to the young and timid, whose bashfulness sometimes endangers life. Though apparently local, diseases of this nature are essentially blood diseases, but a little attention, moderate perseverance, and trifling expense will enable the most diffident to conduct any case to a happy issue without exposing secret infirmities to any one. The Ointment checks the local inflammation and alleviates the throbbing pains. These directions also clearly point out when and how Holloway's Pills are to be taken, that their purifying and regulating powers may assist by adjusting and strengthening the constitution.

Telegraphic Address: "QUINLAND, LONDON."

EXTRACT FROM CIRCULAR ISSUED BY

GEORGE GREGORY & CO.,

STOCK AND SHARE DEALERS,

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

Telegraphic Address: "GRAMMARIAN, LONDON."

JUNE, 9, 1891.

DEAR SIR,—On this day fortnight was issued our last circular, containing exhaustive details relating to the Stock Market, with suggestions as to its probable immediate course.

In the difficulty of the situation, and amid intervening disturbing rumours, we believe our conclusions have proven to be pretty accurate when compared with the now existing and improved position.

For enabling such comparison to be made by readers not already in possession of the circular, copies of it can still be furnished free to all applicants.

THE MONEY MARKET gathered immediate and greatly increased strength in frequent acquisitions of bullion through the action of the Bank in raising the rate to 5 per cent. The measure, as previously pointed out, was chiefly precautionary, but rendered necessary by the spread of serious, although groundless, rumours. The Bank coffers became so rapidly and liberally replenished that in the course of a fortnight the proportion of reserve had improved fully 10 per cent., and, accordingly, on 4th inst. the minimum rate was reduced to 4 per cent. Recent arrivals and the shipments last week from New York to Europe make a further total of nearly £1,500,000, so that even the Russian demand, so long imminent, need not occasion the slightest uneasiness. Later in the season America will drain European supplies pretty heavily, but the Bank and outside market are now of complete accord as to the protective measures to be then adopted with a view to the preservation of confidence and tranquility in the course of business.

THE STOCK MARKETS, which exhibited symptoms of general improvement at last carrying-over, did not continue to sustain favourable anticipations. In every department there were day-to-day fluctuations, some, as in the case of Americans, depending upon the fears of a depleted gold reserve through the free shipments above referred to, others resulting from the unsettled weather conditions and the undercurrent of rumours of financial complications abroad. The Paris settlement—an all-important factor in the present position of foreign stocks—passed over favourably, and without the disclosure of any specially weak element, and a more settled and confident feeling, therefore, prevails. This was specially notable yesterday, when, although the eve of the London settlement, a hardening tendency was apparent in nearly every department.

HOME RAILWAYS, under the influence of changeable and unseasonable weather, have not received the full measure of support to which they are otherwise entitled; still, a comparison of prices at the two dates exhibits substantial gain in the Heavy department.

Great Western prospects have been somewhat impaired by the tunnel accident, and North-Eastern and the Scotch lines have been unfavourably affected by the critical condition of the iron market and labour troubles in the shipbuilding trade.

Brighton "A" has been an active market, with many fluctuations, according to the traffic returns and other circumstances of the moment. At one time the stock was as low as 138½ (now 140¾), and the transactions in it may be said to have almost monopolised the attention of operators.

Metropolitan and District dividend prospects are, to some extent, improved by the 'busmen's strike; but the period of its duration is, of course, matter for conjecture.

We here afford the customary comparative table:—

	May 26, 1891.	June 9, 1891.	Advance or decline.
MIDLAND	151¼	152	A ¾
GREAT WESTERN	155	156	A 1
NORTH WESTERN	169¾	170½	A ¾
GREAT EASTERN	92¼	93¾	A 1½
SHEFFIELD "A"	35⅝	35½	D ⅛
METROPOLITAN	83¼	83⅝	A ⅜
DO. DISTRICT	30¼	30¾	A ½
DOVER "A"	90	89⅞	D ⅛
BRIGHTON "A"	140	141	A 1
CHATHAM ORDINARY	17½	17⅜	D ⅛
NORTH-EASTERN	158¼	155	D 3¼
GREAT NORTHERN "A"	75	72	D 3
LANCASHIRE AND YORKSHIRE	113	112	D 1
CALEDONIAN	117	117¼	A ¼
DO. DEFERRED	40½	40	D ½
NORTH BRITISH	69	67½	D 1½
DO. DEFERRED	42⅝	41⅞	D ⅜

With the near approach of dividend time, low contangos, and assurance of cheap money we consider the entire list worthy of buyers' attention, and in the order stated.

CANADIAN PACIFICS have closely followed the course of Home and American Rails, and at periods the decline has probably been more pronounced on account of persistent assertions of rate cutting by the company. The causes of such reports have been satisfactorily explained, we again find the shares at 80⅜, or ⅞ higher than at date of last circular.

GRAND TRUNK STOCKS.—We hinted at the impolicy of indiscriminate bear selling, and the remark has been followed by a swiftly favourable reaction, as shown by the following:—

	May 26, 1891.	June 9, 1891.	Advance.
ORDINARY	85⅜	87⅝	¼
FIRST PREF.	58	60	2
SECOND DO.	37¾	40	2¼
THIRD DO.	21	22½	1½

There can be little doubt that they, in common with Canadian Pacific, will follow the American market's early upward lead.

AMERICAN RAILROADS.—The comparison of traffic receipts with those of last year, and the anticipated unprecedentedly heavy crop movements, point to a very important advance in prices throughout the coming season. The disquieting European rumours have acted prejudicially upon the New York market, which London has again been content to follow, although she initiated the recent advance movement.

The reduction of the Bank rate on Thursday gave the signal for much bear covering, particularly in the American department, prospects for prices in which are now viewed most hopefully.

After almost daily fluctuations, the following exhibits the comparative position a fortnight ago and now:—

	May 26, 1891.	June 9, 1891.
ATCHISON INCOME BONDS	48¼	48⅜
CENTRAL PACIFIC	31¾	31⅝
MILWAUKEE	66½	65½
DENVER ORDINARY	18¼	17⅜
DENVER PREF.	59	57
ILLINOIS CENTRAL ORDINARY	101	99
LAKE SHORE	113	112
LOUISVILLE	79¾	77
ERIE	21¼	20¼
ERIE PREF.	53½	53½
ONTARIO	17½	17
NORFOLK PREF.	54½	53¾
NORTHERN PACIFIC PREF.	71¼	69¾
OHIO AND MISSISSIPPI	19¼	19
PENNSYLVANIA	51½	51¼
READING	16⅞	16
UNION PACIFIC	48½	46
WABASH	10½	11¼
WABASH PREF.	22	23

A better opportunity than now for placing buying orders we can hardly look for during the remainder of the current year. Wabash Ordinary and Preferred are especially worthy of attention.

MEXICAN RAILWAY (VERA CRUZ).—These stocks are now quoted ex div., but the uncertainty and frequent fluctuation attending the course of the silver market and apprehension of severe competition on the part of the Mexican Central have served to depress them as follows, viz.:—

	May 26, 1891.	June 9, 1891.
ORDINARY	37¾	31¾ ex div.
FIRST PREF.	117½	111½ "
SECOND DO.	68	63½ "

We cannot help thinking that the competitive factor is greatly overvalued, and that both the ordinary and preferences will promptly reward present purchasers of either.

FOREIGN AND MISCELLANEOUS STOCKS.—In last circular we indicated the immense general decline which, in the course of a few months, had taken place in these. Various fluctuations have occurred in the interval, the abundance of floating money and reduced Bank rate having compelled considerable covering of bear sales made at the lower level.

The following we select as worthy of attention at the present time for prompt and, possibly, important profits:—

	May 26, 1891.	June 9, 1891.	Advance.
BRAZILIAN, 1883	74½	74½	—
DO. GOLD LOAN	84	85½	1½
DO. 1889	67¾	70½	2¾
CHILIAN, 1886	81	81	—
COSTA RICA "A"	68	69	1
DO. "B"	64	65	1
EGYPTIAN UNIFIED	94¾	96	1¼
DO. PREF.	90	91½	1½
MEXICAN SIX PER CENT., 1888	86¼	88½	2¼
PORTUGUESE THREE PER CENT.	43½	46¼	2¾
SPANISH FOUR PER CENT.	71⅜	74	2¼
URUGUAY UNIFIED	47⅜	48½	1
DO. STERLING	53	53⅜	⅜
RIO TINTO	21	23⅜	2⅜

Our timely hint a fortnight ago, where acted upon in regard to these stocks, has been very gratifying to many friends.

AMONGST MINING AND LAND SHARES, Transvaal issues appear to be again coming into favour, and at the presently-demoralised quotations we recommend:—

TRANSVAAL MORTGAGE, LOAN AND FINANCE,
TRANSVAAL LANDS,
NORTHERN TRANSVAAL LANDS,
OCEANA,
SILATI RIVER,

And of others, specially

CALLAO BIS,
WENTWORTH GOLD,
BRITISH BROKEN HILL,
AUSTRALIAN BROKEN HILL.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers. We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security. The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with divideuds paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.
£10 " £1,000 " 1 "
£20 " £2,000 " " "
£50 " £5,000 " " "
£100 " £10,000 " 1 " "
With no further liability whatever.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

THE DULNESS OF THE MARKETS—NEWS FROM THE MINES GOOD, BUT PRICES BAD—SPECIAL REFERENCE TO TOLIMA, ETHERIDGE, INDIAN CONSOLIDATED, CALLAO BIS, AND OTHER MINES.

THE state of the Mining Market this week has been doleful to a degree. To say that brokers have not paid their office expenses would be to express the minimum part of the truth—they have not even paid their tram fares into the City. They have been standing idly in the market-place because no man hath hired them. After a promenade up and down Old Broad Street in the early part of the week, the Micawber spirit, which had led them to hope that something would turu up, departed, and towards its close most of them were found sauntering by the sea-side, listening to the music of the sad sea waves. The music in question was of the slow march kind, for it struck the minor key of expenses going on and no returns coming in, which was not pleasant, especially considering that it further suggested the thought of where all this was to end. The position was not alleviated by the rumour of failures here, and bankruptcies there, nor by that of a revolution in Portugal, which had not only upset everybody but everything. When the latter rumour had time to do its worst it became contradicted, and some further help was experienced by a reduction of the bank rate. The public, however, did not rise to these respective baits, and certainly promoters have not done so, for the commercial weather glass does not point fair. It has been felt by these worthies that any attempt to introduce new ventures would be attended with certain failure, and that the response of the public would not be worth the lamp oil consumed in attempting to obtain it.

Numerous are the explanations, and varied are the suggestions, by way of attempting to account for a state of things almost unparalleled in our experience of the Mining Market. There is one that we have not yet heard hazarded, and which we may therefore claim to be our own patent, though we are far from saying that it completely explains the present anomalous condition of things. At the end of each half-year most persons like to appear in the books of their respective banks as having a substantial balance on current account. Now, this may in a sense explain the too noticeable preponderance of sellers over buyers of mining and other shares, in fact the almost total disappearance of the latter class. Until the half-year has been turned, and the public can see what profits are available for the luxury of mining speculations, matters are scarcely likely to improve, though after that period there is the chance that they may do so. Added to the circumstance we have shadowed forth, there has been the knowledge of a common anxiety, caused by the general distrust of commercial matters as a whole, and the wish to strengthen the cash position even by the sale—in many cases the forced sale—of any securities that were realisable at the moment.

If the depression were wholly confined to mining the case would be a serious one indeed, but we all know that it has extended itself to every branch of speculation and investment. Why should mining shares be depressed at this juncture? Speaking with no inconsiderable knowledge of the actual position of the greater part of those quoted in our official lists, it would be safe to say of the majority of them—the large majority—that the position underground, and also the returns were never better than they are at the present time, and that numbers of concerns that have hitherto had only a struggling existence are now wheeling into line in a most satisfactory, and, in some cases, in a most remarkable way. If mining had to stand by itself; in other words, if it had not to bear the reflex action of recent commercial failures, and the spirit of distrust that is abroad, we unhesitatingly say that the prices of most shares would be infinitely higher than those we quote to-day. The latter are neither founded upon the actual facts nor upon the general outlook of the companies concerned.

The nominal capital of Elkhorn is 200,000*l*., of which 175,007*l*. has been subscribed, aud within a very short period after taking possession profits were being made. The prospectus estimate of profits has been greatly exceeded, for owing to the richness of the ore the estimated profit of 44,500*l*. for the year worked out actually for only 10 months at 54,567*l*., or at the rate of 66,000*l*. per annum. For the first quarter of the company's existence the dividend was at the rate of 20 per cent. per annum; for the second quarter this was increased to 30 per cent., making 25 per cent. for the half-year. The third distributiou and the fourth, made after the first annual meeting, were at the rate of 40 per cent. per annum, making 32½ per cent. for the year, or 12½ per cent. above the estimate of the prospectus. Last week an interim dividend was declared at the rate of 40 per cent. per aunum, so that the dividends are something like 100 per cent. in excess of what was promised in the prospectus. The present return to investors on the price of the shares works out at something like 26½ per cent.

A report on the Indian Consolidated Compauy's properties from the pen of the esteemed chairman, Mr. Malcolm Low, M.P., will go out to the shareholders on Monday. In a word, its contents may be described as highly encouraging. Rumour has it that Capt. Plummer holds 8,000 of the shares, and believes that it has a big future. A call of 6d. has been made upon the shares.

The mines in Utah territory are beginning to redeem some of the promises which have fallen from them thick as the leaves of Vallambrosa. Emma is in the market with some really substantial sales of concentrates—18 tons at $78, and 13 tons of ore at $57 per ton, realising altogether about 500*l*. This will not do much towards helping a dividend, but—next best thing—it will do something towards staviug off a call. This, like a Damoclean sword, has been hanging over the heads of the shareholders, but we are assured by the directors that, like the Brighton Co.'s bridges, it has been so strengthened, that the fall has been postponed, perhaps iudefinitely. There is really a good report also from Flagstaff, which has been the subject of Prof. Vincent's prayers for many a year past. The report is specially referred to in our leader column. Talking of the Professor—he is again at Utah prowling about the labyrinths, which constitute the Flagstaff Mine. If he only makes a dividend, we promise, on behalf of the shareholders, that they will listen to him by the hour the next time he comes home. He will be busily engaged in sending the ore down to Sandy as fast as he can, for this year it is an open secret that it is a case of do or die with Flagstaff.

A good report has been issued by Tolima directors, who have managed to declare 15 per cent. during the year in dividends on the "A" shares, and made up the arrears on the "B" shares to the year 1886. It almost takes one's breath away to find the manager estimating the reserves at one and a-half million tons.

Little need here be said of the Etheridge Co., as our lengthened report of the meeting, and article, practically exhaust the subject. The opinion of the market is that the shareholders acted wisely last Tuesday in dethroning the committee and placing the Campbell board in power. One thing is certain, that had the board been constituted as the committee proposed the market would not have assisted the re-construction scheme, and Etheridge would finally have gone to that bourne whence no company returns.

We report the meetings of two very promising home mines in Wales and of a dividend paying concern in Scotland. The two first are named respectively Cwmystwyth and Kingside, both of which have been recently inspected by Mr. Frank Taylor, who is so satisfied with their underground appearances that he is prepared to put more money into them, and confidently urges the shareholders to follow his lead. In regard to Leadhills, we give in our leader columns a little of its past history, including the dividends it has paid, and a little also of its position as changed by the renewed lease and the reduced royalties.

Dealing with the market generally, we may, first of all, refer to the Kaffir section which has been without feature, though London and South African rose on the declaration of the 3s. 6d. dividend. There has been a flutter in Piggs Peak to-day, and the shares close 1s. better. Ferreiras have lost 1*l.* of the rise we notified last week, and the other leading companies are a shade weaker all round. De Beers are down considerably, and, in fact, there has been no rise whatever in the Diamond section.

In the Copper department, the market was unfavourably affected by the circular of the Cape Copper directors anuouncing the passing of the dividend, owing to the ore not having come up to the assays sent home, and the laudable desire of the directors to keep the financial position strong. After all their troubles Tocopilla shareholders will have to content themselves with a return of 2d. per share, this being the amount that the liquidator has been able to save for them by way of salvage. Rio Tintos have been firmer, but, generally speaking, the Copper section has tottered.

Indian descriptions have been freely dealt in without much change of price. Mysore, Ooregum, and Nundydroog are firmer, but Goldfields are down, and Colar Central has lost 6d. of the recent rise. The re-construction scheme of Mysore Reefs knocked the shares down to 1s., and at present prices they look an uncommonly good purchase. The Indian Consolidated call made the shares fractionally weaker. Mysore Wests have been a good deal dealt in, and were the position better understood the shares would be much higher than we quote them now. The Tank Block property, which was acquired for a mere trifle, is practically on the same run as those sections of land for which other companies have paid such high prices to the Goldfields of Mysore.

In the Australian section business has been chiefly confined to Australian Broken Hill Consols, which last Saturday were quoted up to 2½, but close this week 2¼ as the middle price. It says a good deal for the vitality of these shares that when all other descriptions are falling they are able so well to preserve the equilibrium. New Queens are down, and so also are Wentworth Proprietary, but Bonnie Dundees, as the market men say, firmed up.

In the General section there has been but little business. The April profit of Frontino and Bolivia is announced to be 1,078*l.* Tolimas are better on the report, and so also are Almadas, of which the market has had a higher opinion since the last meeting. American Belles and Yankee Girls have fallen considerably in sympathy with Callao Bis (on account of the call of 1s. 6d.), Day Dawn, Elkhorn, Golden Gate and Feather, and Richmond. The most noticeable fall of the week, however, has been in Gravel Gold, which the bears have determinately attacked, with the result that the shares are down 4s. 3d. on the week. Will it be believed that after all that has been said about Yuruari the shares were actually dealt in this afternoon at 4d. There is apparently before this company another re-construction, unless we are greatly mistaken. There has been a good deal of business in Balkis, which were quoted at one time as high as 6s. 6d., but are now down to about 5s. The market turns with aversion from the fresh issue by Lisbon Berlyn directors. In the number of shares it now has on the market, or will have if this issue is taken up (which we very much doubt). Lisbon-Berlyn, to use a colloquialism, decidedly takes the cake.

In Home mines where any change has occurred it has been for the worse. Roman Gravel shares are now fully paid, the final call of 1s. having been made.

As the market closes the outlook cannot be said to be hopeful.

Kaffirs.

An inquiry sprang up to-day for Piggs Peak, and shares changed hands freely at 8s. The spurt did not last long, and the price closes lower, although showing a rise on the week. Kimberley Roodepoort are somewhat firmer. Ferreira, on the other hand, have been offered, and show a fall of 20s. on the week; several others are slightly lower.

Business.—A rise has taken place in Piggs Peak of 1s.; ditto Pref., 1/16; Crœsus, 6d.; Kimberley Roodepoort, 1/8; Randfontein, 6d.; Stanhope, 1/8; and Wemmer, 1/8; whilst a fall is shown in Sheba, of 6d.; Bantjes, 1s.; City and Suburban, 1/8; Ferreira, 1; Forbes Reef, 1s.; Kleinfontein, 1/16; Luipaards Vlei, 1s.; Modderfontein, 6d.; Robinson, 1/16; Simmer and Jack, 1/16; Spes Bona, 1/16; and Witwatersrandt (Knight's), 6d.

Diamonds.

Little business has been transacted in this class. In a few instances shares have been pressed for sale, with the result that lower prices rule.

Business.—There is no rise to record, but a fall is to be noted in De Beers of 5/16; Gordon, 6d.; Griqualand West, 1/8; New Jagersfontein, 1/8; and Burma Ruby, 1/16.

Kaffir Lands.

Business in this department has been very slack during the past week, and with the exception of London and South African

Exploration, which have improved on the announcement of 3s. 6d. dividend, payable on the 31st., prices are all a shade lower.

Business.—A rise has taken place in London and South Africans of ¼; Transvaal Estates, 6d.; and Zoutpansberg, 6d.; whilst a fall is shown in Bechuanaland, ⅛; British South African Chartered, ⅛; Goldfields of South Africa, 5/16; Ophir, 3d.; and Sutherland Reef, 1s. 6d.

AUSTRALIANS.

Australian Broken Hills rose last Saturday, in consequence of the report we published in our last issue, and for a few minutes they stood in the neighbourhood of 50s. They have since, however, become weak, and close 2 1/16, 2 3/16. Day Dawn Blocks have met with some little support, although prices do not show a change. Bonnie Dundees have been offered, and close a shade lower in consequence. Wentworths are lower.

Business.—A rise is shown in Bonnie Dundee of 9d., but the following have fallen :—Australian Broken Hill, 3/16; Cumberland, 6d.; Mosman, 3d.; New Queen, 6d.; Scottish Australian, ⅛; and Wentworth Proprietary, 3/16.

INDIANS.

There has been but little business in this section if we except Nundydroog and Mysore West. The shares of the latter closed last week 2s. 3d. to 2s. 6d., and were steadily offered down to 1s. 9d., but close at 2s. 4½d. to 2s. 7½d.

Buisness.—A rise is shown in Mysore Gold of ⅛; Nundydroog, 1s.; and Ooregum, ⅛; whilst a fall has taken place in Colar Central, 6d.; Goldfields of Mysore, ⅛; Indian Consolidated, 3d.; Mysore Reefs, 1s. and Nine Reefs, 3d.

COPPER.

The sensation of the week has been the fall in Cape Copper on it becoming known that the company had passed the dividend. They do not, however, close at their worst. Rio Tintos have been dealt in at 23⅜, but close at 23, 23¼, showing a rise on the week.

Business.—A rise is shown in Rio Tinto of ⅜, bnt a fall has taken place in Capes of ½, and Copiapo, ⅛. Others remain unaltered.

GENERAL FOREIGN SHARES.

The market has been neglected, and very few shares show any improvement. Almada, Esmeralda and Palmarejo are slightly firmer, but on the other hand, Callao Bis have fallen on the announcement of a call of 1s. 6d. Colorado and Don Pedro have gone back, so also have Golden Gate Alluvial. It should be understood that this mine is in California, and must not be confused with the property which dealers are now trying to manipulate which has its *locale* in Australia. Yuruaris have been offered somewhat freely, and close a shade easier. Gravel gold shares have been forced by bear sales and close lower. Emma have met with some support, and appear a good purchase.

Business,—A rise has taken place in Almada of 6d.; Colon, 3d.; and Tolima, ¼; whilst a fall is shown in American Belle of 3s.; Barretts, 3d.; Callao Bis, 1s. 6d.; Cantabrian, 3d.; Colorado, 9d.; Don Pedro, 1/16; Elkhorn, 1/16; Elmore, 6d.; Emma, 3d.; Golden Feather, 1s.; Golden Gate, ⅛; Gravel Gold, 4s. 3d.; Monte del Oro, 1s.; New California, 6d.; Richmond, ⅛; Tesoro, 3d.; West Indian, 6d.; Yankee Girl, 1s.; and Yuruari, 3d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—For the week ending June 18, 759 tons of ore were treated (inclnding 280 tons iron ore), yielding 152 tons of lead, containing 5,313 ozs. silver.

BROKRN HILL PROPRIETARY.—For the week ending June 18, 4,626 tons of ore were treated, yielding 694 tons of lead, containing 180,414 ozs. silver.

EAST BROKEN HILL CONSOLS.—A telegram from the managing director, June 16, states :—"We have struck new cross lode, Block 98. Bulk assays made of the vein matter give 70 per cent. of lead, 49 ozs. of silver to the ton."

GREDEN GATE.—A cablegram from Charters Towers, June 13, to Messrs. Arthur Forbes and Co., announces the result of the last four weeks' crushing, viz. :—750 tons yielded 875 ozs. gold; value, 3,100*l*. A dividend of 1s. per share is declared, payable to shareholders in London on July 25.

GYMPIE GREAT EASTERN.—A cablegram from the mine, dated June 13, gives the result obtained dnring the past month, viz. :—22 days, 530 tons, 520 ozs., 1,830*l*. value, 1,000*l*. profit.

SUNBURST.—Messrs. Arthur Forbes and Co. have received a cablegram from Charters Towers, which states that the company cleaned up on 6th inst., for the fortnight, 250 tons stone, yielding 1,080 ozs. gold, value 3,800*l*. A dividend of 2s. per share was declared. Crushing continnes, and will be cleaned-up fortnightly.

MOUNT ZEEHAN.—The 48 tons 1 cwt. 3 qrs. of silver-lead ore, ex s.s. Duke of Devonshire, have been sold at the rate of 24*l*. 7s. 6d. per ton.

FOREIGN MINES.

DICKENS CUSTER.—The second shipment of bulliou (bars three and four), from the crushings commenced on May 11 last, has just arrived and has been sent to Messrs. Pixley and Abell to sell for the company.

ELKHORN.—The manager writes: Bullion produced for week ending June 13, $7,550; smaller number of tons crushed, mill not having run to its full capacity.

EMMA.—The following cablegram has been received from the manager at Salt Lake City, showing the sales of ore for the last two weeks :—"18 tons concentrates sold at $78 per ton; 13 tons of ore sold at $57 per ton; larger lots following; drift from Old Emma tunnel north-west and raise above drift on Illinois tunnel level improving; machinery working smoothly and well."

GOLDEN GATE ALLUVIAL.—Cablegram from Col. Frank McLaughlin, the company's general manager at Oroville :—"1,000 ft. of flume completed; balance being rapidly finished."

GRETA COLLIERIES.—The directors notify that their debenture coupons, due 30th instant, will be paid by the London Joint Stock Bank, Limited, 5, Princes Street, E.C., on and after that day.

KETCHAU (PAHANG).—The directors have received advices that a further 205 ozs. of gold bullion have been received at Singapore,

from their Mount Siam Mine, the produce of about 5 cwt. of the richer ore crushed by hand, there being no milling machinery on the property at present.

NEW CALIFORNIA.—Cable from the mine manager, June 16:—"May output, 870 tons; yield, 338 ozs. of gold, value, 1,060*l*.; costs, 690*l*. (mining profit, 370*l*.); expenditure on mine development, and exploration, 280*l*.—RICKARD."

PINOS ALTOS.—The out-turn for May was $40 500. The out-turn for the week ended 6th inst. was $8,000.

RIO TINTO.—The company announce payment of the drawn bonds of their five per cent. issue of 1884, and coupons on their five per cent. issues of 1880 and 1884, due 1st prox. They invite holders to present coupons and drawn bonds at once.

RUBY.—Telegram:—"24 tons tribute ore shipped and smelted, producing to company $31."

SAN LUIS.—Cablegram from the company's manager:—"Bullion shipped June 8, 580*l*."

TOCOPILLA COPPER.—From the liquidation there is a balance remaining of 1,063*l*. 5s. 6d., and the meeting will be asked to sanction a return to the members of 2d. per share.

HOME MINES.

CARN BREA.—The terms of the new lease are now absolntely settled, the trustees of the Basset estate having endeavoured in every way to meet the wishes of the committee as far as possible. This matter being now settled, the committee will have to consider how soon they can get on with the new engine, &c., for Highburrow East.

WHEAL GRENVILLE.—The quarterly meeting is called to pass the accounts; to declare a dividend; and to transact the ordinary general business of the company.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 978 AND 979.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

WORCESTER EXPLORATION.—Result of last month's crushing is 1,020 ozs. of gold.

WITWATERSRANDT (KNIGHT'S).—215 ozs. smelted gold have been received ex Trojan from the Cape.

SHEBA.—A cablegram from the general manager states:—"Level No. 6 cross-cut has cut the lode 23 ft.; assays satisfactory."

SOUTH AFRICAN GOLD TRUST AND AGENCY.—The Boer trek is about abandoned, and will probably now be of very little importance.

NORTH-EASTERN BULTFONTEIN.—Telegraphic advices announce: "7,500 loads washed, producing 1,650 carats of diamonds, for the week ending the 13th inst."

AFRICAN GOLD RECOVERY (MCARTHUR-FORREST PROCESS).—Cablegram from the manager at Johannesburg:—"May, Sheba tailings, 783 tons 1,385 ozs.; Robinson, 1,800 tons 1,061 ozs."

LONDON AND SOUTH AFRICAN EXPLORATION.—The directors have declared a dividend of 3s. 6d. per share, less income-tax, for the quarter ending the 30th inst., payable on and after that date.

SALISBURY.—At the adjourned meeting of the shareholders held at Maritzburg, on Tuesday last, the scheme for the reduction of the capital of the company from 400,000*l*. to 100,000*l*. was carried.

VIRGINIA (TRANSVAAL).—The following cable has been received from the manager, dated Steynsdorp, June 17, 1891:—"There is a great improvement in Dutchman's shaft, 1 oz. per ton; Hodge's winze, 15 dwts. per ton."

VILLAGE MAIN REEF.—The following in an extract from a letter received from Mr. Boucher, engineer, of Johannesburg:—"The south reef has now again been cut through, in the pump chamber, at a distance of 18 ft. from the shaft. A sample taken through it, 15 ins. wide, gave per ton 7 ozs. 16 dwts. gold and silver combined."

CERRO DE PASCO.—The manager writes to this company on May 19th that the assays of the six reefs met with in the south-east cross-cut vary from 5 dwts. 21 grs. to 2 dwts. 14 grs. Another reef has just been cut fully 2 ft. wide, panning, on an average, 10 dwts. per ton.

PIGGS PEAK ESTATE.—Mine report for week ending May 16:—Devil's reef—Drive on top of the hill: Drove for the week 18 ft.; total, 100 ft. Grouud a little harder, mixed with white quartz and iron. Winze: Sunk 4 ft.; total, 64 ft. Started new drive (No. 2 drive) in roadway 416 ft. east of main works. Open cutting, 16 ft.; drove 6 ft.; have cut through a small leader of quartz 6 ins. wide, which shows a few colours in panning. 280 ft. of cuttings in different places shows no gold in panning. 12 boys cutting wood and stacking same; remaining boys wheeling away dump. Peak—Piggs drive: Drove for the week 6 ft.; total, 148 ft. Ground getting harder, and shows a little gold in the pan. No. 1 works: Drove for the week 16 ft.; total, 238 ft.; no change since last report; cuttings, 50 ft. Tamblyn's reef—Drive: Drove for the week 3 ft.; total, 39 ft. Ground much harder, and carrying a good deal of pyrites. Shaft: Sunk for the week 1 ft.; total, 19 ft.; ground same as last week; cuttings, 30 ft.

EDWIN BRAY.—Manager's report for week ending May 16:—Mine—Quarrying west of No. 2 drive, sinking winze No. 2: Measurement at date, 7 ft.; work done for week, 7 ft. The quarry extends now from No. 2 drive, 393-ft. level, to the old working known as drive No. 1½, and marked on our plan 336-ft. level. The sinking of the winze is pushed on as quickly as possible, but the quartz we have to go through is extremely hard, and we cannot expect to sink more than 4 or 5 ft. every week. Ropeway: The engineer had the hauling wire shortened on Monday last, and since then the ropeway has worked very well. The transport of quartz was resumed on Tuesday morning, and the ropeway brought down 882 buckets, representing 220½ tons of quartz. Mill: 25 stamps have been working regularly till Friday evening, when we had to shut up the battery for the night on account of a very heavy thunderstorm. On Saturday morning early we were able to start the stamps again. I am glad to say the frame of the battery shed is finished, and it will not be long before we have everything under cover.

CLUTHA.—Manager's report for week ending May 18:—Mine—Clutha section, 50-ft. level: Measurement at date, 212 ft.; work done for week, 6 ft. Nothing but colours of gold in the end here all the week. The 50-ft. level, 2nd cross-cut south: Measurement at date, 3 ft.; work done for week, 3 ft. This is on leaders from No. 2 shaft, carrying fair amount of gold. North reef: Measurement at date, 69 ft. 6 ins.; work done for week, 2 ft. 6 ins. This lode is 3 ft. in width, and has maintained its value up to the last day or so. Latest pannings show an average of about 6 dwts. I think the falling-off is only temporary. The 100-ft. level south cross-cut north: Measurement at date, 9 ft.; work done for week, 2 ft. This lode is very patchy in gold, but shows an improvement on the week. Victoria section, 120-ft. level north-east: Measurement at date, 822 ft. 6 ins.; work done for week, 4 ft. 6 ins. The gold on the hanging-wall has fallen off again, and the lode has panned off badly for the week. Cross-cut south: Measurement at date, 3 ft.; work done for week, 3 ft. This is a prospecting cut in the footwall, where there are a lot of quartz leaders carrying a little gold. Winze: Measurement at date, 12 ft.; work done for week, 3 ft. There is only a small show of gold here at present, and the lode does not seem so compact as in the level.

HENDERSON AND FORBES.—Mining report for the fortnight ending May 15:—North-west portion of concession: The ground in the face of the cross-cut has become very much harder, and, therefore, the progress is slower, otherwise there is no change to remark. Northern range: In the cross-cut from the foot of the Krantz there is no change in the nature of the ground, but a little more water is being met with as it goes forward. Godfrey's prospecting shaft, No. 1: Apparently the footwall side of the reef has been reached, and at a distance of about 33 ft. from the bottom of the shaft. Its value has not yet been ascertained, as only a few shots have been fired in the reef. Carr's prospecting shaft: The drive from the bottom of this shaft is progressing fairly well, but as yet the reef has not been reached. Kennedy's prospecting shaft: This shaft is at a depth of 35 ft. from the brace, and at this point a drive has been commenced, and should be driven westwards on a branch or leader which was followed to this depth, and has from time to time showu a few colours of gold. Williams' cross-cut at the foot of the northern range: A cutting of considerable length has been made here during the month, the ground faced up and the drive commenced, and is already in about 30 ft. When the reef is struck it should prove of a great width (judging by the surface appearance). It is hardly to be expected that the whole width will prove gold-bearing, but it is possible that some portions of it will prove of value, as from surface pannings I have frequently obtained small traces of gold. Godfrey's cross-cut at the foot of the northern range: This work has just been commenced, and is on the same line of reef as the above-named working, and about 1,000 yds. south-east of it, where also a little gold has been found. A tram line is now being laid, and this work should now go ahead speedily. East camp: The drive east on the black reef: In continuing this drive some quartz in an irregular and broken form has been met with, and carrying gold in minute quantities. The drive west on the black reef: This was carried forward until meeting with the clay formation, when the reef, which was small, turned abruptly at right angles to the level, and, after driving a few feet the underlaying soapstone was struck, and the reef gave signs of pinching out at this point. The points I consider the most encouraging for the future development of this property are: Williams' and Godfrey's cross-cut drives at the foot of the northern range. These should be carried on to attain the object for which they were commenced. The cross-cut drive below the junctiou house should be continued. and to do this it will be necessary at an early date to sink a small shaft to communicate with the tunnel for the better circulation of air. The bottom drill-hole to strike the black reef at the east camp should be continued, as it is evident that the reef has been struck in the hole above this. That a drill-hole should be sunk to test the continuance or not in depth of the No. 2 reef at the west camp. That that portiou of the hill in the immediate vicinity of Kennedy's prospecting shaft should be thoroughly prospected.—W. ROBERTS, manager.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank Rate was reduced yesterday to 3 per cent. Bar silver closes 45d.

COPPER has been firm. A good business has been done in G.M.B. warrants from 55*l*. 2s. 6d. to 56*l*. cash, and 55*l*. 15s. to 56*l*. 10s. for three months. To-day's prices are 56*l*. 2s. 6d. cash, and 56*l*. 12s. 6d. three months. The half-monthly statistics show a decrease of about 200 tons in the stocks in London, Liverpool, Swansea, and Havre, and about 400 tons in the visible supply, viz.: 57,400 tons, against 57,808 tons on June 1. We quote English tough, 58*l*. to 59*l*.; best selected, 59*l*. to 60*l*. 10s.; strong sheets, 66*l*. to 67*l*.; India sheets, 62*l*. to 62*l*. 10s.; yellow metal, 5¾d. to 6d.; ore, 10s. to 11s. 3d.

Tin has been steady and in fair demand. Straits improved from 93*l.* to 93*l.* 12s. 6d. cash, and closes about 93*l.* 10s. cash, and 93*l.* to 93*l.* 5s. three months. The shipments from the Straits for the half month are given as 1,790 tons. The Dutch Market is firm; banca, fl56; billiton, fl55¼. We quote English ingots, 96*l.* 10s.

TINPLATES are quoted about 14s. for delivery this month, and 13s. 6d. for August, for ordinary coke, Liverpool.

SPELTER firm at 23*l.* 15s. for ordinary brands ex ship here.

LEAD steady. We quote soft Spanish, 12*l.* 15s.; soft English, 12*l.* 15s. to 13*l*; L.B. China pigs, 13*l.* 5s.; sheets, 13*l.* 10s. to 14*l.*

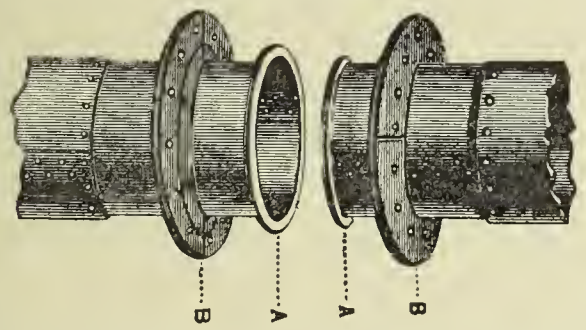
QUICKSILVER dull. Rothschild's price 8*l.*; seconds, 7*l.* 17s.

ANTIMONY dull. Hallett quotes 53*l.* to 54*l.* for prompt delivery to America, and 50*l.* for continent. Ordinary brands and delivery, 48*l.* to 50*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JUNE 20.

Attaree Khat Tea	3 per cent.
Assets Realisation, Preference	5 per cent.
Assets Realisation, Ordinary	10 per cent.
Anglo-Portuguese Telephone	5 per cent.
Borelli Tea	5 per cent.
British Linen Co. Bank	7 per cent.
Chicago Junction Railways, Preference	3 per cent.
Chicago Junction Railways, Common	5 per cent.
Colonial Bank	6 per cent.
Distillers' Co.	12s. per share.
East Argentine Railway	2 per cent.
Federal Bank of Australia	9 per cent.
Head, Wrightson and Co.	7½ per cent.
House Property Co.	6 per cent.
Imperial Property Investment	7 per cent.
John Brown and Co.	1*l.* per share.
Luckimpore Tea	5 per cent.
Legal and General Life	13s. 6d. per share.
London and Provincial Marine	10 per cent.
Majuli Tea	7 per cent.
Maritime Insurance	2s. per share.
Midland Counties Insurance	10 per cent.
Ohlsson's Cape Breweries	14 per cent.
Rajmai Tea	10 per cent.
Rhymney Iron	2 per cent.
Royal Exchange Assurance	12 per cent.

HYDRAULIC MINING.—DESCRIPTION OF A NEW PIPE JOINT.



THE above sketch shows a new method of making the principal joints in light sheet-iron, or steel pipe lines, as used in hydraulic mines, and for other similar purposes.

From four to eight lengths of the ordinary pipes are rivetted up as usual, the lengths at each end having a narrow blank flange (from 1½ ins. to 1¾ ins. deep) turned up at right angles to the length of the pipe as at *a* and *a'* in the sketch; these are brought together and held tight by a pair of strong cast-iron flanges *b* and *b'*, made to fit loosely over the pipe, and cast in halves, if necessary, for facility of handling, each pair breaking joint, as at *c* and *c'*, and secured to each other by bolts (not shown in the sketch), thus clamping together the blank flanges of the pipe. In the above sketch the loose cast-iron flanges *b* and *b'* are represented as drawn back, in order to show the small blank flanges *a* and *a'* on the pipe. If necessary, a packing ring, taper, or otherwise, may be introduced between the flanges, in which case, besides being tighter, the joint will also be more flexible. Pipes up to 3 ft. or more in diameter can be jointed in this way.

It is claimed that this joint is cheap, effective, and easily made, and adds nothing to the weight of the pipe itself, while no skilled labour is required to fix it.

It can also be undone, and the pipes relaid without damaging the parts, thus it is equally good for permanent or temporary works.

MR. JUSTICE KEKEWICH on Saturday made an order, on the petition of T. G. Carpenter and others, for winding up the United Gold Placers, Limited.

THE Nitrate Railways Co., Limited, has declared a dividend at the rate of 7 per cent. per annum, less income tax, on the amounts paid up on the preference shares for the period ending 30th inst., and an interim dividend in respect of the half-year ending 30th inst., at the rate of 1*l.* per ordinary share (being at the rate of 20 per cent. per annum) free of income tax, both payable July 16. The transfer books will be closed from July 1 to 15, both days inclusive."

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (June 17).—No. 10 levels—South driving: As stated in my last, we are now rising in the south end of this level on the lead recently discovered; the lode for length of rise is yielding 1 ton of lead to a fm., and going up on a regular smooth footwall. No. 9 level: In stripping down the lode at No. 1 cross-cut south of shaft we have broken some good mixture stuff, but I fear the lead is too widely scattered for a payable stope. The stope behind the shaft maintains its value of 15 cwt. to a fm., but here we find the lode widening, going south with poor ground in the middle, which makes it more difficult for stoping. New shaft: I have two men stoping the ends of this shaft about No. 4 level, where the lode is producing 1½ tons of blende to a fm. This will pay for stoping, and give us a chance of discovering lead at the same time. No. 8 level: The stope south of No. 2 winze is unchanged. We have a few feet of hard, poor ground to cut through this week before going further with the stope. Surface: Our water supply is low at present, but we still make it keep the wheels going by day and do the dressing. We have to-day sent off a small parcel of lead, which finishes our month.—H. NOTTINGHAM.

DEVON GREAT CONSOLS (June 18).—Monthly report:—Capel Tor Lode, Eastern shaft: During the past month the 112-fm. level west has been driven 2 fms. 3 ft., the lode proving from 1½ to 2 ft. wide, composed of capel and quartz, with a little mundic ore. The 112-fm. level east has been driven 1 fm., the lode proving of the same general character as that in the western direction. These two points of operation are now suspended. Watson's engine shaft: The 172fm.-level west has been driven 3 fms. 5 ft. 6 ins., the lode proving from 2 ft. to 4 ft. wide, composed of capel quartz and fluor, with copper and mundic ores for a short distance, worth 2 tons per fm., and saving work for the remainder of the distance, and occasionally a little tin. The 160-fm. level east has been driven 1 fm. 3 ft. 3 ins., the lode proving of good size, 4 ft. wide, very promising, and yielding 3 tons of copper and mundic ores per fm. The machinery throughout the mines is in good condition and working well.—I. RICHARDS.

DEVON UNITED (June 18).—Willesford's shaft: In the 144-fm. level east the lode is 1 ft. wide, composed of capel and quartz. In the 144-fm. level west, the lode is 1½ ft., lode composed of capel and quartz with a little mundic. The lode in the winze sinking below the 132 fm. level west is 2½ ft. wide, very promising, and yields 4 tons of copper and mundic ore per fm. The lode in the stope in the back of the 132-fm. level west is 2 ft. wide, and worth 2 tons of copper ore per fm.—I. RICHARDS.

DRAKEWALLS (June 18.)—Fair progress in sinking engine shaft during past week. A further depth of 4 ft. has been attained; ground a little easier for exploring. Lode in 160 east is looking more promising, and is producing 4 tons of mundic per fm., and rich stones of tin; good saving work. Nothing new to report in 160 west. In rise back of 160 west lode yields 7 tons of mundic per fm. Stopes back of 160 west and stopes bottom 142 east, 10 tons and 11 tons mundic per fm.; saving tin. No change in 147 east or west of engine shaft. Lode in stope back of 132 west of cross-course 5 tons copper and mundic.

GAWTON (June 18).—The lode in the back of the 95 east is yielding 10 tons of mundic per fm. Stope in the back of the same level west of rise is yielding 11 tons of mundic. The stope in the bottom of the 95 east is yielding 9 tons of mundic per fm. Stope in the back of this level is yielding 11 tons of mundic per fm. In the back of the 95 west of cross-cut the lode is yielding 12 tons of arsenical and sulphur mundic per fm., mixed with good stones of ore. All other bargains are without change.—G. ROWE.

LEADHILLS (June 15).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged with spar and quartz and ore, worth 15 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 20 and 60 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 25 cwt. of ore per fm. The 130-fm. level north of Jeffery's shaft continues in a vein above 4 ft. wide, well mixed with kindly quartz and spots of ore, but scarcely to value. The two stopes above the 130 north of Jeffrey's shaft are worth 20 and 25 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 130 south of Jeffrey's shaft is worth 10 cwt. of ore per fm. The winze below the 115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 115 north of Jeffrey's shaft is worth 35 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein 4 ft. wide, mainly spar, with ore worth 30 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft continues in a vein above 4 ft. wide, charged with kindly quartz, as well as being damp, but without ore. The 70-fm. level south of Wilson's shaft is in a vein 2 ft. wide, and keeps too dried for ore. The two stopes above the 35 south of Flat Rod shaft are worth 50 and 40 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein above 4 ft. wide, showing a nice rib of quartz 8 ins. wide, with dampness, but yet without ore.—T. NEWBIGGING.

PRINCE OF WALES (June 17).—There is no material change to report in the mine since my last. The men at the 180-fm. level, both east and west, and also at the 166 west, are driving for better progress by the side of the lode. In the cross-cut south at the 166 towards the Goodluck lode the ground is of a very mineralised character, and favourable for driving.—J. PROWSE.

ROMAN GRAVELS (June 18).—The 155 north is driven 4½ fms. the lode in present forebreast being 5 ft. wide, composed of good-looking carbonate of lime and lead ore; the containing rock is also of a most favourable character. There are only two divisions of the vein exposed in the drivage at present, viz., the hanging and middle parts, and, although they do not contain sufficient ore to enable us to place a value upon it, the forebreast possesses a more promising appearance to-day than it has done hitherto. In driving the level above (140 north), the forebreast passed through three courses of ore up to a point 50 fms. from shaft, each of which proved far more productive along the sole of the drivage than elsewhere, and the influence is, assuming that they hold down to the 155, that the latter level will lay open very productive ground shortly. The three stopes at work in the 140 north are together producing 4 tons of lead ore and saving stuff for blende to the fm. We have to-day communicated the rise in the 140 south with the winze from the 125, by means of a borer hole.

the last few days in the raise. There is no particular change in either the east or west drifts since writing you last week.—G. MCCORNICK.

EMERALD MINES (OF COLUMBIA) (Apl. 26).—The manager at the mine writes as follows :—We have this week continued the widening of the "Angostura" and of the lowest part of the canal in a length of 43 metres, by a depth of 5 metres and 0.60 centimetres width, which latter work we nearly finished, while the first mentioned part will take at least three weeks more. In the upper part of the canal we shall be finishing next week, taking down ground, of the one side 7 metres deep, by a width of 1.50 metres, making it sound in a length of 120 metres, and then shall be able to follow on with lowering the canal there.

EMMA (May 22).—The following is an extract from the manager's letter. "We shall commence early next month shipping ore and concentrates, and have good hopes and confident expectations of being able at least to pay all expenses for some time to come, if indeed we do not realise a bonanza. The ground looks very promising, and I shall feel much surprised if we do not uncover considerable bodies of ore during the coming summer."

FLAGSTAFF (June 6).—I have the pleasure of again reporting the progress made in the mine during the past week :—Main sixth level : This is now in 140 ft. ; the rock has been very hard, but last night it made a slight change for the better. Will be able to make better headway here from now on. Incline : This is now down 52 ft. ; the ore is still continuing on down, and is fair second-class. It improves all the time as we go down. It is now 2 ft. wide and fully 8 ft. high. There is ore left in the bottom all the way down. I am now only working one shift in this place as the air is not good. I am now putting an incline on the ore above the level, which is now up 25 ft. We are going on an angle which makes it now about 9 ft. above the level of Main Sixth. We have taken out the ore to the height of 6 ft. ; we are leaving ore over head all the way. It is so strong that it seems likely to extend upwards to a good distance, and it is so big in the face that I feel sure it will continue for a considerable distance ahead. It is almost too good for second-class, and not quite good enough for first-class. In places the ore shows silver lead in crystals 3 to 4 ins. wide. I have commenced putting some of it with the first-class already. Seventh level : This is now in 57 ft. ; there is no change in the ground since my last letter to you. Ore mined during the past week, 32 tons. I am glad to see Prof. Vincent again. He arrived here the middle of the week with 15 men, who have been hard at work on the foundations for the new engine house ever since. Prof. Vincent has just gone back to Salt Lake to see after the machinery, and to have some assays made of the ore that I am now working. This week has been very stormy and cold, but in spite of that the Alta tramway has been opened to Wasatch. I am expecting the professor up here again on Monday or Tuesday (June 8 or 9) with 2,000 ore sacks. I shall then begin sacking ore at once for shipment to Sandy.—A. L. SWOPE.

GARFIELD (May 30).—The following work has been done at the mine. Atherton Mine : Drift from the main cross-cut was lengthened 9 ft., making in all 511 ft. We discontinued working in this drift as the ground was very hard, and we had no indications of ore. The winze has been sunk 12 ft., making a depth of 21 ft. Although the ground we have at the bottom of the winze seems good for ore I am sorry to say the seam we commenced to sink on has got smaller. The seam now is 1 in. wide, and carries a trace of silver.

GRAVEL GOLD (OF COLOMBIA) (May 21).—Water : I am unable to report this mail that we are washing, the water was turned on at the San José Quebrada on Mar. 30, and the ditch gave way in several places. These were all repaired by Apl. 23, and then some of the joints of the pipes on the Mondeco side of syphon No. 1 gave way ; this necessitated the upper part of this syphon being relaid. This was completed on May 18, and the water was turned on again, and this time one of the pipes on the Reposo side came unjointed and will not be put in order till to-morrow, May 22, when the water will be again turned on, and I have every hope it will then reach the bulkhead at the top of the Rica Syphon, as the ditch in Mondeco seems fairly secure, but the ground is rather treacherous in places. When once the syphon is full and caulked. I anticipate no trouble, as then the pipes will be always cool, now they are empty and exposed to the sun all day, they naturally expand and contract. The mine pipe is all laid in position, and the monitor mounted, and about 400 ft. of sluice put in, and we have several hundred feet more of sluice ready to put in the next channel, so that when we are cleaning up sluice No. 1 we can run the dirt off into sluice No. 2. I am also having some timber cut and prepared to enable me to put in an undercurrent. The bank that has been chosen to commence operations on is very favourable for making good returns.—W. GRIFFITH.

GYMPIE GREAT EASTERN (Apl. 30).—Fortnightly report : —During the past fortnight the rise on the Orient reef has been put up 14 ft. ; total 141 ft. from where we cut the reef. There is no change in the reef ; the country is good slate and conglomerate. The cross-cut at this level has been extended 7 ft. ; total, 427 ft. from the shaft. The country is about the same as last reported on. The north drive has been extended 8 ft. ; total 80 ft. The reef formation is about 5 ft. between the walls, and is about half crushing stuff, showing fair gold. The south drive has been extended 6 ft. ; total, 56 ft. There is about 2 ft. of crushing stuff, but I have seen no gold in it. We may get it at any time. The stopes above this level going north are all showing a little gold, with an average width of 20 ins. of crushing stuff. The 690-ft. level : The back stopes above these levels north and south are still keeping poor. There will be 10 head of stampers crushing for No. 2 Great Eastern in a few days. The other 15 head will be kept going from the mine in about three or four weeks more, as I expect to break through to the winze that was sunk from the 580-ft. level to the Orient reef in about two or three weeks, then we shall have good air, and be able to get more crushing stuff. For the four weeks ending Apl. 20 there were 400 tons of quartz raised and crushed for a return of 314 ozs. 8 dwts. 18 grs. of smelted gold. Everything about the mine, winding engine and battery is in good working order. There are 53 men employed—46 on the mine and 7 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (May 23).—Phœnix section : No. 1 level has been driven 9 ft. ; the lode continues of the same width as last reported, with a strong band of quartz at foot of fair quality. Tramway level extended 12 ft. ; the lode here has changed into slaty soft stuff, with but little quartz showing ; this is very easy for working and will be pushed on. Winze below No. 2 : I am sorry to say this has had to be stopped, as the contractor is unable to keep the water down. I hope, however, to rig a pump, which will enable him to continue. A stope is still looking well ; width 3 ft., of good quality. B stope : Quartz here is mixed with country rock, but is of fair value. C stope seems improving, and the lode is now about 5 ft. wide. The other stopes continue of same value as last reported, but very little work has been done for want of labour.

(May 26).—Colar section : No. 1 new shaft : 210 ft. south has been driven 23 ft. 6 ins. ; total, 23 ft. 6 ins. We have about 6 ins. or 8 ins. of quartz, worth 2 dwts per ton. The lode between the walls is about 2½ ft. wide. No. 2 new shaft has been sunk 4 ft. 6 ins. ; total, depth, 223 ft. We are apparently getting into much the same kind of ground as that met with in the hand labour drives south of the shaft. We shall, therefore, very shortly be sinking on the underlie. The 210 ft. north has been driven 49 ft., making total distance from shaft, 161 ft. 3 ins. The ground is very favourable for speed, and we are carrying a few strings of quartz with us. The 210 ft. south has been driven 15 ft. ; total, 27 ft. from the point where we re-commenced to drive on this course. The ground is hard and shows no walls. North drive from No. 1 east cross-cut (by hand labour) has been driven 5 ft. 6 ins. ; total, 30 ft. The lode is much mixed up at this point. South drive from No. 1 east cross-cut (by hand labour) has been driven 4 ft. 6 ins. ; total, 32 ft. 6 ins. ; there is scarcely any lode at all here now. Main shaft : The 240 ft. north has been driven 15 ft. ; total, 197 ft. 6 ins. The small vein of quartz that we have followed for a long way has now died out, and we are going to put another drill to cross-cut west from this drift. The 240 ft. east cross-cut has been driven 6 ft., and again temporarily suspended, until we have cross-cut from the north drive. Roache's shaft, 130 ft. east, has been driven 3 ft. ; total, 17 ft. 6 ins. The ground is very hard and massive. New air compressor : I am pleased to say this new machinery is giving us every satisfaction.—A. S. B. OAKLEY.

INDIAN GOLD (May 25).—Koorumber tunnel : 8 ft. driven, making total length 1,074 ft. 3 ins. No 1a side stopes : Stoping done equals 2 ft. 3 ins. ; reef 2 ft. wide, but of good quality. No. 1b side stopes : 2 ft. 8 ins. cleared ; lode 6 ft. wide, of fair milling character. No. 1c : 10 tons excavated ; ground similar to the above. No. 1d : 5 ft. 3 ins. stoped ; lode 5 ft. wide. Near Old Koorumber workings ; ground of good quality. No. 3a : 3 ft. 6 ins. stoped ; reef thin and probably pinching out as we are nearing surface at that point. 3b side stopes : 3 ft. 6 ins. cleared ; width of reef, 3 ft. of millable quality. No. 10 stope : Ground stoped, 6 ft. 3 ins. ; lode 5 ft. wide ; has improved. No. 11 and 12 stopes : 12 ft. 6 ins. stoped : lode 5 ft. 6 ins. wide. New ground, of a promising character. Understopes 1, 2, 5, and 6 : 26 ft. 6 ins. stoped ; lode 6 ft. wide, and of remarkable pyritic richness. Pillars : About 40 tons of good ore cleared from pillars. Davey's tunnel : 3 ft. driven ; total length, 306 ft. 6 ins. Passing through ground of more than average quality. No. 11 north : Length driven equals 3 ft. ; total from cross-cut, 80 ft. 6 ins. ; keeps very hard, and not looking quite so well as usual. No. 11 south : 6 ft. 6 ins. driven ; total from cross-cut 115 ft. 6 ins. 3 ft. next hanging-wall carries large proportion of pyrites. Milling : About 250 tons put through the mill. Amalgam returns indicate improvement in results.

LOMA (May 19).—The mine superintendent report as follows :— Ditch : I have been over the ground with Mr. Welton, and we have determined to make a slight change in the water line to get the ditch on better ground. After this mail Mr. Welton hopes to take up his quarters on the water line. Mine : We have had very great trouble with the old ditches, but manage to keep moving a fair amount of ground. I cleaned up (without cleaning down) five boxes of sluice which gave 31 ozs. of dry amalgam. This will be forwarded with next result from sluice, at present to clean down would only mean a loss of time and water. Jimenez reservoir : Work on this and the dam has progressed well, we hope to be able to finish about June 8.—H. J. PRENDER.

MONTE DEL ORO (June 9).—Fortnightly report :—Taylor's engine shaft : The total depth of this shaft on the underlie, below the 244-ft. level, is 86 ft., including the fork. A sollar has been put in, and all preparations completed for starting to drive the next level both north and south ; the lode is very small, and it contains no gold. Shaft No. 6 : Composed of slate and quartz. The lode in the 244-ft. level north of this shaft is 15 ins. wide, and the two samples taken from it assayed respectively nothing and 2 dwts. 14 grs. of gold per ton. To communicate with winze No. 10 a rise has been commenced from the back of this level ; the lode of quartz is about 1 ft. wide, and it yields 3 dwts. 6 grs. of gold per ton. Winze No. 10, below the 186-ft. level north, was sunk another 7 ft., making its present depth 30½ ft., when sinking was suspended, on account of our inability to conteud with the large influx of water ; the lode averages 18 ins. to 2 ft. in width, carrying 10 ins. of quartz, a sample from which gave a result of 1 dwt. 7 grs. of gold per ton on assay. The men from the winze have since been driving the 186-ft. level north, extending it 9 ft., and thus its total length is now 670½ ft. ; the lode is 3 ins. wide, and composed of floocan and soft slate, which carries no gold. Low's engine shaft : With this shaft fair progress was being made until sinking was stopped, on account of the great increase in the quantity of water. Suspension of operations : We have recently experienced an unprecedently large rainfall, and the consequence is such a great influx of water that all operations throughout the mine are suspended, and the water is still rising notwithstanding the engine is being constantly driven at the rate of 10 to 12 strokes per minute.—J. ROBERTS.

MOUNT ZEEHAN.—The manager's report for the week ending May 2 is as follows :—Argent section : The work of erection of pumping and winding plant is going on steadily. The engine foundation will be completed to receive the engines this week should the weather keep fine. The placing in position of pumping engine is progressing, but some delay is caused by the loss of some small parts in the sands while discharging at Trial Harbour. Silver Queen Extended section : No. 1 shaft : West cross-cut has been extended 16 ft. No. 1 lode : North drive has been extended a further distance of 11 ft. ; total, 183 ft. ; lode formation, 6 ft. wide. The character of the lode remains as last described ; the hanging-wall is becoming more vertical and defined. No. 1 lode : South drive has been extended a further distance of 18 ft. ; total, 161 ft. The lode here is widening, and is now 7 ft. wide, carrying ore, of which about 8 tons second-class, 3 tons 5 cwt. first-class have been extracted from this lode. No. 2 lode, air shaft : 3 ft. 6 ins. sunk ; total, 35 ft. 6 ins. As the appearance of this shaft is somewhat improving, I am sinking here to try

for a little more ore. Montana section: West cross-cut, with two men, has been driven 7 ft. 6 ins.; total, 332 ft. 6 ins. The formation passed through is slate. During the week we cut a small lode formation about 16 ins. wide, carrying a little galena, but did not think it sufficiently good to deviate from the course to ascertain its value further at present. No. 2 lode: North drive, with two men, has been extended 12 ft.; total, 60 ft.; the lode here is 4 ft. wide, carrying galena, from which 10 tons second class and 4 cwt. first-class ore have been extracted. No. 3 lode: North drive, with four men, has been extended 12 ft.; total, 64 ft.; the lode here is improving, being 4 ft. wide, but composed only of a soft pug, interspersed with fine particles of galena and pyrites. No. 3 lode: South drive, with two men, has been extended 5 ft.; total, 26 ft.: the lode here is 5 ft. wide, carrying second-class ore and a considerable quantity of quartz on the hanging-wall side; the rest of the lode matter is slate. Back stope north on No. 3 lode: 11 ft. has been driven by four men; total, 22 ft. from rise; this stope ends here, as the ore has given out. 4 tons 2 cwt. of first-class ore have been taken from this stope this week, and about 7 tons second-class. Britannia section: Nort-west adit has been extended a further distance of 3 ft. 6 ins.; total, 126 ft. Formation dark slate, heavily charged with pyrites and particles of fine galena. As per tracing sent, we hope to reach this pyrites lode very soon. First-class ore raised, 7 tons 11 cwt.; first-class ore sent to Trial Harbour, 9 tons 16 cwt.

NAMAQUA.—Abstract of superintendent's report for Apl.:—Tweefontein Mine—73-fm. level: The preparatory work for sinking the shaft deeper being now completed, it is hoped that good progress will be made in reaching the proper depth for another level. The 73-fm. level west: The lode still retains its well-defined wall, near which at times small stones of very rich copper ore are found. The matrix generally is composed of quartz, iron, and country rock, mixed with good quality ore; the latter, however, is not sufficient to value, but an early improvement may be looked for. The 58-fm. level east: The lode in this place is of considerable breadth, mixed with copper ore throughout, but also with iron; worth 3 tons of ore per fm. The 43-fm. level west: At times there is a little copper, but not sufficient to value. As the stope just above continues to yield well, it is hoped the ore at this point will soon be reached. Stopes 58 east: For the time stoping has ceased, and driving has been commenced; worth 4 tons of ore per fm. Stopes 43 east: This stope has yielded some very good stuff during the month, and is worth 12 tons of ore per fm. Stopes 33 west: Here the stope is being extended into virgin ground; it is rather improved in appearance, and it is thought there are indications of the copper ground extending both above and below; the present height is 9 ft., breadth 17 ft.; worth 10 tons of ore per fm. Stopes 33 south of shaft: Some fair quality stuff is being obtained from a vein directly south of the shaft; worth 6 tons of ore per fm. Wheal Julia Mine: In the west driving the ground is chiefly quartz, with occasional spots of ore. In the south level the ground is a little more favourable for exploring. New East Centre: The ground is becoming more compact, and contains a great quantity of iron, with spots of copper ore. The water is troublesome. Output for Mar.: 339 tons of 30½ per cent.

NEW DEVALA-MOYAR (May 25).—Winze No. 1: We have sunk here 3 ft., and some leaders of quartz are coming in on the footwall; total depth, 66 ft.; we shall soon be in a position to open out the 186-ft. level. The 116-ft. level, drive west: This end has been driven 8 ft.; total distance, 183 ft.; there is an alteration in the quality of the rock, but it continues of no value. Main shaft: We have sunk in clay 23 ft., and have 10 ft. to timber. Stopes are all in good order and being fully worked. Battery is running, and everything is working well.—R. B. JOHNSTON.

NEW GOLD HILL (June 1).—I am pleased to report everything working well. Martin shaft: The vein in the bottom is looking very well, and carries a good quantity of gold, about 10 ins. wide, on the footwall, and another stringer, about 3 ins. wide, following along in the middle of the shaft. 435-ft. level: This level measures 334 ft. in length west of Barnhardt shaft, and shows stringers of ore in the end, but they are of little value, although they are well mineralised and look promising. I have stopped this level for the present. 300-ft. level: As I have previously stated, it is our object to connect this level as soon as possible with the winze above, thereby giving air circulation to the end of the level, and proving whether the shoot of ore extends to this depth, and facilitating the getting of the ore in sight in winze and above it, perhaps, to the surface. The winze is down 40 ft. below the 160-ft. level, and is in ore again of a fair quality. The width is distributed over 3 ft., and the ground a little unsettled. Carter's cross-cut: The new work, whereby we hope to strike some good ore about 60 ft. down the Barnhardt shaft, is progressing, and is in 6 ft. We shall put on another set of men to hasten the driving. Some small strings of ore are showing in the face. If we have any extra help when the blower is up we may push forward the 160-ft. level, as the ore in the end of it is of good quality, although the quality is not up to that in the winze. Roanoke and Southern Railroad: The surveying party passed about ¼ mile south of Barnhard shaft to-day, thus cutting through the company's property for over a mile, which, of course, enhances the value of real estate. Ore on hand May 23, 133 tons; ore mined from winze, May 30, 6 tons; ore mined from Martin shaft, 1 ton; total on hand May 30, 140 tons.—R. EAMES, jun.

OOREGUM (May 26).—Fortnightly report of superintendent:—I beg to hand you the mine report for the fortnight ending yesterday: Wallroth's shaft: The 360-ft. level south advanced 13 ft.; total, 23 ft.; lode 2 ft. 6 ins. wide, value 4 ozs. 18 dwts. per ton. The 360-ft. level north advanced 13 ft. 10 ins.; total, 22 ft. 6 ins.; lode 2 ft. wide; value, 7 ozs. 4 dwts. 9 grs. per ton. These ends are now a sufficient distance from shaft to enable us to complete the plat and resume the sinking of the shaft below the 360-ft. levels. The 280-ft. level south advanced 14 ft.; total, 617 ft. 6 ins.; lode 1 ft. 6 ins. wide; value, 10 dwts. 21 grs. per ton. No. 1 winze, bottom 280-ft. level south, sunk 1 ft. 4 ins.; total, 48 ft.; lode 1 ft. 6 ins. wide; value, 4 ozs. 1 dwt. 15 grs. per ton. No. 2 winze, bottom 280-ft. level north, sunk 3 ft. 3 ins.; total, 31 ft.; lode 9 ins. wide; value, 8 dwts. 17 grs. per ton. No. 3 winze, same level, sunk 3 ft.; total, 43 ft. 10 ins.; a vein of quartz in bottom, 3 ins. wide, assaying 12 dwts. per ton. The 215-ft. level north not measured; lode 1 ft. 6 ins. wide; value, 5 ozs. 8 dwts. 21 grs. per ton. The 215-ft. level south advanced 3 ft. 6 ins.; total, 270 ft. 11 ins.; lode pinched. Low's shaft: Sunk 4 ft. 3 ins.; total below 350-ft. level, 13 ft. 7 ins. The 350-ft. level south advanced 15 ft. 3 ins.; total, 139 ft. 2 ins.; lode 1 ft. wide; value, 8 ozs. 2 dwts. per ton. Probyn's shaft: Sunk 5 ft. 6 ins.; total below 450-ft. level, 96 ft.; lode 5 ft. wide, assaying 1 oz. 17 grs. per ton. The 450-ft. level north advanced 7 ft. 3 ins.; total, 49 ft. 3 ins.; lode 4 ft. wide; value, 4 ozs. 7 dwts. 2 grs. per ton. The 450-ft. level south advanced 20 ft. 9 ins.; total, 195 ft. 4 ins.; lode 3 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. Rise in back 450-ft. level south, 9 ft. 1 in. risen; total, 29 ft. 9 ins.; lode 1 ft. wide; value, 4 ozs. 0 dwts. 13 grs. per ton. No. 1 winze, bottom 450-ft. level south, sunk 2 ft.; total, 3 ft. 6 ins.; lode 3 ft. wide; value, 2 ozs. 4 dwts. 8 grs. per ton. No. 2 winze, same level, sunk 2 ft. 9 ins.; total, 4 ft. 3 ins.; lode 3 ft. wide; value, 2 ozs. 5 dwts. 10 grs. per ton. No. 2 winze, bottom 366-ft. level south, sunk 2 ft.; total, 18 ft. 9 ins.; lode 1 ft. 3 ins. wide; value, 10 dwts. 21 grs. per ton. The 300-ft. level south advanced 8 ft. 9 ins.; total, 276 ft. 5 ins.; lode 1 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. We have now fairly well recovered from the effects of cholera. Most of our old hands have returned, and work both underground and at surface is now in a fair state of progress. The mill has been kept supplied with quartz throughout the month, and we anticipate a satisfactory return of gold.

ORITA (May 18).—The following are the details of the operations during the month of Apl.—Branch: I have just cleaned up from branch sluice 400 ozs. of amalgam; value, about $2,500. We have the water now at work on the rim, and running through new sluice in deep cut, where all is well. The improvement is simply due to the change in the gravel from hard to comparatively soft. Channel: Here we have the sluice ahead over 400 ft. from where it was when we were washing regularly in the channel. Without seeing this work it is difficult to understand what has been done, but now we will be able to increase our grade in the deep cut, and by laying about 150 ft. more sluice at a point where it is not so expensive as what we have done, we will be in shape to run for a considerable time in the channel. Fourth opening: We have not turned over much ground here, as we want to get clear of roots and boulders that we may get in more sluice. The gravel looks good, but even here we have a stiff streak of pipeclay to contend with. General work: Since last writing I have carried over the Mondeco pipe, and to-day start jointing same that we may get up a Monitor in upper mine to wash in the channel gravel.—H. J. PRENDER.

OSCAR (June 12).—Since writing last there is no alteration to note in any of our workings. The Government inspector, Mr. Holmsen, has been here, and considers that good progress has been made during the last 12 months with the small staff employed. He requested me to state he had carefully studied the report which I sent to the company last Dec., and considers that the plan proposed to work the property is the correct one. He further stated that the gold would unquestionably be found similar to the silver at the Kongsberg Mines—in shoots, hence the necessity to open our levels faster as well as to have several lodes to operate on.—J. DAW, jun.

PACHUCA (June 1).—West drift: You will see that 2.80 varas have been driven equal to 7 ft. 7 ins. The vein here is 16 ft. wide, and is a strong masterly vein, impregnated with iron pyrites (mundic), and mixed with quartz, yielding, in assay, as follows: selected stones, from 25 to 30 ozs. of silver per ton; average assay of vein, 10 to 12 ozs. It is one of the finest veins I ever saw, and needs only a slight improvement to become a pay-ore vein. I am convinced at 40 yds. deeper there is a fine body of ore, but I expect the vein to improve as we get nearer to its junction with the Santa Inez or Carretera vein, towards which we are driving. East drift: We have driven 5 ft. 1 in. this week, the ground being hard, but now seems to be getting easier, so that I expect to drive more this coming week. At any rate, I am now driving it by day and night, *i.e.*, 24 hours, so as to reach the main vein as soon as possible. The cross branch we are driving on is opening out larger, which leads me to hope for something when we strike the main vein. All the machinery is working well, and work is progressing very satisfactorily. Of course, it is understood that the size of the drifts are 7 ft. high by 4½ ft. wide.—F. W. BAWDEN.

PARKER (June 7).—Manager's report:—On Monday last, in spite of the heavy rains we have been having, which has again somewhat interfered with the hauling, I finished taking up the line of 12-in. pipe, and am pleased to report having made very good progress in relaying the 20-in. pipe of which during the week we laid in and connected 112, two expansion joints, and one reducer, making in all 2,254 ft. laid and connected. I have now to stop for a few days in order to enable the teams to haul in a sufficient number of pipes to allow of my again starting to connect. I shall in the meantime have the pump throughly overhauled, and the boilers closely inspected and repaired where required, as I found when last running a few of the rivet holes blew steam. I shall also again hunt the country over for more teams. The rock in the base of our cut is being got out but slowly, but will I have every reason to hope be finished when we are again ready to hydraulic.

PITTSBURGH CONSOLIDATED.—During May month we have crushed 871 tons of ore. We cleaned up yesterday, and obtained 564.31 ozs. of amalgam. This, with the amalgam from the plates, makes a total for the last fortnight of 1,029.86 ozs. of fairly clean amalgam, or a total for the month of 1,631.79 ozs. For the first fortnight's work we shipped bar of bullion, having assay value here of $3,249.97, and weighing 251.51 ozs. To-day I ship two bars, valued at $5,456.07, and weighing 426.57 ozs., or a total for the month of $8,706.04, and weighing 678.08 ozs. The shaking table is completed. We are to-day expecting up the plates. Yesterday from the boxes outside the mill we secured 8 ozs. of amalgam, which, except for various rough devices would be lost. This, and probably as much again, will I expect be caught in the shaking table, and possibly some float gold, which is now carried away by the rush of water, not to mention escaping mercury. A cablegram has been received:—"Estimated yield 14 days run $5,000."

TESORO (May 11).—The mine superintendent reports as follows:—The ditch has not progressed as fast as I hoped it would, in consequence of shortness of hands, but a considerable quantity of fluming has been put in, and in parts I have had a wall built to serve as the outside bank of the ditch; also the greater part of the rockwork is now complete.

TOLIMA.—Of the advices by mail of June 18, from the mines, the following is an abstract:—Frias, April returns, 8,410*l.* 2s. 6d.; Frias, April cost, 3,390*l.* 11s. 2d.; Frias, April profit, 5,019*l.* 11s. 4d. The underground agent reports 52 fms. 0 ft. 6 ins. of ground expended, of which 44 fms. 4 ft. 8 ins. were productive, leaving 7 fms. 1 ft. 10 ins. of unproductive ground.

(Continued on page 985.)

the last few days in the raise. There is no particular change in either the east or west drifts since writing you last week.—G. MCCORNICK.

EMERALD MINES (OF COLUMBIA) (Apl. 26).—The manager at the mine writes as follows:—We have this week continued the widening of the "Angostura" and of the lowest part of the canal in a length of 43 metres, by a depth of 5 metres and 0.60 centimetres width, which latter work we nearly finished, while the first mentioned part will take at least three weeks more. In the upper part of the canal we shall be finishing next week, taking down ground, of the one side 7 metres deep, by a width of 1.50 metres, making it sound in a length of 120 metres, and then shall be able to follow on with lowering the canal there.

EMMA (May 22).—The following is an extract from the manager's letter. "We shall commence early next month shipping ore and concentrates, and have good hopes and confident expectations of being able at least to pay all expenses for some time to come, if indeed we do not realise a bonanza. The ground looks very promising, and I shall feel much surprised if we do not uncover considerable bodies of ore during the coming summer."

FLAGSTAFF (June 6).—I have the pleasure of again reporting the progress made in the mine during the past week:—Main sixth level: This is now in 140 ft.; the rock has been very hard, but last night it made a slight chauge for the better. Will be able to make better headway here from now on. Incline: This is now down 52 ft.; the ore is still continuing on down, and is fair second-class. It improves all the time as we go down. It is now 2 ft. wide and fully 8 ft. high. There is ore left in the bottom all the way down. I am now only working one shift in this place as the air is not good. I am now putting an incline on the ore above the level, which is now up 25 ft. We are going on an angle which makes it now about 9 ft. above the level of Main Sixth. We have taken out the ore to the height of 6 ft.; we are leaving ore over head all the way. It is so strong that it seems likely to extend upwards to a good distance, and it is so big in the face that I feel sure it will continue for a considerable distance ahead. It is almost too good for second-class, and not quite good enough for first-class. In places the ore shows silver lead in crystals 3 to 4 ins. wide. I have commeuced putting some of it with the first-class already. Seventh level: This is now in 57 ft.; there is no change in the ground since my last letter to you. Ore mined during the past week, 32 tons. I am glad to see Prof. Vincent again. He arrived here the middle of the week with 15 men, who have been hard at work on the foundations for the new engine house ever since. Prof. Vincent has just gone back to Salt Lake to see after the machinery, and to have some assays made of the ore that I am now working. This week has been very stormy and cold, but in spite of that the Alta tramway has been opened to Wasatch. I am expecting the professor up here again on Monday or Tuesday (June 8 or 9) with 2,000 ore sacks. I shall theu begin sacking ore at once for shipment to Sandy.—A. L. SWOPE.

GARFIELD (May 30).—The following work has been done at the mine. Atherton Mine: Drift from the main cross-cut was lengthened 9 ft., making in all 511 ft. We discontinued working in this drift as the ground was very hard, and we had no indications of ore. The winze has been sunk 12 ft., making a depth of 21 ft. Although the ground we have at the bottom of the winze seems good for ore I am sorry to say the seam we commenced to sink on has got smaller. The seam now is 1 in. wide, and carries a trace of silver.

GRAVEL GOLD (OF COLOMBIA) (May 21).—Water: I am unable to report this mail that we are washing, the water was turned on at the San José Quebrada on Mar. 30, and the ditch gave way in several places. These were all repaired by Apl. 23, and then some of the joints of the pipes on the Mondeco side of syphon No. 1 gave way; this necessitated the upper part of this syphon being relaid. This was completed on May 18, and the water was turned on again, and this time one of the pipes on the Reposo side came unjointed and will not be put in order till to-morrow, May 22, when the water will be again turued on, aud I have every hope it will then reach the bulkhead at the top of the Rica Syphon, as the ditch in Mondeco seems fairly secure, but the ground is rather treacherous in places. When once the syphon is full and caulked. I anticipate no trouble, as then the pipes will be always cool, now they are empty and exposed to the sun all day, they naturally expand and contract. The mine pipe is all laid in position, and the monitor mounted, and about 400 ft. of sluice put in, and we have several hundred feet more of sluice ready to put in the next channel, so that when we are cleaning up sluice No. 1 we can run the dirt off into sluice No. 2. I am also having some timber cut and prepared to enable me to put in an undercurrent. The bank that has been chosen to commence operations on is very favourable for making good returns.—W. GRIFFITH.

GYMPIE GREAT EASTERN (Apl. 30).—Fortnightly report:—During the past fortnight the rise on the Orient reef has been put up 14 ft.; total 141 ft. from where we cut the reef. There is no change in the reef; the country is good slate and conglomerate. The cross-cut at this level has been extended 7 ft.; total, 427 ft. from the shaft. The country is about the same as last reported on. The north drive has been extended 8 ft.; total 80 ft. The reef formation is about 5 ft. between the walls, and is about half crushing stuff, showing fair gold. The south drive has been extended 6 ft.; total, 56 ft. There is about 2 ft. of crushing stuff, but I have seen no gold in it. We may get it at any time. The stopes above this level going north are all showing a little gold, with an average width of 20 ins. of crushiug stuff. The 690-ft. level: The back stopes above these levels north and south are still keeping poor. There will be 10 head of stampers crushing for No. 2 Great Eastern in a few days. The other 15 head will be kept going from the mine in about three or four weeks more, as I expect to break through to the winze that was sunk from the 580-ft. level to the Orient reef in about two or three weeks, then we shall have good air, and be able to get more crushing stuff. For the four weeks ending Apl. 20 there were 400 tons of quartz raised and crushed for a return of 314 ozs. 8 dwts. 18 grs. of smelted gold. Everything about the mine, winding engine and battery is in good working order. There are 53 men employed—46 on the mine and 7 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (May 23).—Phœnix section: No. 1 level has been driven 9 ft.; the lode continues of the same width as last reported, with a strong band of quartz at foot of fair quality. Tramway level extended 12 ft.; the lode here has changed into slaty soft stuff, with but little quartz showing; this is very easy for working and will be pushed on. Winze below No. 2: I am sorry to say this has had to be stopped, as the contractor is unable to keep the water down. I hope, however, to rig a pump, which will enable him to continue. A stope is still looking well; width 3 ft., of good quality. B stope: Quartz here is mixed with country rock, but is of fair value. C stope seems improving, and the lode is now about 5 ft. wide. The other stopes continue of same value as last reported, but very little work has been done for want of labour.

(May 26).—Colar section: No. 1 new shaft: 210 ft. south has been driven 23 ft. 6 ins.; total, 23 ft. 6 ins. We have about 6 ins. or 8 ins. of quartz, worth 2 dwts per ton. The lode between the walls is about 2½ ft. wide. No. 2 new shaft has been sunk 4 ft. 6 ins.; total, depth, 223 ft. We are apparently getting into much the same kind of ground as that met with in the hand labour drives south of the shaft. We shall, therefore, very shortly be sinking on the underlie. The 210 ft. north has been driven 49 ft., making total distance from shaft, 161 ft. 3 ins. The ground is very favourable for speed, and we are carrying a few strings of quartz with us. The 210 ft. south has been driven 15 ft.; total, 27 ft. from the point where we re-commenced to drive on this course. The ground is hard and shows no walls. North drive from No. 1 east cross-cut (by hand labour) has been driven 5 ft. 6 ins.; total, 30 ft. The lode is much mixed up at this point. South drive from No. 1 east cross-cut (by hand labour) has been driven 4 ft. 6 ins.; total, 32 ft. 6 ins.; there is scarcely any lode at all here now. Main shaft: The 240 ft. north has been driven 15 ft.; total, 197 ft. 6 ins. The small vein of quartz that we have followed for a long way has now died out, and we are going to put another drill to cross-cut west from this drift. The 240 ft. east cross-cut has been driven 6 ft., and again temporarily suspended, until we have cross-cut from the north drive. Roache's shaft, 130 ft. east, has beeu driven 3 ft.; total, 17 ft. 6 ins. The ground is very hard and massive. New air compressor: I am pleased to say this new machinery is giving us every satisfaction.—A. S. B. OAKLEY.

INDIAN GOLD (May 25).—Koorumber tunnel: 8 ft. driven, making total length 1,074 ft. 3 ins. No 1a side stopes: Stoping done equals 2 ft. 3 ins.; reef 2 ft. wide, but of good quality. No. 1b side stopes: 2 ft. 8 ins. cleared; lode 6 ft. wide, of fair milling character. No. 1c: 10 tons excavated; ground similar to the above. No. 1d: 5 ft. 3 ins. stoped; lode 5 ft. wide. Near Old Koorumber workings; ground of good quality. No. 3a: 3 ft. 6 ins. stoped; reef thin and probably pinching out as we are nearing surface at that point. 3b side stopes: 3 ft. 6 ins. cleared; width of reef, 3 ft. of millable quality. No. 10 stope: Ground stoped, 6 ft. 3 ins.; lode 5 ft. wide; has improved. No. 11 and 12 stopes: 12 ft. 6 ins. stoped: lode 5 ft. 6 ins. wide. New ground, of a promising character. Understopes 1, 2, 5, and 6: 26 ft. 6 ins. stoped; lode 6 ft. wide, and of remarkable pyritic richness. Pillars: About 40 tons of good ore cleared from pillars. Davey's tunnel: 3 ft. driven; total length, 306 ft. 6 ins. Passing through grouud of more than average quality. No. 11 north: Length driven equals 3 ft.; total from cross-cut, 80 ft. 6 ins.; keeps very hard, and not looking quite so well as usual. No. 11 south: 6 ft. 6 ins. driven; total from cross-cut 115 ft. 6 ins. 3 ft. next hanging-wall carries large proportion of pyrites. Milling: About 250 tons put through the mill. Amalgam returns indicate improvement in results.

LOMA (May 19).—The mine superintendent report as follows:—Ditch: I have been over the ground with Mr. Welton, and we have determined to make a slight change in the water line to get the ditch on better ground. After this mail Mr. Welton hopes to take up his quarters on the water line. Mine: We have had very great trouble with the old ditches, but manage to keep moving a fair amount of ground. I cleaned up (without cleaning down) five boxes of sluice which gave 31 ozs. of dry amalgam. This will be forwarded with next result from sluice, at present to clean down would only mean a loss of time and water. Jimenez reservoir: Work on this and the dam has progressed well, we hope to be able to finish about June 8.—H. J. PRENDER.

MONTE DEL ORO (June 9).—Fortnightly report:—Taylor's engine shaft: The total depth of this shaft on the underlie, below the 244-ft. level, is 86 ft., including the fork. A sollar has been put in, and all preparations completed for starting to drive the next level both north and south; the lode is very small, and it contains no gold. Shaft No. 6: Composed of slate and quartz. The lode in the 244-ft. level north of this shaft is 15 ins. wide, and the two samples taken from it assayed respectively nothing and 2 dwts. 14 grs. of gold per ton. To communicate with winze No. 10 a rise has been commenced from the back of this level; the lode of quartz is about 1 ft. wide, and it yields 3 dwts. 6 grs. of gold per ton. Winze No. 10, below the 186-ft. level north, was sunk another 7 ft., making its present depth 30½ ft., when sinking was suspended, on account of our inability to conteud with the large influx of water; the lode averages 18 ins. to 2 ft. in width, carrying 10 ins. of quartz, a sample from which gave a result of 1 dwt. 7 grs. of gold per ton on assay. The men from the winze have since been driving the 186-ft. level north, extending it 9 ft., and thus its total length is now 670½ ft.; the lode is 3 ins. wide, and composed of floocan and soft slate, which carries no gold. Low's engine shaft: With this shaft fair progress was being made until sinkiug was stopped, on account of the great increase in the quantity of water. Suspension of operations: We have recently experienced an unprecedently large rainfall, and the consequence is such a great influx of water that all operations throughout the mine are suspended, and the water is still rising notwithstanding the engine is beiug constantly driven at the rate of 10 to 12 strokes per minute.—J. ROBERTS.

MOUNT ZEEHAN.—The manager's report for the week ending May 2 is as follows:—Argent section: The work of erection of pumping and winding plant is goiug on steadily. The engiue foundation will be completed to receive the engines this week should the weather keep fine. The placing in position of pumping engine is progressing, but some delay is caused by the loss of some small parts in the sands while discharging at Trial Harbour. Silver Queen Extended section: No. 1 shaft: West cross-cut has been extended 16 ft. No. 1 lode: North drive has been extended a further distance of 11 ft.; total, 183 ft.; lode formation, 6 ft. wide. The character of the lode remains as last described; the hanging-wall is becoming more vertical and defined. No. 1 lode: South drive has been extended a further distance of 18 ft.; total, 161 ft. The lode here is widening, and is now 7 ft. wide, carrying ore, of which about 8 tons second-class, 3 tons 5 cwt. first-class have been extracted from this lode. No. 2 lode, air shaft: 3 ft. 6 ins. sunk; total, 35 ft. 6 ins. As the appearance of this shaft is somewhat improving, I am sinking here to try

for a little more ore. Montana section: West cross-cut, with two men, has been driven 7 ft. 6 ins.; total, 332 ft. 6 ins. The formation passed through is slate. During the week we cut a small lode formation about 16 ins. wide, carrying a little galena, but did not think it sufficiently good to deviate from the course to ascertain its value further at present. No. 2 lode: North drive, with two men, has been extended 12 ft.; total, 60 ft.; the lode here is 4 ft. wide, carrying galena, from which 10 tons second class and 4 cwt. first-class ore have been extracted. No. 3 lode: North drive, with four men, has been extended 12 ft.; total, 64 ft.; the lode here is improving, being 4 ft. wide, but composed only of a soft pug, interspersed with fine particles of galena and pyrites. No. 3 lode: South drive, with two men, has been extended 5 ft.: total, 26 ft.: the lode here is 5 ft. wide, carrying second-class ore and a considerable quantity of quartz on the hanging-wall side: the rest of the lode matter is slate. Back stope north on No. 3 lode: 11 ft. has been driven by four men; total, 22 ft. from rise; this stope ends here, as the ore has given out. 4 tons 2 cwt. of first-class ore have been taken from this stope this week, and about 7 tons second-class. Britannia section: Nort-west adit has been extended a further distance of 3 ft. 6 ins.; total, 126 ft. Formation dark slate, heavily charged with pyrites and particles of fine galena. As per tracing sent, we hope to reach this pyrites lode very soon. First-class ore raised, 7 tons 11 cwt.; first-elass ore sent to Trial Harbour, 9 tons 16 cwt.

NAMAQUA.—Abstract of superintendent's report for Apl.:—Twee-fontein Mine—73-fm. level: The preparatory work for sinking the shaft deeper being now completed, it is hoped that good progress will be made in reaching the proper depth for another level. The 73-fm. level west: The lode still retains its well-defined wall, near which at times small stones of very rich copper ore are found. The matrix generally is composed of quartz, iron, and country rock, mixed with good quality ore; the latter, however, is not sufficient to value, but an early improvement may be looked for. The 58-fm. level east: The lode in this place is of considerable breadth, mixed with copper ore throughout, but also with iron; worth 3 tons of ore per fm. The 43-fm. level west: At times there is a little copper, but not sufficient to value. As the stope just above continues to yield well, it is hoped the ore at this point will soon be reached. Stopes 58 east: For the time stoping has ceased, and driving has been commenced; worth 4 tons of ore per fm. Stopes 43 east: This stope has yielded some very good stuff during the month, and is worth 12 tons of ore per fm. Stopes 33 west: Here the stope is being extended into virgin ground; it is rather improved in appearance, and it is thought there are indications of the copper ground extending both above and below; the present height is 9 ft., breadth 17 ft.; worth 10 tons of ore per fm. Stopes 33 south of shaft: Some fair quality stuff is being obtained from a vein directly south of the shaft; worth 6 tons of ore per fm. Wheal Julia Mine: In the west driving the ground is chiefly quartz, with occasional spots of ore. In the south level the ground is a little more favourable for exploring. New East Centre: The ground is becoming more compact, and contains a great quantity of iron, with spots of copper ore. The water is troublesome. Output for Mar.: 339 tons of 30½ per cent.

NEW DEVALA-MOYAR (May 25).—Winze No. 1: We have sunk here 3 ft., and some leaders of quartz are comiug in on the footwall; total depth, 66 ft.; we shall soon be in a position to open out the 186-ft. level. The 116-ft. level, drive west: This end has been driven 8 ft.; total distance, 183 ft.; there is an alteration in the quality of the rock, but it continues of no value. Main shaft: We have sunk in clay 23 ft., and have 10 ft. to timber. Stopes are all in good order and being fully worked. Battery is running, and everything is working well.—R. B. JOHNSTON.

NEW GOLD HILL (June 1).—I am pleased to report everything working well. Martin shaft: The vein in the bottom is looking very well, and carries a good quantity of gold, about 10 ins. wide, on the footwall, and another stringer, about 3 ins. wide, following along in the middle of the shaft. 435-ft. level: This level measures 334 ft. in length west of Barnhardt shaft, and shows stringers of ore in the end, but they are of little value, although they are well mineralised and look promising. I have stopped this level for the present. 300-ft. level: As I have previously stated, it is our object to connect this level as soon as possible with the winze above, thereby giving air circulation to the end of the level, and proving whether the shoot of ore extends to this depth, and facilitating the getting of the ore in sight in winze and above it, perhaps, to the surface. The winze is down 40 ft. below the 160-ft. level, and is in ore again of a fair quality. The width is distributed over 3 ft., and the ground a little unsettled. Carter's cross-cut: The new work, whereby we hope to strike some good ore about 60 ft. down the Barnhardt shaft, is progressing, and is in 6 ft. We shall put on another set of men to hasten the driving. Some small strings of ore are showing in the face. If we have any extra help when the blower is up we may push forward the 160-ft. level, as the ore in the end of it is of good quality, although the quality is not up to that in the winze. Roanoke and Southern Railroad: The surveying party passed about ¼ mile south of Barnhard shaft to-day, thus cutting through the company's property for over a mile, which, of course, enhances the value of real estate. Ore on hand May 23, 133 tons; ore mined from winze, May 30, 6 tons; ore mined from Martin shaft, 1 ton; total on hand May 30, 140 tons.—R. EAMES, jun.

OOREGUM (May 26).—Fortnightly report of superintendent:—I beg to hand you the mine report for the fortnight ending yesterday: Wallroth's shaft: The 360-ft. level south advanced 13 ft.; total, 23 ft.; lode 2 ft. 6 ins. wide, value 4 ozs. 18 dwts. per ton. The 360-ft. level north advanced 13 ft. 10 ins.; total, 22 ft. 6 ins.; lode 2 ft. wide; value, 7 ozs. 4 dwts. 9 grs. per ton. These ends are now a sufficient distance from shaft to enable us to complete the plat and resume the sinking of the shaft below the 360-ft. levels. The 280-ft. level south advanced 14 ft.; total, 617 ft. 6 ins.; lode 1 ft. 6 ins. wide; value, 10 dwts. 21 grs. per ton. No. 1 winze, bottom 280-ft. level south, sunk 1 ft. 4 ins.; total, 48 ft.; lode 1 ft. 6 ins. wide; value, 4 ozs. 1 dwt. 15 grs. per ton. No. 2 winze, bottom 280-ft. level north, sunk 3 ft. 3 ins.; total, 31 ft.; lode 9 ins. wide; value, 8 dwts. 17 grs. per ton. No. 3 winze, same level, sunk 3 ft.; total, 43 ft. 10 ins.; a vein of quartz in bottom, 3 ins. wide, assaying 12 dwts. per ton. The 215-ft. level north not measured; lode 1 ft. 6 ins. wide; value, 5 ozs. 8 dwts. 21 grs. per ton. The 215-ft. level south advanced 3 ft. 6 ins.; total, 270 ft. 11 ins.; lode pinched. Low's shaft: Sunk 4 ft. 3 ins.; total below 350-ft. level, 13 ft. 7 ins. The 350-ft. level south advanced 15 ft. 3 ins.; total, 139 ft. 2 ins.; lode 1 ft. wide; valuc, 8 ozs. 2 dwts. per ton. Probyn's shaft: Sunk 5 ft. 6 ins.; total below 450-ft. level, 96 ft.; lode 5 ft. wide, assaying 1 oz. 17 grs. per ton. The 450-ft. level north advanced 7 ft. 3 ins.; total, 49 ft. 3 ins.; lode 4 ft. wide; value, 4 ozs. 7 dwts. 2 grs. per ton. The 450-ft. level south advanced 20 ft. 9 ins.; total, 195 ft. 4 ins.; lode 3 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. Rise in back 450-ft. level south, 9 ft. 1 in. risen; total, 29 ft. 9 ins.; lode 1 ft. wide; value, 4 ozs. 0 dwts. 13 grs. per ton. No. 1 winze, bottom 450-ft. level south, sunk 2 ft.; total, 3 ft. 6 ins.; lode 3 ft. wide; value, 2 ozs. 4 dwts. 8 grs. per ton. No. 2 winze, same level, sunk 2 ft. 9 ins.; total, 4 ft. 3 ins.; lode 3 ft. wide; value, 2 ozs. 5 dwts. 10 grs. per ton. No. 2 winze, bottom 366-ft. level south, sunk 2 ft.; total, 18 ft. 9 ins.; lode 1 ft. 3 ins. wide; value, 10 dwts. 21 grs. per ton. The 300-ft. level south advanced 8 ft. 9 ins.; total, 276 ft. 5 ins.; lode 1 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. We have now fairly well recovered from the effects of cholera. Most of our old hands have returned, and work both underground and at surface is now in a fair state of progress. The mill has been kept supplied with quartz throughout the month, and we anticipate a satisfactory return of gold.

ORITA (May 18).—The following are the details of the operations during the month of Apl.—Branch: I have just cleaned up from branch sluice 400 ozs. of amalgam; value, about $2,500. We have the water now at work on the rim, and running through new sluice in deep cut, where all is well. The improvement is simply due to the change in the gravel from hard to comparatively soft. Channel: Here we have the sluice ahead over 400 ft. from where it was when we were washing regularly in the channel. Without seeing this work it is difficult to understand what has been done, but now we will be able to increase our grade in the deep cut, and by laying about 150 ft. more sluice at a point where it is not so expensive as what we have done, we will be in shape to run for a considerable time in the channel. Fourth opening: We have not turned over much ground here, as we want to get clear of roots and boulders that we may get in more sluice. The gravel looks good, but even here we have a stiff streak of pipeclay to contend with. General work: Since last writing I have carried over the Mondeco pipe, and to-day start jointing same that we may get up a Monitor in upper mine to wash in the channel gravel.—H. J. PRENDER.

OSCAR (June 12).—Since writing last there is no alteration to note in any of our workings. The Government inspector, Mr. Holmsen, has been here, and considers that good progress has been made during the last 12 months with the small staff employed. He requested me to state he had carefully studied the report which I sent to the company last Dec., and considers that the plan proposed to work the property is the correct one. He further stated that the gold would unquestionably be found similar to the silver at the Kongsberg Mines—in shoots, hence the necessity to open our levels faster as well as to have several lodes to operate on.—J. DAW, jun.

PACHUCA (June 1).—West drift: You will see that 2.80 varas have been driven equal to 7 ft. 7 ins. The vein here is 16 ft. wide, and is a strong masterly vein, impregnated with iron pyrites (mundic), and mixed with quartz, yielding, in assay, as follows: selected stones, from 25 to 30 ozs. of silver per ton; average assay of vein, 10 to 12 ozs. It is one of the finest veins I ever saw, and needs only a slight improvement to become a pay-ore vein. I am convinced at 40 yds. deeper there is a fine body of ore, but I expect the vein to improve as we get nearer to its junction with the Santa Inez or Carretera vein, towards which we are driving. East drift: We have driven 5 ft. 1 in. this week, the ground being hard, but now seems to be getting easier, so that I expect to drive more this coming week. At any rate, I am now driving it by day and night, *i.e.*, 24 hours, so as to reach the main vein as soon as possible. The cross brauch we are driving on is opening out larger, which leads me to hope for something when we strike the main vein. All the machinery is working well, and work is progressing very satisfactorily. Ofcourse, it is understood that the size of the drifts are 7 ft. high by 4½ ft. wide.—F. W. BAWDEN.

PARKER (June 7).—Manager's report:—On Monday last, in spite of the heavy rains we have been having, which has again somewhat interfered with the hauling, I finished taking up the line of 12-in. pipe, and am pleased to report having made very good progress in relaying the 20-in. pipe of which during the week we laid in and connected 112, two expansion joints, and one reducer, making in all 2,254 ft. laid and connected. I have now to stop for a few days in order to enable the teams to haul in a sufficient number of pipes to allow of my again starting to connect. I shall in the meantime have the pump throughly overhauled, and the boilers closely inspected and repaired where required, as I fouud when last running a few of the rivet holes blew steam. I shall also again hunt the country over for more teams. The rock in the base of our cut is being got out but slowly, but will I have every reason to hope be finished when we are again ready to hydraulic.

PITTSBURGH CONSOLIDATED.—During May month we have crushed 871 tons of ore. We cleaued up yesterday, and obtained 564.31 ozs. of amalgam. This, with the amalgam from the plates, makes a total for the last fortnight of 1,029.86 ozs. of fairly clean amalgam, or a total for the month of 1,631.79 ozs. For the first fortnight's work we shipped bar of bullion, having assay value here of $3,249.97, and weighing 251.51 ozs. To-day I ship two bars, valued at $5,456.07, and weighing 426.57 ozs., or a total for the month of $8,706.04, and weighing 678.08 ozs. The shaking table is completed. We are to-day expecting up the plates. Yesterday from the boxes outside the mill we secured 8 ozs. of amalgam, which, except for various rough devices would be lost. This, and probably as much again, will I expect be caught in the shaking table, and possibly some float gold, which is now carried away by the rush of water, not to mention escaping mercury. A cablegram has been received:—"Estimated yield 14 days run $5,000."

TESORO (May 11).—The mine superintendent reports as follows:—The ditch has not progressed as fast as I hoped it would, in consequence of shortness of hands, but a considerable quantity of fluming has been put in, and in parts I have had a wall built to serve as the outside bank of the ditch; also the greater part of the rockwork is now complete.

TOLIMA.—Of the advices by mail of June 18, from the mines, the following is an abstract:—Frias, April returns, 8,410*l.* 2s. 6d.; Frias, April cost, 3,390*l.* 11s. 2d.; Frias, April profit, 5,019*l.* 11s. 4d. The underground agent reports 52 fms. 0 ft. 6 ins. of ground expended, of which 44 fms. 4 ft. 8 ins. were productive, leaving 7 fms. 1 ft. 10 ins. of unproductive ground.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

(LATE LESTER AND HOOK),

Deals in Home, Colonial, Foreign and American Rails for three months forward on deposit of 2 per cent., and guarantees to close before the account specified on the coutract expires.

JAMES HOOK has made it a speciality to fix contangos at a low rate, therefore it is very advantageous to country operators, and it avoids exorbitant amounts appearing when operators desire to continue stocks for better prices.

JAMES HOOK is prepared to deal on the Cover System for current account, and the stock must recede fully 1 per cent. before the amount paid runs off. £50 controls £5,000 Stock, with no further liability. In the event of the Stock being stationary, no contangos are charged for continuing the same to the successive account. I am the only dealer that gives this advantage. Official prices and substantial advice forwarded daily free on application.

JAMES HOOK is prepared to deal in Mining or Miscellaneous Shares for six months forward on deposit of 20 per cent. Instructions will receive immediate attention.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

BANKERS.—THE IMPERIAL BANK.

Telegraphic Address: — "LONGEVOUS, LONDON."

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study. and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, aud subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., coutaining useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

F. G. (Ashford).—We think the shares should be held and more bought to average. The call was expected, and the reasons for it given at the last meeting, of which we will send you a report if you have not seen one. It is, however, as you say, larger than was then stated. We think the prospects of a rise very good, but everything is depressed just now, and that is why we say "average." The management is excellent.

Bonus.—They should be left severely alone. It is a pure "rig."

Tobacconist (A. D.).—We are afraid you will get very little out of it. The price in the paper named is incorrect. In fact, the shares are unsaleable.

H. Wallington.—Sell, and secure the small profit. We do not think they will go to such a high figure again.
Subscriber (Rugby).—If sold now, the buyer will have to pay call.
B. B. Tame.—You are right. It takes a good deal to lift this market. Rather advise you to hold under the circumstances.
Martyr.—There is a peculiar risk attached to this class of shares. Nos. 4, 5, and 7 are a fairly good selection.
Ludgate.—Do not look for an improvement in those you mention for some time.
W. A. D.—Hold 1, 2, and 3, but sell others.
Spread Eagle.—You are entitled to the dividend just declared.
Dullard.—Will prove a bad speculation in our opinion.
Blackamoor.—Yes. They are of good standing as far as we can gather.
Vexatious.—The re-construction was expected by the majority of the shareholders, as it was well known that the company had no funds.
American Reader.—Rather recommend a purchase to average.
C. B.—The call, it was certainly said, would be 1s.
Busybody.—Our idea is that they have seen their lowest, and should be purchased for a rise.
Sylvia.—The amount of the call was rather unexpected, but no doubt good use will be made of it. The management is highly respectable and experienced.
J. Willinson (Windsor).—Take advantage of any rise that occurs. They are purely speculative.
Uncertain Holder.—Yes. Join the re-construction.
Dissatisfied.—The prospects are good, and the shares in our opinion form a first-rate lock-up. In ordinary times the news just published would have improved the price considerably.
G. A. Tuthill.—It has been a loadstone to the company, and until it is removed there is very little hope for the shareholders.
Londoner.—You should hold, seeing that by selling you would get very little return. They have a fair chance of recovering.
Percy Clayton.—Hold Almadas, Mysore West, and Emma. Should not advise you to keep the others.

The Mining World.

LONDON: SATURDAY, JUNE 20, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

FURTHER REDUCTION OF THE BANK RATE.

IT was expected that the Bank directors would reduce the rate owing to the wide discrepancy between the official figure and the market quotation, and in view of the substantial position of the reserve, now nearly 20,000,000*l.*, against only a little over 13,000,000*l.* at this date last year, when the rate was advanced to 4 per cent. The directors have now lowered the rate to 3 per cent., or 1 per cent. below that fixed a fortnight ago, but in some quarters a still further reduction is looked for. This, however, is not likely, for it must not be forgotten that the reserve is to some extent fictitious, including as it does at least three millions of gold which has been secured to meet the Russian requirements. With the uncertainty of what more may be taken for that quarter, should the exchanges, as at present owing to the low value of money, tend favourably, and the prospect of a heavy autumn drain for America, it is more probable that the directors will endeavour to support the present rate and make it effective. Discount has fallen to $1\frac{3}{4}$ to $\frac{7}{8}$ per cent. for three months' bills, and money has been offering freely at $\frac{1}{2}$ to 1 per cent. The discount houses have lowered their terms for deposits to $1\frac{1}{2}$ and $1\frac{3}{4}$ per cent. for money at call, and notice respectively. The Bank returns shows an increase of 677,000*l.* in the reserve, of which 460,000*l.* was in gold from abroad, but as the liabilities under private deposits have increased 1,300,000*l.*, the proportion remains at 46 per cent.

ETHERIDGE—A SURPRISED COMMITTEE.

THE late committee of the Etheridge Co. are a good deal wiser now than they were a week ago. So are the shareholders. We style it the "late committee," because the funeral obsequies were performed by the shareholders at the meeting on Tuesday last, but there were no hat bands, no black kid gloves, and no tears. The late committee, thus officially interred, are wiser than they were a week ago, because they now realise what they could not understand before—that it is one thing to ask a meeting in an *ad captandum* way to let them enquire into a company's affairs, and quite another thing to request at the sole invocation of their names, the uncontrolled management. The shareholders also are wiser, for they see how imprudent it was to have acted after the manner of a French mob by wholly upsetting existing arrangements without giving sufficient heed to the order of things that was likely to follow. When the committee commenced their sittings they were pretty confident that for a spell at least the direction of Etheridge affairs would pass into their hands. So confident indeed were they of this that they made their arrangements accordingly. These included the appointment of two of their number as directors; and as they were determined that the board should consist of no more than three "for the present," they of course would have the complete control of the company.

A little later on there came the proverbial fly in the ointment pot in the shape of Mr. Campbell, who at the previous meeting was one of the few shareholders who seemed to be able to keep cool, and who certainly foresaw, as well as publicly foretold, the state of chaos into which the company would be thrown by the immediate resignation of the board. As a matter of fact, Etheridge Company has been without a board from the date of the meeting held on May 28th until Tuesday last, and but for the consideration of the gentlemen who were then so unceremoniously treated, the difficulties surrounding the concern would have been greatly increased. Mr. Campbell was not content, however, with making speeches at the May 28 meeting, but set to work to obtain a board more really representative of the majority of the shareholders than the committee—a board composed of gentlemen whose influence would be likely to give such confidence to the shareholders and the public that the fresh capital would be readily subscribed. When the committee began to understand the strength at Mr. Campbell's back a change came o'er the spirit of their dream, and just before the meeting they consented so far to modify their arrangements as to include a director of Mr. Campbell's nomination. The gentleman selected was Mr. Francis G. Lane, a respected member of the Stock Exchange. Those who know Mr. Lane will be the first to admit that a better choice could not have been made. Mr. Lane has great mining experience, is associated with one of the most successful of our home mines (Wheal Grenville), and probably knows more about mining than all the members of the late committee put together. The committee were, however, obstinate on this one point — they would have no more than three members on the board. Hence the position would be this, that if Mr. Lane became a director, he would be practically powerless. Naturally he declined to serve under such circumstances, whereupon a compromise was suggested, namely, that the board should consist of four. This the committee stoutly resisted, for it would destroy their absolute majority, and in the result the shareholders, without any appeal to proxies, of which Mr. Campbell had the enormous majority, elected a board of four, whereupon the two members of the committee, to the apparent satisfaction of the meeting, refused to have anything further to do with the company. Upon this result we congratulate both the late committee and the shareholders. We congratulate the late committee, because the proxies were decidedly against them, and they could not have been called in that case the true representatives of the majority; and we congratulate the shareholders because, with the retirement of the committee, they were able to secure, not only the services of Mr. Lane, Mr. Thorn, and Mr. Tredgold, but practically to assure themselves of those of Messrs. John Taylor and Sons, whose names we need not say will give the greatest confidence to the shareholders and also to the public. With such a board and such managers all concerned know full well that the money now to be raised by an assessment of 1s. per share will be expended by men of mining experience, and that if success be within mortal grasp it will be secured under these happy auspices. It may possibly happen that the troubles of Etheridge may not be over, but at all events the company has a better chance now than it has had at any previous period of its existence. The expected intersection of the reef, spoken of by Mr. Taylor at the May 28 meeting, has taken place, and further news of an important character may any day be looked for.

We cannot close what may be called the old *régime* of Etheridge without a word of acknowledgment to Col. Malleson and the members of the late board. These gentlemen were treated with scant courtesy by the May 28 meeting. As we pointed out a fortnight ago—they were unfortunate, but there was not a single allegation made against them as honourable men, nor was any charge formulated that, according to their lights, they had not done their best to promote the prosperity of the company. The utmost that could be said of them was that they had taken fees for work performed, but it could not be truly alleged that they had neglected their duty. Now, we repeat, these gentlemen were treated with scant courtesy at the former meeting, and they might have retaliated by giving the company a good deal of trouble during the past few weeks in refusing the various appeals for assistance that have had perforce to be made to them. They have done nothing of the kind, but offered every facility for the conduct of the company's business, and aided it by every means in their power. Conduct such as this merits recognition, and so far as we are concerned it shall have it.

"PRIVATE AND CONFIDENTIAL," BUT "SUBJECT TO REVISION."

THE "private and confidential circular" issued by a concern grandiloquently styled "The Associated Merchants' and Mine Owners' Corporation, Limited," we are glad to know is "subject to revision"—very much revision, we should be disposed to say. As a new opera is considerably helped by a good overture, so the framers of the prospectus of this concern think that their effusion will be made more palatable by a few trite sayings of "the stitch in time" and "never too late to mend" style. We are told that "many of our principal families have amassed their wealth from business of this kind," but if they had proceeded on the lines laid down by the directors of this concern, it is probable not wealth, but liabilities they would have amassed. The authors of the prospectus do not tell us the converse of their proposition, that is of the families whose wealth has been taken from them by "business of this kind." They evidently wish that the eyes of the public should be like those of the young recruit, which are fastened upon the general on horse-back, and are wholly oblivious of the slaughtered companion who lies in the ditch. The general statements which interlard the prospectus might have been dispensed with in favour of a detailed description of the nature of the business

that is to be taken over, and that the Corporation proposes to do. The authors of the prospectus tell us that concessions, often acquired by financial houses for "a few hundreds," realise in a short period "many thousands;" but is there not the converse of this proposition also? Evidently our authors are not wanting in the coolness that slaps common sense in the face, for they, in as many words, assert that "the business of the Corporation *must* be a source of considerable profit." We are informed that the business in question has been carried on as a private enterprise under the title of "The Associated Mine Owners' Corporation," and that it has paid 20 per cent. We wish to know upon what capital this has been done, over how long a period these dividends have been paid, and the nature of the property from which they have been derived, which is vaguely styled as of "five times the value of all the capital expended." On these points the prospectus is as dumb as the sheep in the hands of its shearer. It goes on to say that more might have been done had the means been larger "to cope with wealthy houses"—an expression which the imagination of the reader is left to work out, as there is no further explanation. Having proceeded thus far, the authors do not hesitate to hold out dreams of wealth to the investor, before whom are dangled the names of Rothschild, Vanderbilt, Flood, Mackay, and a few of the people who have done well in Cornwall—in fact, the few swallows who by no means make a commercial summer.

The subscribers are bidden to look at these striking examples of amassed wealth, but are not cautioned as to the vast numbers who, in attempting to get rich in haste, have had a leisure of bankruptcy in which to repent. The Corporation is said to have "business under offer" at the present time, which, if carried out, "must result in an immediate profit of 50,000*l*.," but, if this *must be the result*, one in these selfish days is puzzled to know why the Associated Mine Owners' Corporation are so eager to sacrifice it. The prospectus is remarkable for the vague manner in which it deals with the most important points upon which a subscriber would like to have information. What is the business of the Associated Mine Owners' Corporation which is taken over? A slight clue is furnished by the phrase that follows, "including machinery, mines, and other property." Now, what has been the history of the mines to be taken over? What is their position to-day? Until the public get information on these points they should give the Corporation a wide berth. It occurs to us as being not unlikely that if the requisite subscriptions be forthcoming the unfortunate shareholders may find themselves in possession of a few old worked-out mines, with which nobody in Cornwall in his senses would have anything to do. The prospectus is very clumsily drawn, and those who are induced to subscribe their money on the faith of it may be said to be tempting that total loss of their subscriptions which most probably awaits them.

FLAGSTAFF.

THE report we publish this week from Flagstaff Mine shows not merely the progress that is being made with the underground developments, but the steps that are being taken by Professor Vincent, who is again on the spot, to bring to market the ore, of which so much was said at the last meeting. In regard to the progress made, the manager, speaking of the incline, which is now down 52 ft., says that the ore steadily improves. He further says:—

"We are going on an angle which makes it now about 9 ft. above the level of Main Sixth. We have taken out the ore to the height of 6 ft.; we are leaving ore over head all the way. It is so strong that it seems likely to extend upwards to a good distance, and it is so big in the face that I feel sure it will continue for a considerable distance ahead. It is almost too good for second-class, and not quite good enough for first-class."

From the 7th level he had extracted during the week 32 tons. Mr. Swope was glad to see Prof. Vincent again. He brought with him 15 men who have been hard at work on the foundations for the new engine house. The professor then went back to Salt Lake City to get 2,000 ore sacks for the shipment as early as possible of the ore now ready for that purpose, which at the time of the recent meeting, it will be remembered, was valued at 15,000*l*. Since then considerable additions have been made to this property. The weather in the neighbourhood of the mines still continues cold and stormy, but the tramway has been opened for the season. It will be seen amongst our telegrams that the near neighbour of Flagstaff, the Emma, has already made sales, and of both mines we shall be greatly surprised if a good account be not given during the next few months.

THE LISBON-BERLYN PRINTING PRESS.

ALTHOUGH in the six and a-half years of its existence, in one form or another, the Lisbon-Berlyn Co. has been neither a comfort nor a joy to its shareholders, it has been a decidedly good friend to what Mr. Box spoke of as the "printing interest." There are few undertakings of a like character which have spent so much in printing circulars, reports, prospectuses, and share certificates as our old friend Lisbon-Berlyn, and as the multiplication of shares in which it is now engaged may be the means of keeping the concern on its legs for a year or two longer, we do not wish to find fault with it. We could ill spare such a hardy annual as Lisbon-Berlyn, so we say let it go on employing the printing press until its share certificates become as numerous as the leaves on Vallambrosa. Most companies would be content with 750,000 shares; but Mr. Macklin and his colleagues have higher aspirations. They already have charge of a property that is supposed to cover 22,000 acres, but, like Alexander the Great, they sigh for fresh conquests, and the Frankfort property, for which somebody or other was once asked 70,000*l*. or 80,000*l*., having been offered to them for the ridiculously small sum of 14,000*l*., they determined upon acquiring it. And why not? They have simply to set the printing press to work to produce 500,000 more certificates, and the thing is done. The market, instead of having 750,000 gambling counters to play with, will, we suppose, have 1,250,000 at their disposal, and the transfer fees which in the last year—or eighteen months was it?—amounted to 1,281*l*., may in time reach a sufficient sum to pay the 3,000*l*. a year which the directors and the London office and staff cost. If that happy day arrives, the shareholders will doubtless be abundantly satisfied. Of course, this is not mining, and we are not surprised at Mr. Macklin's objection to the reference to the past mining history of the company made by Mr. Thomas Rickard. The Lisbon-Berlyn is anything rather than a mining company, and we are quite of the chairman's opinion that the past history of the concern is not a savoury subject. Its history as a mining undertaking came to an end some time ago. It now exists as a certificate-issuing agency, and we are bound to admit that, in its newer capacity, it has done remarkably well for the directors, the officials, and the printers, if not for the 3,000 people who are foolish enough to have held their shares when they could have cleared out at a profit.

AFFAIRS IN SOUTH AFRICA.

Kimberley, May 4, 1891.

THE WESSELTON MINE AGITATION.

IF any of your readers are under the impression that this newly discovered diamond mine is not likely to have a depressing effect on the De Beers shares they are pretty certain to be undeceived before many weeks are gone. Last week I gave you a description of how the mine has been rushed, and this week I have to report that in the interim a large number of claims have been pegged out, the ground is being worked, and diamonds have been found by the rushers. Mr. Wessels, the owner, has at last taken action, and has summoned the ringleaders, Messrs. J. H. Wilson and Owen Hall, for trespass. The case was commenced in the High Court on Thursday, and, after a long argument, their lordships promised to give judgment to-day, so that I shall be able to give the result before I post this letter. Meantime matters have assumed a serious aspect. It is taken for granted that the Court will grant the interdict sought for, but the next question is how the men can be got off the mine. As is usual in such cases, opinions differ, but there cannot be a doubt that the Government, by pursuing a dilly-dally policy, has committed a grave mistake. They had ample notice from the rushers of their intention to rush, and had the Government taken the bull by the horns and ordered out the mounted police in this district alone, the force would have been amply sufficient, and the rushers would simply have turned tail and gone home, whereas sufficient time has been given for them to obtain not only the active sympathy of a large portion of this community, but of the whole colony, and whilst I write numbers are arriving from all parts of South Africa to join the rushers. The consequence is that the Government has at last taken action, and are massing a large police force at Cookhouse, ready, it is presumed, to come up here by train for the purpose of enforcing the decision of the Court. So much for facts; but as I am writing a rumour is abroad that the order has been countermanded, and the men ordered to return to their respective districts. If this is also a fact, it may conclusively be taken that the authorities are at last convinced that the feeling throughout the colony is so strongly in favour of throwing the mine open to the public, that any attempt to enforce an order of Court would result in a terrible disaster. In any case, there is certain to be an appeal to the Supreme Court in Cape Town, but this takes time, and time is an important factor in this case, and for this reason. The arguments in Court on Thursday revealed three important facts. First, that the Detective Department has received instructions not to grant any permits to the rushers to sell their diamonds; secondly, that the banks refuse to make any advances on them; and thirdly, that the agreement between Mr. Wessels and Mr. Ward has been extended from June 30 to Dec. 31. The effect practically of the first two of these facts is that it will put a stop to the continuation of the work, for the simple reason that not half a dozen out of the hundreds of rushers have sufficient capital to keep on the heavy expense of working for a month, and the last fact has completely taken the public by surprise. It has been anticipated that Mr. Ward's concession expiring on June 30, just when our Parliament is in full swing, an appeal would be made, and the matter settled one way or the other. But the important question remains whether or not the mine will be ultimately thrown open to the public. My opinion is that it will. I can plainly see that the popular feeling is gaining strength every day, and I am supported in this opinion when I see the price of De Beers shares coming down gradually in our market. Whether for good or for evil; whether the diamond industry is to be ruined or not, it would be folly to conceal the fact that the feeling against the

De Beers monopoly is so great, that men of judgment and acumen prognosticate the downfall of this gigantic corporation within the next two or three years. Nor do these men arrive at this very serious and important conclusion without having a tolerably solid platform to walk upon. From time to time I have informed you, until I am afraid my reiteration is becoming tiresome, that there are other diamond mines in this locality yet to be brought to light, and it is beyond all question that this accidental discovery of diamondiferous soil at Wesselton has given an impetus to prospecting which will tell its tale ere many months have passed.

THE JUDGMENT

in the above case was given in the High Court at noon to-day, and no one was surprised to hear that the Court granted au interim interdict, pending an action to be brought in the Supreme Court. On the application of the advocate for the respondents, the Court granted the suspension of execution until the 15th inst., the first day of term, when the appeal is to be heard, and, should judgment be withheld, the execution to be further suspended until judgment is given, on condition that the respondents keep an account of the diamonds won in the meantime. This being the case, the rushers will continue their work until the Supreme Court gives judgment, before which time there is a possibility of an amicable arrangement being effected.

Kimberley, May 18, 1891.

MORE ABOUT THE WESSELTON MINE.

IN my last I informed you that the High Court here had granted an interdict restraining Messrs. Wilson and Hall, the ringleaders of the rushers of this mine, from working their claims. They appealed to the Supreme Court in Cape Town, and the day before yesterday that Court dismissed the appeal with costs. It now remains to be seen what will next be done. If the rushers are united I think there is every probability of a collision of some kind, for it is useless to conceal the fact that they have succeeded in obtaining the sympathy of a powerful section of the colony. This is so much the case that it seems extremely likely that the whole question will merge into one of practical politics. There is a growing feeling of hostility to the great De Beers monopoly, and if the opposition in the House of Assembly takes up the cudgels of the rushers in the approaching session of Parliament the present Ministry will have by no means an easy time of it. It now appears that the Government refuse to throw the mine open, basing their decision on an Act of Parliament introduced some years ago by Mr. Paton, one of the members for this district. This Act restrains the Government from proclaiming a mine a public digging unless with the consent of the owner. The consequences of such an Act were not seen at the time, and it became law without any opposition. Whether Mr. Wessels, the owner, is willing to throw the mine open or not, it is difficult to say, but there seems to be a very general impression that there are important legal difficulties in the way, and if that is the case, the lawyers have plenty of work before them. My own impression is that we are on the eve of a disturbance. The singular feature in the case is that the rushers are still working their claims, finding diamouds, and selling them in defiance of the law.

DIAMONDS AT CHRISTIANA.

And now I have to report the discovery of another diamond mine on the commonage of Christiana, a small village in the Transvaal, and about 90 miles from here, as the crow flies. A few weeks ago, indications of the proximity of diamonds being found, a regular search was instituted, and there are now some 60 or 70 prospectors all at work, and although they have only reached the depth of 5 ft., the finds have been very satisfactory, stones varying from 14 carats, down to small stuff, with intermediate gems of 2, 3, 4, 5, and 7 carats, being quite numerous. They are described as uniformly good in shape and quality, and easily classified. The mine has not yet been surveyed, but a sample of the diamonds found has been forwarded to Pretoria with the object of inducing the Government to appoint a mine inspector, to get the ground proclaimed, and to arrange all other preliminaries. Machinery is being ordered by one or two syndicates that have been formed, and there is altogether a probability of this new discovery making a noise in the world.

THE MAITLAND SILVER MINES.

In a recent letter I sent you some particulars concerning the Maitland Silver Mine, in the neighbourhood of Port Elizabeth. Since then a cablegram has been received by the directors of the company intimating that the galena ore from this mine, sent to Swansea in bulk for treatment, had yielded 67 per cent. of lead and 18 ozs. of silver per ton. Taking into consideration the fact that the ore reported on was taken from a depth of less than 30 ft. from the surface, the result is considered in the highest degree satisfactory. The directors hope for still better results when they strikc the lode at the low level, for which they are now tunnelling at a depth of 200 ft. Taking the value of the native ore at 8*l.* (the price put upon it in England), the profit, when the company is in full working order, should be very handsome, for, looking at the close proximity of the estate to Port Elizabeth, there is practically no expense for transport, and it can be shipped to England at a minimum rate of freight, even if not taken as ballast, so that the only cost to be considered is that of miuing and dressing, which, owing to the natural facilities of the estate, can be carried on most economically. The importance to this colony of this mine turning out a success cannot be overrated.

PETROLEUM.

From time to time several spasmodic attempts have been made to develop the alleged petroleum deposits in this country. A Mr. Seavill, who evidently knows what he is writing about, has recently asserted in the newspapers that the petroleum industry will, at no very distant date, employ thousands of hands in this country. After naming the principal localities at present known, where work is being carried on with more or less energy, he goes on to say that strong petroleum indications have been discovered in over 20 diffcrent places outside of the localities he refers to. It is well known that American oil experts who were recently sent from the United States to report on Vetpan (*Anglice*, fat or oil basin), one of these properties, declared the petroleum wealth of the locality to be "untold," and they regretted they had not the power to purchase. Since then a wealthy firm at Johannesburg has purchased a farm, showing strong indications of oil, out and out for 10,000*l.* cash.

LEADHILLS ON A NEW BASIS.

MR. PETER WATSON laid before Leadhills shareholders on Tuesday the result of 12 years' negotiation, correspondence, and unremitting toil. It is no injustice to his colleagues to say that in this matter their chairman has borne the burden and heat of the day. He probably knows every signal post between here and Edinburgh, for the latter has been the city where the negotiations have had to take place. How often Mr. Watson has been to Edinburgh on the company's business it would be difficult to say, but the railway tickets he has taken must have been during all these years a source of considerable income to the lines he has patronised. There is, however, an end to all things—even to Leadhills negotiations—and therefore it was with no ordinary feelings of satisfaction that he was able to lay before the shareholders this week the consummation of his and their wishes. The royalty formerly fixed at the excessive rate of one-ninth has been reduced more than one-half, and a new lease, with altogether better working arrangements for the company has been secured for a period of 36 years. The irritation caused by the constant complaiuts of land damaged by the smelting works has been practically removed, for the company has a right to claim under the rental the farms alleged to be affected by the fumes of the furnaces. Leadhills Company, therefore, is from henceforth on quite a different basis from what it has hitherto been, and we cannot but regard its position as much more satisfactory than under the old *régime*. On this result we think that both lessors and lessees are to be congratulated. The latter will have a greater inducement to develope the property, as Mr. Watson says, "vigorously," than heretofore, and this being so, the profits to be shared, as provided under the conditions of the lease, are likely to be greater. It may be useful, however, to recall what Leadhills has done for its shareholders in the past, though proportionately it has done still more for its landlords. The company was formed in the autumn of 1876, with a capital of 120,000*l.*, in 20,000 of 6*l.* each. The dividends paid since then have been as follows :—

	Dividends	Average price of Lead. £ s. d.
1876-7 ...	12s. per share	—
1877-8 ...	3s. „ „	—
1878-9 ...	nil	—
1879-80 ...	nil	—
1880-1 ...	nil	—
1881-2 ...	3s. per share	14 12 5
1882-3 ...	7s. 6d. „ „	13 14 6
1883-4 ...	3s. 6d. „ „	12 3 5
1884-5 ...	1s. 6d. „ „	10 12 10
1885-6 ...	3s. 6d. „ „	12 1 9
1886-7 ...	5s. 0d. „ „	12 19 0
1887-8 ...	3s. 6d. „ „	13 7 9
1888-9 ...	3s. 6d. „ „	13 3 3
1889-90 ...	3s. 6d. „ „	13 2 6

The failure of dividends during the three years, 1877-8, 1878-9, 1879-80, was due to the extremely low price of the metal, and to the large outlay on permanent improvements on the mine. The price of the metal at the time the company was formed was 22*l.*, it is now round about 13*l.* Talking of the latter, it would be impossible, within the reasonable space of an article, to allude even by name to the enormous improvements that have been effected in the mines during the tenancy of the company. They take rank as amongst the best equipped mines in this or any other country. As we have pointed out the shareholders will now have greater encouragement to work with energy a property which has paid dividends in the past by no means commensurate either with the capital employed or the outlay that has been made. The dividends work out at the rate of 3s. 10d. per annum, and this on the present price of the shares is a very fair return. A better state of things may be said to have commenced from Tuesday last.

MEXICAN SANTA BARBARA.

After many difficulties and mishaps, this company seems at last to be on the road to success. At the recent meeting held in Liverpool, the chairman, while admitting that the result for 1890 was not satisfactory, was able to announce that the company was now making profits instead of losses. The Pari Mine owned by the company has shown itself capable of producing large profits in the past, and no doubt could do so again. In the year 1886 and for several years previous to this date the mine produced a profit of over 8,000*l*., but for the last three years the yield has been poorer, and losses have been made. It is the opinion of those best able to judge, that the lode is entering a new zone of productiveness, and should this be the case there is every reason to believe that the company will return large dividends to its shareholders.

THE MONEY MARKET.

City, Friday Evening.

To say that business has vanished from the Stock Exchange is absolutely no exaggeration of language. It is unfortunately the case, and the entire week has been a dreary blank. There is no public to support the markets, and "jobbers" are overloaded with stock, so that were money to fall to almost nothing there can be no amelioration unless the position becomes less congested and stock more widely distributed. Optimism is not lacking in adducing facts showing that conditions abroad are improving, but there the record ends, and on the faintest recovery realisations are attempted. Consols and the very best investment securities have shown life, but only India and Colonial Inscribed, Bank Stock, and perhaps Liverpool, Corporation Three-and-a-Half per Cent. have appreciated. Foreign Bonds, on the whole, are maintained, but Portuguese have fallen, on rumours of a revolution, which counteracted a hopeful Budget statement. Spanish yesterday were freely sold also, because their Internal Coupons are payable by draft at 30 days, and Argentine Securities are weaker, owing to fears that the *moratorium* may further disorganise trade in the Plate. In English Railways, adverse dividend estimates and disappointing traffics have completely upset prices, which, too, were affected by the rejection of the Sheffield Extension Bill, a censorious report from the Board of Trade regarding the Brighton system, and a proposed new issue of capital by the Caledonian. United States Railroads are flatter, in sympathy with Wall Street, but Canadian Pacific shares were throughout exceptionally good, partially because the Dominion Government has agreed to take $1,000,000 of debentures to facilitate improvements between Montreal and Quebec. Mexican Railways also rose on repurchases, while Lombards fell. Guinness's Brewery stock gave way, likewise Salt Union and Trusts, but Suez Canal and sundry Buenos Ayres industrial properties advanced.

The Bank of England to-day received 40,000*l*. in gold, chiefly from Lisbon. Money continues a "drug" at ½, ¾ per cent. for loans on call, while the discount rate is weaker at 1¾ per cent. for three months' bills. In every respect, therefore, the market is literally dead. Bar silver showed remarkable firmness, for the quotation has advanced ⅜d. to 45d. per oz. This is partly due, no doubt, to extensive bill sales by the India Council, but the root of the sudden expansion is American manipulation.

Business at the Stock Exchange to-day has been more active than of late, and prices have ruled firm, particularly for "silver" securities, owing to the further advance in the price of the metal in America. Rupee paper has been very firm, closing nearly ¾ higher, and Mexican Railway Stocks ½ per cent. Foreign Government Bonds were weak in sympathy with the Continental Bourses, but the fall was not at all serious, excluding Greek which fell ½ to 1 per cent. South American issues dropped about ¼, but Uruguay and Venezuela Bonds, as much as 1 to 1¼. The premium on gold at Buenos Ayres is cabled at 256. Portuguese, after being 46¾, closed at 46¼, or exceptionally ½ higher on balance. The railway markets were good in tone, but with rather unimportant advances apart from ¾ in Caledonian, 1¼ in Brighton "A," and 1 in Denver Preferred, and the movement in Mexican recorded above. The only features of importance in the Miscellaneous departments were the flatness of Eastmans Meat and Hudson's Bay Company's shares. Bell's Asbestos and Salt Union, however, closed at an advance.

Annexed are the final quotations to-day:—Consols Account, 95¼, 95⅜; Egyptian Preference, 91¾, 92¼; Egyptian Unified, 96⅛, 96⅜; French Four-and-a-Half per Cents., 103¾, 104¼; Hungarian, 91⅜, 91⅝; Italian, 92¾, 93; Mexican, 31¾, 32¼; Peru Corporation, 9¼, 9¾; Peru Preferred, 24¼, 24¾; Russian, 1889, 98½, 99; Portuguese, 46⅛, 46⅜; Spanish, 73⅛, 73⅜; Turkish, 1871, 95¼, 95¾; Turkish Defence, 93¼, 93¾; Caledonian Railway, 115½, 115¾; Great Eastern, 93½, 93¾; Great Western, 156¾, 157; Brighton "A," 140⅛, 140⅜; North Western, 170½, 170¾; Metropolitan, 81¼, 81¾; Metropolitan District, 29½, 30; Midland, 152⅜, 153; North British, 40, 40½; North Eastern, 155¼, 155½; South Eastern "A," 86½, 86¾; Mexican Ordinary, 39⅜, 39⅝; Grand Trunk, 8⅝, 8¾; Grand Trunk First Preference, 59¼, 59⅜; Grand Trunk Second, 39⅛, 39⅜; Grand Trunk Third, 21⅞, 22⅛; Canadian Pacific, 81¾, 82; Denver Preferred, 52, 52½; Erie, 20¼, 20½; Milwaukee 66½, 66¾; Lake Shore, 112¾, 113¼; Louisville, 75, 75¼; Atlantic First, 32¼, 32½; Ontario, 16⅝, 16⅞; Ohio, 18¾, 19¼; Norfolk and Western, 53⅝, 53⅞; Reading, 16, 16¼; Reading Five per Cent. Bonds, 54, 55; Union Pacific, 46⅛, 46⅜; Wabash Preference, 24, 24¼; Ottoman Bank, 13¼, 13⅜; Anglo-Telegraph, 46¼, 46½; National Telephone, 4¾, 5; Hudson's Bay, 15½, 16; Suez Canal, 110¼, 110¾; Guinness, 324, 326; Allsopp's Ordinary, 29, 31; Bryant and May, 13⅞, 14⅛; Eastmans, 6⅛, 6⅜; Bell's Asbestos, 9⅝, 10⅛.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the Mining World and Engineering Record.

WEST ARGENTINE.

Sir,—In your issue of May 16 you quote me as having said to Mr. Jennings that Silver Ledge was "one of the finest prospects in the district," and I saw no reason why it should not turn out equal to Yankee Girl. That portion of the statement in quotation marks is all right; the other is not. I saw the Yankee Girl when it was discovered in 1882, and it had 12 ft. of solid pay ore on the surface, and to compare Silver Ledge with it is utter nonsense. I saw Silver Ledge seven months ago, and it was then a good prospect, and nothing more; but it is not in the same field as the Yankee Girl at the same stage of development, and I do not believe it ever will be.—I am, &c.,

W. Weston, M.E.

Denver, Colo., May 29.

BLUE SPUR AND GABRIEL'S GULLY MEETING.

Sir,—I shall be much obliged if you will allow me, through your columns, to supply an omission in the few words I addressed to the general meeting of the shareholders of the Blue Spur and Gabriel's Gully Consolidated Gold Co., Limited, on the 11th inst., an omission due to my suffering at the time from violent toothache which made it difficult for me to think or speak.

I ought to have drawn special attention to the ability which the chairman of the company, Sir Walter Buller, K.C.M.G., had displayed in the conduct of his negotiations with the two banks in New Zealaud which held mortgages over a great part of the company's property. But for the agreement of Dec. 20, 1890, with the banks the company must have been wound up, and shareholders would have got nothing for their money. Their thanks are, therefore, due to Sir Walter Buller for his exertions which were continued during several months.

The company's manager at the mine, Mr. Howard Jackson, has also deserved well of the shareholders for the manner in which he carried on work for several months under the most discouraging circumstances. Now that he can act more freely and has money for developing the mine, the shareholders are beginning to reap the fruits of his previous perseverance.—I am, &c.,

J. Stokes.

The Blue Spur and Gabriel's Gully Consolidated Gold Co., Limited.

June, 1891.

CHEAP SHARES.

Sir,—Referring to a letter in your paper last week, "O. B.," I endorse the writer's remarks, and also the remarks of the editor from time to time as to the substantial value of both Custer and Emma properties. The bears are working every manœuvre to depress and buy in the shares. Take Custers for instance: the rumour of a call was most unreasonable. There is, at the present, about 5,000*l*. in hand from the last call, and with the prospect of excellent returns, a dividend may be calculated on. No extra machinery will be required; there is a splendid 30-stamp mill, capable of crushing 1,400 to 1,600 tons per month, with plenty of good ore out for crushing, and the directors are very sanguine of the prospects. There is a party that has secured 140,000 shares, who say that they have nailed them to the mast for 15s., but it is confidently expected they will go to *par* this summer. If the public wish to recoup losses, I say, buy Custers.

Emma shares are also unduly under bear influences. No call will be made, and the prospects are most excellent. I hear they are to go up considerably very shortly (see last report). Emma has more substantial prospects at the present moment than it has ever had. I notice shareholders have been repeatedly cautioned in your paper not to sell or sacrifice their shares at anything like 2s. 6d. or 3s., at which they have been vacillating for some time, and they are well advised not to do so.—I am, &c.,

A. H.

YANKEE GIRL SILVER MINES, LIMITED.

OUTPUT FOR FIRST HALF OF JUNE MONTH.

The mine superintendent cables to the following effect:—"Ore shipped, 610 tons. Estimated value, 12,390*l*."—B. McNeill, Secretary.

THE NEW GUSTON CO., LIMITED.

OUTPUT FOR FIRST HALF OF JUNE MONTH.

The mine superintendent cables to the following effect:—"Ore shipped, 580 tons. Estimated value, 8,260*l*."—B. McNeill, Secretary.

THE AMERICAN BELLE.

The following cable information is from Mr. Harvey who took charge of the mines on May 28: "Just returned from Denver, purchasing cage and cars for Silver Belle; shipped during May ore value $11,300; output of mines limited while sinking shaft. Am putting in new cage as soon as possible. There is good ore in the stopes, mines looking very well."

THE MYSORE REEFS CO., LIMITED.

FURTHER CAPITAL BEING REQUIRED, A RE-CONSTRUCTION SCHEME IS PROPOSED, WHICH WILL PROVIDE 33,750*l*.—FAVOURABLE REPORT BY CAPT. GILBERT.

THE report of the directors to be presented to a meeting of shareholders next Thursday foreshadows a re-construction scheme, which there is not the slightest doubt will be carried. It is not at such a stage as this that the shareholders will dream of abandoning a property with so good an outlook. The directors say that though the work accomplished is satisfactory, and the expenditure moderate, the results are, so far, disappointing. "The lode is large and auriferous throughout; in places it is payable, but, unfortunately, the average grade of the ore in bulk has been too low to admit of profitable treatment." During the year 2,442 tons of quartz were crushed, yielding 409 ozs. 4 dwts. of bar gold, showing an average yield of 3 dwts. 8 grs. to the ton. The quartz unexpectedly became poorer below the 320-ft. level, and although a large quantity, estimated at from 40,000 to 50,000 tons, has been laid open, it will not at present pay the costs of extraction and milling. The hope of the directors now is, that at a deeper point the value of the quartz may be found to improve, and Capt. Scantlebury is sanguine that this may be the case. With the view of obtaining the opinion and advice of an independent and thoroughly competent authority, Messrs. John Taylor and Sons recently instructed Capt. Gilbert, the manager of the Mysore Gold Mine, to inspect and report upon the property. Capt. Gilbert takes a favourable view of the prospects of the euterprise. He is of opinion that Harvey's engine shaft, which has now reached a depth of 510 ft., is not being sunk on the main part of the lode. He thinks that the main, and probably the richer part of the lode, is standing to the west of the shaft, and that this should be proved by cross-cutting in that direction. He estimates that from the bottom of the shaft the main part of the lode may be found at a distance of about 65 ft. Probably, therefore, for some time past the shaft has been sunk on the poorer part of the lode, and it is not unlikely that this may be the explanation of the falling off in value below the 320-ft. level. Capt. Gilbert also points out that the character of the ground in the bottom of the shaft is changing, and that there are favourable indications that the rock is becoming more congenial for the production of gold. It is the intention of the board to act upon Capt. Gilbert's suggestions and carry out the work which he recommends. The company's ground is in a direct liue with the properties of the Mysore, Ooregum and Nundydroog Companies, and these concerns passed through many vicissitudes before they attained the great success they have achieved, and of which their shareholders are now reaping the benefits. The capital of the company is unfortuuately almost exhausted, and it is proposed to raise a sum of 33,750*l*. by a re-construction scheme which will assess the existing 135,000 shares in 5s. each, payable by easy instalments.

THE CAPE COPPER CO., LIMITED.

DIRECTORS RESOLVE TO HUSBAND THE RESOURCES OF THE MINE.

(June 18).—The directors have decided not to declare the usual quarterly interim dividend, and they instruct me to state that the causes which have led to their decision are as follows:—Owing to errors in the assays received from the mines, the ores raised during the past year have not, on arrival at market, proved so rich in copper as those assays indicated, the effect being that there has not been produced so large a margin over the amount of dividends as is desirable. The directors therefore consider that it is necessary to retain the profit in hand, and they have been the more led to this decision by the altered conditions of the money market, which render it advisable that the company should strengthen its position by retaining in hand a fair amount of profit to supplement its working capital. The directors are glad to be able to point out that ore has lately been found in the 105 and 117-fm. levels in the Ookiep Mine, the endeavours to discover which at those depths had for a considerable period been unavailing. In addition to this a considerable improvement has lately taken place in the copper market, which bids fair to continue.—J. C. LEAVER, Secretary.

COLORADO BOY SILVER MINES, LIMITED.

T. E. SCHWARZ, Esq., mining engineer, who was superintendent of the Yankee Girl Mine, 1884-1889, and of the Guston Mine, 1888-1890, and who is now manager of the Genesse-Vanderbilt Mining Co. (Red Mountain), and of other important companies, has reported on the Colorado Boy property by letter dated 6th inst., as follows:—The location of the property is excellent, being in the trend of the best and most productive portion of the Red Mountain ore belt. Its surface indications of ore bearing chimnies are strong and similar to those occurring on the Yankee Girl, Guston, and other producing mines. Two well-defined chimnies outcrop on the property. The surface development on these having already shown mineral of good grade at a less depth than is usual in Red Mountain. I regard the opening of large and productive ore bodies with increased depth as well assured.

FOREIGN MINING INTELLIGENCE.

(*Continued from page* 977.)

YURUARI.—The secretary advises receipt of the mid-monthly mail from the mines dated Chile, May 29. In it Mr. Pryor states that the lode in the No. 5 level west could not bear a better appearance as to quality and formation, but a sample quantity of quartz assayed showed less than ½ oz. to the ton. I am vigorously prosecuting development operations and extendiug levels, but judging from the appearance of the lode in the differeut levels the quartz does not appear to be rich. (Note.—This does not apply to Cenicero No. 9, as Mr. Pryor's report, with reference to this lode, was to the effect that the quartz was of good quality, showing visible gold, but that instructions having been received to suspend operations owing to the great expense of haulage and raising by the Cenicero shaft, crushing was suspended until the connection had been established with the Water shaft so that the quartz could be trammed and raised by that shaft, which would mean not more than one-half of the working costs.) I am well satisfied, however, with the even look of the walls in the Water shaft, but have been checked for the time by a rapid flow of water. This I am arranging to dispose of without much expense. I have yet 86 ft. to drive to connect No. 6 level east, Water shaft, with No. 9 Cenicero. I am sure that I am on the right track, and continue of the opinion that satisfactory results will follow at an early date. The directors, feeling disappointed at the delay in starting the mill, telegraphed about a fortnight ago for fuller information. They think it fair to Mr. Pryor, however, to point out that operations are being conducted with every regard to economy, and that the expenses now are on a lower scale than they have ever been. From another source the directors have received the following information:—Two pay shoots are to be found in this mine, called the Potosi and Chile, running east by west, at an angle of about 40 degs. It was estimated by those with the most competent knowledge of the mines that a shoot would be struck in the Water shaft at a depth of about 70 ft. further sinking, and the lode was found at this point. The No. 9 level, Cenicero, was the mine of the property, having given results varying from 1½ to 2 ozs. per ton, about 18,000 to 20,000 tons having been raised, and milled from this level. Undoubtedly when the connection is formed between No. 6, Water shaft, and this level, the same results should be obtained; in fact, every miner knows that when a lode goes down, as has been proved in this level, it ought to increase rather than diminish in richness. While shareholders may be desirous that some results should now be coming forward, the policy of thoroughly opening up the mine, and establishing ample reserves, is a sound one, and everyone here is convinced that Chile will justify its past character, and that the virgin ground being opened up in the Water shaft will prove as rich as that to the eastward, and establish the reputation of Chile, as the richest mine in the neighbourhood. The secretary adds that the mines are free from debt, and when the last call is fully paid, ample reserve capital will remain till returns come to hand.

SAN SALVADOR SPANISH IRON ORE CO., LIMITED.

CONDENSED FROM THE "EL ATLANTICO" OF SANTANDER, JUNE 7, 1891.

"THIS matter had almost been forgotten by us, when we received, a few days ago, an invitation from our particular friend, Don Modesto Pineiro, on behalf of Mr. Kensington, the engineer of the company, requesting us to be present yesterday, Saturday, in order to witness the working of the chain railway constructed for the conveyance of the mineral, as well as the ore washing machinery by the side of San Salvador haven. The shareholders and other gentlemen invited numbered about 70, and left Santander at two o'clock in the afternoon by the steamer Corconera, which went as far as Astillero, and from there they proceeded on foot to the washing machinery. (Amongst the invited were the Civil Governor of the Province of Santander, the Alcalde, the Chief of Public Works, the Controller of Ports, the Director-General of Customs, and other important officials). At about 3.30, the three enormous cylinders and the double vertical pump commenced working, raising the water to a height of about 12 metres by means of two drawing tubes of 25 centimetres in diameter, the water falling on the mineral, cleaning it of all earth and foreign bodies, and causing the cleaned iron ore ultimately to slide into the waggons placed beneath, on the line of tram leading to the wharf. The whole of this enormous and powerful mechanism is set into action by a steam engine of 185 h.-p. We were informed that the three great trommels, or ore washers, would clean 360 tons of iron ore per day. This result has been obtained by the company's engineer, Mr. Frederick Kensington, by means of this special system of washing cylinders invented by himself. The endless chain railway, which conveys the mineral from the miues to the washing machinery, was set in motion, conveying a continuous line of waggons full of mineral to the washing trommels, and bringing them back empty over the incline to be refilled at the mines. This railway measures altogether about 4,130 metres in length, and crosses the top of the Cabargo mountain at an elevatiou of about 1,050 English ft. above the sea level, employing for this ascent an auxiliary steam engine of 80 h.-p. The total length of the endless chain is a little over 8,000 metres. The visit was altogether most satisfactory, and after a thorough inspection of everythi g in all its details the visitors partook of lunch in one of the buildings, when, amidst general applause, speeches were made, in which great success was very confidently predicted for the company, and the engineer and managers were heartily complimented upon the excellent result of their labours. Altogether the company seems to be starting under the most favourable indications, which we hope to see fully realised."

REPORTS OF MEETINGS.

THE LEADHILLS SILVER-LEAD MINING AND SMELTING CO., LIMITED.

NEW LEASE OF 36 YEARS ADJUSTED AFTER YEARS OF NEGOTIATIONS AND ENORMOUS CORRESPONDENCE.

THE twenty-eighth ordinary meeting was held at the Offices, No. 30, Finsbury Circus, on Tuesday.

Mr. Peter Watson, M.C.C.

(chairman of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice of meeting.

PROPERTY IMPROVED.

The CHAIRMAN: You are aware, gentlemen, that at this half-yearly meeting we have not presented any statement of accounts, because we make them up annually to June 30, and we shall have a meeting as usual about Sept., when the balance-sheet will be submitted to you for your approval, or otherwise. I have not a very great deal to say to-day because this report by Mr. Newbigging explains to you the various operations going on underground at the present time, but more particularly does he refer to the expenditure (which I must tell you has been very considerable) upon the pipes for the bringing in of a larger quantity of water, and giving us greater power. This, I think, was alluded to at the last meeting, and also at the meeting before, but that has been all accomplished for the benefit of the company, and, I hope, to the satisfaction of Lord Hopetoun's representatives. You are aware that according to that agreement, which I read to you last half-year, we were to put up condensing power at our smelting works. We resolved not to put up an ordinary condenser, but that it should be a double condenser, and I may tell you that, notwithstanding the strike on the Caledonian and North British Railways, which caused difficulty in the delivery of the material on the spot, we, by dint of perseverance, accomplished the work according to agreement by Mar. 31. It was set to work on that day, if not, indeed, before. That has cost us a very considerable sum also, but we find it working, as Mr. Newbigging states, splendidly to the benefit of the company, and also to that of Lord Hopetoun. This report gives you all the information which you can desire as to the works that are going on. I do not think it worth my while to tell you anything more, because virtually I cannot do so; but I may say this, that these two great improvements will hereafter benefit your property very considerably. Coming to a more important matter which I desire to bring before you to-day, and which is one I hope will give you, as it does Mr. Glen, and me, and Mr. Southgate, satisfaction, I will tell you what has occurred in connection with the new lease. First of all, I must apologise for the absence of Mr. Southgate, who is unfortunately not well enough to be here to-day. You all know that for the last 12 years we have been asking for a great reduction in the royalties from time to time, and more recently for a new lease. You have passed from time to time various resolutions with respect to these matters, and 12 months ago we referred to an arrangement made for the year's royalties.

THE NEW LEASE.

After that we made arrangements for the remaining term of the lease—seven years—but that was not wanted by the shareholders. What the shareholders required was this—that seeing we only had some six or seven years to run upon the old lease, it was time that we should come to a satisfactory arrangement respecting the new one for a much more extended term. Negotiations have been going on, as you are aware, for some considerable time, and in Aug. last an agreement, between Lord Hopetoun's commissioner, Mr. Thomas Hope, and myself, on behalf of you (the company), was agreed to. That agreement was submitted for your approval, and was unanimously sanctioned by special resolutions. From that time there has been some friction in connection with that agreement with regard to clauses which were added thereto—that is to say, that when we received the draft lease there were certain clauses which, in your interests, we could not agree to. We have paid several visits to Edinburgh in connection with the matter. I have been there personally three times this year, and my friend, Mr. Glen, accompanied me the week before last, and we had a meeting at Mr. James Hope's office with Lord Hopetoun's commissioner, Mr. Thomas Hope, and our own agents, with others, and the matter was thoroughly thrashed out. There were something like 30 clauses to go through, and without going into details, which would take me not a day, but days to report to you—suffice it to say that we have not landed you in the law Courts to have this matter rectified—a result which would have been most suicidal to the interests of all concerned. Mr. Glen and I, acting on your behalf, have met, I may say, in connection with this matter not weekly, but really daily. We have always been of opinion that if we, acting for you, and Mr. Thomas Hope, for his Lordship, could not make a satisfactory arrangement, nobody else could do it. But some of our friends thought that nothing would ever come out of it unless we went into the law Courts. We set our minds against any such policy from the first unless forced so to do. I am not going to deal at any great length with the subject, but will simply tell you we have had most amicable meetings in connection with it—the last one especially so. On that occasion we began at 11 o'clock in the morning and never got up from that discussion and settlement till past seven at night—just eight hours.

NO LUNCHEON.

You may imagine what we had to go through without even making a break for luncheon or anything else. (Laughter.) But we went through it, and I am bound to say that every clause was fully discussed with Mr. Thomas Hope, who acted in a very kindly and considerate spirit, and agreed to visit the mines on several points raised, and since then the lawyers have gone through the draft lease and adjusted all these various clauses. I do rejoice greatly in this result, and if there is any man who ought to rejoice I am he, when I say to you to-day there (holding it up) is the draft lease finally adjusted as between lessors and lessees. (Cheers.) Lord Hopetoun has about three-fourths, and there is another party to consider in connection with it, but we have not the slightest doubt that he will agree to it also. Therefore, I say, gentlemen, that we, as directors, certainly have great cause to be thankful that this matter, which has been in abeyance for so many years, is now in a fair way of being carried out. I hope, therefore, at our meeting in Sept. we shall be able to report the lease and everything in order, for such is our earnest desire. This company has never desired anything but what was fair and just as between the lessors and the lessees. I think there is

NOTHING IN THIS LEASE THAT IS NOT WORKABLE.

There is one matter I may mention, however, with respect to land damage which has been a source of great irritation to this company in years gone by. The directors are determined that it shall be so no longer, and that neither our workpeople, our managers, nor you shall have any irritation of this sort in the future. I would rather take the 25 or 50 acres or even 100 or 500 acres, or 1,000 if necessary, and work the farms for our own benefit than have the sort of trouble in the future we have had in the past. We are bound by the lease to smelt our lead ore and make it merchantable on the spot, and we are the best tenants of Lord Hopetoun in that neighbourhood, and should have the consideration, which is only our due. That, I think, is now fairly adjusted, and if hereafter we find it necessary we shall exercise the option to take certain lands, or farms, of which due notice will be given to you.

Mr. DON: I presume they are merely sheep farms.

The CHAIRMAN: Sheep and grazing farms. There is land where we can grow oats, &c., for our horses if necessary. It is very wild land. We do not really care about the farms so long as we do not have the irritation which we have suffered in the past. I do not think it worth my occupying your time any longer on this subject. I trust the shareholders will appreciate the settlement that has been come to. (Cheers.) I must say

A WORD IN PRAISE OF MR. THOMAS HOPE

in connection with this matter. I believe him really to be a most conscientious man. He has given a great deal of time and trouble to the subject, and is a thorough business man. Of course, as he has been placed in the position of not acting for himself, but for his cousin Lord Hopetoun, he has had a somewhat delicate task, but he has carried it through with tact and justice, and not only to his own satisfaction and the satisfaction of Lord Hopetoun, but to that of the company. He has shown himself most anxious, by his correspondence with me, and in his interviews, to see this matter finally adjusted, and now that it is so, I hope that you will one and all—shareholders present as well as absent—appreciate what has been done. (Cheers.) I have no resolution to move at present, but shall be happy to hear any discussion. (Cheers.)

A SHAREHOLDER: There is one matter to which you did not allude, which is a source of great anxiety—namely, the royalties. Year after year we have been troubled with the large amount of royalty we have had to pay, and I should like to know whether that is going to be considerably reduced.

The CHAIRMAN: This is a draft lease for 36 years. The agreement embodies the payments as to royalties, which are less than half what they were before. The lease dates from Dec. 30, 1890, for 36 years. We ought to have held this meeting earlier, that is about the end of April or the beginning of May, but it was in consequence of these negotiations going on that we have been hoping day by day to be able to call you together, and announce their completion. So soon as my friend (Mr. Glen) and I got the matter finally adjusted we wrote to the secretary to call this meeting.

A SHAREHOLDER EXPRESSES SATISFACTION.

Mr. DON, in moving the re-election of the chairman as a director, said: I am sure we have all heard with great satisfaction the statement just made. It must be satisfactory to all of you, as it was to me, to have this lease settled (for it has been a matter prolonged over many years), and I am sure it could scarcely have been got through without litigation had it not been for the patience of the chairman and Mr. Glen, who are entitled to our best thanks. (Cheers.)

Mr. THOMAS NICOLL ROBERTS: I have great pleasure in seconding that resolution. I daresay there is not another shareholder outside the board who has seen so much of these negotiations and this correspondence as I have. I have been perfectly appalled to think of the torrents of correspondence that have fallen with reference to this matter for so long a time, and the numerous journeys Mr. Watson and Mr. Glen have taken in reference to it. Therefore, it is, I think, we should not only re-elect Mr. Peter Watson unanimously, but that we should also thank him and the board generally for having had such a very keen eye to the interests of the company throughout. I do not think there is any shareholder, be he present or be he absent, who has a notion of the time and the trouble Mr. Watson and these gentlemen have taken in this matter, and, therefore, it is now eminently satisfactory that it has been adjusted amicably, and I am sure in the mutual interests of those lessors and lessees. (Hear, hear.)

The motion was carried unanimously.

The CHAIRMAN, in returning thanks, said: I can only say this, that I do hope during my next term of office I shall not have to work a quarter as hard as I have done in the past, for the reason that I trust it will not be necessary. I can only say, further, that if that work should be necessary, my services are at your disposal. We have now this matter so far adjusted, and, of course, until we get the lease properly signed, I should like to refrain from saying anything more on the subject. I may tell you we did not apply for a new lease for this company without meaning to work the property vigorously, but we have done a great deal of work in the last 12 months. There are very many things to be considered in our mutual interests, and Lord Hopetoun stated, before he left for Victoria, that anything he could do for the welfare of those at Leadhills he would be happy to do. There are some little matters pertaining to this property which I hope Lord Hopetoun and his excellent representative, Mr. Thomas Hope, will be able to arrange outside the lease, but if we are met in the same spirit as we have been during the last fortnight or three weeks, I am quite satisfied it will be for the benefit of both lessors and lessees. (Cheers.)

Mr. GLEN (director): I should like to make a few remarks in regard to our meeting with Lord Hopetoun's commissioner (Mr. Thomas Hope. Before I sat on this side of the table I said that if we could meet the principals I had no doubt a satisfactory arrangement could be come to. We did meet his lordship in the first instance, and had a very friendly conversation with him. Unfor-

tunately for us, he had to go to superintend matters in Melbourne, and we have now to do with his commissioner, also one of the Hopes, and a member of the family, and I am glad to say he has been

A SPLENDID REPRESENTATIVE OF HIS LORDSHIP.

He has met us in a very friendly way, and though he is no great judge of mining matters, still he comes of a rare good working family. I have no hesitation in thinking that we shall always be met in a business-like manner by him. He takes a reasonable view of things, and I have no doubt that all points will be satisfactorily arranged. (Hear, hear.)

The CHAIRMAN: I may say one thing in reference to Mr. James Hope, although he is absent, that he met us on the last occasion in particular in the most friendly spirit, which we most gratefully recognise. At the same time a meeting, from 11 in the morning until half-past seven in the evening, and 30 intricate clauses to go through, is enough to try the patience of any man—it was enough to try ours—but Mr. James Hope, who has been most courteous on all occasions, was on this particular one not only courteous but also kind, and manifested every desire to have matters finally adjusted. (Cheers.)

A GOOD SUGGESTION.

Mr. CATTERSON: I think at the next meeting we ought to recognise the services of Mr. Peter Watson and the board in a more substantial way than by a mere vote of thanks—that is, when we have our meeting in Sept. Personally, I am only a small shareholder, but I do think they are eutitled to something more than a bald vote of thanks, and that between now and the time I have mentioned the matter may be considered.

Mr. ROBERTS: I quite sympathise with that suggestion, and we shall see how matters go on between now and then.

The meeting then closed with a vote of thanks to the chairman.

THE KINGSIDE MINING CO., LIMITED.

A DISCOVERY CHEERS THE SHAREHOLDERS, AND IS LIKELY TO IMPEL THEM TO A FRESH EFFORT TO WORK A VALUABLE MINE.

THE fifth ordinary geueral meeting was held at 6, Queen Street Place, on Thursday, on the general business of the company.

Mr. Robert Henty

(chairman of the company) presided.

Mr. H. SWAFFIELD (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, the first resolution is, "That the report, together with the accounts and balance-sheet, be received and adopted." Those accounts are not very favourable, but I think the report of the directors and of the managers offers a sufficient explanation that, though we may have reason to be disappointed, we have none to feel dissatisfied. There were many difficulties in our way, but we cannot but feel that good work has been done for our money, and that every effort has been made to bring the mine to a success. The last report has given me more satisfaction than its predecessors, and the question of further operations will have to come before a special meeting. Therefore, I will say no more about it beyond this, that it does seem a most undesirable thing that when better times appear to be in store for us we should throw up the sponge. I hope we shall not do so, and I think that this view will be shared by you after you have heard the opinion which Mr. Frank Taylor formed on his recent visit to the mine.

VIEWS OF A RECENT VISITOR.

Mr. FRANK TAYLOR: It gives me great pleasure to rise and tell you what I have seeu very recently in this mine. I was there only last Friday afternoon, and went through all the important workings, and can assure you I was very much pleased. I do not regret that I am a large shareholder in the company, and shall certainly be one to continue, if necessary, to find more money to work out this good discovery which we have recently made. It will be in the recollection of most of us that this company was started to sink a new shaft below the depth at which rich bunches of ore were worked upon the Kingside lode. This shaft was sunk to the depth of 150 yds. It took a great deal of time to do, because at places hard rock had to be pierced, and when we got to the required depth we had to drive a cross-cut 40 fms., which also occupied a considerable period, owing to accidents which happened, partly owing to the frost, and altogether the expenditure of time and money has been greater than we anticipated. We have, however. arrived at this happy conclusion, that we have now cut this lode in the point indicated on the section on the wall. All the blank space left is what we call whole ground. We have a bunch of ore, and I am satisfied from it we shall get very good returns in the future. We are down 12 to 15 fms. below the bottom of the old workings. The ore worked there was from what was called the Jeremiah stope, and those who have seen it—(Mr. JOHN TAYLOR: I have done so)—say there was an excellent and rich lode there. Well, 12 fms. below that point we have cut this lode.

IT IS A JUNCTION OF LODES.

There is the Copper lode on the one side, and the Kingside lode on the other, and they have come together. Quite on the north side of this lode, we have cut a really excellent branch of ore. It has been described in the report as being worth 2½ tons to the fm., but I can assure you on Friday afternoon I saw it even better than that. I think when we have a little time, and are allowed to drive both east and west on this lode, we shall open up stopes and gradually work into a much more prosperous condition than we find ourselves at present. There are other points of equal promise in this most interesting mine. In the 22-fm. level driving east we have crossed a branch. Really it was quite a treat to see this little branch, for it is almost solid, 6 to 9 ins. wide, and if it continues, it will help our returns very much. We also hope to cut this branch at the 11-fm. level, which will still further help our returns. The 22-fm. level we have been driving east, but influenza and other causes have led to the lack of men, and we have had to stop the level for a time, but it must be pushed forward when we can do so. Within 2 or 3 fms. Capt. Rowse has the greatest hope of coming into a branch of ore coming down from the deep adit 22 fms. above, and we think by pursuing this level 2 or 3 fms. further we may cut into a nice buuch of ore there. I think it would be most unwise for the shareholders not to come forward and help this mine with more money. I believe if we could get money subscribed to

PUT UP A SMALL ROCK-DRILLING PLANT,

we should be able to push the mines at a greater speed, and quite alter the complexion of affairs. An expenditure of 700*l.* or 800*l.* in this direction I think none of us would regret, and I for one would subscribe towards these debentures almost on purpose to have this rock-drilling plant erected. You know what has been done in other mines, and how many of them have been saved by rock-drills. We do not actually require "saving" at Kingside, because in the bottom we have this discovery, but rock-drills would certainly put us in a better position to utilise it. I hope the shareholders will come forward and provide sufficient money to enable us to do this. We have worked under difficulties owing to the scarcity of men caused by influenza. Five men were at work the night before I was there who were absent from this cause the following morning, and altogether there have been 30 cases of this horrible complaint. I think Capt. Rowse and Capt. Paull are excellent agents. They are doing their best for your interests, and if we can support them by a little more money, we shall eventually work ourselves into a very successful and prosperous company. (Hear, hear.)

Mr. HOOKE: I understand that any shareholder taking up these debentures is entitled afterwards to convert them into ordinary shares if he chooses, irrespective of what price they may be.

The CHAIRMAN replied in the affirmative, and Col. ST. JOHN seconded the motion, which was carried unanimously.

Mr. JOHN TAYLOR proposed, and Mr. CARLISLE seconded the re-election of the retiring director, Mr. Henty.

On the motion of Mr. ST. JOHN, seconded by Mr. DONAGAN, Mr. John Garland was re-appointed auditor.

EXTRAORDINARY MEETING.

The meeting was then made special for the purpose of authorising the directors to raise 4,000*l.* by the issue of mortgage bonds, bearing interest at 10 per cent.

The CHAIRMAN: This resolution is necessitated by the fact of our having spent all our money, and by the circumstance that we are in debt. We have, however, arrived at a point in the property which renders it extremely undesirable to give up its prosecution. At the same time the position is oue of urgency, and money must be found at once or outsiders will step in and take the advantage practically of past expenditure. Originally there were 20,000 shares, but only 16,000 were issued; 4,000 shares were reserved for the time of need, but at present there is no life in mining operations, owing to the state of financial matters in the City, and therefore it was thought advisable to raise this money by debentures, and for security, the machinery and the lease of the property will be available. There are other favourable conditions of which the resolution speaks, but I may say this, that if the money be not subscribed, the mine will be wound up, and then there are shareholders who have such a high opinion of it, that they will come forward and carry it on upon their own account.

Mr. SWAFFIELD: The real proportion would be for each shareholder to take up a fourth of his holding in shares and debentures, because there are 16,000 shares of 1*l.*, and the debentures to be issued are 4,000*l.* If they were to limit their applications to that amount I think the full amount would not be subscribed, and therefore shareholders should know that they may have a larger proportion of debentures if they choose to apply for them. The position is this, that unless they do, those who thoroughly believe in the mine (especially the Messrs. Taylor) will be able to foreclose and to secure the property for themselves. I shall take more debentures than I hold shares, and think a good many others (including the Messrs. Taylor), who are wise, will do the same.

Mr. JOHN GARLAND: I do not see any reference in the resolution to the proposed option to be given to the debenture-holders to exchange for shares.

Mr. SWAFFIELD: The solicitor said this was unnecessary, as the board had that power already, and the directors have pledged themselves to it in their report.

Mr. DONAGAN seconded the resolution, and pointed out that the terms of raising money after the consent of a general meeting had been obtained were left with the directors by the articles.

The motion was carried unanimously, and, after a resolution similar to that at the Cwmystwyth meeting in reference to Mr. Frank Taylor had been passed, the proceedings closed.

THE CWMYSTWYTH CO., LIMITED.

MR. FRANK TAYLOR VISITS THE MINE, AND ENCOURAGES THE SHAREHOLDERS TO PROCEED—A MINE THAT ONCE PAID 60 PER CENT. PER ANNUM.

THE sixth ordinary general meeting was held on Thursday, at the Offices, 6, Queen Strect Place, to receive the reports of the managers and superintendent and mining agent, and the audited accounts of the company, for the year ended Dec. 31 last, and other business.

Mr. John Taylor

(manager of the company) was asked to preside.

Mr. H. SWAFFIELD (secretary) read the notice of meeting.

FUNDS AVAILABLE.

The CHAIRMAN: Gentlemen, you will recollect at the general meeting, held on May 8 last year, we recommended that further capital should be raised to the extent of 2,500*l.*, by the issue of preference shares, and we have now to say that these were all taken up very quickly. We have up to the present time called up on those shares 10s., and have therefore available 1,250*l.* with which to carry on the works. That sum will certainly last us for a considerable time, as the expenditure over and above the returns has been very small, something under 30*l.* or 40*l.* per month, and we have every reason to hope that we shall be able to raise more ore monthly in the time to come than we have done recently. We have been seriously interfered with during the past year by the terrible winter through which we have passed, but during the last few months the works have been pushed on very fast, and the most recent news from the mine is more favourable. I think we

have extremely fair reasons to think we shall come quickly upon a good length of stoping ground west of this fault, of which you have heard on previous occasions. The veins, as you all know, have been very rich in the east in this field, and practically no work has been done upon them to the west, so that it is to this part of the property we have now to look in the future. My brother, Mr. Frank Taylor, visited the mine three or four days ago, and will be able to tell you what he saw and heard. He will be able to tell you that the greatest economy is being exercised in every way, and that the works are being carried on in a very cheap manner. We have exercised the greatest economy in London, and the expenses have been reduced to the lowest possible point. Meanwhile we can only wait the result of the continuance of present exploratory works to the west, and I do so myself with a considerable amount of confidence.

VIEWS OF A RECENT VISITOR TO THE MINE.

Mr. Frank Taylor: I have the advantage, gentlemen, of being able to give you the latest information possible as to the mine. I was underground on Friday afternoon, and of course very little work has been done since that time. I can start my observations by saying that I was extremely pleased with what I saw. The only really fresh work we are doing at the present time is driving on the new lode at the 15-fm. level in a westerly direction. The idea there is to get through the west joint with the hope we shall find the Comet, the new lode, and the north lode, as good below as they were above west of this joint. These lodes have not been touched at all at this depth, and we have very great hope that in the 15-fm. level we shall cut the Comet lode first, and if it is cut as good as it was above we shall at once open out very fair ground. The only other works going on are a few stopes, all of which are profitable. The level driving east on the 30 is better than where we saw it above. We have great hopes, as this level goes eastward under ground, which was worked away in the 15-fm. level, that we shall there open out some stopes which will return us good profits, and if we should have the luck, as I have already indicated we may have, to cut a good lode in the 15-fm. level west of the joint we shall soon be in a much better position. Anyway, I can express my own feeling, having been through the mine, that I am very hopeful we are

IN THE VICINITY OF MUCH MORE PROSPEROUS TIMES.

As my brother has indicated, I can endorse what he says as to the works being carried on in the best possible way under the circumstances, and in the most economical manner. I will mention one thing, that the dressing of the ore is done at the cost of 10s. per ton, and I think that is a very good record indeed, for I do not know that we can put our fingers on another mine which can show such a satisfactory result as that. I can only repeat that I look forward to the future with very great hopes, and am sure that we shall do our best to bring the mine to a more successful issue than it has yet achieved.

HOPES v. WISHES.

Mr. Hooke: As a novice in mining matters, I would ask—are your hopes guided by your wishes, or is there anything tangible to indicate that those hopes may be realised?

The Chairman: The basis of our hopes has been indicated in the two speeches we have delivered. It is the opinion of an experienced miner who has seen the property, and who can only look through the ground as far as you can, that the indications are good. You may call it surmise, but it is surmise based upon actual appearances.

Mr. Swaffield: The best proof that the Messrs. Taylor believe in the concern, and what they state in regard to it, is that they themselves hold a very large proportion of the entire number of shares, and in regard to the new capital, I think they hold 1,774*l.* of the entire amount. Therefore no better proof could be given for their belief in the future of the mine. We have about 1,250*l.* still in hand.

Mr. Hooke: I am glad to hear that the capital account is so much better than I expected.

Mr. Henty seconded the adoption of the report, which was unanimously agreed to.

The Chairman: The only other resolution is the election of the auditor, Mr. James W. Jepps, who has filled that position since the company was formed. He has been paid three guineas a year, which is a very moderate amount, and, as far as I am able to judge, he is a most efficient auditor, and is known to more than one of the shareholders present.

Mr. Henty proposed, and Mr. Hooke seconded, the re-election of the auditor, which was agreed to.

EXTRAORDINARY MEETING.

An extraordinary general meeting was then held, for the purpose of considering, and, if approved, passing the following resolution:—"That article 7 of the articles of association of the company be repealed, and that in lieu thereof the following be article 7:—'Messrs. John Taylor, Frank Taylor, and Robert Taylor now carrying on business in co-partnership as Civil Engineers, at No. 6, Queen Street Place, London, under the firm of "John Taylor and Sons," and the survivors and survivor of them, shall be, and they are respectively hereby appointed the managers or manager of the company, and they or he shall continue to be such managers or manager until resignation or until removed by special resolution of the company.'"

The Chairman: Under the articles of our company, Messrs. John and Robert Taylor are appointed managers, and some months since we took into partnership our brother, Mr. Frank Taylor, and therefore this article requires altering, in order to give the company the benefit of his services as well as those of my brother Robert and myself.

Mr. Donagan moved the resolution, which Mr. Henty seconded, and it was carried unanimously.

Mr. Donagan: I propose a vote of thanks to Mr. Taylor for his able explanations and management of the company's affairs since the last meeting. There are no directors, and therefore it must come all the heavier on those who have the management of the company's affairs.

Mr. Hooke seconded the motion, which was carried unanimously.

AN ANCIENT MINE.

The Chairman: I should like to mention that this is an historical property. The mine has been worked since the time of the Romans. It has been working more than 50 years within the knowledge of my firm and under our management, and I should be most unwilling to see it given up without making what was absolutely a last effort. Within the last 30 years, since I first went underground at Cwmystwyth, the profits have been very large indeed. Thousands every year were paid in dividends, and I look upon it as a fight worth continuing, for I cannot give up the idea that we are not even yet going to have good business here.

A REMINISCENCE.

Mr. Henty: I was a shareholder in the old Cwmystwyth more than 50 years ago, when I had the pleasure of receiving 10 per cent. dividends every two months, and you may naturally suppose that I still have an affection for the old mine.

THE SAM CHRISTIAN GOLD HYDRAULIC, LIMITED.

APPEARANCE OF THE MINE IS SO ENCOURAGING THAT THE SHAREHOLDERS UNANIMOUSLY DECIDE TO PROSECUTE IT FURTHER.

An extraordinary general meeting was held at Winchester House, on Monday, in accordance with the expressed wishes of the shareholders at the ordinary general meeting on Dec. 30, 1890, for the purpose of discussing the affairs of the company.

Mr. Edmund Forster Webster, C.I.E.

(chairman of the company), presided.

Mr. Arthur W. Wells (secretary) read the notice of meeting.

A FULFILLED PLEDGE.

The Chairman: Gentlemen, this notice gives indications of the reason we have convened this meeting. It was understood the last time we met that we should prosecute the work of developing the veins on the property, and call you together and report on the general position at about the expiration of six months. We have been at work for the last seven months on what is known at the mine as the Webster shaft, and there from time to time we have discovered gold in the veins, but latterly we have come upon that hard capping which appears to be very extensively found over the property, and then the question arose whether we should transfer the plant we had at the California shaft to the Webster shaft, and attempt to get through this hard chert, or whether, having the plant already *in situ* at the California shaft, we should sink deeper upon that. Mr. Hambley's advice was that we should utilise the machinery we had at the California shaft and attempt there to get through the hard chert.

IMPORTANT LETTER.

That we undertook to do, having received the following letter from Mr. Hambley regarding it. On Apl. 7 he wrote:—

"Mr. Young's last letter will have given you particulars of an assay made of the hard rock and obdurate formation which we encountered at the bottom of the works, proving conclusively that this contains gold to the value of $2 per ton. It is needless for me to point out that this is an extraordiuary occurrence, and one which I did not anticipate, but it is evidence of the existence of gold in other than the quartz, and there is no knowing what we shall encounter in depth. It is a strong indication of the existence of large bodies of low grade ore. In view of this extraordinary discovery I have no hesitation in advising the concentration of operations at California shaft in place of Webster shaft."

I have here an assay from the U.S. Mint at Charlotte:—"The description is hard rock taken from the bottom of the California shaft, being amongst the last rock taken from the bottom of that shaft." It gives a value of $2.7 per ton. Then we told Mr. Young, who is in charge of the mine, to go ahead, and that he has done. We have unwatered the mine, and the last accounts are that work is proceeding as fast as possible. Mr. Hambley is there, but is only superintending the business.

Mr. Friend: What depth are you now?

PRACTICAL FINANCE.

The Chairman: 105 or 107 ft. We turn now for a moment to the question of money. We had not much money when we last met, and thought we saw in front of us a time when we should come to the end of our tether, but we have sold some piping that we did not require, and we now, practically, are very well in funds. We have at present in the bank 1,751*l.* We have to come in on Sept. 9 450*l.*, making a total of 2,201*l.* I am sure we can sell the rest of our piping that we do not require for about five or six hundred pounds more, so that we may calculate we have something over 3,000*l.* Now, before I go on with the expenditure, I want first of all to place ourselves (the directors) in a clear light before the shareholders.

NO FEES.

We are sitting here having none of that money, nor do we intend to draw any, because we mean that every available penny shall go to the actual development of the mine. (Cheers.) We have got rid of Mr. Hambley, who was an expensive gentleman, and have put Mr. Young in charge. He is known to one of my colleagues personally, as a man anxious to do his best, and thoroughly practical, and he is getting 360*l.* a year. His reports are business-like, and he has been Hambley's head man in the management of the mines since the commencement of the company. We are paying for rent 125*l.* a year, and, without going into particulars, I think we shall reduce that, and it is our earnest wish to do so to the last possible penny. Then we have limited Mr. Young's expenditure, including his salary, to 150*l.* per month. That comes to 1,800*l.* for a year, so that we can work from now by carefully utilising our resources for at least 12 months. Then I am told by Mr. Young that he can go down another 100 ft. in the California shaft with the machinery we have on the surface in about seven or eight months, so that you may say that the cost of going down that distance will be eight times 150*l.*, or 1,200*l.*

Mr. Friend: Is that supposing the chert continues?

The Chairman: Yes; and I believe it is awfully hard. The letter of May 9 says that when he began it was so hard that he had absolutely to blast it out, but since then there has been a marked difference in the quality of the ground, which is softening, and the quartz is very heavily charged with oxides, whilst the appearances

generally are much more favourable. Of course, it is impossible for any human being to say what depth we may have to go to before we get through that chert, but the most important point with reference to it is that from the bottom of the shaft quartz was taken which does contain gold, not merely in the vein itself, but in the hard surrounding rock, so that it seems possible we may come upon large

MASSES OF LOW GRADE ORE, WHICH WILL PAY WELL

at the mill, and these are being found in other parts of Carolina. I think you will hardly expect me to say more. It is a lottery, and all we can do is to see that the money is properly spent, and that none of it finds its way into pockets into which it ought not to go. If you are content to spend the remainder of the money in this way we can certainly go down another 100 ft., and we can go a great deal further if necessary, for although we have only 2,201*l.* in hand we have other things to sell, and could probably prolong our existence another six months if the indications were sufficiently good. The point for you to decide is "Will you authorise the spending of this money, or do you think it better to wind up the whole affair?"

EMPHATIC DECISION.

Genl. CARNELL: I propose that we go on expending the money as we are doing. (Cheers.)

Mr. HUNTLEY GORDON: I second the motion.

Carried unanimously.

The CHAIRMAN: Now do you wish us to have another meeting soon, or will you wait for the annual meeting, which will be held at the end of the year?

Mr. FRIEND: I suppose if there is anything of importancc you will communicate with us.

The CHAIRMAN: Certainly; and meanwhile every shilling we can save will be put into the mine. I hope you quite understand that this is entirely a lottery. (Hear, hear.)

THANKS TO THE CHAIRMAN AND BOARD.

Mr. FRIEND: I think the chairman merits our best thanks and also the directors for what they have done, and we hope for something better from them by and by.

Mr. MORDEN seconded the motion, which was carried.

The CHAIRMAN: I hope that even yet we may be able to give you a more respectable statement of accounts. (Cheers.)

THE ANTIOQUIA (FRONTINO) CO., LIMITED.

A TEMPORARY FALLING OFF IN THE MINE LEADS TO A REDUCTION OF THE DIVIDEND ON THE PREFERENCE SHARES—IMPORTANT WORKS AT THE MINE—INDICATIONS OF IMPROVEMENT IN THE CARMEN MINE.

THE ordinary meeting was held at the Offices, 184, Gresham House, Old Broad Street, on Monday, "to receive the report of the directors and the audited statement of accounts of the company to Dec. 31, 1890, to elect directors, to elect auditors, and for other business."

Mr. Richard Donagan

(chairman of the company) presided.

Mr. J. JAMESON TRURAN (secretary) read the notice of meeting.

SPIRITS HIGH, BUT NOT HILARIOUS.

The CHAIRMAN: Gentlemen, I beg to move the first resolution, "That the directors' report now presented be received and adopted, and the accounts of the company to Dec. 31. 1890, having been duly examined and audited, be now passed and allowed." We do not come before you on this occasion in the hilarious spirits that we experienced last year; not that there is any reason for despair. but we have had to encounter a disappointment. Last year we had paid the dividend on our preference shares to Dec. 31 previous, being the date up to which the accounts then submitted extended, and we thought we saw our way to continuing to pay such preference dividend, inasmuch as the advices which we had then received, relating to the beginning of the year, showed we had earned such dividend for two months during two months, and the Mar. letters were favourable in many respects. Later on in the year, however, the different places at work fell off in value, as will be shown when I mention that the gold for the first three months of the year was worth 2,014*l.*, but for the last three months of the year was worth only 1,261*l.* The consequence was that the profits of the first half-year were about enough to meet one-half of the dividend, or 5 per cent., but that the second half of the year did not aid us towards the second half of the dividend, and hence 5 per cent. preference dividend, paid in November, 1890, is all that can be paid for 1890. In round figures, the profit of the year slightly exceeds a 5 per cent. preference dividend. The cause of this is that the wide and rich mineral that we had in the levels of Carmen mine has become narrower and poorer. We have passed, as Mr. White says, from a pocket to a pinch, and in his limited workings these changes must be put up with. During the year, at an expenditure of only 954*l.* on capital account, some good work has been done.

WORKS IN PROGRESS.

The entrance to the intended new tunnel has been completed as an open cutting, aud the rock-drills and air compressor have been got up to the mines—no inconsiderable work, seeing that some portions of these machines would have swamped a canoe of the dimensions in use on the river Atrato, and these pieces had to be got over the river in rafts when the current was slack. The opening up of the levels on the hill side in the San Pedro Valley, called the Escobar and Grupero workings, has been continued during the year, and the Grupero lode was reached in October, and a new mill was erected in that valley to crush the mineral from such workings, and was also ready in October, though it was not till January iu the present year that any sound ore from the Grupero lode was crushed, as the wire rope arrangement for lowering the ore to the mill took some time to complete.

IMPROVEMENT IN CARMEN MINE.

Another bit of work done was some progress in a cross-cut from the San Pedro Valley to an old level in the Carmen Mine called the Chuchero, and it is by this cross-cut and old level that the Animas water is to be brought in to work a waterwheel in the mine, wherewith to drive a pump to drain the western shaft, now being kept free of water by hand pumps. The intended plan is simultaneously to drive the tunnel from the San Pedro Valley, by aid of the rock-drills, to the site of the western shaft, and to sink such western shaft, by the aid of the pumping wheel, to the depth at which the tunnel will come in. That work accomplished, it will be easy to explore the mine in all directions not worked during the sinking of the shaft (for directly the wheel-pumping is at work we shall be in a position to extend our present workings from the western shaft), and easy to sink deeper than the tunnel (just as we are now going below the adit), when required. The tunnel is not directed merely to the exploring of the Carmen Mine, but on its course will intersect the Escobar and Grupero and some other lodes, if they respectively go down so low, and, indeed, it is expected that mineral to be obtained from those places will give a profit and furnish means for the completion of the tunnel. As to the situation at the present moment it seems inclined to improve. In the first place we now have the new mill running on mineral, and the new works were progressing so as to get such mineral out cheaper, and the Grupero lode was expected to be reached ere long in another cross-cut; besides that the Carmen Mine was in a position to turn out more mineral as soon as the dry season should be over. The dry weather, we have reason to believe, through advices received from more accessible places than Frontino, and which are of later date, broke up about Apl. 20, so our next advices, which will be dated on or about May 1, will probably report that the mills are, or will soon be, in full work again. Mr. White in his last letter speaks of intending to have three waggons instead of two engaged in taking out mineral as soon as the rains come, and in a previous letter Mr. White spoke of having a large quantity of low grade ore available, which at one time would not pay to take out, but which now would leave a profit, as it can be got out at less cost.

GROUNDS OF CONFIDENCE.

We can only hope that with the old mills going quick on low grade ore we may have decent returns, and that it may not be long before we get to another rich shoot in that part of the mine, and that our new mill may be kept going on Grupero mineral, so that we may be able to pay our preference dividend for 1891, and have some profit realised beyond the 2,240*l.* required for such dividend. We have 900*l.* of our reserved capital still unexpended.

The Hon. F. C. DRUMMOND (director): I second the motion.

Carried unanimously.

ROUTINE BUSINESS.

The CHAIRMAN: We have two directors who retire, the one being the Hon. F. C. Drummond, and the other Mr. C. F. Lowe, and I move their re-election.

Sir GEORGE HARRIS (director), in seconding the motion, said it would be impossible to have two more punctual and painstaking directors.

The motion was carried unanimously.

Mr. GRAY proposed the re-election of the auditors, Messrs. Lovelock, H. W. S. Whiffin, and Dickenson, at a remuneration of 10 guineas.

The motion was seconded by the Rev. Dr. Holden, and carried, and the meeting closed in the usual way.

NORTH AUSTRALIAN MINING CO., LIMITED.

TEMPORARY SUSPENSION OF OPERATIONS.

THE ordinary general meeting of the shareholders in this company was held at Winchester House, Old Broad Street, on Thursday June 18.

Mr. Joseph Todhunter

(chairman) presided.

The SECRETARY read the notice convening the meeting

THE POSITION OF AFFAIRS.

The CHAIRMAN said: Gentlemen, I have very little to tell you beyond what is contained in the report. You are there made aware exactly of the position of affairs as far as we know it. At the present moment the original property has practically been abandoned, with the exception of Block 63, which is retained for some purpose, best known to the Australian board. They did not like to relinquish this last block, so they paid the rent for the current year. Practically our operations since we last called you together have been confined entirely to the half share in the South Union Co.'s reefs, and Mr. Saunders, our manager, was transferred to that property, which we have been working for a certain period. But, as we told you by circular in February last, he, unfortunately, struck water at a depth of 140 ft., and found that his pumping machinery was not sufficient to cope with that difficulty. Consequently, after consultation with the Australian board, works were again stopped. Since then, however, the board have had a conference with the owners of adjoining claims, and they have thought it well to recommend that another attempt should be made to develop this gold property, and Mr. Saunders has been instructed, after consultation between the two boards, by telegram to go on as well as he can sinking further on this gold property, but what he has done we do not at present know. Iu the meantime the Australian board have taken measures in connection with the adjoining properties to ascertain as clearly as possible whether there is a fair chance of doing anything more with the small amount of money remaining, and we hope to hear in a short time what their views are. At present we feel we can do nothing. We must leave it in the hands of those in Australia, whom we are quite satisfied will advise what is best for the interests of the shareholders. I beg to move that the report be adopted.

Mr. KENNETH H. JAMES (director) seconded the motion, which was carried unanimously.

The CHAIRMAN proposed the re-election of Sir John W. Downer, K.C.M.G., the chairman of the Australian board.

Mr. JAMES seconded the motion, which was carried.

Mr. JAMES proposed the re-election of Mr. Todhunter to the London board.

Mr. WILLIAM G. ELDER seconded the motion, which was carried.

The CHAIRMAN: You will notice, near the end of the report, a statement that the directors have clearly intimated to the South Union Co. that should it be thought desirable to spend any more

money in the development of these South Union claims they will not advance any further sums beyond the 4,000*l.* agreed

UNLESS THE SOUTH UNION CO. JOIN THEM

in advancing an equal sum, and only then with the consent of the shareholders. The secretary has drawn up this resolution, and if you approve of it, perhaps some gentleman will propose it:—"In the event of its being thought desirable by the directors to join the South Union Co. in further developments of the South Union claims, that this board be empowered to advance such further sum as they may deem expedient out of the unexpeuded capital, provided that an equal amount of money be furnished by the South Union Co." We have the power to do it, but, as we have told the board on the other side, we will not do it without the express sanction of the shareholders—we will not do it without that sanction.

Mr. HAY proposed the above resolution, which was seconded by Mr. PHILLIPS, and carried unanimously.

The auditors, Messrs. Price, Waterhouse and Co., having been re-elected, the proceedings closed.

THE MEXICAN LAND AND COLONISATION CO., LIMITED.

VARIOUS SUBSIDIARY COMPANIES FORMED.

THE third ordinary general meeting of this company was held at Winchester House, on Tuesday.

Sir Edward Jenkinson, K.C.B.,

presided.

Mr. G. ARMSTRONG (the secretary) read the notice calling the meeting.

The CHAIRMAN said that he did not mean to detain the shareholders very long on that occasion, and he had dealt fully with the position of the company when they had the formation of the Lower California Development Co. under consideration, and also as the board had for the first time issued a report which dealt very fully with the present position of the company. Every detail in that report had been given of the receipts and expenditure, and the shareholders would notice that the administration expenses of the company had been considerably reduced. The expeuses had been somewhat heavy, including as they did the repairs to the pier at Ensenada, and to the construction of a telegraph line from Ensenada to Alamo and San Quintin. They had also been obliged to make considerable repairs to the existing telegraph, owing to the damage done by floods and storms. The law charges were also a most serious item of expenditure, amounting to no less than 7,000*l.* The construction of a railway would be of great advantage to their property, and he was pleased to say that a separate company had been formed for the purpose of building the railways mentioned in the concession. The materials had been sent out, and they soon hoped to hear that work had been commenced. If the line was constructed it would be of immense advantage to their company. He thought that the forming of subsidiary companies was a very good plan, and every company formed added to the value of their own property. At the present time the companies which had been formed were the Mexican Phosphate and Sulphur Co., the Princesa Gold Mine, the Peninsula and California Co., and the Lower California Development Co. They were also forming a company to develop their property in Chiapas. For the purpose of forming that company the board would borrow 35,000*l.*, which would enable them to do what they wished to, and he hoped that the shareholders would show their confidence in the board by subscribing the money required. He concluded by moving the adoption of the report, which was seconded by Mr. HENRY BELL and carried, and other formal business having been transacted, the proceedings terminated with a vote of thanks to the chairman.

HAWKINS HILL CONSOLIDATED GOLD MINING CO.

(IN LIQUIDATION.)

LIQUIDATORS INVOLVED IN LITIGATION.

A GENERAL MEETING of the shareholders of this company was held on Thursday, at the Guildhall Tavern, "to receive the report of the liquidators and transact other business of the company."

Major Young

presided.

Mr. M. T. HODDING (liquidator) said that since the last meeting the liquidators had been in an unfortunate state of litigation. The shareholders were informed at the previous meeting that the property had been sold in Sydney for 800*l.*, and that there had been an embargo placed upon the mine by some creditors in New South Wales—Messrs. Briscoe, Drysdale and Co. Their claim was for between 300*l.* and 400*l.*; and in the early part of that same year—1886—a telegram was received from the company's agents in Sydney saying that the mine had been attached, and that 400*l.* must be sent over, or a sacrifice of the property would be inevitable. The 400*l.* was immediately cabled, with precise directions to satisfy the claim. Instead of satisfying the claim, however, their Sydney solicitors pursued a course of action which they said to be absolutely unavoidable—they informed the creditors that they would have to wait until the money was received. Proceedings were then taken to prevent the sale of the property. On Jan. 30—14 days after the dispatch of the cable—the money was received, and on that date an injunction was obtained; but instead of staying the proceedings and paying everything in full, the Sydney solicitors took upon themselves to go on with the litigation. They were to a certain extent

HOODWINKED

by these gentlemen in Australia. It was not until Nov., 1887, when the full Court of Sydney delivered judgment in the case, that the liquidators found that their correspondents out there had disobeyed their instructions in every particular. They had offered the people less than they were entitled to, and it was simply their wrong-headedness that had involved the company in this litigation. The liquidators thereupon commenced an action against the Sydney solicitors to recover the amount they had sent out on account of costs (150*l.*), and they were then met with a counter-claim for 450*l.* The proceedings lasted until May of this year, when the company obtained judgment against the solicitors for 100*l.*, on both the claim and counter-claim, with costs. Actions against Mr. G. Milré and Col. Shakspeare, in respect of unpaid calls, had been compromised.

DEBTOR AND CREDITOR.

A SHAREHOLDER asked what was the total amount of cash in hand, and what were the claims upon the company?

Mr. HODDING replied that they had 1,003*l.* in hand. The lawyers' bill was 1,200*l.*, but that had yet to be taxed; and there was 180*l.* in the solicitors' hands which belonged to the company, and would have to come off the bill of costs.

The CHAIRMAN moved, "That the liquidator's report and accounts be accepted and approved."

Mr. STEWART PIXLEY seconded, and the motion was carried.

A sum of 100*l.*, in addition to 50*l.* already paid, was voted to Mr. Leslie for his services in connection with the liquidation.

It was resolved that no further meeting be called until a final statement can be submitted.

The CHAIRMAN, by way of giving a crumb of comfort to the shareholders, said that they might congratulate themselves upon having got so much as 800*l.* for the property, for it had been a dead loss to the parties who purchased it.

The meeting closed with a vote of thanks to the chairman.

PEDNANDREA.

EFFORTS TO PREVENT THE MINE FROM BEING STOPPED.

THE special meeting of the adventurers in Pednandrea Mine, Redruth, convened for the purpose of confirming or otherwise the resolution passed at the ordinary general meeting authorising the sale of the mine and materials as a going concern and the winding up of the company's affairs, was held on Monday on the mine.

Mr. R. S. Teague

(the purser) presided.

Considerable discussion ensued relative to the absence of the manager (Capt. Rich).

The PURSER expressed the opinion that Capt. Rich had overlooked the time of meeting.

MANAGER ABSENT.

The meeting was then adjourned to three o'clock.

MANAGER PRESENT.

At that hour the meeting was re-opened, and Capt. RICH, who was in attendance, apologised for his absence in the morning, which was an entire oversight. He had no excuse to offer, seeing that he had a printed notice stating the time of meeting. He did not run away from the mine. Perhaps it would be better if he did. It was his unfortuuate habit to stick to a sinking ship, but they had not sunk yet. If there was any information he could give them regarding the mine he should be glad to make it known. He did not think he could add anything to his former report, which clearly stated the position of the mine and its prospects.

Mr. DAVY asked Capt. Rich if he thought by the expenditure of 10,000*l.* it would be possible to bring the mine to a profitable condition.

Capt. RICH thought it probable, but he should not like to prognosticate. He thought there was a fair chance of success, but not for 12 months or so. There were great lodes in the bottom.

In answer to further questions,

Capt. RICH stated that the prospects were as good as they were six months ago. The crucial test was the extending of the levels.

MR. STRAUSS' OFFER.

Mr. J. HICKS, after explaining that he represented a gentleman who was interested in the neighbourhood, said he understood that the shares had been reduced by relinquishments from 7,000 to 5,000 operative shares. Mr. Bain had stated that Messrs. Harvey and himself would be willing to continue half of their interest provided those shares could be replaced. In order to show how the matter really stood he read a letter from Mr. A. Strauss, dated from London, to the following effect:—The writer stated that he had received numerous applications to assist the adventurers of Pednandrea in saving the mine from being stopped. He would consider its stoppage a great calamity for the whole neighbourhood, and more particularly for the working men now employed on the mine, and who had always done their utmost for the adventurers. He was willing to take 1,000 shares on conditions that the mine was worked on the original number of 7,000 shares, of which he held 1,000. He trusted that the offer would be the means of preventing the stoppage of the mine, and left the offer in force for reply at his, Mr. Hicks', office ou Wednesday, June 18.

The PURSER then put the confirmation of the resolution to the meeting, which was carried *nem. con.*, the date of the sale being left to the discretion of the committee.

FRONTINO AND BOLIVIA.

PROFIT OF 1,078*l.*

THE directors have received advices from the mines dated Apl. 23 and May 7. Also a letter from Messrs. Restrepo, dated Apl. 11. The statement for the month of Apl. is as follows:—984 tons of ore produced, bar gold, 1,384 ozs.; tributers' gold produced, bar gold, 534 ozs.; bar gold, 1,918 ozs. Also 1,239 lbs. of sulphurets, valued at 284*l.* 9s. 7d. Estimated value of the gold and sulphurets, 4,538*l.* 11s. 6d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributers, 3,460*l.* 4s. 4d.; estimated excess of returns, 1,078*l.* 7s. 2d. The returns have been restricted owing to the continuance of the dry season. Rains fell at the close of the month, and the dry season thereupon ended, but not in sufficient time to affect the produce of Apl.

THE TOLIMA REPORT.

15s. PAID ON THE A AND 2s. ON THE B SHARES—A SATISFACTORY REPORT.

THE report of the Tolima directors leaves nothing to be desired on the score of gratifying facts as regards the past, and encouraging outlook as regards the future. The development of the mine has proceeded most satisfactorily during the year ending last Dec., and all the indications point to the maintenance of the present rate of returns. The development of the mine, which is now proceeding principally in depth, has proved the existence of a large body of high grade mineral at and below the 90-fm. level, extending, at the 100-fm. level, with scarcely a break throughout a length of 73 fms. Of the depth of this deposit no definite opinion can yet be formed, but it has been proved to descend in unbroken continuity for 15 fms. in the engine shaft, which continues to be sunk in a strong and masterly lode. Another and very promising feature in the mine is the development of high grade ore west of the engine shaft, both above and below the 100-fm. level, which, taken in conjunction with the rich deposits already proved in the 20, 40 and 60-fm. levels west, seems to promise further discoveries in that section of the property. The average value of the mineral raised has approximated to 400 ozs. to the ton, whilst the output has steadily increased, the amount of ore exported having reached in one month 134 tons. Meanwhile the delivery and realisation of the consignments have been expedited, notwithstanding the difficulties of local transit occasioned by the deterioration of the roads through the exceptionally tempestuous weather experienced in Colombia in the year under review. The improvement of the machinery and of the works at surface for treating the ore has been proceeding satisfactorily during the year, and strong testimony has reached the directors from able and independent observers that their whole establishment at Frias bears evidence of efficient management and sustained industry. Steps are also being taken to increase the water power at the mine by the construction of an aqueduct 9½ miles in length. Since the last annual meeting three dividends have been paid upon the "A" shares, amounting in the aggregate to 15s. per share (15 per cent.), and a dividend at the rate of 2s. per share on the "B" shares. The directors report that the realisation of the ore raised in 1890 is rapidly approaching completion, and that a sufficient sum will shortly be in hand to permit of the distribution of a further dividend at the rate of 10 per cent. on the "A" capital of the company, which they recommend should be made payable on the 31st prox. This payment will liquidate the ordinary dividend on the "A" shares up to the end of the year 1886. The report is extremely satisfactory and will so be viewed by the shareholders, particularly seeing that the "available reserves" are estimated at 1,521,880 tons.

THE McARTHUR-FORREST PROCESS.

(From the Johannesburg *Standard and Diggers' News*.)

THE Gold Recovery Syndicate on these fields, who hold the patent for the application of what is known as the McArthur-Forrest Process of refractory ore treatment, have in the short time during which they have been conducting operations achieved such phenomenally satisfactory results, that we have been surprised to observe in some of the latest London papers to hand a disposition to doubt not only the adequacy of the process, but to criticise even the results obtained. These results, in the eyes of practical men, speak so conclusively for the *bona fides* and excellence of the process, that it is difficult to understand the motive of the systematic attacks made upon it by writers in one or two of the least reputable of financial sheets and by anonymous correspondents to a paper largely circulated in South Africa and London. With a view to ascertaining definitely what are the actual merits of this process, and what is the actual position of the recently-floated Gold Recovery Co., which has acquired the McArthur-Forrest Patent, a representative of the *Standard and Diggers' News* has been making careful enquiries from authoritative sources, and we are now in a position to state the result of these enquiries.

FOUR MONTHS' WORK.

It will be remembered that about a year ago we brought prominently before our readers a number of new processes for the treatment of tailings and concentrates, which it was hoped would tend to materially increase the gold output from this centre. Without wishing to disparage the numerous other processes and patents now undergoing trial, or which have undergone trial and been found wanting, it is very evident that the McArthur-Forrest Process is the only one as yet which has succeeded in substantially adding to the monthly product of these fields. Commencing systematic operations at the beginning of the year, up to the end of Apl. this process had added over 6,000 ozs. of standard gold to the Randt out-turn. This practical demonstration of the effectiveness of the process speaks more eloquently than words could do, and is not to be under-rated by such anonymous strictures as several irresponsible correspondents have seen fit to indulge in. It is of such vital importance to these fields that we should arrive at a satisfactory and economic system of treating our refractory ores and tailings, that any endeavour to discredit the labours of those who are devoting themselves, with some measure of success, to the solution of the problem, not only betrays a lamentable lack of loyalty but savours of disappointed rivalry; while knowledge of the ways and vagaries of financial organs helps us to a readier understanding of the motive of opposition in their case.

THE BARBERTON RESULTS.

But the results of the process are even more pronounced in comparing the output at Barberton, over a quarter of the production of last month being produced by the McArthur-Forrest Process from Sheba tailings. The actual returns from Barberton for last month were 5,432 ozs., and the Gold Recovery Syndicate's contribution to this total exceeded 1,500 ozs. In point of fact the company has been producing, since it started the Sheba tailings' treatment about two months ago, more gold with its process than has been obtained in the mill. These results are all the more gratifying, as the Gold Recovery Syndicate never made the boast—as other "system" proprietors were wont to do—that its process would knock all other processes into a cocked hat. It preferred working, silently but effectively, and the wisdom of this policy is apparent in the fact that to-day the company has in hand the treatment of the tailings of nearly all the large and important companies on these fields.

WHAT THEIR SUCCESS MEANS.

Now let us look at the practical effect of their work here. The results of the Robinson work especially have suddenly caused directors generally to pay increased attention to their tailings and dumps; heaps which were formerly purchaseable for a mere song they now demand a very substantial price for, while greater care is being exercised in their conservation now that it is definitely known that they are capable of being profitably and economically treated, and of contributing materially to the gold output of the district. In fact the most potent effect of the company's successful operations here is that these tailings are now being reckoned as a valuable asset by all companies, whereas formerly, owing to the absence of an effective system of treatment, they were regarded more or less as an encumbrance. That the process is what it claims to be seems to be established not only by the gold recovered for the companies that adopt its system of treatment, but by the hopeful remarks indulged in by Mr. Eckstein, who stated, at the recent meeting of the Robinson Gold Mining Co., that "the results from the treatment of the company's tailings and concentrates would be sufficient to pay their expenses during the next year, thus leaving the bulk of the profits earned from milling to go to dividends." Clearly therefore this company has every reason to feel satisfied with the genuineness of the McArthur-Forrest process.

THE NEW COMPANY.

While discussing the process, we may as well say a word or two about the new company. One paper, in criticising the company, states that of the 60,000*l*. paid in by applicants for shares 55,000*l*. goes to the vendors. This, we have ascertained, is absolutely erroneous, the fact being that the 25,000*l*. working capital is first provided for out of this sum, and that all flotation expenses are to be deducted from the balance, 20,000*l*. of which goes to the Cassel Co. A great deal of capital is made out of the circumstance of the syndicate foregoing a profit of 40,000*l*., as estimated in the prospectus, in favour of the company, but the answer to this is that the syndicate, which was established to demonstrate the process, had to transform themselves into a company within a certain time under agreement with the Casel Co. The syndicate certainly had, and has, this profit in prospective—which is proved by their having earned some thousands of pounds in the few months they have been at work—but they were compelled to float the company in order to get the necessary working capital to provide new works, plant and stock. In fact, the works that were originally put up were paid for out of profits earned, and now that the process has been finally demonstrated to be effective, simple and cheap, we have no doubt that it will continue to be worked on these fields—anonymous criticisms notwithstanding—to the profit alike of the Gold Recovery Co., and the large army of shareholders on the Randt.

REMOVAL.—The office of the East Broken Hill Consols, Limited, has been removed to Dashwood House, 9, New Broad Street, E.C.

NOTICE is given that the British and American Trustee and Finance Corporation, Limited, will pay on and after July 1 next the coupons for interest then due on the 310,000*l*. 6 per cent. debentures of Thomas Daniel and Co., Limited. The coupons must be left three clear days previously for examination.

REPORTS OF MEETINGS.

THE ETHERIDGE UNITED GOLD MINING CO., LIMITED.

COMMITTEE PROPOSE TWO OF THEIR OWN NUMBER AS DIRECTORS, AND ONE AS LIQUIDATOR — SHAREHOLDERS DECLINE TO ACCEPT THE NEW BOARD AS PROPOSED, AND ELECT ONE OF THEIR OWN, WHEREUPON THE COMMITTEE RETIRE.

AN extraordinary general meeting of the members of the above-named company was held at the Terminus Hotel, Cannon Street, on Tuesday, for the purpose of considering, and if thought expedient, of passing resolutions to wind-up and re-construct the company. These resolutions have already been published.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

Mr. BENNETT: It is necessary, first, that you should appoint your chairman. You are aware that at the last meeting the directors tendered their resignation, and it is a question whether that resignation was tendered or not, and I, as advising the committee, think it desirable that the meeting should elect the chairman under the following circumstances: The secretary has received a letter from the chairman of the board stating that he will not be present to-day, and under article 59 it is competent for the meeting, without waiting half an hour, to elect a chairman.

Mr. L. Kentish Rankin

(chairman of the committee) was asked to preside.

The CHAIRMAN, after promising to be as brief as possible, said: Perhaps it will be as well to remind you of the mandate that was given to us at the last meeting, and what we were asked to do on that occasion. We did not in any way commit ourselves against the principle of re-construction. The amendment of Mr. Ewer, after suggesting that the first paragraph should read, "that it may be desirable to re-construct the company," went on to say, "and with a view thereto a committee of shareholders be appointed to investigate, report, and advise as to the best method of terminating the present crisis." That is the mandate we have fulfilled—"the best method of terminating the present crisis." That mandate really decides what we are going to put before you to-day. I will speak to the report which is before you, and comment on it as I go along.

"We are not in a position to report to you upon the accounts of the company, as we find the books, beyond the cash book, have not been written up since Nov. last; the blame for this, we desire to explain, does not rest with Messrs. Taylor."

The chairman of the board forgot to mention last time a material fact. He told us how many thousand pounds worth of calls were overdue, but forgot to state that the whole of them were

HYPOTHECATED TO A BANK

to secure a loan from that bank, of which a balance of 580*l*. then remained unpaid. That materially altered the situation. When we went on this committee of investigation, my own thought was we have this 10,900*l*. worth of calls to recover: and we will take care that they are recovered, but we were indulging a false hope. We found that we had not that money; that the calls were hypothecated to this bank, and their collection was actually in the hands of its solicitors. Now, to carry on this mine 400*l*. a month is required, and though it is true the meeting gave us power to raise money, we could not do it except on our own private security. What were we to do? We interviewed the bank to try and get a further advance on that security, but it would not help us.

A VOICE: What bank?

The CHAIRMAN: The Metropolitan and Birmingham Bank. I am glad to be able to say that calls have come in since that date, which have reduced the balance owing to the bank to 44*l*., but, of course, there are other liabilities. We were met first by want of funds, and then by the limitation of our powers as a committee—not being able to act as directors. Now, if money be not remitted speedily the property will be liable to forfeiture, and if the wages of the miners be not paid they will disperse to other more attractive fields, and the difficulty of getting them together again will be great. We lack the time thoroughly to investigate matters, because we must have money. We then said: "We will put the whole thing before the shareholders," and that is the reason we are here to-day. We had two alternative ways of putting it before you. We might have asked you to subscribe by means of a whip, or we might put it in its final shape, and on reflection we decided on the latter course, because the result of the former is always uncertain.

COMMITTEE ADOPT THE LATE BOARD'S PLANS.

It may be remarked that we come here to-day with very much the same scheme as the late board presented. (A VOICE: "You do.") I have two remarks to make upon that; first, that all re-construction schemes are very much alike; and, second, that our objection on the last occasion was not so much to re-construction in the abstract as to those who proposed in this case to carry it out. We should not recommend this scheme to-day unless it could be carried out by those in whom you have confidence, for it makes all the difference who are in power to carry out a scheme of re-construction. I should like to say a word of praise of Mr. Goddard, one of the members of the committee, who has been very useful in the accounts, but I do not wish to go into them now, because it would be anticipating the work of the liquidator. We say further in our report:—

"We find, however, that there is great doubt whether any money will be recovered from the calls in arrear. The property of the company is, we are informed, unencumbered. We are not in a position to add anything with regard to the value of your property beyond what you have already heard, but as money is immediately required to keep the mine going, and as time is of great importance, we have no alternative but to have the adjourned meeting immediately convened, when the scheme of re-construction can be thoroughly discussed."

That explains the position in a nutshell. We recommend that the management should be in the hands of an independent board—a board with no taint of being connected with promoters, or any of the people in the past who have not served you well, and that greater economy should be considered in the management, and also that the board should not have the power of calling up more than 3d. per share out of the proposed liability of 1s. without convening a general meeting. We think economy will be obtained by a considerable reduction in the number of directors, and, after all, small boards attend oftener, and do better work. We think, in the face of

A VERY GOOD TELEGRAM,

which we had, and which I will read to you, and in face of the fact that we personally have not visited this mine or had an expert's opinion, and that the Messrs. Taylor speak well of the mine—we have felt in the face of all this that we could not advise you compulsorily to wind up, because you might be throwing away a very valuable property. The manager telegraphs:

"Georgetown, June 1. Cut reef in the cross-cut—water troublesome. Remit by cablegram, 350*l*. wages."

I do not think we should have been justified on that telegram in coming here and saying we advise you not to re-construct, but we have safeguarded you and ourselves by putting it within your power to stop further expenditure after the call of 3d., which will produce about 6,000*l*., should you see fit to do it. Then powers should be taken for the appointment of an advisory local board of two shareholders to watch the manager. The Etheridge field is a long way from the coast and from civilisation, and it is advisable to take powers of this kind. Then we say we have no alternative but to discuss the re-construction scheme. That is a thing for the future. Before we pass the resolution I might say that we recommend the London board should not exceed three or four in number. We are obliged to-day to propose directors to you, because there are none. We have little difficulty in doing it, but we thought that as you had the confidence to nominate us your committee, you would also have sufficient confidence in us to appreciate our nominating two directors from our own body—that is, from the committee. (Hear, hear, and laughter.) Hence we propose to-day, if you agree to the resolutions as to the re-construction and the appointment of a liquidator, that the new board shall consist of not more than four members, and that for the present there be three directors—namely, two members of the committee, Mr. Ewer and myself, and a third gentleman, Mr. Francis G. Lane, a member of the Stock Exchange, who holds 10,000 shares. We understand that he will be able to assist very much in getting shares taken up. Since Mr. Goddard has been on this committee we have learnt to respect his abilities as a man of business and an accountant, and we propose that he shall be liquidator with a fixed remuneration of 100 guineas. We acknowledge the valuable assistance we have received from the Messrs. Taylor. (Cheers.) I move the first resolution to wind-up and re-construct the company.

Mr. HILL: I second it.

DISCUSSION.

Mr. HAMILTON: I think most shareholders will feel a great obligation to you and the other members of the committee, but there are certain things we do not wish to go into, as our desire is not to injure the property or say anything unpleasant, and this, I observe, the chairman has carefully refrained from doing. (Hear, hear.) We want to work in a friendly spirit, and see if something can be got out of the fire. You have proposed a board of three, and I have confidence in the number, but am particularly glad that the name of Mr. Lane is included in the list. I suppose the fees of the board will be a lower sum than that fixed in the old articles. At the present time the Messrs. Taylor are the people to whom we look for working the mine—the directors being more or less ornamental. The practical details of the mine will be left in the hands of the Messrs. Taylor, and they could not be left in better, though, of course, they cannot undertake that kind of work unless they receive remuneration. For that reason the directors should be satisfied with moderate payment. (Hear, hear.)

Sir LEOPOLD HEATH: When you have spent the first instalment, and you have called a meeting to know whether you can make another one, will those people who object to paying the second instalment and subsequent calls be obliged to go on?

The SOLICITOR: When the first 3d. is exhausted the directors will not be permitted to call up the balance without a special resolution, but the minority will be bound by the majority. Those who object should rank as dissentients, and refuse to join the re-construction.

PRACTICAL QUESTIONS.

Mr. TREDGOLD: I think we have to thank the committee for the able way in which they have looked after our business, but I have been struck by the absence of any statements from them as to our liabilities. If the company is placed in liquidation we shall have to pay the whole of the shilling a share, whether we like it or not, and, therefore, we ought to know what are the outstanding liabilities. (Hear, hear.) The articles fixed the remuneration of the directors, but

THE MEETING OUGHT TO BE ACQUAINTED WITH THE LIABILITIES.

I shall support the board and the liquidator, but do not intend to let this matter rest where it is. I do not think that bygones ought to be bygones. This company embraced four companies—Etheridge, Canadian, Electron, and Etheridge Reefs, having a total capital of 320,000*l.*, and now we have not 100*l.* in our coffers. Ought we not to have this thoroughly investigated? (Cheers.) I, for one, will not rest until it is.

A SHAREHOLDER: Is this question relevant?

A SHAREHOLDER: Certainly it is relevant. I quite agree with you, as the holder of 2,000 shares.

The CHAIRMAN: I think Mr. Tredgold has a perfect right to raise these points; as to how far it is expedient I will not say. I think your interests will be safe in the hands of the liquidator we appoint, and it is his responsibility, if there is anything wrong, to investigate it.

MR. LANE REFUSES TO SERVE WITH A BOARD OF WHOM HE KNOWS NOTHING.

Mr. LANE: I thank you for proposing me as a member of your board, but must decline to be nominated with only two other gentlemen with whom I have no acquaintance whatever, and from whom I may possibly receive very little support, and may even be over-ruled. I do not object to be a member, provided another one joins with whom I am acquainted. I do not even know what is the holding of the gentlemen who propose me as their colleague, neither do I know how long they have been holders, and I am as unacquainted with them as I was with the old directors. I therefore say plainly, that if I am required to look into the affairs of the company (which I should do if I were elected a member of your board), I must have somebody I know to be associated with me. (Cheers.)

Mr STEWART PIXLEY: I propose that Mr. Thorn be a member of the board. (Cheers.)

Mr. CAMPBELL: We are anticipating business. Let us take the points *seriatim*. Let us pass our resolutions for the re-construction, and then let us come to the question of directors.

The CHAIRMAN: Justice will be done if gentlemen limit themselves to the matter before them, and in this case it is the resolution.

COMMITTEE SHOW WHAT THEY REALLY MEAN.

Mr. EWER (member of committee): The committee only urge this matter of re-construction on the one condition, that you have a board of three members, and we insist upon two members of the committee being upon that board. (Loud cries of "Oh.") If you object to that we withdraw ourselves from this scheme, and hold ourselves free to take whatever action we like. (Uproar.) When appointed to this committee we found the company as a physician might find a patient who had suffered such maltreatment from his previous advisers that he had been brought into a state of collapse borderiug upon death, which would have taken place but for the prompt administration of a restorative. Now, would it be better to let the company die out altogether, and so terminate for ever our hopes and anxieties about it, or have we sufficient reason for giving it a fresh constitution and financial streugth, in order that it may have the chance, in the hands of a properly constituted board, to prove itself worthy or not of our confidence. We have evidence on this point that is neither conclusive nor complete. We should like to have obtained an opinion from the spot, but could not get it in the time. If gentlemen are going to be nominated to the board other than in the manner I have iudicated, I withdraw from the scheme of re-construction, although I shall vote for it now. (Uproar.)

The SHAREHOLDER: Will the 3d. per share be sufficient to carry you on for six or eight mouths? If you say it is I think we ought to pay our 3d., and let us see whether there is salvage or no salvage.

The CHAIRMAN: I believe that is the opinion of the Messrs. Taylor.

A SHAREHOLDER: I am surprised to find Mr. Ewer saying that he would insist that two members of the committee must be members of the board. They talk of an "independent" board, but I hope they are not going to be independent of the shareholders, and it is clear from what Mr. Ewer said they are not going to be independent of the committee. (Laughter.) Three of the committee are to be appointed to posts of emolument.

Mr. EWER: No; two.

The SHAREHOLDER: How do you make that out, when two are to become directors and one is to be liquidator at 100 guiueas. I consider that Mr. Rankin and Mr. Ewer have done good service, but I should like to know if they are willing to work in conjunction with the Messrs. Taylor. If so, I shall be happy to support them, for we must not have a board that will dictate to our mining managers on matters of technical knowledge. What do they mean by an independent board?

The CHAIRMAN: We mean a board independent of promoters and the late directors.

THE POSITION CLEARLY EXPOSED BY MR. JOHN TAYLOR.

Mr. JOHN TAYLOR: A qucstion was asked with regard to the amount of capital to be raised, and what it would do. You may feel quite reassured as to that. If fully subscribed, I make out that the 3d. per share will bring in about 6,000*l.* The expenses at the mines have not recently exceeded from 400*l.* to 500*l.* per month. Your directors may feel it desirable, if they have an amount like 6,000*l.* at their back, to expend it somewhat more quickly, but in any case it will carry us on for a considerable time. Part of the work I indicated to you as a matter which had great interest for us has been already accomplished. I told you on May 28 about the cross-cut being driven to cut the reef upon which Mr. Prince is working successfully in a neighbouring mine, and that it would probably intersect the reef very shortly. Immediately after the meeting almost a telegram came, which Mr. Rankin has read, saying

THE REEF HAS BEEN INTERSECTED.

We have no further news, but may have it any day. The expenditure of money is merely in the development laterally, or further in depth at one particular point, and the expenses cannot be very heavy. The capital suggested will carry you on for a considerable time. (Cheers.)

Mr. TREDGOLD: I have asked a most important question, which has not been answered, and that is—What are the liabilities?

The CHAIRMAN: About 1,000*l.* will clear all our liabilities.

BUSINESS.

The first resolution was then carried.

The CHAIRMAN proposed, and Mr. CAMPBELL seconded, the second, third, fourth, fifth, sixth and seventh resolutions, as already printed and sent to the shareholders, and they were carried unanimously, and without discussion.

The CHAIRMAN proposed the eighth resolution, appointing Mr. Arthur Goddard liquidator, at a remuneration of 100 guineas.

Mr. THORN seconded the motion.

A SHAREHOLDER said that directly this gentleman was appointed liquidator the committee would cease to have power.

The SOLICITOR: All these resolutions will have to be confirmed, and this cannot be done for a fortnight. It is a question who are the directors at the present time. I understand the old board are quite willing to give every facility for re-construction. It is desirable also to keep them alive for another purpose, as before you can raise money there must be somebody who can give a security. That security will have to be given under the seal of the company which can only be obtained from the old directors, and I understand the old board are willing to give every assistance. A resolution will be proposed: "Resolved, that by way of recommendation to the old board, they be requested to appoint the new board you may elect as directors of the Etheridge Co., and that they when so appointed be, and are hereby, authorised to raise the necessary funds for carrying on the business of the company until the re-construction of the new company."

The CHAIRMAN put the resolution as to the liquidator, and it was carried. He said: The next question is—who shall be members of the new board? I have already told you that the committee recommend two of its own number, Mr. Ewer and myself—(laughter)—and Mr. Lane, a holder of 10,000 shares was also contemplated. Mr. Lane has said he will not serve, but I hope he will re-consider his decision in his own interests and the interests of the company.

MR. LANE FIRM.

Mr. LANE: I will not serve under the circumstances. I shall have no power or control. (Hear, hear, and cheers.)

The CHAIRMAN: The resolution I am going to propose will read thus: "Resolved, that on the constitution of the new board the same shall consist of not more than four directors, and for the present of three directors ouly, and that Mr. L. K. Rankin, Mr. Ewer and one other gentleman, to be nominated by the meeting, be appointed directors." (No!)

Mr. CÆSAR COHEN (member of committee) proposed the motion.

Mr. TREDGOLD: I second it.

VIEWS OF ONE WHO COMMANDS THE VOTES OF SHAREHOLDERS.

Mr. CAMPBELL: At the last meeting I was accused of supporting the old board, but I was against the old board. I consulted with the Messrs. Taylor before the last meeting, who said they thought the best thing to be done was to re-construct. and all the old board gave me their assurance that they would resign. On this understanding I supported their re-construction scheme, but the meeting thought otherwise, and that is why we are here to-day to do what might have been done then if my views had been acceded to. (Hear, hear.) I have no interest to serve except a common one—that I am myself a large shareholder, that I have lost a large sum of money by this company, and that I have the support of other shareholders. After that meeting I had no interest to serve but to try and do the best for the company. I voted for the committee, approved of their appointment, and was in favour of the view that all that has gone before should be investigated, for I say, if any money can be got back let us have it. But, seeing the committee were sending out proxies, not stating what they wanted us to do with them, I thought it only right to get my friends to support me, for the protection of all concerned. There are

500,000 SHARES TO BE TAKEN UP,

and I ask you to mark this well, and let it sink deeply into your memories—that unless we can get directors appointed in whom the shareholders at large and the public have confidence—instead of getting 500,000 shares taken up, we will ouly get 100,000 shares, and instead of the call producing 6,000*l.*, it will merely produce 1,000*l.*, and our last position will be worse than our first. Now, I wanted to see what directors could be got who would inspire sufficient confidence in the shareholders and the public so as to make the capital secure.

MY THOUGHTS TURNED FIRST OF ALL TO MR. FRANK LANE,

one of our largest shareholders. (Cheers.) You know perfectly well he was in no way connected with the old board. When an action was brought against the old board he voted against them. Now, I got him to agree to be a director, but only if other uien were appointed whom he knew and in whom you could have confidence. Mr. Bennett (the solicitor of the committee) came and saw me and said "What about Mr. Thorn for a new director?" I said "By all means." He, too (I do not know him), I believe, was one of those who even brought au action against the old board to try and recover his money.

Mr. THORN: Permit me to correct you on one point. I did not

bring the action, though I tried to get the shareholders to join me, but no one would, and I did not feel justified in fighting the battle alone.

Mr. CAMPBELL: Then, I said I think it quite necessary and right that we should have a board that the public will follow. I do not mean the least disrespect to the committee; in fact, I voted for them. They are estimable gentlemen for a committee, but are they the gentlemen that the shareholders, and failing them, the public, would follow in an appeal for the placing of 500,000 shares? (Cries of "No.") Names go a long way, as you all know. It was suggested that Mr. Stewart Pixley should be a director, and I supported that idea, and did all I could to bring influence to bear upon him to get him to stand, and, therefore, I cannot be accused of supporting the old directors. I have lost my money the same as all of you, but

I WISH TO SEE IT BACK AGAIN,

and the amendment I shall propose is the best means of doing so that occurs to me. I had a meeting with the committee before this one, and stated certain points to them, but do think it necessary, having respect to those whom I represent, that I should stand out on certain points for the good of the company. We should have known names on the board, and, therefore, my amendment is, "That Mr. Frank Lane, Mr. Thorn, and one member of the committee, be elected the new directors." (Cheers.) Mr. Lane has promised to serve if he can get any gentleman he knows to serve with him, but he objects to serve with Mr. Rankin and Mr. Ewer combined, as he does not know them personally, their stake in the company, or the time they acquired it. I think mine a fair and just amendment. (Cheers.) I do not wish to use my proxies, because I desire the amendment to be carried by the sense of the meeting; but I must remain faithful to those who have given them, and I may say they far exceed those that have been given to the committee. I do not cast any slur upon the committee, but I want to have a board that is known, and the names of Mr. Lane and Mr. Thorn are so well and honourably known in the City that they will give confidence. I propose the amendment. (Loud cheers.)

A SHAREHOLDER: Why not four?

Mr. CAMPBELL: I am quite agreeable, but the committee only wish three. If they say they are willing to have four, I will vote for four.

Mr. GRIFFIN: I hold a thousand shares, and think the amendment a fair one. I am especially struck with Mr. Campbell's remark about the necessity of having known names when we have so many shares to place. The wisest plan would be for the committee to accept the suggestion of four.

Mr. EWER: The sole motive of the committee is economy. (Laughter.)

A SHAREHOLDER: What is the remuneration?

The SOLICITOR: I was going to suggest that each director should receive 100*l*. a year, with an extra 50*l*. for the chairman.

MR. BIRD *v.* MR. THORN.

Mr. BIRD expressed confidence in the proposal of the committee, because in his investigations into the affairs of the company he had found certain under-currents. He objected to Mr. Thorn as a director, though he had nothing whatever to say against him personally. He was not a suitable person to stand for the new board, and he had reasons which he was perfectly willing and able to give to the meeting if Mr. Thorn allowed his name to be put up, though those reasons were not dishonourable to Mr. Thorn.

MR. THORN *v.* MR. BIRD.

Mr. THORN (indignantly): I must give the most unqualified contradiction to everything that Mr. Bird has said. He has most grossly misrepresented everything that has taken place. I am an original shareholder of upwards of 4,000 shares, and by the action of two directors who, to use a common expression, "let me in" for those shares I have ever since been in the strongest possible opposition to the board as a whole, and when the question of bringing an action against the directors came up, I did not go on because my solicitor told me that I should have to pay all the expenses myself. I deny that I have had anything to do with the promotion of these companies, and I have lost thousands by them. The only position in which I stand here to-day is that of being a heavy loser, and whilst I have lost about 4,000*l*. my friends have lost another 3,000*l*. My personal friends have appealed to me, and asked me if I would be a director if voted on to the board, and only for that reason would I think of serving. I do not seek the office—I do not wish it. (Loud cheers.)

ECONOMY.

Mr. LANE: It seems that the committee are half inclined to refuse the appointment of four directors on account of the expense. Now, I quite agree with the chairman and Mr. Ewer that it is well to have the management as economical as possible.

A SHAREHOLDER: If that be so, you will accept the views of Mr. Lane. I ask the chairman and Mr. Ewer again if they will support the Messrs. Taylor, in which case I will support them.

A FORGOTTEN POINT.

Mr. J. H. A. SMITH: There is one point during this discussion which has rather escaped attention, and *that is the clock*. (Loud laughter.) Personally, I shall keep my eye carefully upon it, particularly as Mr. Lane has to a certain extent anticipated what I was going to say, though I think I can improve upon his suggestion. The committee propose themselves as directors (or two of them are proposed), whilst, on the other hand, you have Mr. Thorn and Mr. Lane nominated. Now, Mr. Campbell has brought out an important point, that although we may decide upon re-construction, that does not give us the capital, and if we re-construct with insufficicut shares taken up it requires no prophet to foretell the result. Now, I suggest that these four uames should be nominated and elected as far as we can to-day, and that they should all agree to act without remuneration until the statutory meeting, when the shareholders can elect a permanent board. If you do not come to an agreement with Mr. Campbell, remember he has the majority of the proxies. He has given way to you on an important point, and you should meet him half-way. You cannot confirm your resolutions without Mr. Campbell's vote.

HANDS NOT TO BE TIED.

The CHAIRMAN: This is becoming a question of confidence. (Hear, hear.) Personally, I do not care whether I serve on this board or not. We will only serve if our hands are not tied. It is necessary that we should have men on the board whom we can trust. We feel we cannot work with an equality of men on the new board who might be hostile to us and tie our hands. (Cries of "Oh! oh!")

A VOICE: The truth is, you want to dominate us. (Cheers.)

The CHAIRMAN: You will have to choose between other gentlemen and ourselves. We will not go on the board if there are four members, or if Mr. Thorn be one of them. We absolutely decline to go on the board with a fourth director, or with Mr. Thorn as one of the three.

Mr. THORN: I withdraw my name from the board entirely, but I ask what you mean by "your hands being tied." Twice you have said that. I think the shareholders have a right to know what you mean by that. (Cheers.)

The CHAIRMAN: It is a question of confidence. We feel that if there are directors whom we do not know and whom we cannot rely upon, our hands might conceivably be tied.

A SHAREHOLDER: What you mean is that if you and Mr. Ewer are elected with only one other gentleman

YOU WILL ALWAYS BE ABLE TO SECURE THE MAJORITY

yourselves. (Loud cheers.) I want you to answer the question as to what your policy will be if you are re-elected.

The CHAIRMAN: The Messrs. Taylor have our present support, and we have not proposed to dispense with their services. (Several VOICES: We should think not.)

Mr. CAMPBELL: The committee are talking about "their hands being tied," but they have their own liquidator and the offer of two of their members to act on the board.

Mr. SMITH: I want the people who find the money to elect the directors.

THE FOOT IS PUT DOWN.

The CHAIRMAN: We do not feel that we can alter the position, or consent to more than three directors—namely, two of the committee, and one nominated by Mr. Campbell. We are not prepared to accept the amendment.

Mr. JOHN TAYLOR: I should like the meeting to approach this question with a perfectly clear understanding of the position of my firm. A shareholder in the far end of the room has asked the chairman whether he would support my firm if we continued in the position of managers. I think I have never been present when a matter of this kind has been brought forward in this manner. I do feel, from the way in which the board is likely to be constituted, that there is

NOT A GREAT PROSPECT OF THEIR WORKING HARMONIOUSLY.

Under those circumstances the position must be clearly understood, that if we think right we shall retire from the whole matter. Therefore, please do not leave the meeting with the idea that it is a settled matter that we shall remain your managers.

A SHAREHOLDER (to Mr. Taylor): I think, sir, in your own honour you have acted quite rightly.

A SHAREHOLDER: Mr. Taylor would evidently prefer an independent board, and, therefore, let us adopt Mr. Campbell's amendment.

Mr. TAYLOR: We have known the name of Mr. Lane for a long time, but, personally, I only know him by sight, and also Mr. Thorn. Both gentlemen have a considerable interest in this company, and I do feel that in the preseut position of affairs the directors should be men whose stake is substantial. If they will act we shall probably get on very well.

The CHAIRMAN: It is necessary that there should be harmony. Now we can work harmoniously under certain conditions, but no under others, and we would rather not work at all.

Mr. EWER: If you wish to have the company coutrolled by Stock Exchange influence, I am not a candidate for the board.

Mr. HILL proposed, and Mr. CAMPBELL seconded, "That in the constitution of the new board, the same shall consist of not more than four members."

The motion was carried, the chairman (amidst laughter) alone voting against it.

The following gentlemen were then elected directors:—Mr. Rankin, Mr. Lane, Mr. Thorn, and Mr. Ewer.

The CHAIRMAN: I am sorry to say that Mr. Ewer and I must decline respectfully to serve. (Cheers.)

Mr. Cohen was then elected a director.

Mr. CAMPBELL: Has Mr. Cohen sufficient shares to qualify him as a director?

Mr. COHEN: The number of a man's shares does not matter. (Oh!) I must respectfully decline to serve. If I had gone on the board I should like to have done so with my colleagues.

Mr. CAMPBELL proposed, and Mr. MORRIS seconded, "That by way of recommendation the old board be requested to appoint the new directors, and that these gentlemen be, and they are hereby, authorised to raise the necessary funds for carrying on the company's business."

The motion was seconded and carried.

Mr. CAMPBELL proposed, and Mr. THORN seconded, a vote of thanks to the chairman, which concluded a long and exhausting meeting.

CORNISH SHIPBUILDING.—The Ramleh, the largest ship ever built in the West of England, was launched on Saturday at 4.30 p.m. from the stocks in Messrs. Harvey and Co.'s shipbuilding yard at Hayle.

HOLLOWAY'S OINTMENT AND PILLS.—Notable Facts.—Intense heat augments the annoyances of skin disease, and encourages the development of febrile disorders; therefore, they should, as they may, be removed by these detergent and purifying preparations. In stomach complaints, liver affections, pains and spasms of the bowels, Holloway's Ointment well rubbed over the affected part immediately gives the greatest ease, prevents congestion and inflammation, checks the threatening diarrhœa and averts incipient cholera. The poorer inhabitants of large cities will find these remedies to be their best friend when any pestilence rages, or when from unknown causes, eruptions, boils, abscesses, or ulcerations betoken the presence of taints or impurities within the system, and call for instant and effective curative medicines.

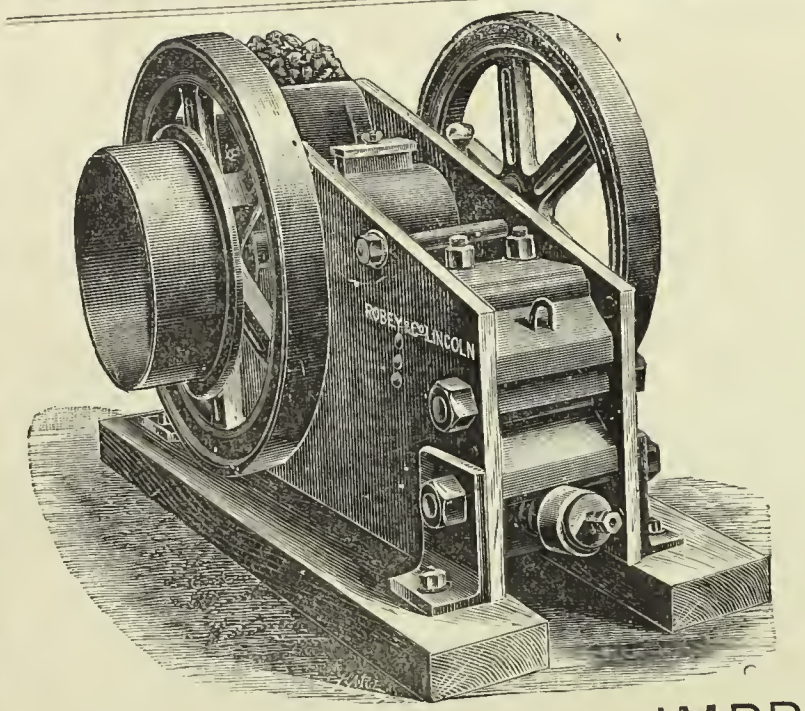
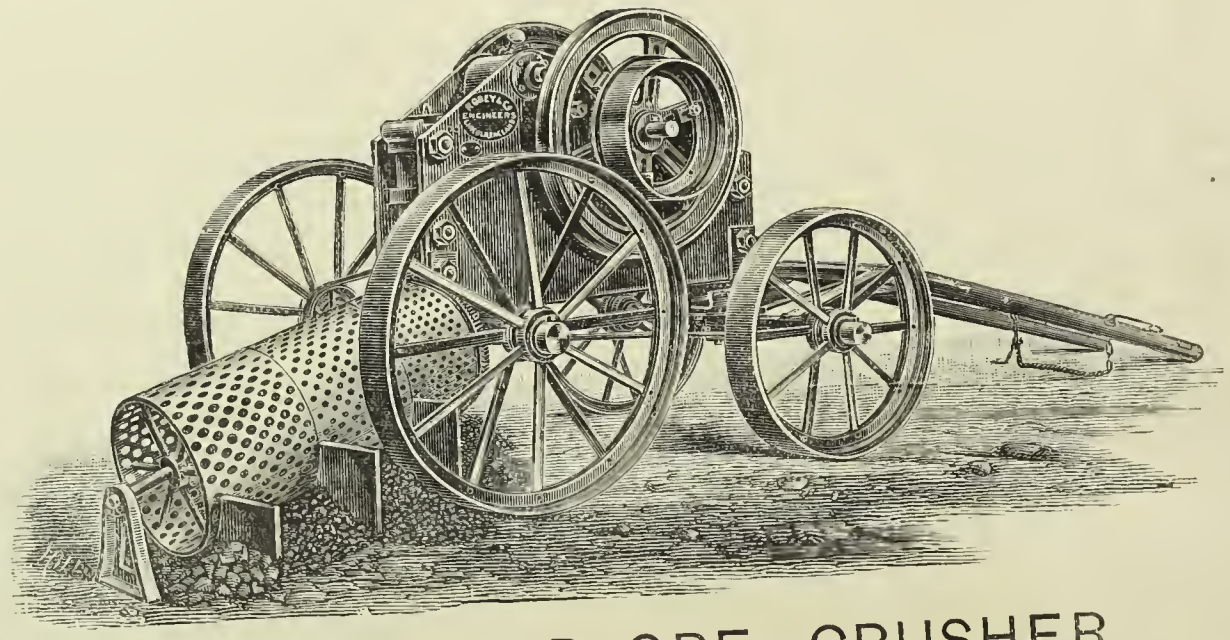
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

ROBEY & CO., Globe Works, LINCOLN.

Gates Rock and Ore Breaker

TO BE SEEN IN OPERATION AT LONDON OFFICE.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MARKETS FIRMER — SHARES RECOVERING — SPECIAL REFERENCE TO YURUARI, BALKIS. GYMPIE GREAT EASTERN, ST. AUGUSTINE, AND OTHER COMPANIES — DEALERS HOPEFULLY VIEW THE POSITION.

THE Mining Market in the early part of the week had scarcely recovered from the staggering blow it received during the period of which we last wrote. The outlook seemed about as gloomy as it could be, and an index to the state of affairs was seen in the small attendance in the Mining Exchange as well as in the vicinity of the mining door of the Stock Exchange, where brokers "most do congregate." Many of the brokers had gone away to get a little fresh air in the country, seeing there was no business to be done by remaining in town. A little later on, however, a change occurred, and the tide began to turn. Orders came in, and were not all of the selling class. For may days previously sellers had predominated—in fact, they were everywhere and buyers nowhere. Brokers refused at last to make prices without knowing first whether those with whom they came in contact were buyers or sellers, Although prices were temptingly low they did not see the prudence of saddling themselves with too much stock.

As to what caused the change for the better, it is scarcely possible to tell, unless we are to give the unsatisfactory explanation that "the wind bloweth whither it listeth." Those who are more clever than we are in tracing effects to their causes, say it commenced at about the time of holding the Mysore Reefs meeting, where a really satisfactory telegram was read announcing that the reef had been struck in the cross-cut, showing "rich rock with visible gold," Curiously enough it was cut at about the time and place that Capt. Gilbert ventured to predict. This circumstance will add to the already established reputation of this gentleman as an experienced gold miner. Needless to say that on the strength of such a discovery as this the re-construction resolutions were unanimously adopted, and a considerable enquiry began to spring up for the shares. They had formerly been as low as 9d., but almost at once doubled on the strength of the meeting. Other shares began to move, if not in sympathy with Mysore Reefs, at least in sympathy with a more animated state of the market than previously prevailed, and the record of the week as a whole is decidedly more encouraging than at the time we last took up our parable on the subject.

The minds of the public who interest themselves in such matters were much exercised by the retirement of Col. Malleson from his position as chairman of Balkis, and the appointment of three new directors. Col. Malleson has worked hard for the company, and will not be sorry to retire from his thankless position as chairman. It appears that application was made to the British and Transvaal Financial Co., Limited, for an undertaking to find 10,000*l*. Of this concern the directors are Messrs. Douglas, Bullock, C. A. V. Conybeare (of Silati fame), J. C. A. Henderson, G. H. Kearton, and A. Wells. Shortly after this application for aid Col. Malleson left Balkis to its fate. The Mr. Grant Conybeare who has joined the Balkis board is not probably unknown to the Silati Conybeare, and Col. Fludyer is his leading supporter when he goes on his political crusades to the Camborne division. Oceana and Silati, therefore, have practically taken Balkis under their guiding care. We hope, however, it will not teach Balkis naughty things, and that even under their experienced tuition Balkis will have no fellowship with those works of darkness called "rigs." The great Conybeare himself is, if we mistake not, about to visit South Africa, where we hope he will put his geological theories to some practical test and let us know the result. We shall await it with no little curiosity. From all we can hear the intrinsic value of Balkis lies in the farm Esterling.

There was a flutter in the Mining Market this afternoon when it became known that Messrs. John Taylor and Sons had accepted the management of Yuruari. This has been one of the most extraordinary companies we have ever known. Large quantities of gold have been extracted from the mine, but the shareholders never seem to have obtained any of it. We do not wish to impute any blame for this to the past management, but merely to state the fact. After two or three years of Messrs. Taylors' management the shareholders will know whether it is really worth while continuing the mine, because they may rest assured that if any managers in London can get gold out of the property for the benefit of the shareholders, it will be those to whom the affairs of Yuruari have now been entrusted.

This week there was received by St. Augustine Co. the most satisfactory telegram it has yet had, a telegram which to a certain extent justifies the statements made by Mr. Finlayson and Col. Malleson at the meeting some weeks ago.

Mr. Malcolm Low has issued a "memorandum" in relation to the Indian Consolidated Co. He visited the property both underground and at surface—both in the Wynaad and in the Colar. As he said at the last meeting, he will go on working the Wynaad property as long as it pays expenses. He takes a very hopeful view of the operations as regards what is known as the Colar section, but thinks that as regards the Madras Block deep sinking should for the time be postponed. The report has evidently been drawn with great care, but the shareholders will, doubtless regard it as we do as encouraging.

The report from Gympie Great Eastern, dated May 5, is encouraging, and justifies the opinion we have repeatedly expressed that these shares are decidedly too low. The manager states that never since the old workings on the Great Eastern reef were in full swing has the mine looked so promising as now. He adds, "there seem years of payable work ahead." A cablegram since received states that first-class ore is being taken out of the Orient reef. An eye should evidently be kept on these shares.

The market for Anstralian Broken Hill Consols was at one time almost knocked to pieces, and shares were down to 27s. 6d., after being as high as 2¼, and close firm at about 32s. 6d. Those most largely interested in the shares express great confidence in the future of the concern, and the appearance of reality is given to this by the report received to-day showing the extraordinary value of the last return.

In a circular to Etheridge United shareholders, Mr. John Garland, the secretary, says that at the extraordinary general meeting of the shareholders, held on the 16th inst., the resolutions submitted by the committee for the voluntary winding-up and re-construction of the company were unanimously passed. "These resolutions being identical with those submitted on the 28th ult. by the late directors, it must be satisfactory to the shareholders to know that both parties were agreed, not only as to the desirability of re-construction, but also as to the mode in which it should be carried out."

The new board, consisting of Messrs. Francis G. Lane, Frederick Thorn, and R. S. Tredgold, is now actively engaged in conducting the business of the company. They have arranged for, and remitted to Queensland by cable, the sum required for the monthly wages, and mining work is proceeding with regularity.

Coming to mines generally, there has been a brisk business in Almadas, and the shares are almost certain to go better. There have also been inquiries for Blue Spur and Gabriel's Gully shares To the satisfactory position of this concern we called attention quite recently. Colombian Hydraulic shares have improved in price, and so also have Gravel Gold—the recent decline in each not being warranted by the facts. After the meeting there was a brisk inquiry for De Lamars, and though the prices have not materially changed they bid fair to rise. As we said last week, the Lisbon Berlyn printing press, which has again been vigorously at work, has not done the shares any good. They have been freely offered, and close lower. There has been a brisk business in those two American beauties—Yankee Girl and American Belle—and prices are likely to improve.

South African Gold shares on the whole are firmer, but Land descriptions and Diamonds are again quoted lower.

In the Australian section we should notice that Bonnie Dundees fell sharply on the issue of the report.

The Indian section we must dismiss with a word, for we might almost apologise to our readers for the space this subject occupies in the MINING WORLD of this week. The subject, however, was fascinating, and the difficulty was to make a choice of the best of the matter available for the article which accompanies our map of the Colar district. Indian Consolidated shares fell, owing to the official announcement of the call, which we anticipated last week.

The Copper section has been uneventful, but, referring to General Foreign mines, most of them are up, including Elkhorn, Flagstaff, Orita, and the companies we have previously mentioned. The reverse side of the medal is shown by Callao Bis, Frontino, Linares, Montana, Tesoro, and Venezuelan Austin.

Again it is our melancholy duty to chronicle a fall in British shares, Carn Brea and Dolcoath leading off with a drop of 30s. each, and others following at a more or less respectful distance. The solitary rise of the week has been in South Condurrow of 10s.

It will be gathered from all this that the general outlook for next week is infinitely more hopeful than it was when last we wrote.

AFRICAN LANDS.

The shares of the Chartered Co. have been offered for sale, on the rumour that extra capital will be required to purchase some Portuguese interests. They close lower in consequence. Explorings and Oceanas have also been offered for sale.

Business.—A rise is shown in Transvaal Gold of 6d.; whilst the following have fallen:—British South African Chartered, ¼; Exploring, ½; Goldfield of South Africa, 1/16; Oceana, ¼; Sutherland Reef, 1s.; and Transvaal Estates, 6d.

Making-up Prices. June 24.	Name of Company.	To-night's Prices.

¼	Transvaal Lands, 12s. 6d. paid	7/16 — 9/16 dis.
3/6	Zontpansberg	3/6 — 4/

KAFFIRS.

The most favoured of this class has been Pigg's Peak, but although large business has taken place, the shares are only fractionally better. Langlaagte and Simmer and Jacks have improved, and the market generally is firmer than last week.

Business.—A rise is shown in Pigg's Peak of 6d.; Bothas Reef, 6d.; City and Suburban, ⅛; Crown Reef, ⅛; Durban Roodepoort, ⅛; Geldenhuis, 3/16; Jumpers, 1/16; Langlaagte, ¼; Simmer and Jack, ¼; and Vogelstruis, 6d.

Those lower are Heriots, 1/16, and Jubilee, ⅛. Others remain unchanged.

DIAMONDS.

There have been very few transactions in these shares, and those have been chiefly in De Beers, which close weaker.

Business.—A rise is shown in Bultfontein of 9d., whilst a fall has taken place in De Beers of ⅛; New Jagersfontein, ¼; and Burma Ruby, ⅛.

Making-up Prices, June 24.	DIAMOND SHARES.	To-night's Prices.

INDIANS.

The market for this section has been dull, and lower prices generally have ruled. There is, however, a disposition to purchase the lower-priced shares. Indian Consolidated have been forced for

sale, with the usual result of lower prices. These shares are dealt in "cum call."

Business.—A rise has taken place in Mysore Reefs of 3d. and Mysore-Wynaad, 3d.; whilst a fall is shown in Balaghat of 9d.; Champion Reefs, ⅛; Indian Consolidated, 1s. 3d.; Mysore, ⅛; and Nundydroog, 1s.

AUSTRALIANS.

The chief feature of this market has been the heavy transactions which have taken place in Australian Broken Hills. A large number have been placed on the market by the Trustees' and Executors' Corporation, and at one time yesterday they changed hands at 1 3/16, 1 5/16. To-day they speedily recovered, and business was transacted freely at 1 1/4. They do not, however, close so good, the price being 1½, 1⅝. If the statement is true that the above-mentioned Corporation have sold 27,000 shares, it may be fairly expected prices will harden next week. Gympie Great Easterns have been freely dealt in, and close firmer, but Bonnie Dundee, on the other hand, have been forced for sale, and consequently close lower.

Business.—A rise is shown in Gympie Great Eastern of 9d., and Wentworth Proprietary, ⅛; whilst a fall has taken place in Australian Broken Hills of 2/16; Bonnie Dundee, 1s. 9d.; British Broken Hill, ¼; Day Dawn Block, 3d.; Gympie Golden Crown, 6d.; Mosman, 3d.; New Queen, 3d.; and Scottish Australian, ⅛.

COPPER.

A somewhat restricted market has characterised this class, though there have been free dealings in Copiapos. Cape Coppers closed on Saturday 7s. 6d. lower, and fell again on Monday, bnt have since improved slightly in sympathy with Rio Tintos. The market closes dull.

Business.—A rise is shown in Copiapo of ⅛, whilst a fall has taken place in Capes of ¼; Panulcillo, ⅛; Quebrada, ⅛; and Tharsis, ¼. Others remain as last quoted.

GENERAL FOREIGN SHARES.

A better feeling has been apparent in this market, and prices have been inclined to harden.

Business.—A rise is shown in Almada of 3d.; Amador, 6d.; Argentella, 3d.; Bratsberg, 3d.; De Lamar, ⅛; Elkhorn, 1/16; Flagstaff, 6d.; Orita, 1s.; Palmarejo, 6d.; Pinos Altos, 6d.; Yankee Girl, 6d.; and Yuruari, 3d. The following are lower:—American Belle, 6d.; Callao Bis. 3d.; Don Pedro, 1s.; Frontino, 2s.; Golden Feather, 1s.; Golden Leaf, 3d.; Kapanga, 6d.; Linares, ¼; Lisbon Berlyn, 6d.; Montana, 6d.; Tesoro, 6d.; and Venezuelan Austin, 9d.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

INDIAN MINES.

NERBUDDA.—The sales of coal for the month of May amount to 1,134 tons.

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—For the week ending Jnne 25, 763 tons of ore were treated (including 280 tons of iron ore) yielding 130 tons of lead containing 5,341 ozs. of silver.

BROKEN HILL PROPRIETARY.—For the week ending June 25, 4,626 tons of ore were treated yielding 694 tons of lead containing 180,414 ozs. silver. Cable also states price of company's shares in Melbourne 10*l.* 16s. 6d., and surplus silver on hand 200,473 ozs. The usual monthly dividend of 2s. per share, amounting to 96,000*l.* for the month of July, has been declared on the 960,000 shares, and will be paid on July 15. The books close for dividend on July 4. The ordinary half-yearly meeting of shareholders will be held in Melbourne, on July 16.

BRILLIANT.—Messrs. Arthnr Forbes and Co. have received a cablegram from Charters Towers (June 22): "Crushed in 18 days ending June 20, 1,350 tons for 2,680 ozs. gold, value9,400*l.* Tha 22nd dividend of 2s. per share is declared."

BRILLIANT BLOCK.—Messrs. Arthur Forbes and Co. have received a cablegram from Charters Towers (June 22): "That the mine has opened out on the Brilliant Reef at the 1,066 ft. level, and is raising a large quantity of stone showing good gold."

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending 20th inst.:—"Tons crushed, 650; yield of gold, 673 ozs.; approximate value, 2,320*l.*; fortnight's expenses, 1,000*l.*"

DAY DAWN P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending June 20:—"1,086 tons, 1,066 ozs." (Estimated value, 3,624*l.*)

MOUNT LEYSHON.—A cablegram, dated 22nd inst., from the manager at Charters Towers, gives the fortnightly crushing:—"790 tons crushed, 300 ozs. gold; 20 stamps mill ran 288 hours; estimated profit, 100*l.* Ten new stamps out of 20 now in course of erection; will start June 29."

NEW QUEEN.—A cablegram, dated June 22, gives the result of crushing for the past fortnight:—"380 tons, yielding 350 ozs."

SUNBURST.—Messrs. Arthnr Forbes and Co. have received a cablegram from Charters Towers (June 22): "The company cleared up for a fortnight's work 250 tons, yielding 946 ozs. gold, value 3,400*l.* The usnal fortnightly dividend of 2s. per share is declared."

WENTWORTH PROPRIETARY.—Mr. Cooper, the company's consulting engineer, and Mr. Irwin, the mining manager (whom Mr. Cooper engaged in America), arrived at Sydney on Monday per s.s. Alameda, and have proceeded to the mines.

FOREIGN MINES.

ALASKA TREADWELL.—A cablegram gives the result of June clean up as follows:—"Shipment of bullion, $54,500; tons of ore milled, 18,150; tons of sulphurets treated, 513. Of bullion there came from sulphurets $13,230; number of days mill ran, 28; working expenses for period have been $26,000."

AMERICAN BELLE.—A cable from Mr. Harvey is to the following effect:—"The mines are all right. No. 7 stope improving, but cannot work Silver Bell to advantage until the new hoisting arrangements are completed." Cable from the general manager: "Cut ore body National Belle mine, lowest level ore looking well."

ARGENTELLA.—Information from the mines per cable:—"Ore body going down into the bottom of drive. Have commenced winze in level. Samples by next mail. Vein has all the appearance of being permanent.—J. B. ROBERTS."

COLOMBIAN HYDRAULIC.—Cablegram of the result of run No. 173:—"We have cleaned up after a run of 49 days, during which time we have washed 1,100 hours. The gross returns are 3,000*l.* The net profit is 1,650*l.*"

CORTEZ.—The directors have declared an interim dividend of 1s. 6d. per share, payable on July 2. The transfer books are closed from June 25 to July 2, both days inclusive.

DICKENS CUSTER.—A further shipment of bullion (bars 5, 6, 7, and 8) has been received from the crushings commenced on May 11 last, and has been sent to Messrs. Pixley and Abell to sell for the company. Cable from Mr. Axford, the managing director at the mines:—"Shipped bullion amounting to 2,180*l.*, after a run of 15 days in June."

ELKHORN.—Cable from the mine: "Bullion produced for week ending June 20, $9,065."

Flagstaff.—For the word "property" in the last line but five of our article on this company's affairs last week, read "quantity."

General Phosphate Corporation. — According to cable advice a further shipment of 364 tons of phosphate has just been made.

Golden Feather Channel.—Telegram: "Flume all completed ready for planking. 1,000 ft. sub-flume foundations laid.—McLaughlin."

Golden Gate Alluvial. — Cable: — "2,000-ft. flume completed planking. Balance being rapidly laid.—McLaughlin."

New Pierrefitte.—The company has sold 150 tons lead ore to the Pontgibaud Co. at 12*l.* 2s. 8d. per ton f.o.b. at Bordeaux.

Palmarejo.—Coupon No. 1 for interest due July 1 next on the 7 per cent. debentures of the company will be paid, less income-tax, on and after that date, at the offices of the company, 4, Copthall Buildings, E.C.

Pestarena United.—Notice is given that the coupon, No. 12, of the 10 per cent. second mortgage debentures of this company, will be paid at the office, 7, Queen Street Place, on and after June 23.

Pinos Altos.—The out-turn for the week ended 13 inst., was $11,600.

Tolima.—The reserves of the Tolima Mine are 1,522 tons, as reported by the manager, and not the figure given in our last issue.

Home Mines.

West Wheal Grenville.—A meeting is called for Friday, to receive a statement from the chairman and Mr. F. G. Lane upon their recent visit to the mine, and to authorise the directors to take such steps as they may think fit for the sale or disposal of the mine as a going concern.

Tin Ores.—A tin ticketing took place at Redruth, on Tuesday last, when 294½ tons were offered, realising 15,615*l.*

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Spitzkop.—Telegraphic advice is to hand of a further shipment of 116 ozs. of gold.

North-Eastern Bultfontein.—Telegraphic advices announce 11,500 loads washed, producing 1,900 carats of diamonds, for the week ending 20th inst.

St. Augustine.—The following cablegram, dated June 24, has been received from Mr. Hartley:—"Pocket of good blue ground dips to the north-west out of shaft. Rock blue, a great deal softer. Indications are favourable for change for the better. Letter will give you full particulars."

Balkis Consolidated.—Col. Malleson, C.S.I., has resigned the chairmanship of this company, and Mr. Pearce Edgcumbe (Deputy Chairman of the Ensenada and South Coast Railway Co.), Lieut.-Col. Fludyer and Mr. Grant Conybeare have been elected members of the board. Mr. Pearce Edgcumbe has been appointed chairman.

Transvaal Gold Exploration and Land (May 25).—Mining—Brown's Hill, Nu vein: Ore extracted at No. 1,211, 16 tons; assay value, 1 oz. 8 dwts. per ton; and at No. 1,209, 50 tons; assay value, 5 ozs. 1 dwt. per ton. Mill: All the machinery was running well. A large quantity of ore had been carted to battery dump during week.

Akankoo.—The following advices have been received from the mine, May 25:—New reef east driven 8 ft. 6 ins.; total distance, 32 ft. 6 ins. This reef is intact the full height of the hill. The quartz as we approach the junction with the old reef is improving greatly, a portion, 18 ins. wide, giving fully 2 ozs. to the ton. We intend recommencing to mill this afternoon; 60 tons ready. Winze B: We have struck quartz, but owing to water I have had to suspend work until the drive on the 60-ft. level drains it. All work delayed for want of labour.

Horo Concession.—Report received from the manager at the mine, dated May 18:—I beg to send you below the report of work done here from the 1st to the end of the 15th of this month. Intermediate tuunel: The 4 ft. of ground remaining to drive at the end of last month to connect the intermediate tunnel with the drive at the bottom of the winze from No. 2 tunnel has now been finished. The drive has been continued for a few feet past the winze, for tramming purposes. There is a small prospect of gold in the drive to the east of the winze. The winze from the No. 2 tunnel to the intermediate tunnel is being divided for an ore-pass and an air-way. The tramways from mine to battery and the ore trucks are nearly completed. Pipe line: The pipes we have rivetted here are already in place and screwed up. The pipes now coming from Moreni are being put in place as they arrive. The transport riders state that the mortality among their oxen is the cause of the pipes not coming forward more speedily. No. 1 shaft: The top soil is being stripped from the reef by No. 1 shaft, in order to work the ore in an open cutting. The reef is here about 40 ft. wide.

Wassau (Gold Coast).—The yield of gold for the month of Apl. last was 142 ozs. standard weight, of the net value of 531*l.* 14s. 4d. During this month the Adjah Bippo mill worked about 19 days, and the Crockerville mill about nine days, together crushing 250 tons of lode, giving a yield of gold per ton equal to 0.57 oz. A scarcity of men still prevails in the mining district on the west coast, and our manager, under date May 13, write us: "In less than a week no less than 34 men have gone out of the work." In addition to this drawback (which, however, the manager is doing all in his power to overcome), two accidents occurred in the mine during last month—one to a native miner through blasting, and another to the engine driving the Adjah Bippo Mill. Owing to these casualties, which are always incidental to mining, the directors cannot expect the produce for the past month to be more, if as much as in April. All this is very disappointing to the directors, as it will be to the shareholders, especially as we had just got over the water difficulty, and were looking forward to increased and remunerative returns. The directors propose to have the next annual meeting of shareholders about the end of July, or early in August; by which time they hope to have surmounted the difficulties at present unfortunately hampering their operations.

COMMERCIAL NOTES.

Metals.

The Metal Market has been fairly active during the current week. Bank Rate remains 3 per cent. Bar silver advanced to 46d., but has declined to 45⅞d.

Copper has been fairly steady. In G.M.B. warrants a good business has been done at from 56*l.* to 56*l.* 10s. cash, and 56*l.* 10s. to 57*l.* three months, closing yesterday rather easier 55*l.* 17s. 6d. cash, and 56*l.* 7s. 6d. three months. To-day's prices are 55*l.* 10s. cash, and 56*l.* three months. We quote English tough, 58*l.* to 59*l.*; best selected, 59*l.* to 60*l.* 10s.; strong sheets, 66*l.* to 67*l.*; India sheets, 62*l.* to 62*l.* 10s.; yellow metal, 5¾d. to 6d.; ore, 10s. to 11s. per unit.

Tin steady during the early part of the week, Straits selling at about 93*l.* 10s. cash and 93*l.* 5s. for forward. There has since been a decline to 92*l.* 12s. 6d. cash, and 92*l.* to 93*l.* 5s. three months. To-day's prices are 92*l.* 10s. cash, and 93*l.* three months. The Dutch Market has been steady at fl56 for banca, and fl55¼ for billiton. English ingots, 96*l.* to 95*l.* 10s. The billiton sale went at an average of fl63.65 per picul, parity with about fl55 per 50 kilos, or about 92*l.* per ton in Holland.

Tinplates quiet and quoted about 13s. 6d. to 14s. for ordinary coke in Liverpool.

Spelter easier. We quote 23*l.* 7s. 6d. to 23*l.* 10s. for ordinary brands ex ship here. To-day's price is 23*l.* 12s. 6d. to 23*l.* 15s.

Lead quiet. We quote soft Spanish, 12*l.* 12s. 6d. to 12*l.* 15s.; soft English, 12*l.* 15s. to 13*l*; L.B., 13*l.* 5s.; sheets, 13*l.* 15s. for export, and 14*l.* 5s. home trade.

Quicksilver. — Rothschild reduced his price to 7*l.* 15s. on Monday, the 22nd inst., at which a fair business has been done.

Antimony lower. Hallett's price for export to America, 50*l.* Ordinary brands and delivery, 47*l.* to 48*l.*

Dividends Declared and Announced for Week Ending June 27.

Australasian Mortgage and Agency	8 per cent.
Anglo-African Land Mortgage...	2½ per cent.
Australian Agricultural	36s. per share.
Bank of Adelaide	7 per cent.
Canada Co.	17s. 6d. per share.
Distillers Co.	10 per cent.
Debenture Corporation	7 per cent.
Edward and John Burke	13 per cent.
Huelva Gas	7 per cent.
Hudson Bay Co.	6s. 6d. per share.
Henry Ford and Co.	12½ per cent.
Johnson, Cole, Brier and Co.	7 per cent.
Imperial Ottoman Bank	14s. per share.
International Bank of London	5 per cent.
Leeds Daily News	10 per cent.
London Pavilion	12 per cent.
Merchants' Marine Insurance	5 per cent.

Royal Swedish Railway...	7s. 2d. per share.
Sea Insurance	2s. per share.
Seville Waterworks	4 per cent.
Sydney and Louisburg Coal	10 per cent.
Tamplins and Sons	12 per cent.
Waterlow Bros. and Layton	5s. per share.
West African Telegraph	6s. per share.

THE SYDNEY AND LOUISBURG COAL AND RAILWAY CO., LIMITED.

BUSINESS INCREASED—12S. DIVIDEND ON THE PREFERENCE SHARES.

The report of the board shows that the business of the company has considerably increased. The quantity of coal won during the year, including slack, as well as coal consumed at the mines and in working the railway, was 155,907 tons, as against 121,660 tons in 1889 and 124,050 tons in 1888. The augmented business has necessitated considerable outlays. The Emery Mine has been opened up; mining rights over a large additional area have been acquired; a house at Sydney for the agent and manager, and several miners' houses have been erected; one new locomotive, and 50 new coal cars have been bought, while the railway, the pier at Sydney, and the general plant have been put into good working order. Though the year's working shows a substantial increase over that of 1889, owing to the above-mentioned disbursements (a large proportion of which has been debited to revenue) only 1,715*l.* 9s. 6d. is carried to profit and loss account, instead of 3,618*l.* 18s. 2d. in 1889. The balance of profit and loss account brought forward on Dec. 31, 1889, after payment of a dividend of 12s. per share on the 5,000 first preference shares, was 1,839*l.* 5s. 2d., which, added to 1,715*l.* 9s. 6d. as above, leaves an available balance of 3,554*l.* 14s. 8d. Out of this sum the directors recommend the payment of a dividend of 12s. per share, equal to 10 per cent. on the amount paid up on the 5,000 first preference shares, which would absorb 3,000*l.*, leaving a balance of 554*l.* 14s. 8d. to be carried forward. The Cape Breton Railway has been completed, and was opened for traffic on Jan 3 last.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE past week has been slow in the extreme, and monetary rates have again fallen away under the pressure of abnormal quiet and accumulated balances. Three months' bank bills were yesterday discounted at 1 7/8, ½ per cent., and six months' at 2¼, and as regards the latter, dealers hitherto had refused to buy under 2½, fearing a stringent autumn and winter, but opinions in these extraordinary times change rapidly, especially when there is nothing passing. Call loans have been ½, 1 per cent. throughout, and the banks lent to stockbrokers from June 26 to July 15 at 2, 2½. The Foreign exchanges are sensibly lower against a rising tendency for discount on the Continent due to the approach of the half-year, and there is already a German gold demand for export in this market. Any suitable arrivals will no doubt be absorbed, but for the present, the Bank continues to secure the bulk of what comes to hand, and for the *Gazette* week there was a net influx of 201,000*l*., although 100,000*l*. in sovereigns were taken for Russia. The usual statement of the Bank of England is satisfactory, although the proportion is a little easier at 45¾ per cent. The note circulation expanded 600,000*l*., and the bullion increased 354,091*l*., while the reserve has fallen off 245,000*l*., which with a slight diminution in both the public and private deposits is not unfavourable at this season.

Absolute stagnation controls the Stock Exchange, while the markets have been unsettled. The settlement which commenced on Wednesday was remarkably small, and rates extraordinarily easy, nominal in fact upon most foreign bonds, which, too, were so scarce for delivery owing to continental manipulation as to compel the payment in many instances of slight backwardations. English Railways again were carried over with ridiculous ease, and there was hardly any "bull" speculation visible except in the great carrying lines whose dividend prospects are brightest. American Railroads were renewed at 3 to 4 per cent. per annum, and Mexican Railway Securities occasionally commanded "backs," as well as Eastmans' Meat, Bell's Asbestos, Hudson Bay, and Allsopp's and Guinness's Brewery Ordinary Stocks. There is no genuine feature anywhere save for another rise in Mexican Railways, owing to a sharp advance in silver, and in all such "silver" securities there has been a fair and quite exceptional business. American Railways have followed New York, and are weaker. Foreign Bonds are dull, and English Railways positively flat, for the course the rates inquiry has assumed, combined with poor dividend estimates, have depressed nearly all stocks, and Great Eastern, Brighton, and South Eastern "A," Chatham, and the Scotch systems have all suffered severely, for in their respective cases there are other adverse considerations at the same time. Consols are better; also Rupee paper. All things considered, it is no anachronism to remark that rarely has the speculative position been in a sounder or healthier state than now.

There were no bullion operations at the Bank of England to-pay. Call money has remained easy at ½, 1 per cent., and into July loans were available at 1¼, ½. 60 and 90 days bills, endorsed by bankers, were discounted at 1⅜, 7/16, but despite this great weakness there is nothing particularly new to record. Bar silver recovered to 45¾d., and Mexican dollars were 44½d.

The India Council continues to sell very freely upon Bombay and Calcutta at firm exchanges. The bi-monthly liquidation was concluded this afternoon in Public Securities without any failures, and prices, after being heavy, recovered. Consols were the feature, owing to some brisk investment buying rising ¼ to 95 5/16, and rupee loans were maintained notwithstanding realisations. Colonial Inscribed Stocks likewise improved, and International Government Bonds tended upward in sympathy with Paris. Argentine, &c., slightly appreciated on a further fall in the gold premium to 229 per cent., but all the same rumours were circulated of another revolution in that unfortunate Republic. In Home railways, Hull and Barnsley improved nearly 1 per cent., though the general list showed a further relapse, and all the southern passenger stocks were considerably offered towards the finish in anticipation of heavy expenditure upon their respective systems. All Canadian railways rose very exceptionally upon certain curious rumours of amalgamation between the Pacific Co. and the Grand Trunk, which caused some large accounts for the fall to be closed in the last-named securities. Mexican railways on the contrary were sold to realise, and there was another universal fall among United States railroads. Eastman's Meat shares improved, and San Francisco Breweries and Trustees' Insurance continued in request, the latter upon the assumed adjustment of Messrs. C. De Murrieta's affairs.

Annexed are the final quotations to-day:—Consols Account, 95 5/16, 95 7/16; Egyptian Three-and-a-Half per Cent., 91½, 92; Egyptian Unified, 96⅜, 96⅝; French Four-and-a-Half per Cents., 103¾, 104¼; Hungarian, 91⅛, 91⅞; Italian, 92¾, 93; Mexican, 32, 32½; Peru Corporation, 9¼, 9¾ per cent.; Peru Preference, 24¼, 24¾ per cent.; Russian, 1889, 98¾, 99¼; Portuguese, 46⅛, 46⅜; Spanish, 74, 74¼; Turkish, 1871, 95, 95½; Turkish Defence, 92¾, 93¼; Caledonian Railway, 114¾, 115; Great Eastern, 90⅝, 90⅞; Great Western, 156⅞, 157⅛; Brighton "A," 139⅝, 139⅞; North Western, 170⅞, 171⅛; Metropolitan, 81½, 81¾; Metropolitan District, 29½, 30; Midland, 153½, 153¾; North British, 38⅛, 38⅜; North Eastern, 154¾, 155; South Eastern "A," 82⅞, 83⅛; Mexican Railway, First Preference, 118¼, 118¾; Grand Trunk, 8⅝, 9; Grand Trunk First Preference, 60⅝, 61⅛; Grand Trunk Second, 40⅝, 41⅛; Grand Trunk Third, 22⅜, 22⅝; Canadian Pacific, 81⅞, 82⅛; Denver Preferred, 49⅜, 49⅞; Erie, 18⅞, 19⅛; Milwaukee 63¾, 64; Lake Shore, 111½, 112; Louisville, 73½, 73¾; Atlantic First, 31⅛, 31⅜; Ontario, 16, 16½; Ohio, 18, 18½; Norfolk and Western, 52⅝, 52⅞; Reading, 14⅞, 15⅛; Reading Bonds, 52, 53; Union Pacific, 44⅛, 44⅜; Wabash Preference, 22¾, 23; Ottoman Bank, 13¼, 13⅜; Anglo-Telegraph, 45¾, 46¼; National Telephone, 4⅞, 5⅛; Hudson's Bay, 15, 15½; Suez Canal, 109¾, 110¼; Guinness, 324, 326; Allsopp's Ordinary, 29, 31; Bryant and May, 13⅞, 14⅛; Eastmans, 5⅞, 6⅛; Trustees, &c., Insurance, 4½, 5.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (June 24).—No. 10 level, south: The rise in south end of this level on the footwall part of the lode continues to produce lead, varying from 1 to 1½ tons to a fm.; ground keeps close and spare for working. No. 9 level: The lode along the side of level between shaft and No. 1 cross-cut is producing ½ ton of lead to a fm., and ground looking kindly. Stope behind the shaft is worth 15 cwt. of lead to a fm. No. 8 level: The stope under No. 8, and south of No. 2 winze is not cut through into the best ground yet, but will be in a better position in a few days. No. 7 level: The tribute pitch is not looking so well as it was. The lode we are stoping for blende at top of new shaft is without change this week. At surface, water is very scarce this week, and we are obliged to pump with the engine most of the time.—H. NOTTINGHAM.

DEVON GREAT CONSOLS (June 25).—Watson's engine shaft: In the 172-fm. level west the lode is 4½ ft. wide, composed of capel and quartz, with fluor and small quantities of copper and mundic ores. In the 160-fm. level east the lode is 4 ft. wide, very promising, and is yielding saving work of copper and mundic ore. In the 160-fm. level west, the driving of which has recently been resumed, the lode is 3½ ft. wide, also very promising, and yielding saving work of copper and mundic ores.—I. RICHARDS.

DRAKEWALLS (June 25).—Ground much same as last week. Granite, capel, veins and spots of tin. In 160 east lode yields 3 tons mundic; good saving tin; promising. In 160 west saving work for mundic and tin. Rise back 160 west, 6 tons mundic. Lode in stope back 160 west, 11 tons mundic; saving tin. Stope bottom 147 east, 12 tons mundic and a little tin. Lode in 147 east, more mundic and small proportion tin; ground easier. Men taken from 147 west to break mundic back 160 west to feed calciners. Stope back 132 west: Cross-course capel part not looking so well; 3 tons; capel ore computed 60 tons to 61 tons 3 cwt. Parcel of tin next week. Jiggers improved.

EAST GRASSINGTON (June 24).—Report from the mine manager:—Hammond shaft: The 47 west has been advanced 21 ft., and stoped 7 fms., giving 10 fms. 3 ft. of ground removed here up to date this month. The lode has widened out to 1½ ft., and the filling matter all that can be desired for the production of mineral in payable quantities, valued to-day at 18 cwt. of lead ore per fm. and improving. We are now within 11½ fms. of reaching the perpendicular of the proposed new Isabelle shaft to command the western ground. Stope in back of level in a lode 2 ft. wide, producing 10 cwt. of ore per fm. No. 3 sump is sunk 23 ft. below the 47 upon the course of the lode which is 2 ft. wide, and producing 22 cwt. of lead ore per fm. Stope at intermediate level is 2-ft. wide, composed chiefly of soft sugary spar and lead ore, worth 8 cwt. per fm. Harris main engine shaft: This shaft is in regular course of sinking by a full complement of hands, and taking in consideration the hard compact country rock we are sinking in, excellent progress is attained. The 47 has been advanced 16 ft. east of No. 3 heave, in a strong gossany lode 3 ft. wide, and producing 12 cwt. of lead ore per fm., and promising for a further improvement. Two stopes in back of level, worth together 20 cwt. of lead ore per fm. In the 37 east the lode is somewhat easier for progress and the matrix more congenial, intermixed with patches of lead ore. Surface, dressing, and smelting operations in full swing. Machinery in good order and working smoothly.

PHŒNIX UNITED (June 22).—According to the setting report, there are now at various points seven tribute pitches at tributes varying from 7s. 6d. to 13s. in the £ for tin.

PRINCE OF WALES (June 24).—In the 180-fm. level both east and west the men have commenced taking down the lode, which, so far as seen, looks well, but we cannot as yet give its size nor value. When last taken down it was 2 ft. wide, yielding good work for tin. In the 166 west we are now driving in the lode, which is 4½ ft. wide, and much improving in character and value, produciug good stuff for stamping. There is but little change to notice in the cross-cut since last week.—S. ROBERTS, J. PROWSE.

SOUTH CONDURROW (June 24).—We are pushing on the 138 end east of Marshall's shaft towards the cross-course, and as soon as it is reached we shall extend north on it to intersect the lodes. The lode in the winze sinking below the 123-fm. level is worth 10*l*. per fm. The stope in back of the 123 east is worth 10*l*. per fm. The lode in the 40 end east of Engine shaft is without tin to value. Three stopes in back of the 40 are worth in the aggregate 28*l*. per fm.—W. RICH, W. THOMAS.

SOUTH DARREN (June 25).—The shaft is 39 ft. 6 ins. under the 142, having been sunk 3 ft. this week. Good stones of lead and copper are being broken, not enough to value, but it is an encouraging feature, as it is an improvement on what we had higher up. The 130 end west is worth 10 cwt. of silver lead ore per fm., being better in the roof than in the bottom of the level. The repairs to Bishop's shaft are going on satisfactorily, being nearly completed, except the collar which requires seven new sets of timber.—J. MITCHELL.

WEARDALE.—Report on Weardale Co's. mines for week euding June 20:—Ore raised for week, 88 tons; ore dressed for week, 58 tons; ore, slag and fume smelted for week, 115 tons, producing 57 tons of pig lead.

WHEAL CREBOR (June 23).—The points in operation at the mine are as under: Four men cross-cutting the lode at the end of the 156-fm. level east of the new shaft, at 7*l*. per fm. In driving the level a part of the lode has only been taken, which part, now in the end, is worth 4 tons of mundic per fm. The cross-cut will prove its full size and value. We have already driven it about 5 ft.; the lode for that 5 ft. is poor. Four men stoping the 144 east of winze, at 3*l*. per fm.; lode worth 2 tons of copper ore and 4 tons of mundic per fm. Four men stoping the back of the 144 west of cross-cut, at 3*l*. per fm.; lode worth 3 tons of copper ore and 4 tons of mundic per fm. Two men driving west at the 132-fm. level on the south part of the lode, at 5*l*. per fm.; lode worth 3 tons of mundic per fm. The object we have in driving this end is to intersect a shute of ore worked on in a tribute pitch in the bottom of 120. We may have about 6 fms. or 7 fms. to drive to work it. In different parts of the mine we have 12 men working on tribute; their tributes varying from 12s. to 13s. 4d. in the £.—P. D. HOLMAN.

WHEAL UNY (June 24).—Shaftmen still doing well. No change in the lode. Engine working well. The 244 west, with all other points, are being pushed with all speed. No change in value since last reported.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Extracts from a letter received from superintendent at the mines, dated May 30 :—Mine: Our foreman reports to me that the 24 south drift on west wall, 100 lode, is now in 4 ft. of ore. General samples occasionally taken from this drift have shown that the ore is of a rather low grade, but it may improve further south. The important feature here is that we have all the 100 lode unexplored southward. The position of the west wall and its bearing southward leave no doubt in my mind that the Primera Veta, or first lode, in Tirito, and the 100 lode in Mina Grande, are one and the same lode, which keeps its individuality along the whole claim. Formerly it had been supposed that they were spurs or offshoots from the parent, or main lode, and that they both died out in a short distance. It had also been supposed that the western wall of the formation was all broken up into the country rock, or, rather, that there was no western wall, but the recent workings have demonstrated that there does exist a western wall (of brown porphyry), quite as well defined as the eastern wall, but had never been touched from the tunnel level downwards.

ANGLO-MEXICAN.—The superintendent at the mine reports for the week ending April 18, as follows :—Connection has been made with the old workings, and we shall endeavour to utilise it in the extraction of the low-grade ore that has been left. I hope that we may find enough, and of sufficient value, to pay the expense of the work we have already undertaken. About 100 tons of ore has already been taken from these workings. Nabor winze, below 814-ft. level, was sunk 9 ft. during the past week, making the total depth 91 ft. We are daily expectiug to make connection with the upraise from the 908-ft. level. There only remains 4 ft. between the two points, and this we shall probably make some time to-day. Angel wiuze 812-ft. level, was sunk 7 ft., making the total 45 ft. The small streak of ore, I was able to report last week, is still in sight, although the ore it contains is not auy more reliable than it was. We have occasionally fully 12 ins. of ore. East drift, 908-ft. level, advanced 17 ft., making the total 88 ft. Width of ore in the face 4 ft. to 5 ft.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated May 5, 1891, and from Messrs. Restrepo, dated May 12. The statement for the month of Apl. is as follows :—286 tons produced 131 ozs. ; average, 9 1-10th dwts. ; also 15 ozs. from the Attle stamped ; and 11 ozs. from a discovery in the hillside ; total, 157 ozs. Estimated value of gold, 416*l*. ; cost at the mines, Medellin, and in London, 541*l*. 7s. 7d. ; estimated loss, 125*l*. 7s. 7d. During the month sums amounting to 76*l*. 8s., included in the above statement of cost, were expended in Colombia on capital account.

BRATSBERG.—Report for week ending June 13 :—Hoffnung Miue : No. 2 adit level is yielding now about 1 ton per fm., having improved recently, especially towards the bottom of the level. No. 1 rise in the back here is yielding for the present ½ ton per fm. At No. 3 adit level the lode is 2½ ft. wide, and a strong leader of quartz, carrying ore, has just been struck, hence we have every hope of being able to report a valuable lode here shortly. The rise in the back is producing 1 ton per fm. No. 4 level is unchanged since last report, but the rise going up in the back is worth fully 1½ ton per fm. to-day. The level in Murchison's section is also worth 1 ton per fm. of rich ore. Johannes Mine : The western level on Howard lode continues to yield about ½ ton per fm., and the eastern end ¾ ton per fm. The rise in the back is still idle from want of miners. Surface work and remarks : The dressing machinery has been kept going very regularly during the past week, and we have now nearly cut through the rough stuff blocking the way to the fiue stuff heap, heuce after to-day we shall probably be able to charge the machinery in the manner most desirable. Our agent in Skieu reports that he has in view the John Evans for the second cargo, to load July 1.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending June 13.—The roaster was got under weigh for the first time on Saturday afternoon, and, I am glad to report, appears to be working very satisfactorily, and we anticipate no trouble with it. The timbermen have still some small matters to finish about the building, but will be ready in a day or so. As soon as sufficient roasted ore has been got into stock, we propose having another trial of smelting under the new conditions of the ore, and will duly report to you the result.—T. F. SMITH.

COROMANDEL (May 14).—I beg to hand you my report for the four weeks ending the 9th iust. :—Blagroves : During the month the No. 2 reef has beeu driven on 16 ft. 6 ins. It is large, being over 3 ft. in thickness, very changeable, and broken at times. The hanging-wall portion is composed of quartz, strongly coloured with oxide of iron, and letting out water freely. Fair prospects of gold were obtained by washiug and crushing the stone. The footwall part is of a dark blue colour, being a mixture of quartz and sandstone, giving occasionally strong colours of gold. As we advance the reef should improve as the country becomes more settled—in fact, at the present the indications are such as to lead me to believe that a further improvement will take place shortly. The machinery at the uine is in good working order.—W. H. ARGALL.

DAY DAWN P.C.—Report for fortnight ending May 9 :—The output of quartz is 1,013 trucks of mineral stone and eight trucks of brown stone. Sent to the Excelsior mill 1,134 tons of mineral stone. Your underlie shaft has been sunk a further depth of 3 ft., making a total depth of 133 ft. below the No. 12 level. The number of trucks of quartz hauled from the shaft and each level is as follows :—Shaft, 12 trucks ; No. 12 level, 346 trucks ; Nos. 10 and 11 levels, 563 trucks ; No. 2 shaft, stopes under No. 5 level west, 30 trucks ; stopes over No. 5 level west, 62 trucks ; total, 1,013 trucks. No. 2 underlie shaft—No. 5 level east : Nothing has been done in this level except timbering this fortnight. No. 5 level west : The stope under this level going west from the winze is carrying 2 ft. of stone, of fair quality. In the stope going east from the winze is 2 ft. of stone, of medium quality. No. 4 level west has been extended a further distance of 30 ft., making a total distance of 340 ft. from the shaft ; the formation is 5 ft. wide, of a soft diorite, but carrying no stone. In the No. 1 stope over the back of No. 5 level west we have about 2 ft. of stone in the footwall, of good quality. The No. 2 stope has been carrying 4 ft. of stone, but in the last breaking down the reef on the footwall pinched out, but I expect to cut some very good stone after extending this stope about 15 or 20 ft. further ahead. No. 3 Straight shaft : The workin connection with the poppet legs and brace at this shaft is progressing satisfactorily ; we start to lift the poppet legs to-day. Lease No. 1,281 : During the past fortnight the eastern drive has been extended a further distance of 15 ft., making the total distance from shaft 155 ft. The formation at present is fully 6 ft. thick, and somewhat harder than usual. There is an inch or two of poor stone in the hanging-wall.—T. LESTER.

— The following telegram gives the result of the company's crushing for the fortnight ending June 20, viz. :—"1,086 tons, 1,066 ozs. (Estimated value, 3,624*l*.)."

EMMA (June 3).—Operations at the mine the past week are as under :—We started the concentrating mill on Tuesday, the 26th ; run but a couple of hours ; on Wednesday we run all day, making about 2½ tons of concentrates. On Thursday we had to stop because of foundation of engine needing repairs, we did not ; get started again until Monday, 1st. Mill is now running nicely, and making about 2½ tons concentrates per day, and we hope to do better. In the mine we mined only low grade ore for the mill ; some 25 tons mined ; this from the Emma tunnel level. The footwall drift from Emma tunnel advanced 16 ft. ; total 164 ft. ; worked four men. On the Illinois tunnel level we raised and drifted 20 ft. ; total 127 ft. ; worked four men. On drift above No. 4 level we worked but two men : advanced 10 ft. ; total 255 ft. In the cross-cut towards hanging-wall from No. 3 level south-east, worked one man ; advanced 4 ft. ; total, 154 ft. The appearances in the different workings remain about the same as per my letter of the 25th ult. Tramroad is now open, but will not carry ore until next week. We will, no doubt, start shipping Monday next. —H. C. WALLACE.

ETHERIDGE UNITED (Apl. 29). — Fortnightly report :—Caledonian No. 1 South Mine : During the past fortnight the south level at the 80 ft. has been advanced a further distance of 7 ft., making the total distance from shaft 80 ft. The reef is greatly broken up yet, and I have discontinued the level for the present, and commenced stoping where the reef was about 2 ft. 6 ins. in thickness, and heavily charged with mundic. The 130-ft. level : The cross-cut has been advanced 14 ft., making the total distance from shaft 36 ft. We have just got a change of rock, and I think 10 ft. more will cut the reef. I have got the large pump at work now, and hope to be able to keep the water down when we cut the reef. If we get the reef next week I will endeavour to have a crushing out in May.—M. FERGUSON.

FLAGSTAFF (June 13.)—I have the pleasure of again reporting to you as to the progress made in the mine during past week. Main sixth level is now in 144 ft. ; the rock is still very hard. The incline above this level is now up 32 ft. ; the ore here is improving in quality. It is 18 ins. wide, and full height of incline. In this we have about 2 ins. of first-class ore ; the rest is very good second. The incline below sixth is now down 60 ft. ; the ore here is now of the very best, being 16 ins. wide and fully 5 high ; it has turned straighter downwards. Seventh level : This is now in 67 ft. ; the rock is becoming stained more with iron than heretofore. Number of tons of ore mined the past week, 20—3 first-class and 17 second.

GYMPIE GOLDEN CROWN.—Report of manager for fortnight ending May 8 :—I have to report that the rise on the March reef has been carried up a total distance of 136 ft. from the floor of the 240-ft. level. At 105 ft. driving north and south on the slate break has been commenced, the north drive 20 ft. ; total 40 ft. ; and the south drive 18 ft. ; total 30 ft. The reef averages about 1 ft. in thickness, and is showing a little gold. The north drive and stopes over the 240-ft. level are being continued, but the stone being raised at present is poor. Lease No. 777 (two mile) : Driving south on the Peter and Paul reef is being carried on as usual. The reef is about 12 ins. in thickness, of good quality, and showing a little gold. The north drive is being continued, but the reef has not yet been met with ; the south drive has been put in 13 ft. ; total, 47 ft. ; have broken no quartz down yet. At the eastern shaft the cross-cut has been advanced 15 ft. ; total, 147 ft. The rise on the Peter and Paul reef has been carried up 8 ft. ; total, 32 ft. The reef has improved, being now 2 ft. in thickness, but have not got the slate yet.

GYMPIE GREAT EASTERN.—Extract from letter of local secretary, dated Gympie, May 5 :—I am happy to state that there is a very great improvement in our workings on the Orient reef, which at present in the northern end shows really good gold. There is also an improvement in the appearance of the stone in the southern end, but not much gold showing yet. The manager did not deem he had got sufficient to warrant sending a cable, as the present good quality of stone may not last, although we do not see any reason why it should not do so. Should the improvement continue sufficiently to justify our thinking it permanent we will at once cable ; while if the stone continues like the last week I trust we will have the pleasure of doing so long before this reaches you. (Official note.—A cablegram (duly published) was received from Gympie, dated May 18, as follows :—"There is a great improvement in Orient reef, first-class ore being taken out.") The I South Great Eastern Co. are getting good gold coming up to our southern boundary, and yesterday culled some splendid specimen stone, which leads us to believe we will get good returns from it when it is taken out in our ground. You will observe by the plan a small reef marked, which was intersected by us before reaching the dyke, and which we have never yet prospected, having confined our works to the Orient reef. It is not practicable to do any work on this reef until we hole through on the Orient and get the mine opened up and ventilated for stoping, and as soon as this is done we will proceed to thoroughly test that reef. The No. 1 North Glanmire have got it, and are getting really good gold on it, so that we may reasonably anticipate it will be good with us. We are happy to state that never since the old workings on the Great Eastern reef, even in full swing, has the mine looked so promising. As far as one can anticipate in mining, there seems years of profitable work ahead.

JAVALI.—Pim's tuunel was driven 16⅜ varas since writing last; the lode has bee disordered and of no value, but we are now bringing it again to the stamps. No. 1 rise was put up 6 varas and No. 2 rise 9¼ varas, also a No. 3 level, driven 8½ varas west of cross-cut from ventilation shaft. The lode throughout is of great width, and our present workings are still only on the north part. Total quartz raised from the above places of operation during the past month, 190 tons ; 140 of which was treated by five stamps, working slowly on an average of 28 days. Yield from stamps, 105¼ ozs., and from tailings 8 ozs. ; total, 113¼ ozs. of gold valued at 283*l*. 10s. There is now 50 tons of quartz left on the stamps. Cost for April 240*l*. 10s. We have had here now a long dry summer, but are opening our mine to prepare for good returns in the wet season, and also to have a choice of richer ore for future seasons.

KANGARILLA PROPRIETARY (May 19).—Manager's report :—

Aclare Mine : No. 1 winze still continues in good ore. This block will yield a considerable amount more ore than the original estimate. No. 2 winze is now yielding 1¼ tons of ore per ft. ; good veins of pure galena are met with, also antimonial silver ore in small quantities. These are indicative of mineral wealth. No. 4 winze : The most important work iu the mine. Every foot sunk represents at least 500 tons on the length of the shoot of ore. Generally speaking, the outlook of the mine is very cheering.

KAPANGA (May 14).—I beg to hand you report of the work done in the mine for the four weeks ending 9th inst The level, driving south on the Kapanga reef at the 300-ft. level has been extended by six men a further distance of 40 ft. The reef is small, composed of pug, carbonate of lime, quartz and iron pyrites. It has, however, changed its underlie, caused most probably by a branch that has come in from the footwall. Thinking there might be some more reef in that direction, I put the men to drive there, but after going in 7 ft. found nothing, so, of course, suspended it again. The main drive is still being pushed ahead, and we hope shortly to get out of this disordered country. During the month we rose about 4 ft. on the reef from the back of the level. The reef itself looked well, being highly mineralised, and, from present appearances, might show gold at any moment. The cross-cut driving east, north of the slide at the 130-ft. level north of the main cross-cut, for the purpose of intersecting the footwall portion of Scotty's reef, has been advanced by two men 19 ft. The country is rather hard, full of heads, and strongly impregnated with iron pyrites. The rise above the 300-ft. level south of Coromandel shaft has been put up by the last-mentioned men 4 ft., but the reef being of no value it was suspended. The rise above the 300-ft. level north of Coromandel shaft has been risen by four men a further distance of 32 ft. The lode is about 1 ft. wide, composed of clay and boulders of quart intermixed ; altogether the indications at this point are favourable. We have also driven from this rise a prospecting drive north to ascertain the quality of the reef in that direction, and are now in 13 ft., but nothing of importance has been met with as yet. During the month we have cleaned and retimbered an old pass above the 300-ft. level, 28 ft., for the purpose of opening up some ground above this level. As far as I can ascertain, a large block of ground is standing intact at this point to the surface, and in prospecting the same very likely we shall come across some deposits of gold. The winze on Scotty's reef below Blythes level has been sunk by three men 21 ft. The lode, averaging 6 ins. in width throughout, but failing to find any gold, was stopped. The same men drove 10 ft. south from end of winze with the same result. Stoping on Scotty's reef above the intermediate level : The stope is 14 ft. long by 6 ft. high, reef 1 ft. wide, and showing a little gold at intervals. The drive going north on Scotty's reef from the main pass below the intermediate level has been extended by one man 14 ft. ; the reef averages 1 ft. wide, and looks well. This will prove a block of ground standing in this direction. I might mention that in the level above a good deal of gold was obtained, so there is a great chauce of our getting some again as our drive advances. The timbermen and two shaftmen have been engaged during the month clearing and re-timbering the 300-ft. level south on Scotty's reef. This has been a long and tedious job, the ground being very heavy, but we hope to reach the end this week. In extending this level further south there is every probability of discovering other rich patches of gold, as we shall be going into virgin grouud. We have also repaired Coromandel shaft, and put in new footway. The machinery throughout the mine is working fairly well.—W. H. ARGALL.

LA PLATA.—Report for the month euding May 31 :—The output from La Plata for May amounts to 421.25 tons, which sold for $4,953 69-100ths. Montgomery Mine : 15.43 tons sold for $150 46-100ths. From the slag dump 21.82 tons of matter were recovered, and sold in Denver for $724 13-100ths, the total receipts being $5,820 28-100ths leaving a profit on the month's work of $843 17-100ths. During the past month a good discovery was made in Block No. 6, the ore averaging 23 per cent. lead and 23 ozs. silver, and averages 20 ft. in height by 10 ft. in width. Other parts of the mine have not changed since I last reported. Work is being pushed at every point, and with fairly good results. White Cloud : The shaft is down about 50 ft. ; the ground is much softer, and contains striugs and bunches of iiron pyrites, with occasional spots of grey copper ore in talcose gangue. The machinery is now all on the grouud, and in progress of erection.

LEEDS COPPER (June 11).—I beg to hand you my report for the week ending above :—Kent's shaft : The 20-fm. level driving west of Kent's shaft is in good vein ore, producing 2½ tons 15 per cent. copper ore per fm. No. 1 stope in the back of this level has improved, and is in bed ore 4 ft. wide, and producing 2½ tons 15 per cent. ore per fm. No. 2 stope in back of this level continues in bed ore 3 ft. wide, producing 2 tons 15 per cent. copper ore per fm. In the 15-fm. level driving west of Kent's shaft the bed ore is of a mixed character, and not as good as last reported, but I expect an early improvement here, producing 1 ton 15 per cent. copper ore per fm. No. 1 stope in the back of 15-fm. west level is in bed and vein ore, 6 ft. wide, producing 5 tons 15 per cent. ore per fm. No. 2 stope in the back of this level has just been started ; this is not as good as we want to see it, and look for au early improvement iu it, producing 1 ton 15 per cent. copper ore per fm. No. 3 stope in the back of this level is in good bed ore, producing 2 tons 15 per cent. copper ore per fm. McGees shaft : The drive mentioned in my last to cut the vein is in more promising rock. The indications show we are nearing the vein. We are sending to surface a quantity of stuff which has been left iu the mine, and which will pay us to treat. Adit : We have started a party on No. 2 bed in this part, which shows good ore, producing 2 tons 15 per cent. copper ore per fm. Surface : The surface operations are being pushed on with all speed.—T. R. DAVEY.

MYSORE (June 2).—Mining operations for month ending May 31 : —The progress made in the different bargains with the rock-drills continues to be very satisfactory. The 780 north of Rowse's shaft has been driven 70 ft. ; total distance, 293 ft. ; the lode is 2½ ft. wide, and assaying 4 ozs. 7 dwts. 12 grs. We have commenced to drive the 620 south of incline shaft on wide lode with a rock-drill, in a lode 2 ft. wide, and estimated to be worth 1 oz. The 550 south of incline shaft on the wide lode has been driven 16 ft. 6 ins. ; total distance, 55 ft. ; the lode is 1½ ft. wide, and assaying 15 dwts. Glen's shaft : The 250 north of shaft has been driven 39 ft. 6 ins. ; total distance, 232 ft. 10 ins. ; the lode is 1 ft. wide. and yielding a little quartz, but not sufficient to value. The 250 cross-cut east of this shaft has been driven 20 ft. 7 ins. ; total distance, 56 ft. 4 ins. ; the ground is very hard and spare for driving. Tennant's shaft : The 360 north of shaft has been driven 67 ft. ; total distance, 463 ft. 5 ins. ; the lode is 2 ft. 6 ins. wide, and assaying 2 dwts. The 360 south of shaft has been driven 5 ft. 6 ins. ; total distance, 18 ft. 6 ins. ; the lode is 6 ins. wide, and assaying 1 dwt. The 290 north of shaft has been driven 54 ft. 6 ins. ; total distance, 784 ft. ; the lode is 1 ft. wide, and assaying 1 dwt. 15 grs. The 290 south of shaft has been driven 58 ft. 6 ins. ; total distance, 423 ft. 6 ins. ; the lode is 1 ft. wide, and assaying 1 oz. 6 dwts. The 180 north of shaft has been advanced 22 ft. 6 ins. ; total distance, 900 ft. ; this level is still iu old workings, and the end now is just under Gilbert's shaft. Schaw's shaft : The 450 north of shaft has been driven 68 ft. 6 ins. ; total distance, 378 ft. 6 ins. ; the lode is small and unproductive. The 450 south of shaft has been driven 9 ft. 6 ins. ; total distance, 88 ft. ; the lode is 9 ins. wide, assaying 2 dwts. 14 grs. The 320 north of shaft has been driven 9 ft. ; total distance, 165 ft. 9 ins. ; the lode is yielding a little quartz, but not sufficient to value. The 320 south of shaft has been driven 10 ft. 9 ins. ; total distance, 217 ft. 6 ins. ; the lode is 1 ft. wide, and assaying 3 dwts. 6 grs. Rising : The rise in back of the 400 north of Rowse's shaft has been put up 14 ft. 6 ins. ; the lode is 4 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The rise in back of the 450 north of Schaw's shaft has been put up 8 ft. ; total distance, 14 ft. ; the lode is 2 ft. wide, and assaying 3 dwts. 22 grs. Stopes : The lode in stope in back of the 700 south of incline shaft is 2 ft. wide, and assaying 1 oz. 2 dwts. 6 grs. The lode in No. 2 stope in back of the 700 south of incline shaft is 2 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in bottom of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 15 grs. The lode in stope in back of the 620 south of incline shaft on wide lode is 2 ft. wide, assaying 1 oz. 9 dwts. 9 grs. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, assaying 12 dwts. 9 grs. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 9 dwts. 9 grs. The lode in No. 2 stope in back of this level is 1 ft. 6 ins. wide, and assaying 4 ozs. 0 dwts. 2 grs. The lode in No. 3 stope in back of this level is 1 ft. 6 ins. wide, and assaying 1 oz. The lode in stope in bottom of the 550 north of Rowse's shaft is 3 ft. wide, and assayiug 1 oz. 6 dwts. 18 grs. The lode in stope in bottom of this level south of shaft is 3 ft. wide, and estimated to be worth 1 oz. The lode in stope in bottom of the 466 near Taylor's shaft is 4 ft. wide, and estimated to be worth 8 dwts. The lode in stope in back of the 400 south of this shaft is 3 ft. wide, and assaying 1 dwt. 7 grs. The lode in bottom of the 400 north of this shaft is 1 ft. 4 ins. wide, and assaying 15 dwts. 15 grs. The lode in back of the 360 south of Plummer's shaft is 3 ft. wide, and assaying 10 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 15 grs. The lode in stope in back of the 296 north of this shaft is 2 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 296 north of Rowse's shaft is 4 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 236 north of Rowse's shaft is 3 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 290 north of Tennant's shaft is 4 ft. wide, and assaying 1 oz. 6 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 2 dwts. 10 grs. The lode in stope in back of the 180 north of shaft is 3 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 16 grs. The lode in No. 2 stope in back of this level is 4 ft. wide, and assaying 1 oz. 5 dwts. 11 grs. Sinking : Rowse's shaft has been sunk 30 ft., making altogether 106 ft. below the 780 ; the grouud contains veins of quartz and carbonate of lime, and is letting out a little water. We shall sink this shaft a few feet deeper, and then commence to drive the 890-ft. level. The lode in winze in bottom of the 700 north of Rowse's shaft is 4 ft. wide, and assaying 7 ozs. 5 dwts. 3 grs. Gilbert's shaft has been sunk 25 ft. ; total distance from surface, 109 ft. ; the ground is very firm and compact, and looks congenial for the production of gold. All our machinery is in good working order, and the new surface works, including Tennant's Railway, are progressing rapidly. Mill samples : New mill quartz, 2 ozs. ; old mill quartz, Taylor's, Rowse's and Tennant's, 1 oz. 12 dwts. 6 grs. ; new mill tailings, 7 dwts. 3 grs. ; old mill tailings, 3 dwts. 21 grs.—J. GILBERT.

MYSORE REEFS (June 2).—Fortnightly report.—Harvey's shaft : The 520-ft. level north has been extended 17 ft. ; now 26 ft. from shaft ; the rock is very hard and difficult to blast. A week since we commenced a cross-cut west at this level ; 10 ft. has been advanced in this direction. The 400-ft. level south has been extended 11 ft. 7 ins. ; now 118 ft. 6 ins. from shaft ; the lode is pinched, and at present of no value. I have removed these men to drive and stope south of the cross-cut from the winze below the 320-ft. level. We have a piece of lode here for a width of 4 ft. ; worth from 6 to 8 dwts. of gold to the ton, and the chances are when opened on it will widen and improve in value. You will remember that the width of the lode as seen in this cross-cut is over 60 ft., but there are portions of it very poor, but by driving and stoping in the part that contains the most gold we may get a quantity of ore that will pay to mill. The 400-ft. level north has beeu advanced 21 ft. 9 ins. ; now 169 ft. 10 ins. from shaft ; the rock is hard and close, but there are small branches and stringers of quartz running through it, containing a little gold, worth, according to assay, 2½ dwts. per ton. Air shaft : The stopes in the bottom of the 140-ft. level ; the part we are taking away is from 8 to 10 ft. wide, and for a short length assays 7 dwts. of gold to the ton.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports for the fortnight ending June 2 :—Tank Mine, north shaft : This shaft has been sunk 6 ft. 9 ins., making a total depth of 174 ft. 3 ins. The rock is now hard, and it will not be necessary to timber it close down to the bottom, but as yet we are very near the lowest sets, and have to repair them or put in new timber after almost every blast. During the month of May the shaft has been sunk 18 ft. South shaft : This shaft has been sunk 3 ft., making a total depth of 95 ft. 6 ins. from surface ; there is no change ; the water is increasing but is not yet sufficient to interfere much with the sinking. The progress has been so unsatisfactory that I have now set it to a party of Moplahs to sink by hand labour until I can spare an Englishman to sink it with rock-drills. Health has not been so good lately, and I have had the engineer and one of the English miuers laid up for some days, and a good deal of fever amongst the native miners.

NEW CALIFORNIA.—Mine report for second half of May.—The 2,100-ft. level, west of shaft, in 21 ft.: The lode at this point is 2 ft. wide, and in this last advance has gone through some rich mineral,

the best showing being in the bottom of the drift. The 2,100-ft. level, east of shaft, in 13 ft.: On this side the vein is a little wider, and in the end we have 3 ft. of good milling ore. Our force in these two drifts is limited to four men, it being impracticable to increase this number until we can get in and make better ventilation. The 2,000-ft. level, west of shaft, in 829 ft.: The lode in this drift is 6 ins. wide, and more encouraging than we have seen it for weeks past. The 2,000-ft. level, rise and stopes: This rise is going up at a point 767 ft. west of the shaft, and has met with some fair stoping ground. The 2,000-ft. level, stopes east and west of No. 2 winze, west of main shaft: These workings are on a good vein, but the grade of the ore low. It is good concentrating material. The 1,800-ft. level at 500 ft. west of shaft: We are breaking through the bottom of the level at this point to tap old workings, which were abandoned on account of poor air, and where we expect to find some milling ore. The 1,500 south vein, south spur, east of junction, and the 1,500 south vein, south spur, west of juuction: Our workings on this spur continue quite profitably, and show a slight improvement at time of this report. The 1,400-ft. level, east of shaft, B lode: This point is as when last reported on. The 1,100-ft. level, east of shaft, main drift, in 496 ft.: To the past fortnight this drift has progressed well, and the stopes just behind it have produced some fair milling ore.—F. RICKARD.

NEW DEVALA MOYAR.—Extracts from manager's reports:—(March 31)—Bottom winze: We have cut through the reef at the bottom of this winze and commenced sinking. We have sunk 4 ft.; total depth from the 116-ft. level, 35 ft. The reef, as far as we can judge, has taken a fresh underlay and carries its size, showing in places dark close-grained pyrites rich in gold.

— (May 19).—I have sent you by Parcel Post 7 lbs. of the dark close-grained pyrites from the winze No. 1. There is none of this now in the face; we passed through it as we were sinking

NEW DEVALA-MOYAR (Juue 1).—Main shaft: We have sunk 9 ft. during the week, and timbered same; we are now down 32 ft., and have still got clay and decomposed rock—good ground for sinking. No. 1 winze: We have only sunk 2 ft. here; total, 68 ft.; as we found a splice of quartz lying on the footwall and had to take it up. This splice of quartz has opened out into a fine body of quartz, and increases in size as we descend. The 116-ft. level, drive west: Here the reef has given out, and we are in country. In this level the reef has carried considerably further west than it did in the deep tunnel level. Crushing is proceeding, and the stone runs about the same as formerly. During the month there have been sent to the mill 417 tons of quartz.—R. B. JOHNSTON.

— (June 23).—Certificate of assay by Johnson, Matthey and Co.:—Produce of gold, 5 ozs. 3 dwts. 10 grs.; produce of silver, 6 dwts., per ton of 2,240 lbs. mineral.

NEW EBERHARDT.—The mine manager reports, under date June 8, as follows;—I beg to hand you the following statement for the mill run commencing Apl. 6, and ending with the mill clean up of May 25:—Total weight of dry ore worked in pans, 690 tons; total assay value of same, $28,353.06, or, per ton, $41.09. Bullion product: Standard value, $22,590.11, or per ton, $32.73. Please find herewith shipping receipt for three bars bullion; total, 4,602.93 ozs.; standard value, $5,089.53.

NEW VIOLA.—Information from the manager of June 5 states: The total expenditure for the month of May amounted to $1,787.93, and the work done during that month in sinking and driving amounted to 212 ft. In the shaft marked B in the map I sent you, we cut through about 2 ft. of quartz. This body of quartz is capped in both places with a soft sandy lime which shows streaks of different coloured iron. In the shaft in the Micawber claim we have not penetrated the "shab" as yet. The bottom is discoloured in "spots" which leads me to think it will not be many days before we encounter a body of iron or the limestone. It has rained and snowed almost continuously for the past two weeks (8 and 10 in. of snow falling within 24 hours on two occasions), which accounts in part for the small amount of work done. I have sent out for more men which will enable me to push things as soon as the weather settles.

NEW VISO (June 16).—Manager's fortnightly report:—I have just come from the mine, and am pleased to state that all our operations are going on regularly. We are working on tin-bearing ground at three different parts of our property, which, although not rich, is of a paying character, and at two of these points I consider there is a good chance of making further discoveries. On the 4th inst. I sent off to England the small parcel of tin referred to in my last report, which weighed a little over 2 tons.

NUNDYDROOG (June 2).—Report of work done for month of May:—The 520 north: Distance driven, 35 ft., and stoped in bottom 3 fms., by two Italians with a rock-drill; this level is now in 112 ft. from the cross-cut, the lode being 1½ ft. wide, and assaying 1 oz. 13 dwts. 12 grs. per ton; we expect it will soon open out as we drive further north. The 520 south: Distance driven 55 ft., by one Englishman with a rock-drill; total length of level, 114 ft.; the lode is a strong one, 4½ ft. in width, and worth 3 ozs. per ton. We have commenced a rise in the back of this level to communicate with the winze in the bottom of the 450 south. The 450 south winze in bottom sunk 4 ft. by 12 coolies with a maistry; this winze is now 11 ft. below the level; the lode looks and assays well, being 3 ft. in width, and worth 3 ozs. 17 dwts. per ton. The 450 north, No. 2 stope north: Ground stoped 20 ft., by 12 coolies with a maistry; the lode is 2 ft. wide, and assays 1 oz. 7 dwts. 6 grs. per ton. The 450 north, No. 2 stope south: Ground stoped 16 ft. by 12 coolies; the lode is 4½ ft. wide, and the assay value 1 oz. 14 dwts. 12 grs. The 450 north, rise in back, north stope: Ground stoped 10 fms., and south stope 30 fms., by one Euglishman with two rock-drills; the lode averages over 3 ft. in width, and the quartz 2¼ ozs. per ton. The 480 north from Webb's winze: Distance driven, 62 ft., by two Italians with a rock-drill; we expect to hole to Webb's very shortly, and shall then drive to communicate with the winze in the 450 south. The 370 north, stope in back: Ground stoped, 13 ft., by 12 coolies; the lode is 2½ ft. wide, and assays 2 ozs. 4 dwts. 12 grs. per ton. The 300 north, stope in back: Ground stoped, 15 ft., by 12 coolies; the lode is 1½ ft. wide, and the assay value, 1 oz. 12 dwts. 12 grs. per ton. Taylor's shaft: Distance sunk, 17 ft., by three Italians with a rock-drill; total depth of shaft, 562 ft. We were delayed here for three days, owing to an accident to the pumping engine; the ground is hard. Kennedy's shaft: Distance sunk, 16 ft., by three Italians with a rock-drill; total depth, 133 ft. 6 ins.; we have still a large quantity of water to contend with here. Mill: The mill has done good duty during the month, and we have put through about 1,000 tons. Health: The health generally on the camp is good; one or two of the Europeans have been off work from slight accidents. Mill samples: Rough quartz through stonebreaker, 2 ozs. 8 dwts. 12 grs.; smalls, 1 oz. 19 dwts.—F. W. GREY.

OURO PRETO (May 25).—Passagem Mine: Incline shaft No. 1 was cleared to bottom, and ends have been started in each direction at a new level, to be called the 400-metre level. Above the ends in both sides of the shaft a strong body of lode is standing up to the 365 level, and if it proves to be of any length a large amount of stoping ground will be opened. Incline shaft No. 2: The opening in the roof was completed in hard quartzite, and an end has now been started to meet the 365 north-east, and thus hasten the communication and improve the ventilation, which is so much required at that level. The 365 level north-east was driven 5.80 metres, in schist without ore. The rise 24 over 365 north-east was advanced 5.20 metres in schist carrying a little tourmaline and strings of pyrites, but yielding no saving work. Rise 25 over 965 south-west continues in lode of fair quality, consisting of friable quartz with patches of pyrites, though at present the ore is rather pinched by a bar of schist. It was advanced 4.70 metres. The 315 level north-east was driven 6.30 metres. The end at present is in a bar of schist against the hanging-wall, though quartz appears to be holding along the floor. The rise 23 over 315 north-east was advanced 6.50 metres, but continues without change in hard sterile quartzite. The 315 level under rise 19 is a new end started to explore a branch of the lower lode found in the cross-cut. The branch is irregular, but at times produces good stones of tourmaline and arsenical pyrites. The end was driven 5.10 metres. The rise 21 over 315 south-west was advanced 3.90 metres. It carries a small branch of good pyritic ore against the roof, but the lower part of the rise continues in schist. The end under 265 south-west was driven 4.30 metres on a branch of the lower lode producing a little tourmaline ore, but has since been suspended as the same branch will be explored by the end at the 315. The cross-cut under 265 north-east wasdriven 8.00 metres through hard quartzite without ore as yet. The cross-cut under 235 south-west was driven 5.10 metres in hard footwall schist, but the heading now appears to be getting into the run of tourmarline ore under the 215 as small veins of this ore are being found in the schist. The rise 2 over 175 north-east was advanced 6.20 metres chiefly in stratified schist. A brauch of quartz about 1 metre thick was intersected, but this has since cut out again. The Rise 17 at 175 south-west was advanced 3.10 metres, and continues full size in regular lode of fair quality ore, consisting of quartz well spotted with pyrites. The 120 level north-east shows a branch of quartz about 6 ins. thick, the heading being principally in a mixture of schist and quartzite. Distance driven was 8.20 metres. Stoping: In the north-east section generally, the ore continues to be of a very quartzose nature, carrying very little pyrites. At the stopes under the 120 the ore body is still extending to the north-east, and one stope has also crossed No. 2 shaft in the other directions. The ore body under the 215 north-east also continues very regular and of great width, but, on account of the large amount of white quartz broken here, part of the force has been withdrawn. Over the 265 level some stoping was done on branches holding off from the 235 ore body, but the ore produced is of poor quality, except in the lower part of the shoot, where some good lines of pyrites have been uncovered. Three stopes on the lower lode over 235 level are still going up in bunchy ground, good patches of pyrites and tourmaliue occurring irregularly through a thickness of about 3 metres of schist. The new stope started at the 315 north-east of No. 2 shaft has been very disappointing, the quartz in which it was commenced having cut out and left nothing but sterile quartzite. The shaft stope at 315 also carries a large admixture of quartzite, and the ore occurs through this very irregularly. A good quantity of fair quality ore was broken from a stope between the shafts at the 315, and there is still a good width of ore in the breast. Two other stopes were worked in this section, but produced nothing of importance. In the south-west section the most interesting feature is the continuance of good quality ore in the stopes opeued at the 365 level, though owing to the bad veutilation only a small force could be employed, and the amount of ore broken was small. Over the 315 level the lode is of a strong massive nature, with an average width of at least 4 metres, but it consists almost entirely of quartz, and is of low grade. Over the 265 level a good deal of work has been doue to open out stopes on the lower lode, and around rise 22 the stopes are now in fair workiug order. The lode at this point consists of about 2 metres of quartz aud pyrites formiug the main lode, and under this, separated by a layer of schist, about 1 metre of purely pyritic ore of high grade. A level cut carried in from the 265 further north has also opened up a rich branch of pyritic ore crossing under the 215 level. At the 175 level, the outer stopes having got into poor quartz, have been suspended, but the two inner stopes around rise 17 are still going forward. The lode in these stope has pinched very considerably, but carries a fair amount of pyrites. Construction: The wheel pit aud tail race from turbine have been completed, and all is ready for this machinery as soon as it arrives. Masonry for carrying framework of barrels is also finished, and timbers are now being erected. The cooling floor has been made, and other small jobs around the furnace roofing, &c., have been completed. Further repairs were also made to the aqueduct near head weir.—H. J. GIFFORD.

PESTARENA UNITED (June 16).—Pestarena: The lode in the 160 north is 60 centimetres wide, showing particles of pyrites, but not producing any ore. The 150 north shows 40 centimetres of lode, giving a little low grade ore. There is no change in the cross-cut at this level. The 90 south has fallen off, the lode is split, and the eastern part now being driven on is yielding 4 tons of 8 dwts. ore per fathom. Counter lode: The 90 east from old cross-cut is advancing on a small vein which produces about 2 tons of 12 dwts. ore per fathom. The ground in the 70 cross-cut is more jointy, and shows strings of pyrites. Doubtless this will shorty be holed to the rise over the 90 on No. 1 lode, when a 70-fm. level on this lode will be started south. The lode in the 55 east has fallen off, and is producing about 4 tons per fm. at 8 dwts.; the end west produces 6 tons at 12 dwts. The 46 end carries two veins, and is turning out 3 tons per fm. at 8 dwts. The stopes, on the whole, are yielding about their usual quantity of ore. The buddles has been started, and are working fairly well.—W. ROBERTS, W. H. TRELEASE.

— Val Toppa (June 16).—The drive south from rise over Zero level

is being continued on the junction of the two veins, and is yielding 7 tons of 11 dwts. ore per fm. The stope in north end of rise on eastern branch carries about 80 centimetres of quartz, producing 8 tons per fm. at 5 dwts. In the stope in side of intermediate level over No. 3 level the quartz has widened out to 2½ metres, and shows a fair quantity of pyrites, estimated to yield 15 tons of 8 cwt. ore per fm.—W. ROBERTS.

PORT PHILLIP (May 18).—Mine—North shaft: This is now down 71 ft. below the No. 17 level, in hard slate, with a few small veins of quartz in it. No. 17 level: The drive west is now 292 ft. from the shaft, in very hard sandstone rock, and consequently making very slow progress, but we think it advisable to continue the drive until the bar of sandstone is passed through, and see if there is anything promising the other side. Criterion ground—East Lode, No. 6 level: The last crushing from this gave a favourable return, 23 tons of quartzi giving an average of 12 dwts. per ton. Another small party of tributers are sinking on the lode towards No. 7 level.

— (June 23).—Telegram received from Eureka:—"87 tons tribute ore shipped; 56 tons tribute ore smelted; producing $414 to the company."

RAVENSWOOD.—Report and *résumé* of work done to Apl. 30:—Battery: Worked only part time, crushed in all 224 tons—104 for the tributers, the company, and 120 public. Chlorination and furnaces: Roasted and completed 77 tons 4 cwt., viz., 46 tons 16 cwt. of concentrates from Grant Mine from 57 tons of stone and balance from Black Jack contractors, and 16 tons from public. Charged 80s. per ton for this; residues 4 dwts. per ton, and satisfaction expressed at result. Total all sources for month, 187 ozs. of gold.

RUBY.—Report upon the mines for the week ending June 6:—Dunderberg: We have seven tributers at work here. In following up the raise above the 800 we ran into a cave about 30 ft. long, showing considerable ore in the bottom, as far as can be seen. The top of it, I think, will make connection with the old stopes, and we will follow this up until connection is made. The bottom of this cave is apparently running over the 800 drift. I consider this is a fair showing, as we have evidently got on to the run of the ore. Lord Byron: We will start to do the work mentioned in my report of May 23. We have 17 tributers at work here. Bullwhacker: We have two men at work here prospecting.

WEST ARGENTINE.—Cablegrams from Colorado of June 17 from Denver:—"Silver ledge: All is fully secured in accordance with terms of agreement."

— June 22, from Silverton:—"Everything is going well. Ore in shaft improving as it goes down. The ore contains a large percentage of lead and grey copper."

— June 25, from Silverton:—"Have made a rich strike in stoping above level No. 2; copper ore containing 146 ozs. of silver to the ton; percentage of copper 17."

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

DICKENS CUSTER.

SIR,—Since I wrote to you a fortnight ago on the affairs of this company there has been a distinct improvement both in the price of the shares and in the prospects of the mine. I am pleased to see that the first fifteen days' run for this month has resulted in a yield of bullion of the value of 2,180*l*. Should matters go on like this, we may expect great things in the future.—I am, &c.

OBSERVER.

MOUNT ALBION SILVER MINING AND SMELTING CO.

SIR,—The meeting of this company was not calculated to inspire one with a great amount of hope, nor likely to bring in subscriptions for the new capital. It seems strange, after all that has been said about the company, that it should be now, after three years' working, practically on the verge of bankruptcy. Something is evidently wrong either here or in the colony, and the shareholders, before sanctioning this fresh capital, which is practically raising a mortgage on the property, should have enquired fully into the matter.—I am, &c.,

ONE WHO WAS THERE.

COL. MALLESON CORRECTS THE MISINFORMED.

SIR,—As many papers have erroneously connected my name with several companies with which I have now no concern as director, I write a line to state—of all the companies to which my name is attached as director in the "Directory of Directors" for the current year, I am now director only of the following:—

1. The Mysore-Wynaad Consolidated Gold Mining Co., Limited.
2. New Viola Co., Limited.
3. Nine Reefs, Limited.
4. St. Augustine, Limited.
5. The Ironclad, Limited.

I have joined no company since.—I am, &c.,

G. B. MALLESON.

30 and 31, St. Swithin's Lane, E.C.,
London,
June 26, 1891.

YURUARI.

SIR,—The directors of Yuruari have always been very sanguine of the success of the company, and at one time, a few months back, it did look as if the long suffering shareholders were to reap some reward for their patience and courage, but the hope which had sprung up in our breasts has now gone to the winds, and we have the satisfaction or dissatisfaction of seeing our shares quoted at something like 6d. each, with the prospect, I fear, of another re-construction scheme in the near future. What, I would ask, is the reason of this? From all accounts, the mine appears to be capable of producing payable stone, and those who have seen the property speak highly of it. What, then, is the reason of the present state of affairs? I leave it to the management, or any of your readers who are in a position to do so, to reply.—I am, &c.,

R. W. L.

June 22, 1891.

THE YURUARI CO., LIMITED.

SIR,—Having purchased a small interest in this company since my return from Venezuela, I cannot understand how there have been no returns for some time past. When I was at the mine about the end of last year very rich quartz was being brought to surface in bags, so as to prevent stealing, which looked like 20-oz. rock, and from inquiry of the secretary I find that nearly 200 tons yielded, after allowing loss, nearly 3 ozs. per ton net. It was all the talk of the mining district at the time, and I cannot understand how this pay-shoot has not been vigorously prosecuted, which might have been done along with the opening up of the new shaft.

My object in now writing is to state, for the information of shareholders who may not have the advantage of personal knowledge such as I have, that now that the new shaft has been sunk nearly 700 ft., I look for as good returns as three years ago, with greatly reduced mining expenses, and hope shareholders will not be induced to throw away their stock at a nominal price, simply because the mill has not been running.—I am, &c.,

MINER.

Redruth, Cornwall.
June 23, 1891.

THE FALL OF PRICES.

SIR,—In your last week's paper you indicate your opinion for the decline in the Mining Market, but I venture to submit mine, which I know is nearer the truth, viz., that *bonâ-fide* investors in mining shares have become thoroughly disgusted with the market, owing to the contiuual re-constructions and compulsory calls for money, the entire absence in most cases of anything like a chance of any return in the way of dividends, the tricks and frauds practised, and the extreme contempt shown by so many secretaries, directors, and others of the "management" to the shareholders. I am speaking mostly in the interest of mining shareholders who live away from London, and have not an opportunity so often to call at the mining offices, when I say that we further notice and feel the want of a paper that is perfectly *disinterested*, to chronicle the news of mining matters and investigate and advise against the many frauds of the market. As an example, I have on more than one occasion tried to get some information, which I cannot get by letter, although I am a shareholder, from the so-called mining papers with reference to the following companies, viz., Tarryall Creek Gold Co., United States Gold Placers, La Trinidad, Waterberg Gold Syndicate, &c., but I have never succeeded in getting more than what was already known to myself and to most other people of the most superficial kind. The fact is, all the papers and so-called friends, or advisers, of shareholders in mining companies are too much dependent on keeping straight with the directors, secretaries, and promoters of mining companies, either in the advertising, or in the supply of copies from whom they get orders, to be really *disinterested*, and, for my part, I think of stopping my subscription to all of them.—I am, &c.,

DISGUSTED SHAREHOLDER.

June 23, 1891.

TRANSVAAL GOLD AND MAY CONSOLIDATED.

SIR,—As an old shareholder in Transvaal Gold, I have looked on with some degree of amusement at the correspondence which has been intermittently addressed to the financial press during the past month or two, vainly endeavouring to depreciate this company, on similar lines to those of the valiant knight who went tilting at windmills! Our property is much too valuable to be disturbed by such puerile tactics, and I, for one, would not have deigned to notice the correspondence were it not that the last letter I have read is the proverbial straw. In a financial paper of the 16th inst. there was published a letter from a correspondent, signing himself "Liberal," in which May Consolidated is compared favourably with Transvaal, the former company, it being alleged, returning double the amount of gold as the latter. "Liberal," however, takes care not to inform us how much ore the May crushed, and the average yield per ton; but, by your leave, I will supply this interesting information. For a crushing of 4,600 tons last month the May people obtained a yield of 2,100 ozs., or *a dwt. under ½ oz. to the ton*, 9 dwts. being also the average of the previous month. Compare Transvaal, which for a crushing of 575 tons obtained 1,210 ozs., or at the rate of *2 ozs. 2 dwts.* per ton; and, mark, this average has been kept up for a considerable time now, with the fair mixing of the ore month by month, the manager not making separate returns of the ore from the Nu and Theta veins, which commonly go from 5 ozs. to 10 ozs. per ton. Again, whilst the capital of the Transvaal is under 250,000*l*., the May has no less than 450,000*l*., towards which 9 dwt. stuff cannot go very far! On the other hand, Transvaal Gold paid off the 3½ per cent. debenture debt—amounting to 18,725*l*.—in equal instalments on Jan. 31 and May 1 last, out of profits, and as there was a cash balance of over 15,000*l*. at the end of Sept. last, it is morally certain that we shall have a dividend for the year ending Sept. next, from the average of 1,200 ozs. of cheaply won 2-oz. stuff, steadily and regularly being obtained from this rich property.

Apologising for troubling you, and hoping "Liberal" will give a more *liberal* comparison next time he writes to the press—I am, &c.,

TRANSVAAL.

Manchester,
June 24, 1891.

YANKEE GIRLS AND NEW GUSTONS.

SIR,—I think the wide difference in the quotations of these "A1" American mines to be one of the frequent anomalies of the market. I am quite aware that there are two and a quarter times the number of shares extant in Yankee Girls compared with Gustous; but even on the basis of the Apl. dividend—say before the active season in these mines commenced—the former mine is paying dividends at the rate of 40 per cent. per annum, against 80 per cent. in the case of

Guston. But if any shareholder will examine the returns and the figures, they will discover that even now Yankee Girl could pay a quarterly dividend (before it is due) of 3s. per share, or at the rate of 60 per cent.—say equal to the New Guston return for 1890. In view of this, I think it a very moderate statement to make when I say "Girls" should be worth more than half the price of Gustons, against the present quotations of about a third. Look at the following returns for the first half of June :—

Yankee Girl : Ore shipped, 610 tons ; value, 12,390*l.*
Guston : " " 580 " " 8,260*l.*

I have no wish to depreciate such a gilt-edged, if somewhat high-priced, property as the New Guston, with its chequered career since the historic re-construction, but it is manifest from the above that Yankee Girl is turning out ore to the value of over 300,000*l.* per annum, against 210,000*l.* for the older property, whose shares command something like $3\frac{5}{8}$ to $3\frac{3}{4}$, whereas I notice of late a goodly number of transactions in "Girls" on the Liverpool Exchange at 10s. 6d. to 12s. 6d. premium, for the 17s. 6d. paid shares. If the mining market were not to-day in such an utterly demoralised condition, I will vouch that the premium would be at least 1*l.* higher than the figures quoted ; and it may be so before very long, if all one hears is true ! Certainly the mine seems to be coming into favour in the north ; and I, for one, shall nail my shares to the mast for something very different to present figures, as the returns are surely good enough for the most fastidious.—I am, &c.,

INVESTOR.

Manchester,
June 22, 1891.

REPORTS OF MEETINGS.

THE TEMPLETON ASBESTOS MINING CO., LIMITED.

THE PROGRESS OF THE COMPANY DESCRIBED.

THE first ordinary general (statutory) meeting of the Templeton Asbestos Mining Co., Limited, was held at Winchester House, Old Broad Street, E.C., on Tuesday, June 23.

Mr. R. Wissmann

presided.

Mr. G. J. DU CLOUX (secretary *pro tem.*) read the notice calling the meeting.

The CHAIRMAN : Gentlemen, as you all know, this is a statutory meeting, held in compliance with the Companies Act. We are as yet unable to give you much further information about our property, but what information we possess is of a satisfactory nature. The property was taken over about the middle of April, and exploring work was begun at once in order to determine the most favourable points from which to work the asbestos veins simultaneously. According to our engineer's (Mr. Cirkel) report for April and May, he has selected three points of attack, the first being in the old pit from which two drifts are driven ; the second being a new drift to be driven right through the hill, and the third being an open quarry. A great deal of preliminary work had to be done, such as the erection of cobbing sheds, boiler house, the forge, timbering of the pit No. 1, and work was greatly impeded by the absence of rails and trucks, which were ordered in Montreal on Apl. 15, but were not received until May 25. In his report for May, which only came to hand yesterday, Mr. Cirkel says that rapid working has now become possible, and that he is now employing 15 men and five boys. Mr. König, one of your directors, who went out with Mr. Cirkel (who was unacquainted with the country, and spoke little English), has had great difficulty in obtaining suitable men, but that difficulty has now been entirely overcome.

OUR POLICY HAS BEEN TO SPEND AS LITTLE MONEY AS POSSIBLE

before a mature plan of working could be formed, and only the machinery absolutely necessary has been ordered. All our expenses in Canada, including machinery, rails, trucks and two large boilers, amount to about 1,200*l.* up to date. Our London expenses are practically *nil*. During the first six weeks, which, as I have explained, were principally taken up with careful and methodical work of preparation, only between 5 and 6 tons of asbestos have been raised, the quality of which has been described as magnificent. The serpentine on the property is of a specially pure character, and we intend milling it on the spot, together with the fibre refuse, resulting from the cobbing. This powder fetches about 5*l.* per ton. The cost of grinding and packing is about 15s., and freight to London 20s., which would leave over 3*l.* a ton profit for what, if left on the spot, would be refuse. Mr. Cirkel, who is a scrupulously conscientious engineer, says, in his report, that he could not yet commit himself to the statement that asbestos existed in paying quantities. However, together with his report, we received yesterday

A CABLEGRAM

from Mr. König, in code words, the gist of which is that our engineer's opinion is "that an expenditure of 2,000*l.* for machinery and a maximum expenditure of 6,000*l.* for general working expenses will result in producing 300 tons of asbestos and 500 tons of powder." From this it would appear that Mr. Cirkel has, after careful preparatory work, now arrived at the same conclusions which our consulting engineer, Mr. de Müller, had come to, and which were laid before you at the time of the formation of our company. Taking the value of our asbestos at only 40*l.* per ton (instead of from 50*l.* to 60*l.*), and the powder at 4*l.* per ton, this would yield 8,000*l.* profit for the year. We now await Mr. Cirkel's detailed report before sanctioning the further expenditure of 2,000*l.* on machinery. The capital of the company has been fully subscribed, but 500*l.* have been reserved for a special purpose, viz., for our manager, to give him an interest in the concern should he be so inclined. (Applause.) I do not know that I have anything more to say, but I shall be happy to answer any questions.

Mr. F. OPPENHEIM : Have you got sufficient capital to pay for the machinery ?

The CHAIRMAN : Yes ; we have got a good deal more than that.

The CHAIRMAN, in reply to a further remark, said : I may mention that on the debenture issue of 3,500*l.*, which was made to secure the German contract, only 20 per cent. has been called up. We did not need the money, and naturally we did not wish to pay interest upon it unnecessarily.

Mr. OPPENHEIM : Quite so.

The CHAIRMAN : We calculate at the lowest estimate that we have fully 6,500*l.* available, and that is more than enough for our purposes.

A SHAREHOLDER : Has all the purchase-money been handed over yet ?

ALL SETTLED.

The CHAIRMAN : Yes ; everything has been settled. There is absolutely nothing to be paid, and we have a balance in the bank at Montreal, which I have not taken into account, because it stands against a part of the machinery that has not yet been received, or, at any rate, not at the date of our last letter.

IT TAKES A LONG WHILE FOR LETTERS FROM THE MINE TO REACH LONDON.

The last letter from our manager was dated June 5. It was mailed on the 6th, and it only arrived yesterday morning.

Mr. OPPENHEIM : I take it, Mr. Chairman, that you have exercised great care in the choice of a bank in Montreal. Banks there are doubtful.

The CHAIRMAN : We have only got a small sum—1,000*l.*—at a time out there in the bank.

Mr. OPPENHEIM : Still, a loss like that would be hard for our company. You must exercise great care in choosing a bank.

The CHAIRMAN : I know that ; but I think we are all right there. I know that things are not very satisfactory there.

The CHAIRMAN : There is no resolution to propose, there is not a report to adopt. It is only a communication from me—a condensation from the reports received. That is, therefore, all the business.

Mr. OPPENHEIM : I beg to propose

A VOTE OF THANKS TO THE CHAIRMAN

for presiding to-day.

Mr. ESGEN : I beg to second it.

The motion was carried.

The CHAIRMAN : I am much obliged to you, gentlemen.

The proceedings then terminated.

THE MINING EXCHANGE, LIMITED.

A NEW RULE—THE NAMES TO BE PUBLISHED OF MEMBERS CEASING THEIR CONNECTION WITH THE EXCHANGE.

AN extraordinary general meeting of the members of "The Mining Exchange" was held at No. 9, Old Broad Street, on Thursday, for the purpose of considering, and, if thought fit, passing the following resolution for the alteration of the rules and bye-laws of the Mining Exchange.

RESOLUTION.

"That the rules of the Mining Exchange be altered by the addition of the following rule :—'7A. The committee for the time being may, in their absolute discretion, and in such manner as they may think fit, notify, or cause to be notified, to the public that any member has been expelled, or has become a defaulter, or has been suspended, or has ceased to be a member, and the name of such member. No action or other proceeding shall, under any circumstances, be maintainable by the person referred to in such notification against any person publishing or circulating the same, and this rule shall operate as leave to any person to publish, and circulate, such notification, and be pleadable accordingly.'"

Mr. Thomas Thompson

presided.

Mr. W. T. HARGREAVES (secretary) read the notice calling the meeting.

The CHAIRMAN : Gentlemen, I know that this is a very busy day with you, and I do not intend, therefore, to dilate very much upon the resolution which will be put before you. The proposed new rule is merely a copy of one of the rules of the Stock Exchange, which we thought applicable to our Exchange. Our meeting to-day is held in accordance with a recommendation made by you gentlemen on the other side of the table to the committee that some such rule as this should be adopted, and I think at our last meeting we thoroughly thrashed out the question. It will, therefore, be unnecessary for me now to say anything more about it. You all know—at least I imagine that you all know—that if we pass such a resolution as this it will very much

STRENGTHEN OUR POSITION WITH THE PUBLIC ;

and that, I think, is a very important matter indeed. We have lost the greater portion, I think, of our weak members. We are now a small, but still a tolerably strong body ; and I think it would be a pity to allow persons, who have ceased to be members of the Mining Exchange, to go on trading with all the prestige that belongs to membership. As we have not hitherto published the names of defaulters and members leaving the Exchange, many have been able to continue carrying on their business, and some have to my knowledge done a very great deal of business, which they would not have been able to do had it been known that their connection with us had ceased. I think that is very unfair to the still remaining members. (Hear, hear.) As a matter of form I now beg to move the resolution, and I believe in doing so I am only carrying out the wishes of the members of the Mining Exchange as a whole. (Reads resolution.)

Mr. J. H. CROFTS : I beg to second the resolution, and I endorse every word that our chairman has said as to its usefulness. I think if we pass this resolution to-day we may congratulate ourselves, for I believe it will do much to increase the public confidence in the members of the Mining Exchange.

IMPORTANT QUESTION.

Mr. W. E. LAMBERT : Would we render ourselves liable for an action for libel ?

The CHAIRMAN : Do you mean the Exchange itself ?

Mr. LAMBERT : Yes.

Mr. CROFTS : The point has been raised amongst some of the members, but that is a matter in which we must place ourselves very much in the hands of our legal advisers. The committee will take advice on the subject. I cannot say whether it may not be necessary a little later on to get every existing member to sign an agreement to it ; but, of course, new members coming in will bind themselves to obey the rules and regulations. That, however, is a matter of detail which we can safely leave in the hands of our legal advisers.

The CHAIRMAN : This resolution will have to be confirmed at another meeting, so that if you, between now and the holding of our next meeting, think of any points about which the resolution will bear alteration or improvement, you will have a further opportunity of discussing it. I will now formally put the resolution. Those in favour will be good enough to signify the same in the usual manner —those who are against—the resolution is carried unanimously. I am very glad to see that it is so, because I think it will do our Exchange a great deal of good and increase our own prestige, which is a matter of great importance to us all.

Mr. LAMBERT proposed a vote of thanks to the chairman.

Mr. GEORGE MITTON seconded the motion, which was carried, and the proceedings then closed.

EDWIN BRAY GOLD MINING CO., LIMITED.

OUTPUT OF GOLD 1,358 OZS., REALISING £4,986 — EXPENSES REDUCED—MINE LOOKING WELL—SUFFICIENT ORE IN SIGHT TO LAST SEVEN YEARS.

THE third ordinary general meeting of the shareholders in this company was held at Winchester House, on Wednesday.

Mr. J. Browne Martin

presided.

Mr. CHARLES LLOYD (secretary) read the notice convening the meeting.

THE WIRE ROPEWAY.

The CHAIRMAN : Gentlemen, I presume you will take the report and accounts as read, but before moving their adoption I should like to make a few remarks upon the present position of the company. I do not think I need refer particularly to the accounts ; they speak for themselves ; and as for our past financial troubles, and the delays in getting to work, they are now matters of ancient history, and are well known to all of you. What is of vastly more interest are our prospects for the future. However, before I come to that point, I should like, with your permission, to briefly refer to our operations since we commenced crushing a week or two before the commencement of this year. As you will have learned from the report now in your hands, as well as from the manager's weekly reports published from time to time, the working of the wire ropeway has not been all that could have been desired, and this will almost wholly account for the small return of gold up to the present, as well as for a large proportion of the additional expenditure we have been put to. Not only did the completion of the ropeway prove to be a far more expensive affair than we had expected, but, as I have just said, its failure to work efficiently when finished has severely hampered all our operations. Several more or less serious breakdowns occurred during the early part of this year, the last occurring during the month of Apl., and it will be at once understood that with no other means of transport the work at the battery had to be entirely suspended. The board have caused exhaustive enquiries to be made into the causes of these accidents, and are informed by those more competent to form an opinion than themselves, that so soon as certain adjustments are made in the working of the line, which is one of more than usual difficulty, the machinery will run with regularity and ease. These adjustments now appear to have been satisfactorily made, as from the latest reports to hand by this week's mail the mauager states that the ropeway has run smoothly for three weeks without a stoppage, and delivered more than the prescribed amount of quartz at the battery. However, in order to prevent a recurrence of the stoppage of crushing operations in the event of the ropeway again being disabled for a time, we have instructed our manager to lay up a sufficient reserve of quartz at the battery to serve for at least a month's crushing. Whilst the ropeway has continued giving us trouble, the battery, on the other hand, has been behaving most excellently. Up to the date of the latest advices 25 out of our 30 stamps have been working, but intermittently, the other five being kept idle, waiting for the arrival of a Cam shaft, which had to be sent out from this country to replace a broken one. This has properly arrived, and the whole battery should be in working order. We are now completing the erection of a shed to protect it from the weather. As for the mine, it is looking well, probably better than it has yet done. As you will see in the report, the manager estimates that there is a sufficient amount of ore in sight to last us about seven years. Now, with regard to the yield of gold per ton, I feel sure that most of you, in common with myself and my colleagues : are somewhat disappointed that it is not considerably larger.

QUALITY OF THE ORE.

Putting aside the question of the last crushing, which I will deal with separately, I must point out that our quartz is known to be extremely pyritous, in fact, as already reported to you, the latest assay of our tailings show an average of close upon 17 dwts. per ton, and when it is remembered that for every 20 cwt. of quartz crushed we should retain about 15 cwt. of tailings, it will be seen that, even taking the yield of free gold per ton crushed at the very low figure of 7 dwts., we still have over 1 oz. to the ton. As a matter of fact we have crushed up to the end of May 2,765 tons of quartz, yielding 1,357¾ ozs. of free gold, which I consider a fair average ; it will, therefore, be seen that the yield per ton is 9 dwts. 19 grs., or just ½ oz. The board are considering the advisability of taking steps to have the tailings treated so soon as a sufficient quantity shall have been accumulated. I may tell you that our managing director reports that so soon as we settle down into working order, he is confident of being able to confine the working expenses in South Africa to 600*l*. per month, that is to say, everything over and above about 170 ozs. of gold per month will be profit. Up to the present our working expenses have amounted to about 800*l*. per month, but the conditions under which we have been working will not admit of this being taken as a standard for the future. Now, with regard to the May crushing, which I can tell you came as a great disappointment to us all, and, in fact, to everyone having the interest of the company at heart. We are now waiting for definite information upon this point, but at present believe that in developing the mine and openiug up the reef, a large amount of inferior quartz, bordering on the reef only, has been obliged to be got out, and sooner than keep the battery idle, pending these developments, this inferior stuff has been put through ; anyhow, as I have said, it was a great disappointment to us all, but from information to hand we anticipate better returns. Now, gentlemen, I have put our position clearly and fairly before you, and I must say that I much regret not being able to communicate better results, but the confidence of your directors in this property is not one jot abated. We are quite certain the gold is there, and it only requires time and science to turn it into sovereigns. I can tell you that the past 12 months has been an anxious time for myself and my colleagues, but we feel that the worst is over, and that we are getting into smoother water. Gentlemen, I beg to move the adoption of the report and accounts. (Cheers.)

Mr. W. TRUBSHAWE seconded the motion.

Mr. JAY : Has any explanation been given of the low return we had last month ?

The CHAIRMAN : We have not had time yet to get a letter, but we have received the following

TELEGRAM

in reply to a wire we sent asking the manager how he accounted for it.

"Cannot separate rich orc from low-grade ore ; there is an improvement this month."

I think you are aware that we are treating this mine as simply an open quarry. We were informed by our manager that there was not an ounce of dirt but what was pay dirt ; and by treating the mine as an open quarry it will in the long run pay very much better than by picking out the eyes of the mine.

A SHAREHOLDER : How do you propose to treat the tailings—by the McArthur process ?

The CHAIRMAN : We have not yet decided ; the McArthur process, however, seems to be most in favour.

A SHAREHOLDER took exception to the item of 82,709*l*. for purchase of property, erection of ropeway, battery, &c. He thought the items should be stated more in detail.

The CHAIRMAN : We found that it would be a very difficult matter to dissect the accounts, and we therefore capitalised the entire amount expended. We have vouchers for everytbing, and any shareholder who wishes to do so may inspect them. We thought it better to charge everything to capital account until the mine would be earning a return.

PAYING EXPENSES.

Mr. STUTAFORD : Are you earning sufficient to pay the present expenses ?

The CHAIRMAN : Yes ; and we have paid off nearly all our debts. Before we commenced crushing we were in debt to a very large amount in South Africa ; that has now been reduced, and the amount we owed at the end of May was somewhat under 1,800*l*.

Mr. STUTAFORD : You said that the wire tramway failing to work in a satisfactory manner was the cause of very considerable extra expenditure ; but was that not done by contract ? Did they not agree, as in the case of the Sheba Co., to complete the tramway iu a satisfactory manner ?

The CHAIRMAN : Yes ; the Sheba Co. made a very similar contract to ourselves. The contractors were to supply the materials for the tramway, and it was to be erected at our expense, and we found this a very much larger matter than we and the contractors had anticipated. That caused a great deal of delay. Some slight accidents happened, such as the giving way of certain parts of the line owing to the friction, and these caused delays. The materials supplied were quite in accordance with the contract entered into. The erection of the plant was carried out under the supervision of the manager to the contractors, who supplied the materials, and they have done everything they could since then to put it in working order. We are informed by the latest advices that the ropeway has been working very smoothly since May 1.

The report and accounts were unanimously passed.

The CHAIRMAN proposed, and Mr. JAY seconded, in complimeutary terms, the re-election of the retiring directors—Genl. Sir J. Luther Vaughan and the Right Hon. Viscount Grimston, M.P.

The motion was carried.

A DIRECTOR'S CONFIDENCE IN THE PROPERTY.

Viscount GRIMSTON : I beg to thank you very sincerely for re-electing me as a director, and I think I may also take upon myself to thank you on behalf of Sir Luther Vaughan. I have a great feeling of confidence in the future of this property. There are very few mines where you can quarry quartz from the open rock before you, and I think that the prospects of this Edwin Bray—if the ropeway does its work as well as we are led to anticipate it will—ought to be of a very favourable description, and exceedingly pleasant for those who are shareholders in it. (Cheers.)

Mr. BIDEN proposed. and Mr. MOSCROP seconded, the re-election of the auditors—Messrs. Ford, Rhodes, and Ford—which was agreed to.

On the motion of Mr. JAY, seconded by Mr. BIDEN, a vote of thanks to the chairman was passed, and the meeting separated.

AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

TWO TONS OF VALUABLE ORE.

THE following telegram has been received from the managing director resident at Broken Hill, dated June 26 :—"2 tons of ore containing 17,439 ozs. of silver raised during the fortnight. Fourteenth shipment, consisting of 2 tons of ore containing 17,439 ozs. of silver, will be shipped for London per steamer leaving Adelaide on July 8. Additional output from other parts of the mine, consisting of 25 tons of ore containing 5,977 ozs. of silver raised since last advice, and now in course of being shipped. The rich vein below the 280-level west promises well for important developments."

THE offices of the Sam Christian Hydraulic Mining Co., Limited, have been removed from St. Swithin's Lane to 1, Queen Victoria Street.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

(Late LESTER AND HOOK),

Deals in Home, Colonial, Foreign and American Rails for three months forward on deposit of 2 per cent., and guarantees to close before the account specified on the contract expires.

James Hook has made it a speciality to fix contangos at a low rate, therefore it is very advantageous to country operators, and it avoids exorbitant amounts appearing when operators desire to continue stocks for better prices.

James Hook is prepared to deal on the Cover System for current account, and the stock must recede fully 1 per cent. before the amount paid runs off. £50 controls £5,000 Stock, with no further liability. In the event of the Stock being stationary, no contangos are charged for continuing the same to the successive account. I am the only dealer that gives this advantage. Official prices and substantial advice forwarded daily free on application.

James Hook is prepared to deal in Mining or Miscellaneous Shares for six months forward on deposit of 20 per cent. Instructions will receive immediate attention.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

BANKERS.—THE IMPERIAL BANK.

Telegraphic Address: — "LONGEVOUS, LONDON."

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir Charles Metcalfe, Bart. | Major J. W. M. Cotton.
L. Balfour Burns. Esq. | Richard Smith, Esq.
Sir Stuart S. Hogg. | Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

G. B.—The richest lead mine in the Isle of Man is Foxdale. The production last year was of the value of 44,500*l*. Great Laxey coming next with 27,317*l*.

Atchison.—You would be certain to lose your money by such a system.

Old Subscriber (D. K.)—Hold for the present, as they can hardly go lower. You might do well, in fact, to purchase more and so average.

Monetary.—Take up your shares at once. You not only strengthen your market but avoid heavy contango charges.

Thankful.—As a speculative investment they are very good.

Oxfordshire.—Nos. 3, 4, and 8, keep for market rise. Nos. 1, 5, 6, 7, sell. No. 2, join the re-construction by all means.

Sceptical.—They must eventually command a much higher price, especially as the company will shortly be in funds.

Mines.—Do not advise them just now. Later on they may improve.

Stockholder (M. D.)—The price is temptingly low, but we do not advise a purchase.

B. R. D. (Liverpool).—Sell them now. The market still deals in the old shares.

Rudolph (S. W.)—Hold on. They are likely to have another spurt ere long.

P. M. A.—Expected to improve on the announcement which is published today. Do not sacrifice your holding.

W. J. (Dorking).—It is expected that more capital will be required, but there is nothing fixed as far as we know.

Mirror.—Are all fairly good speculations. Buy in fifties or hundreds, not the odd numbers you suggest.

W. Thurston.—They seem almost as low as they can be, and should, in our opinion, be held for a much better price.

Soothsayer.—You must hold them, as there is only a nominal price quoted.

Foggy.—It is in the same district. Certainly the shares appear to be worth their present price or even more.

Deerstalker.—Hold on. The news will, no doubt, be of an encouraging nature, judging from the progress of late of the company.

Orbit.—By waiting, you will, we think, be able to get in at a lower price. They are not likely to improve just yet.

Fishy.—Worthless.

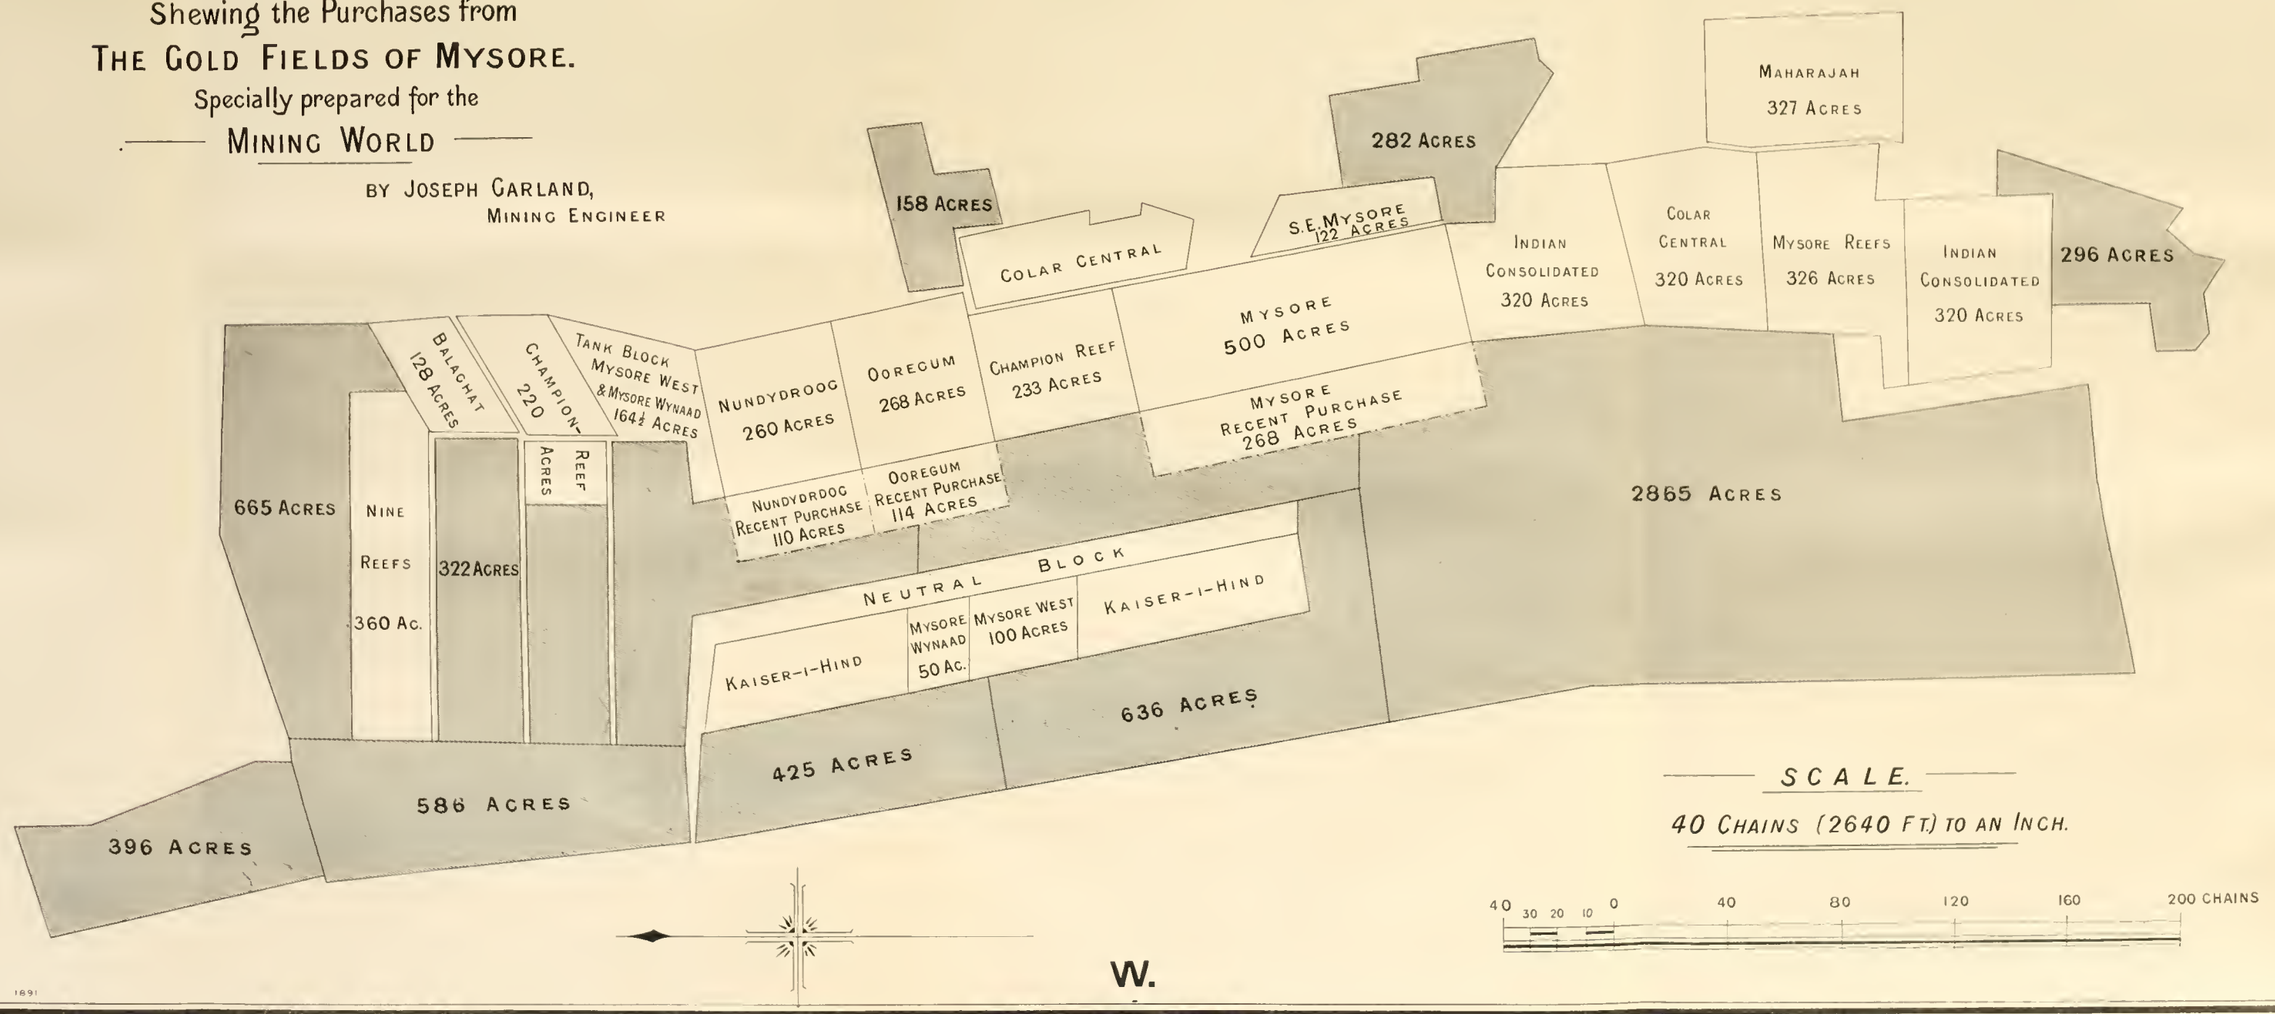
Perplexed.—Of course you must pay the difference between the price of the bargain and making-up price at the account. If not, you cannot expect your broker to carry them over.

MAP OF THE COLAR GOLD FIELDS

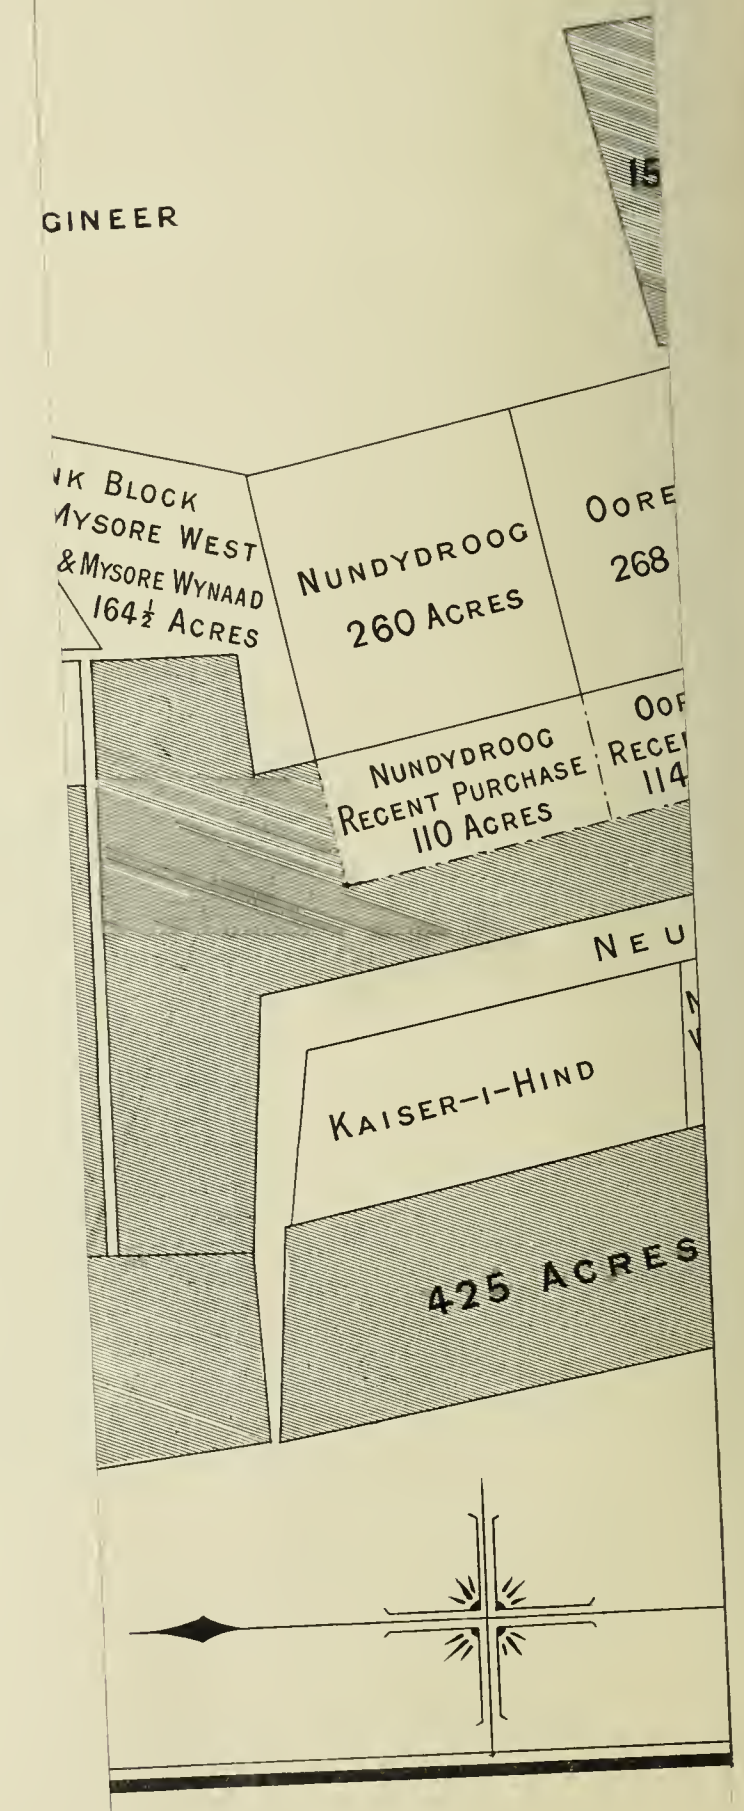
Brought down to date and
Shewing the Purchases from
THE GOLD FIELDS OF MYSORE.
Specially prepared for the
MINING WORLD

BY JOSEPH GARLAND,
MINING ENGINEER

PROPERTY OF THE GOLD FIELDS OF MYSORE LD. SHADED THUS:



SUPPLEMENT TO



The Mining World.

LONDON: SATURDAY, June 27, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

GOLD MINING IN THE COLAR DISTRICT OF INDIA.

RETROSPECTIVE AND PROSPECTIVE.

With the current issue of the Mining World we present our readers with a specially prepared map of the Colar Goldfields, brought down to date, and showing the properties recently purchased from the Goldfields of Mysore, from which those interested may see at a glance the position of the various gold mines of the district, east and west, north and south, of the Mysore, which has been for some years past the "cynosure of neighbouring eyes," and which is at the present time one of the most prosperous ventures, worked with British capital, in India or anywhere else. Time was, and that not so long ago, when it used to be said, in somewhat parrot-fashion, that there would not be enough gold obtained from the mines of Southern India to make a decent watch chain; but those who made the remark, or repeated it, forgot the American adage, that you should never prophesy unless you know. As a matter of fact, the Colar district alone has in the past few years yielded an amount of the precious metal exceeding a million sterling in value, thus providing the material for a good many watch chains and watches too.

Nearly a dozen years have elapsed since the late Mr. Brough Smyth's report to the Indian Government on the auriferous deposits of Southern India came as a revelation upon the world of science and of commerce, and as a boon and a blessing upon the owners of properties which had up to that time been utilised merely for agricultural purposes. Mr. Smyth, it will be remembered, pinned his faith to the Wynaad district, and, though, hitherto, experience has not warranted that confidence, it is by no means improbable that future explorations may do so. Be that as it may, the effect of the report was such that within about two and a half years of its publication nearly 40 separate undertakings, representing an aggregate capital of about four and a half millions sterling, had been formed for the purpose of gold mining in India. Since then some of the companies have entirely disappeared, some have been amalgamated, others have been re-constructed, and nearly all have raised additional capital since their original formation. Most of the concerns have not yet entered the promised land of dividends; but when one remembers that eight years ago Mysore shares were selling for fewer shillings than they now realise in pounds, it will be seen that there is really no reason why the shareholders in other Colar enterprises should lose heart. That the district is highly auriferous has been proved beyond the shadow of a doubt; and though delays are, of course, vexatious, the profitable results which the leading trio of mines have obtained must act as an incentive to those who are interested in neighbouring properties to plod along, in the hope that their efforts also will one day be crowned with success. In the following table we show when the companies at present working in the Colar district were formed, the original capital, and the present share capital of each :—

Company.	Date of Formation.	Original Capital.	Present Capital.	Paid per Share.
		£	£	£ s. d.
Balaghat Mysore	Jan., 1886	150,000	150,000	0 19 0
Champion Reef	June, 1889	182,495	182,495	1 0 0
Colar Central	Oct., 1886	150,000	200,000	1 0 0
Goldfields of Mysore ...	July, 1886	220,000	220,000	1 0 0
Indian Consolidated ...	June, 1881	550,000	275,000 (A)	0 9 6
Mysore	July, 1880	135,000	225,000	1 0 0
Mysore Reefs	Dec., 1885	135,000	135,000	1 0 0
Mysore West	Jan., 1886	125,000	84,939	0 18 6
Mysore Wynaad	Feb., 1886	250,000	250,000	0 19 6
Nine Reefs	May, 1881	100,000	150,000	1 0 0
Nundydroog	Nov., 1880	100,000	200,000	1 0 0
Ooregum	Oct., 1880	125,000	145,000 120,000 (B)	1 0 0 1 0 0
South-East Mysore ...	Oct., 1886	130,000	130,000 128,163 (C)	1 0 0 1 0 0

(A) 10s. shares. (B) Preference shares. (C) Preferenee shares.

The positions of the properties owned by these 13 companies will be seen by a reference to the accompanying map of the district, much better than by any verbal description. We will, therefore, say nothing about the geographical status of the respective companies, but will proceed at once to deal with their progress as commercial undertakings. Before doing so, it is simply an act of justice to recognise the fact that of *all* the successful mines in this field, Messrs. John Taylor and Sons, of Queen Street Place, are the managers. Their ability is so well recognised, that nearly the whole of the companies that are not yet in a dividend position have also been placed under their management.

Mysore Co.

The Mysore Co., as befits the pioneer of the group, has been the most successful, though, if a few pessimists had had their way, it would have been wound up and buried years ago. Happily, wiser counsels prevailed, for the patience exercised then has since been abundantly rewarded. The company was registered on July 6, 1880, with a capital of 135,000*l.*, of which 55,000*l.*—10,000*l.* in cash, and the balance in fully-paid shares—was paid for the property, which consisted of about 733 acres. In June, 1889, a block of the property situated at the northern extremity, and extending up to the boundary of the Ooregum Mine, was sold to the Champion Reef Co., for the sum of 105,000*l.* Upon the remaining 500 acres a large amount of exploratory work has been done by means of shafts, of which Rowse's, Taylor's, and Tennant's are the most advanced. It was not, however, the fortune of the Mysore Co. to achieve great success with its original capital. In Mar., 1886, 15,000 new shares were issued at a premium of 3*l.* each, and in June, 1888, a further issue of 25,000 shares was made, but this time only at 1*l.* premium. In Apl., 1890, however, another issue of 25,000 shares was made at 3*l.* premium. The capital was thus raised to 200,000*l.*, but the actual amount obtained by the company was 345,000*l.* Three months ago it was decided to issue 25,000 more shares in payment for a block of 268 acres of land, situated on the western boundary of the Mysore Mine, from the Goldfields of Mysore Co. For nearly five years the Mysore Co. had its full share of disappointments and vexations; but the corner was turned in 1885, though it was not until May, 1886, that the first dividend was paid. For the year ended Sept., 1885, there was a balance of profit amounting to 1,676*l.*, and having once for all got rid of debit balances, there has since been a steady improvement, until last year's profit amounted to 155,799*l.*, and, apart from the Champion Reef shares, the proprietors have now received dividends amounting in all to about 220 per cent. In the following table we show the tonnage of ore treated, the amount of gold obtained, and the value of the produce from Sept., 1884 :—

	Tons.	Ozs.	Value.
12 months to Sept., 1885 ...	1,616	3,754	£14,675 4 5
" " " 1886 ...	6,077	15,776	61,953 0 10
15 " Dec., 1887 ...	14,061½	16,280	63,400 12 6
12 " " 1888 ...	20,191	19,090	73,349 13 1
" " " 1889 ...	32,567	49,234	193,535 9 7
" " " 1890 ...	38,812	58,181	229,966 16 4

This shows at a glance what enormous strides the Mysore Co. had made up to the end of last year. And the progress made during the current year is also decidedly satisfactory, as will be seen from the following comparison between the crushings for the past five months and those for the corresponding period of last year and the year before :—

	1891.		1890.		1889.	
	Tons.	Ozs.	Tons.	Ozs.	Tons.	Ozs.
Jan. ...	3,350	5,360	3,271	5,002	2,066	2,376
Feb. ...	3,031	5,452	3,000	5,834	2,023	3,038
Mar. ...	3,108	5,477	3,200	5,869	2,459	3,249
Apl. ...	3,239	5,506	3,661	4,571	2,600	3,872
May ...	3,554	5,729	3,385	4,263	2,672	3,869

There is an improvement, it will be observed, not only in the amount of gold obtained, but also in the quality of the ore treated. Last year the average yield was about 1 oz. 10 dwts. to the ton of ore treated; this year, so far, it has been very nearly 1 oz. 14 dwts. With such a record, and remembering, too, that the latest reports from the property are among the most satisfactory that have ever been received, the Mysore shareholders have every reason to look forward with confidence to the future of the mine, or, rather, series of mines, in the management of which Capt. Gilbert has proved himself such a worthy successor of Capt. Plummer, and surely he could receive no higher praise than that.

The information we give would be incomplete did we not mention in this connection the useful visit that was recently paid by Mr. William H. Rowse, the secretary, to this mine, and also to others in the same field with which he is officially connected. We are strongly tempted to plunge into the details he gave with reference to Mysore, Nundydroog, Balaghat-Mysore, Nine Reefs, and the Champion Reef Companies, which made the information about them as complete as it could well be. At the time we reported what Mr. Rowse had to say, and must refer our readers for the full text of his utterances to our issues of Apl. 25 and June 2, which contained them. The one point that stood out in the boldest relief of all he had to say was this, that in regard to the most promising of the companies, "their value to-day is in proportion to the amount of development in depth and length that has taken place upon their respective properties."

Ooregum Co.

Turning, in the second place, to the Ooregum Co., we have to deal with an undertaking whose period of probation was much more extended than that of the Mysore Co. The Ooregum Co. was registered in Oct., 1880, but by the end of 1883 the funds were exhausted without producing any tangible results, and in the opening month of the following year liquidation was resorted to. In Feb., 1885, however, the liquidation was stayed, and, the Mysore Co. having in the interval made highly encouraging progress, the shareholders agreed upon a scheme of re-construction, by which the 125,000 shares of the old company were treated as deferred ordinary shares, and 120,000

preferred shares were issued at 75 per cent. discount, producing 30,000*l.* The question as to the validity of the terms of this preference issue is now, as our readers are aware, awaiting the decision of the House of Lords. Subsequently 20,000*l.* was obtained by the issue of 10 per cent. debentures, but these have since been paid off out of profits. During the current year the first dividends have been paid of 15 per cent. on the preference and 5 per cent. on the ordinary shares, leaving 3,570*l.* 7*s.* 10*d.* to be carried forward. In the past three years the returns have been as follows :—

	Tons.	Ozs.	Value.
Year to Dec. 1888 ...	2,119 ...	4,038 ...	£15,126 6 3
„ „ 1889 ...	7,839 ...	15,925 ...	62,036 2 11
„ „ 1890 ...	12,929 ...	27,351½ ...	104,047 5 3

For 1888 the proportion of gold obtained was 1 oz. 16 dwts. 16 grs. per ton ; for 1889 it was 2 ozs. 15 grs. ; and last year 2 ozs. 2 dwts. 7 grs. The returns for the past five months compare as follows with those for the corresponding periods of last year and the year before :—

	1891.		1890.		1889.	
	Tons.	Ozs.	Tons.	Ozs.	Tons.	Ozs.
Jan. ...	1,353 ...	2,890 ...	825 ...	1,784 ...	454 ...	806
Feb. ...	1,197 ...	2,913 ...	957 ...	2,032 ...	482 ...	893
Mar. ...	1,302 ...	3,004 ...	1,005 ...	2,075 ...	508 ...	1,091
Apl. ...	950 ...	2,055 ...	966 ...	2,049 ...	585 ...	1,210
May ...	1,367 ...	2,890 ...	1,004 ...	2,107 ...	623 ...	1,307

The proportion of gold obtained this year from the Ooregum Mine has been within a few grains of what it was last year, and there is no reason to doubt that the progress shown in the past three years will be well maintained. The prospects of the mine never appeared to be so assured as they do now. An additional 114 acres of property has been obtained from the Goldfields of Mysore for 20,000 ordinary shares ; the reserves of ore amount to over 24,100 tons ; a new mill of 20 heads of stamps, capable of increasing the crushing capacity to 2,100 or 2,200 tons per month—nearly double the present power—will shortly be erected, and tailings machinery has been ordered, which it is estimated will produce a net profit of something like 7,000*l.* per annum. The outlook for the shareholders is, from every point of view, eminently satisfactory, and we have no doubt that the Ooregum Mine will steadily become a closer competitor with its neighbour, Mysore. The useful visit paid by Mr. Malcolm Low, M.P., the chairman, quite recently, and the account he gave of what he saw, which we fully reported at the time, will certainly not have passed from the memory of the shareholders.

Nundydroog Co.

Adjoining Ooregum to the north is the property of the Nundydroog Co., covering an area of 370 acres, including the additional land recently acquired from the Goldfields Co. The Nundydroog Co. dates from Nov., 1880, and has now a capital of 200,000*l.*, or just double the amount with which it started. The purchase consideration for the property was 17,000*l.* in cash, and 33,000*l.* in shares—50,000*l.* in all. In this case, it was not until the early part of 1888 that the profitable results, so long hoped for, were first realised, but when once a commencement was made the progress became continuous. On Oct. 17, 1888, the first dividend of 9*d.* per share was paid, and in the following May a like distribution was made. During 1889, owing to the displacement of the lode by a cross-course, the results obtained were meagre, and for that year no dividend was paid ; but in 1890, two dividends, amounting to 2*s.* 10*d.* on each fully-paid share, were distributed, and in Mar. last another 1*s.* per share was divided. The following table shows the returns to the end of last year.

	Tons	Ozs.	Value.
Five months to Dec., 1886 ...	152½ ...	141 ...	£ 505 7 2
Twelve „ „ 1837 ...	890½ ...	1,546 ...	5,737 18 10
„ „ „ 1888 ...	3,887 ...	6,922 ...	26,230 10 3
„ „ „ 1889 ...	3,781 ...	6,127 ...	22,773 7 1
„ „ „ 1890 ...	9,495 ...	15,634 ...	58,911 18 1

The development of the mine was particularly rapid last year, as will be seen from the above table. And while raising so much larger a quantity of ore, the manager has certainly not neglected anything which would tend to the permanent success of the company. The mine has been laid out in true miner-like style, the reserves of ore amounting at the date of the last annual report to 10,150 tons. The crushing returns for the past five months compare as follows with the corresponding periods specified :—

	1891.		1890.		1889.	
	Tons.	Ozs.	Tons.	Ozs.	Tons.	Ozs.
Jan. ...	830 ...	1,471	670 ...	1,139	370 ...	581
Feb. ...	810 ...	1,449	700 ...	1,321	280 ...	394
Mar. ...	800 ...	1,520	650 ...	1,017	300 ...	514
Apl. ...	855 ...	1,638	650 ...	986	300 ...	485
May ...	1,000 ...	1,634	700 ...	1,085	300 ...	520

Last year's output averaged 1 oz. 12 dwts. 18 grs. per ton ; in the past five months it has been just upon 1 oz. 15 dwts., showing that as the exploratory work progresses the ore improves in quality. The last fortnightly report states that the mill samples gave these results : Rough quartz, 3 ozs. 11 dwts. ; smalls, 2 ozs. 4 dwts. 12 grs. per ton. The outlook for the Nundydroog shareholders is decidedly cheering, and we have no doubt whatever that the mine will continue to give a good account of itself.

Balaghat-Mysore.

We need not deal at any length with the Balaghat-Mysore Co. This company has been crushing regularly for some time past, and the ore has yielded much above the average of the district, but the vein has been small hitherto, though the deeper sinking leaves no room for doubt that below the present workings the lode will open out, and prove remunerative. At a depth of 500 ft. the mine looks much more promising than it has ever looked before. Meanwhile, the monthly returns must very nearly pay the current working expenses, and as the company is well provided with capital, its future appears to be assured.

Goldfields of Mysore.

Turning then to the other company, whose affairs have recently attracted so much attention—the Goldfields of Mysore—we would draw attention to the accompanying map, which shows how vast are the areas still in the possession of that company since its sales to the Mysore, Ooregum and Nundydroog Companies. The original concession granted by the Mysore Government to the Colar Concessionaires Co., Limited, covered about 20 square miles, but prior to the formation of the Goldfields of Mysore, leases had been, or were about to be, granted to the Mysore, Nundydroog, Ooregum, and other companies, these leases representing about 7 square miles. In July, 1886, the Goldfields Co. acquired from the Colar Concessionaires the remaining portion of their property, viz., about 13 square miles, or, approximately, 8,168 acres, and the prospectus inviting subscriptions for a capital of 220,000*l.*, in 1*l.* shares, was issued on July 22, 1886, the purchase price fixed for the 13 square miles of property having been 160,000*l.* At that time, we may remark, Mysore shares were quoted at 8*l.*, a fact which, no doubt, influenced the rush which was made for Goldfields' shares.

A circular issued by this company in Aug. of same year notified to the shareholders that two specially qualified gentlemen, Messrs. William Frecheville and John Samborne, would proceed at once to India to survey and prospect their property. These gentlemen reached their destination at the end of September, and set to work to make a careful and accurate survey of the whole 13 square miles of mineral property belonging to this company, and to prepare an excellent map, showing not only the company's own property, but also the various leases which had been acquired by other companies, thus showing at a glance the whole Colar Goldfield of about 20 square miles. It is this reliable map which has become the standard map of reference for the various mining companies working on the Colar Field, and for which these companies are indebted to the Mysore Goldfields Co., the latter having generously published a reduced copy with their first general report in 1887. It is by this map, brought down to date by a competent mining engineer and surveyor for us, that we are now able to present to our readers an accurately prepared map of one of the greatest gold-mining districts in the world.

It may be of interest to quote one or two extracts from the first general report, dated India, Oct. 26, 1887 (by Mr. Frecheville) :—"The property is a very large one, comprising, as it does, fourteen blocks, aggregating 8,400 acres, or 13⅛ square miles. The original concession of the Kolar Goldfields covered 20 square miles, being about 10 miles long in a north and south direction, which is the direction of the run of the lodes, and a little over 2 miles wide. Of this concession of 20 square miles, 7 square miles are taken up by the blocks belonging to the other companies working on the field, and the remaining 13 square miles form the property of this company." . . . . "A careful survey has been made of the field, taking in the boundaries and the runs of old workings."

Sales by Goldfields of Mysore.

Since this company was started, in 1886, it has disposed of portions of its extensive area to the following companies :—

I. The Champion Reef Gold Mining Co., Limited ... for 27,000*l.***	220 acres*
II. The Mysore Gold Mining Co., Limited ... ... for 25,000 fully-paid shares.	263 „
III. The Nundydroog Gold Mining Co., Limited ... for 20,000 fully-paid shares.	110 „
IV. The Ooregum Gold Mining Co., Limited ... ... for 20,000 fully-paid ordinary shares.	114 „
Total	712 acres.

Taking the company's property to have comprised originally, as per Mr. Frecheville's statement quoted above	8,400 acres
And deducting sales to other companies	712 „
The company still holds ... ... or 12 square miles.	7,688 acres

As we pointed out in our issue of May 2 last, the Goldfields Co. originally possessed about 8,000 acres, for which it paid 160,000*l.*, or 20*l.* an acre, and it has sold 492 acres, or about one-sixteenth of its

* This company purchased a further 233 acres from the Mysore Gold Mining Co., Limited.

** 5,000*l.* in cash, and 22,000*l.* in cash or shares.

property, for the equivalent of 240,000*l.*, or 20,000*l.* more than the total capital of the company. Meanwhile, the company's explorations on the Golconda and Oriental blocks give ground for the belief that as a mining undertaking as well as a land company, the Goldfields of Mysore will achieve a satisfactory reputation.

NINE REEFS.

The company has passed through a trying experience, but quite recently the directors have proposed to restore the financial equilibrium by an issue of preference shares, instead of proceeding to re-construction. There are here three lodes, the first being Malleson's, the second the Champion lode, sunk upon in Vyvyan's shaft, and the lode now being worked at Balaghat. The most extensive workings have hitherto been carried out upon the Malleson lode, which the extensive native workings indicate as a most promising spot, and the lode itself, from first to last, has proved to be one of the most tantalising on the field—at one time giving as many ounces by assay as at another time it gave pennyweights. It is likely that now the greatest amount of money and energy will be expended on Vyvyan's shaft, where the Champion lode is well defined, and where, an expert says, "great riches will be found."

MYSORE REEFS.

It is almost unnecessary to refer to the position of this company, seeing that we report its meeting fully in our present impression. From this it will be seen that the available funds have been exhausted, and that it is proposed to re-construct the company by a scheme which will provide 33,750*l.* of working capital.

During the year 1890-1, 2,442 tons of quartz were crushed, yielding 409 ozs. 4 dwts. of bar gold, showing an average yield of 3 dwts. 8 grs. to the ton. It had been confidently expected that the ore would have been found much richer than this, inasmuch as from a trial crushing of 23 tons in Dec., 1889, 58 ozs. of gold were obtained, giving an average yield of 2 ozs. 10 dwts. 10 grs. of gold to the ton. Capt. Scantlebury had reckoned upon a yield in bulk of 7 to 8 dwts. of gold per ton, and had it so turned out, the mine would now be working at a profit, but the quartz unexpectedly became poorer below the 320-ft. level, and although a large quantity, estimated at from 40,000 to 50,000 tons, has been laid open, it will not at present pay the costs of extraction and milling. The news has just come to hand that the lode has been cut in the cross-cut west in the bottom of the mine, showing visible gold. This is a signal instance of the accuracy of Capt. Gilbert's forecast as given in his special report, dated Apl. 24, 1891. No shareholder who really understands the subject will fail to take up, to the full extent, the shares offered him under the re-construction scheme.

MYSORE WEST.

Mysore West and Mysore Wynaad have, in a manner, become partners, and with joint purse are working the Tank Block—a property of 164½ acres, which Mr. Robert Walker, J.P., when in India, had the great foresight and sagacity to secure. The block adjoins the northern end of Nundydroog, and was acquired for a payment by each company concerned of 3,000*l.* in cash and 2,500*l.* in fully-paid shares, valued at par. A reference to the prices paid to Goldfields of Mysore Co. by its customers for other blocks will show how great was the bargain Mr. Walker secured for the joint concerns. The property (Kaiser-i-hind) which Mysore West was originally started to work has been left in abeyance, and all energy has been concentrated on Tank Block, where the results of the developments so far are considered encouraging. The only distribution to its shareholders this company has made has been part of the shares acquired from Mysore Wynaad as mentioned below. The board in the report issued in anticipation of the annual meeting on Monday express their full confidence in the results likely to be attained from the working of Tank Block, which represents a run of 2,200 ft. on the Champion lode, which is giving such good results in Nundydroog, this company's immediate neighbour to the south.

MYSORE-WYNAAD.

This, as its name applies, was originally a Wynaad company, owned Dingley Dell and Devala Provident properties. These are held in abeyance at present. It was in 1881 that the company lost heart over its operations in the Wynaad, and bought from Mysore West a block of 50 acres of Kaiser-i-hind sett for 10,000*l.* in cash and 50,000*l.* in fully-paid shares. Little work was done upon it, for the directors here, as in the Wynaad, adopted the "wait and watch" policy. Had its neighbours in the Wynaad been successful, or had fortune smiled upon Mysore West in the Colar—Mysore-Wynaad directors would have been up and doing, but as hope neither came from the one direction nor the other, they remained with folded arms until Tank Block was bought, and here upon a joint purse arrangement they are now vigorously at work.

CHAMPION REEFS.

This company commenced work in June, 1889. The properties consist of three blocks. That leased from the Mysore Co., comprises the northern section of that company's ground, lying between the Mysore Mine to the south and the Ooregum Mine to the north, with a length of 3,490 ft. on the course of the Champion lode. The other part of the property was held by the Goldfields of Mysore, and consists of a section of ground known as the Coromandel Block, together with a block to the west, termed No. 16 Block, situated between the Nundydroog Mine to the south, and the Balaghat Mine to the north, and having a lineal measurement on the run of the Champion lode of 1,980 ft. Four shafts are being sunk with great persistency and speed, and at one of them quartz to the value of nearly 1 oz. to the ton has been found. The confidence the directors expressed at the last meeting has been justified by more recent reports which are certainly of a very encouraging nature.

SOUTH-EAST MYSORE.

This property is well equipped, and is in a position at once to take advantage of any success it may meet with. So far, the lode on the deepest point reached (about 500 ft.), has not been payable, but Prospect shaft is being sunk upon a lode hitherto unworked by this company. The later reports indicate an improved condition of things in the deepest workings.

INDIAN CONSOLIDATED.

Indian Consolidated was originally solely a Wynaad company, and absorbed Indian Phœnix, its near neighbour. Whilst coutinuing operations in the Wynaad on what is called the "Phœnix section," with greater success than has attended any other company (since crushings commenced there till the end of Apl. this year it has extracted in gold 29,500*l.*) it long ago transferred the greater portion of its energies to the Colar Goldfield. There it acquired the Colar block, formerly the property of the Colar Gold Co., and also the Great Southern Mysore block, and the Madras block. It subsequently sold the Great Southern Mysore block to the Colar Central Co., and is itself working on the Colar block, which in the reports is termed "Colar section," and on the Madras block, where some exploratory works have been carried on. Mining in the Wynaad, as stated by the chairman (Mr. Malcolm Low) at the last general meeting, will be carried on as long as it pays expenses, in the hope that richer stone will be struck according to the views originally expressed by Mr. Brough Smyth. The company's main hopes are centred in the Colar section, where two new shafts were sunk on the suggestion of Capt. Plummer. The reef, believed to be the Champion lode, was cut in both these shafts at a depth of about 200 ft., but at each point of intersection the lode was poor. The present developments consist of drivings north and south on the lode, with the view of meeting rich shoots of gold, but in addition the two shafts are being put down to a greater depth, and other cross-cuts driven to the lode. The general idea is to drive westerly levels from No. 2 shaft, from the 240 west cross-cut, from main shaft, and from the 420; from the No. 5 shaft right through the band of trap dyke which intersects the property in the hope that on the western side of the dyke rich makes of quartz will be discovered. About 18,000*l.* worth of gold has been obtained from the No. 5 shaft on the Colar section.

COLAR CENTRAL.

The property of this company was acquired from Indian Consolidated, and was originally called Great Southern Mysore Block, to which was united an adjoining block of the same size as the above from the Colar Concessionaires. The company has been at work for some considerable time, but has not yet met with payable reefs. It then acquired from the Eastern Mysore Co. a block of land lying to the north-east of the Mysore Mine, leaving the original property in abeyance for the time. The whole strength of the company has been devoted to this Eastern Mysore block. A masterly lode, extending for several hundred feet, was discovered, but unfortunately was not sufficiently rich to pay. Throughout the 700 ft. driven upon it was poor, and not improving even in depth it was practically abandoned, and operations confined to the development of the northern portion of the property, which it was thought offered greater chances of success. It is satisfactory to know that in the western cross-cut from the new shaft a lode was discovered about the end of May, which was 2 ft. wide, showing 15 dwts. of gold to the ton. Work here is being pushed on with all possible speed to develop this discovery, and it will be interesting to watch the future reports from this part of the mine. If the recent telegram from Mysore Reefs is confirmed by subsequent reports and developments, it will have a reflex benefit upon this company in regard to its original Great Southern Mysore block, which lies immediately between Indian, Consolidated and Mysore Reefs properties.

In conclusion, we would draw attention to the following table showing the highest prices touched by the shares of the principal companies, compared with the quotations now ruling :—

	Highest Price.		Current Price.
Goldfields of Mysore	... 3 15/16	...	1¾
Indian Consolidated	... 1⅜	...	2/6
Mysore	... 9	...	5⅝
Nundydroog	... 2⅜	...	1¾
Ooregum, Ordinary	... 2 11/16	...	2¼
„ Preference	... 3⅜	...	2¾

We do not propose to attempt to prophesy what is to be the future level of prices for these shares; but of this we feel certain, that the Colar mining industry will produce such results that people will in the coming times look back upon the current quotations as exceedingly moderate.

PROGRESS OF ST. JOHN DEL REY.

THE great difficulties which the company has had to encounter have been courageously met and overcome. The average rate of sinking the two shafts, as we have published it month by month, has surprised mining men. It is creditable to the management at home, and particularly to Mr. Chalmers abroad, who, of course, has had the main share of the responsibility and the work. During Apl. and May, the total number of fathoms sunk in both shafts was 69—or 414 ft.—that is, said Mr. Hockin, "these two shafts, 12 ft. in diameter, were advanced during two months to a depth equal to (taking for comparison an object familiar to us all) one half of the height of St. Paul's." The upshot of the whole business is that about two-thirds of the enormous task to which the company addressed themselves 22 months ago has been accomplished. The surface works have also been advanced at a satisfactory rate, and have for their double object the more efficient and the more economical working of the mine. The working expenses, already greatly reduced by this means, will be still further so by the advent of the railway, which is now within 4 miles of the mine. The expenditure on surface works, as shown in the balance-sheet, has been to Feb. 28, 63,414*l*., and for sinking shafts, including cross-cuts for connecting the shafts every 50 fms., 33,916*l*. Interesting details were given by the chairman as to the cost and progress of the works, and no shareholder should omit to read with care the full text of his speech, which will be found in the usual place. The debts in Brazil are now one-half of what they were at the date on which the accounts were made up, and the arrears of calls have been reduced 672*l*. To the value of the services of Mr. Chalmers full justice was done. The discussion did not raise any point of great importance. A shareholder, who is a mining engineer, naturally inquired why two shafts are being sunk instead of one. He was quite satisfied with the full explanation given by Mr. Tendron, who, however, might have added a further one, that the safety of the workpeople is better secured by two shafts than by one. There is no need to impress upon shareholders the duty of continuing the liberal support to the board they have already accorded. They know the position as well as we can tell it to them. This is not an ordinary mining enterprise where the results are uncertain. If anything in mining is assured it is the existence of the Morro Velho lode at a certain depth, towards which the management has already gone two-thirds of the distance.

THE KETCHAU (PAHANG) CORPORATION.

SHAREHOLDERS who were not able to be present at the meeting of this company yesterday will, no doubt, read with interest our report of the proceedings. The statement which Genl. Barwell (the chairman) was able to make was in every way satisfactory, showing clearly not only that the company possesses a property of no ordinary richness, but also that it is being developed with minerlike skill and energy. The discovery of the rich streak of ore at Mount Siam, which was referred to at the previous meeting of the company, has turned out to be even better than was then anticipated, and has proved to be "a solid gold bearing reef," and not a mere pocket of ore. A parcel of ore taken from the poorer portion of this reef (not from the rich streak referred to) has been sent to an adjoining property to be crushed, and has given the very satisfactory result of 5½ ozs. to the ton. In addition, however, to this encouraging intelligence, the chairman was able to announce another discovery made in Apl. last, being that of a new reef crossing at right angles, the one upon which the operations had up to that time been carried on. The lode here is 5 ft. wide, panning gold throughout, and giving "an unlimited supply of good milling stone." There are also known to exist several other reefs, which have not yet been attacked. In fact, to use the chairman's own words, "gold seems to exist all over this part of the property," and though the operations up to the present have been confined entirely to development work, steps are now being taken to equip the mine with machinery, which appears to be the only thing necessary to make the company a paying concern. Into the question of the management in London we do not propose to enter, as the shareholders wisely decided to leave it in the hands of the directors.

NAMAQUA COPPER CO.

THE report and accounts to be presented at the forthcoming meeting of this company are, on the whole, satisfactory. The accounts for the year ending Dec. 31, 1890, show a net profit of 21,702*l*. 16s. 6d., which, with the balance of 2,598*l*. 9s. 2d. brought forward from the preceding year, gives a total of 24,301*l*. 5s. 8d. The interim dividend paid in Dec. last absorbed 7,074*l*. 16s. 6d., so that the sum of 17,226*l*. 9s. 2d. is left to be dealt with, and the directors propose to apportion this amount in the following manner:—11,791*l*. 7s. 6d. to the payment of a final dividend of 2s. 6d. per share, making, together with the 1s. 6d. per share paid on Dec. 24, 1890, a total distribution at the rate of 10 per cent. per annum; 3,000*l*. to be carried to the reserved fund, raising that fund to 18,000*l*.; and 2,435*l*. 1s. 8d. to be carried forward to the eusuing year. Owing, in great measure, to scarcity of native labour, and, to some extent, to fluctations in the yield of the stopes, the output for 1890 has not reached the quantity sent forward during 1889; but the quality of the ore has been fairly maintained, and the average price obtained for the 1890 ores, viz., 10s. per unit (say, 50*l*. per ton of metal), may be considered satisfactory. The fluctuations in the yield of the stopes are not a new feature in the history of the Tweefontein Mine, and it is satisfactory to record that since the commencement of the present year an improvement has again taken place. At the close of the year the reserves of ore at Tweefontein were estimated at about 9,000 tons. During a part of the year the exploratory work at the Wheal Julia Mine and the New Centre was suspended, owing to the scarcity of labour, but it has now been resumed.

DE LAMAR.

To the full report of the interesting meeting held by this company on Tuesday, it is unnecessary that we should advert at any length, for the simple reason that we claim to have exhausted the subject a fortnight ago, when we published the results of an interview one of our representatives had with Capt. De Lamar himself. This gentleman is enthusiastic about the property, and the explanation is that it is, in a sense, his own child. He showed his faith in it by stipulating that he should have half the shares of the company transferred to him as the major part of the purchase-money, and also by buying shares as soon as he came to this country. He is prepared to stand or fall by it, but thinks he will maintain the perpendicular. So will all those who read what he had to say along with the remarks of the chairman, though the latter, at least, may be accepted as the more impartial witness of the two. The able speech which Mr. Muir delivered rendered further comment unnecessary, but Capt. De Lamar was literally boiling over with oratorical matter; and Mr. Bennett, like a true surgeon wishing to afford the patient relief, suggested that the gallant captain should say "a few words," little expecting the Niagara of eloquence that was to follow. Now, if Capt. De Lamar's is the American idea of "a few words," we tremble to think what must be the duration of a set speech. The worthy captain could have talked till now, without the least difficulty, upon his favourite topic—that is, upon De Lamar, for which he has slaved by day, and of which he has dreamed by night. But to do Capt. De Lamar justice he wasted no time. The English public want facts, not theories; practical results, not dreamy fancies; and Capt. De Lamar met their wishes. He showed that the property has possibilities, which those who subscribed on the faith of the original prospectus never imagined, and he quoted with great effect the views of Mr. Clarence King, who is widely known in England, and whose opinion is highly valued, that of De Lamar almost anything now might be expected. The nett result of the meeting has been to confirm the strong view we have previously expressed, that De Lamar shareholders are likely to see an infinitely better premium for their holdings than even now in this period of unutterable dulness they are able to obtain.

FIGURES *v.* FACTS.

MR. EDWARD COLEMAN, as the former chairman of Great She Mining Co., ought to know, as well as anybody in London, that in the use of figures everything depends on their accuracy. Possibly he may have forgotten this when he took up his tale at the English and Australian Copper meeting last Wednesday. He made out to his own satisfaction, if to nobody else's, that since June, 1885, the directors had lost 90,000*l*. of the company's capital, and those gentlemen appeared very much surprised to hear it. He asserted that there is a diminution at the present time as compared with 1885 in the assets of 90,941*l*. The shareholders listened to this tale of woe aghast and bewildered, but Mr. Coleman, having no mercy upon them, poured the artillery of his figures upon them as the enemy would do their shot and shell into a beleaguered city. The only comfort the harassed shareholders could gather was from the reflectiou that after all Mr. Coleman's figures might be wrong. Now, as we said before, in figures everything depends upon accuracy; failing this they are rather apt to explode in the hands of those who use them, and long before Mr. Coleman had finished, the sharcholders had begun to see that as a certain part of his superstructure was manifestly wrong, the basis could scarcely be right. Mr. Cuff, a painstaking director of the company, who has even gone to Australia to look into affairs on the spot, was to the fore with another set of figures, and we do Mr. Coleman no injustice when we say that in the opinion of the meeting his were metaphorically knocked into a cocked hat. The real fact is this, that since the present board took office the properties have been re-valued, and, instead of standing at the ridiculous sums represented in the accounts of the old board, they have been written down by 70,000*l*.—a considerable slice off Mr. Coleman's total. Then Mr. Cuff adroitly quoted the report of the old board, in which they showed that not only had they disposed of the reserve fund at 6,000*l*., of which Mr. Coleman had made a point, but of 3,000*l*. besides, then standing to the credit of wharf account. We have no space to go into all the details, but having disposed of the greater portion of Mr. Coleman's debit, we can assure our readers that the greater includes the lesser. At all events if any shareholder thinks it does not, Mr. Cuff is on view daily at the office, and will prove to any doubter how he smashed and pulverised the Coleman figures on Wednesday last.

A POINT IN FAVOUR OF MINING COMPANIES.

MR. TENDRON indicated it at the St. John del Rey on Thursday. He knows as well as most people that mines are not sinless—that they often make the word of promise to the ear and break it to the hope. He knows that lodes have an unpleasant tendency to disappoint forecasts, and that very often when the aspect of affairs is most encouraging a disagreeable change takes place, which upsets the calculations of the best directors and managers. He knows also that the management of mines is not altogether faultless, but remembers that directors are to a large extent like clergymen—they are dealing with the unknown. No wonder then that they make mistakes, when even those who deal with the known cannot always avoid them. But Mr. Tendron has detected one thing about mines which he likes — they do give information. By many enterprises it is given weekly, by others fortnightly, and by nearly all of them monthly, whereas the majority of other enterprises dole it out half-yearly or annually. We incline to the opinion that the published reports from the mining companies are given too often, and that opinion is most strongly entertained when the editorial desk is literally groaning beneath the weight of communications which, in spite of heavy supplements, we are sometimes forced to condense, and occasionally (though always with regret) to omit. Let it, therefore, be put on record in favour of mining companies, whatever may be said against them, that they do give information, and give it more abundantly than any class of enterprise that can be named.

AFFAIRS IN SOUTH AFRICA.

Kimberley, June 1, 1891.

AN ACKNOWLEDGMENT, AND AN EXPLANATION.

I HAVE to acknowledge, with many thanks, the complimentary remarks which your correspondent, "J. W. D." made in your issue of Apl. 11, and at the same time I am anxious to make an explanation. Referring to the Wesselton Mine, your correspondent writes :—"If your correspondent would send you the official figures of the diamonds found, I feel sure you would qualify the 'good finds' by the single word 'reported.'" By this time "J. W. D." has doubtless read my later letters, which would sufficiently explain why there have been no official returns, or reports. But to make assurance doubly sure, allow me to repeat that some two mouths were allowed to elapse between the rushing of the mine and the interdict being applied for and granted. During that time it was well known that several of the rushers were finding, and finding well. As soon as they found they went, as in duty bound by law, to the Detective Department and requested permits to enable them to sell; but the detective authorities, evidently acting under instructions, refused to grant the necessary permits. Then, when the interdict was granted, a verbal guarantee was given that all diamonds found by the rushers should be given up to the owner of the mine in the event of the interdict being confirmed in the Supreme Court. As we all know, the interdict was confirmed, but in the meantime it is a matter of notoriety that those who had found had sold their diamonds, and the owner of the mine may whistle for them. Of course they were sold illegally, and every seller and purchaser made himself liable to seven years' hard labour under the Diamond Trade Act. This being so, there can be no official report or record of the number and value of the diamonds found by the rushers during the last two months and a half. And here is a further proof that the diamonds found must have been sold. It is well known in this town that every one of the rushers was, at the time, in a state of impecuniosity. Now, each man, to work his claim, has to employ a gang of from eight to 15 natives, to say nothing of other expenses. As a rule, the natives are paid every Saturday at the rate of 15s. or 16s. a week, and unless they are paid on Saturday not one will turn up to work on Monday morning. This being so, it will be seen at once that a man without capital could not work his claim for a fortnight, and therefore the natural inference is that in order to pay their way these men must have found, and found fairly well, at all events.

THE NEXT ACT IN THE DRAMA.

Since I last wrote the curtain has descended on another act in this Wesselton Mine drama. The law has at last been vindicated. Why the Government dilly-dallied in the matter is past comprehension; but finding that the rushers treated the interdict with contempt, the authorities proceeded to move, and they did so in such a gingerly fashion that many a smile was created. First, an inspector of police and a few constables were sent to politely request the rushers to leave the mine. The reply was that a meeting of the Claimholders' Association was to be held that afternoon, and they should abide by its decision. That decision was that they should stick to their claims. Three or four days were allowed to pass over, and the inspector went out again, and arrested the first half-dozen men he came across. They were at once taken before the magistrate, and on promising not to go on the mine again they were reprimanded and discharged. Still there were a number of men working there, and at last, on Saturday, the inspector went out again and arrested the ringleader, Mr. J. H. Wilson, and several others. They were at once brought into town, and of course expected to be released on bail, but to their chagrin the inspector informed them that his instructions were to lock them up until this morning, and locked up they were. This morning several of them were merely charged with trespass, and remanded until to-morrow, bail being accepted. Wilson and another man were, in addition, charged with resisting the police in the execution of their duty, and they were remanded until Thursday, and also released on a small bail. I have gone into these details for the purpose of showing your readers that they have by no means heard the last of the Wesselton Mine business, and for two reasons, the one being that when the case of Ward, the concessionaire, *v.* Eland comes before the Supreme Court the whole affair promises to assume quite a different aspect, and the other is that, as I predicted in a previous letter, the opposition in Parliament is evidently preparing to take steps to get the mine thrown open. Nor should I be at all surprised if the Wesselton Mine brings about the downfall of the Rhodes Ministry.

MORE DISCOVERIES.

As prospecting goes on along the Vaal River, more diamondiferous soil is being discovered, and amongst the rest the discovery at Christiana has resulted in the unearthing of some valuable stones. I have also just heard of the discovery of an enormous bed of asbestos within a hundred miles of where I am now writing. Parties have gone out to inspect the ground, and as soon as reliable information can be obtained I shall not fail to send it you.

REVIEWS.

ZAMBESIA : ENGLAND'S EL DORADO IN AFRICA. By E. P. Mathers, F.G.S., F.R.G.S. King, Sell, and Railton, Limited, Gough Square, Fleet Street, E.C.

The facile pen of Mr. Edward P. Mather has again been busy in the production of the above-named work, which comprises a description of Matabeleland and Mashonaland, and an account of the gold fields of British South Africa. A mere glance at the volume is sufficient to show that the author has exercised great care and discretion in the selection of his material; and besides being delightful reading, the book contains a mass of useful information which no one interested in South Africa can afford to neglect. Mr. Mathers deals with various interesting epochs in the history of South Africa, making particular reference to the rapid strides, political and industrial, which have been made since the formation of the British South Africa Co. The south-eastern territory of Africa contains, in Mr. Mathers' opinion, the veritable land of Ophir, whence Solomon is said to have drawn gold to the modern value of 900,000,000*l*. In the final scramble for Africa, Great Britain has managed to appropriate a very satisfactory share, and the author tells us that there is an almost universal aspiration to prosper under the protection of the British flag rather than be subject to the vagaries of Boer Republicanism. Nominally, the Transvaal is a Boer Republic, and nominally the men who at present sway its destinies are Boers, and in some cases ultra-Boers : but practically the territory and the Government are swayed by a new set of needs, required and demanded by a great population of English-speaking people who have settled there. Mr. Mathers predicts that the motto under which the future federation of South Africa will be accomplished, will be that under which the Australian Colonies recently took their first step towards federation—namely, "One people one destiny." Zambesia — the territory which the British South Africa Co. by the terms of its charter is granted power to develop, administer and govern — includes some of the finest and fairest portions of the earth's surface. Matabeleland and Mashonaland, which are included within the scheme of the company's operations, are eminently fitted for permanent occupation by Anglo-Saxon settlers. The climate is everything that could be desired, and "a mere superficial exploration of British Zambesia reveals uulimited commercial and agricultural potentialities—wonderful fertility of soil, magnificent forests, plentiful streams and abundance of useful minerals and precious metals." A large portion of the work is devoted to a history of the British South Africa Co., its origin and objects being fully and clearly set forth, and the charter itself is printed *in extenso*. The author warmly commends Mr. Rhodes for his spirited policy, and tells how the Prime Minister of Cape Colony on one occasion, some years since, pointing to a map, and indicating what is now Zambesia, said to a friend, "All that British ! That is my dream." How soon the dream would be fulfilled was little thonght at the time. Mr. Mathers gives it as his opinion that a new country—an El Dorado and a Goshen rolled into one—is being opened up for the benefit of the Anglo-Saxon emigrant and the British merchant. We advise our readers to procure a copy of the work, which is literally brimful of useful information, a large portion of which cannot be procured from any other source.

JUDGMENT IN THE MOUNT MORGAN MINE CASE.—Mr. Justice Romer gave judgment yesterday morning in the case of Benson *v.* D'Arcy in favour of the defendant.

SANTA ROSALIA DEL CARMEN (MEXICO) COPPER CO., LIMITED. —This company has removed its offices to 19, Mark Lane, London, E.C., and this is now the registered office of the company.

HOLLOWAY'S PILLS AND OINTMENT.—Vicissitudes of climate, exposure and hardships, tell heavily on soldiers and sailors, sowing the seeds of diseases which may ultimately break up the constitution. Naturally careless of their health, a word in season may avert many evils, and may cause them to resort to timely measures without any difficulty or publicity. Holloway's effectual remedies are so suitable, and are so easily adapted for the varied complaints to which our soldiers and sailors are liable, that a supply should always be obtained before proceeding abroad. It may with confidence be stated that many a valuable life might have been saved, or confirmed cripple prevented from begging in the streets, if Holloway's remedies had been used in time.

REPORTS OF MEETINGS.

THE DE LAMAR MINING CO., LIMITED.

A GRATIFYING STATUTORY MEETING—THE CHAIRMAN DESCRIBES THE PROPERTY, AND ITS ACQUISITION BY THE PRESENT COMPANY, AND CAPT. DE LAMAR CONTINUES THE TALE.

THE statutory general meeting was held at Winchester House, on Tuesday.

Mr. Francis Muir

(chairman of the company) presided.

Mr. CHARLES PAKEMAN (secretary) read the notice of meeting.

HISTORY OF THE COMPANY.

The CHAIRMAN: Gentlemen, this being the statutory meeting of the company, the first since its formation, and as only three months have elapsed since it was formed, and two and a-half months since we took possession of the mine, you will not expect the directors to have very much to say to-day. Still, at the same time we are very glad to meet you, and give you such information as we have regarding this property. I think I may say for my colleagues and myself that we feel we have a very big thing on hand, and we also believe, and hope, an enterprise which will be, in course of time, eminently successful. Probably, I will best meet the purposes of this meeting if I give you briefly an epitome of the board's proceedings since its formation, and with that I think you will be able to arrive at a pretty good idea of where we stand to-day. I will begin by saying that when the directors were invited to take part in the company and join the board there were submitted to them—two, or three reports I might rather call them, regarding the property. One was by Mr. Wartenweiler, a very eminent American mining engineer; one by Mr. Bennett, who is one of the managers of the Mining and Financial Trust Syndicate; and one by Mr. Bratnober, which is short, and practically confirms the other two. These reports we (the directors) found in every way satisfactory, and although none of us could call ourselves mining experts (very much the reverse), still, as business men, the statements put before us appeared to be fair and reasonable, and in every way worthy of consideration; but we decided that before allowing our names to be put on the prospectus it was prudent, advisable, and in every way right, that we should obtain

AN INDEPENDENT OPINION AS TO THIS PROPERTY,

and in looking for some one to make that report on our behalf, the name of Capt. Plummer was suggested to us, a gentleman very highly esteemed by those who know him. Now, my colleagues knew Capt. Plummer themselves, because it happens they are more or less connected with the Elkhorn Mine, of which he was manager, and they had the most perfect confidence that Capt. Plummer's report would be fair, and just what it ought to be. I have not the pleasure of knowing anything of him, and, therefore, it became my duty on my own account, and also as a director, to get such information as I could with regard to his standing and antecedents. I consulted those friends who are considered very good authorities in the City, and the information I got about Capt. Plummer fully confirmed the opinion my colleagues had formed regarding him. We have been found fault with for selecting Capt. Plummer for this important work, because he was manager of the Elkhorn Mine, promoted by the same syndicate, but we were willing to take that risk, believing we should get from him a fair and absolutely reliable opinion. So much for the appointment of Capt. Plummer. His report was in every way satisfactory, fully confirming the reports that had been laid before us, as I have mentioned, and the directors therefore felt no hesitation in allowing their names to appear on the prospectus of the company, or in having the company registered. The company was registered on Mar. 3, and on Mar. 7 the prospectus was issued. The allotment took place immediately after, and, as you are aware, the vendor, Capt. De Lamar, according to the terms of the prospectus, took 205,000 shares out of the 400,000. There were privately allotted, before the prospectus had been issued, 145,000 shares, and there were offered to the public 50,000 shares, which 50,000 shares were

APPLIED FOR JUST ABOUT THREE TIMES OVER,

showing what confidence the public had in the prospectus as it was laid before them. (Cheers.) It may interest you to know that in addition to the shares held by the vendor, Capt. De Lamar, in America, there were allotted to American applicants no fewer than 40,000 shares, and of these some 17,000 were allotted to *employés* at the mines. (Cheers.) These were *employés* of Capt. De Lamar, and they were anxious, when they heard that the mine was to be formed into a company, to have an interest in the work with which they were familiar, and in which they were engaged. It may also interest you to know that 1,0000 shares were allotted to holders in France—in Paris chiefly. These preliminaries beiug attended to, we were advised by our lawyers that everything was in order, and on Apl. 4 the cash, as agreed, was paid for the property in New York, and we took possession of the mine on the same afternoon, Mr. Wartenweiler and Mr. Bratnober being present, and the mine was started on behalf of the company on Apl. 5. In the meantime we had to be considering the appointment of a manager, and thought ourselves very fortunate in being able to make an arrangement by which Capt. Plummer agreed to act in that capacity at the mine. (Cheers.) I have already told you what we thought of him. Of course there was this difficulty, that he was manager of the Elkhorn, but having brought the Elkhorn to a very satisfactory state of organisation his directors were able to part with his services to a certain extent—that is to say, he is to divide a certain amount of time—so much per month to the service of Elkhorn in the way of superintendence, but the great bulk of his time is to be given to De Lamar Mine. He arrived at the mine on Apl. 19, and took charge, Messrs. Bratnober and Wartenweiler having meantime attended to the property on behalf of the company. Here I may take the opportunity of

THANKING MESSRS. WARTENWEILER AND BRATNOBER

for their kindness in attending to the transfer of the property, superintending the works, and putting things in shape prior to Capt. Plummer's arrival. (Cheers.) Now, gentlemen, perhaps it may be as well I should make some reference to the property itself. It is a very big thing. I am not a mining expert, and there are no plans or maps by which I could make more plain anything I wish to say. Capt. Plummer is making a thorough survey of the property, of which plans will reach the office by and by, and we shall then be able to show the shareholders what the property is like. In the meantime there are photographs in the room, which will afford to those who examine them some idea of things as they are. The mine is, as you are no doubt aware, situated in Idaho, about 55 miles from Nampa, on the Oregon Short Line Railway. It is practically a mountain, about 1,000 ft. high from the valley where the village of De Lamar is situated. The mining claims extend altogether to about 250 acres, and are situated on the crest of the mountain. The principal claims are on the north side of the mountain, where the village of De Lamar stands, and there are some subsidiary claims on the south side acquired by Capt. De Lamar only a few months before disposing of the property. The whole extent of the property, including claims and mill sites, is about 350 acres. There is an ample supply of water, and all necessary rights for the proper working of the property have been secured and provided for. In the property, so far developed,

THERE ARE FIVE ORE VEINS.

Three of them have been chiefly worked on, so far, and two have hardly been worked at all. On the other portions of the property there are strong evidences that several additional veins exist, which, of course, it will be our business by and by to develop. One valuable peculiarity of the mine is that instead of being worked by shafts, necessitating expensive hoisting and pumping arrangements, the mine is worked entirely by adit tunnels from the face of the hill. The main tunnel, called the Voschay, which has been in use so far, and which is at present in use, is at a depth of 250 ft. vertical from the crest of the hill, and since we took possession of the property has been extended entirely through the hill, communicating with the tunnel approaching from the Summer Camp claim, which was bought by Capt. De Lamar, and included our purchase. These two tunnels, I say, have been joined, and hence we have

A TUNNEL THROUGH THE HILL 3,500 FT. IN LENGTH,

which is an admirable arrangement for ventilating the mine, attacking the different ore bodies and removing the ore. At present also, as for some time past, there has been another tunnel under weigh at a depth of 208 ft. below this first tunnel, called the Wahl, and we have a telegram this morning from Capt. Plummer (we informed him of the meeting, and asked him to be good enough to let us have any information that might interest the shareholders) in which he says he has entered the veinseries in the Wahl tunnel, that is 208 ft. below the tunnel we have already got through the mountain, and the appearance of the mine is good. We have already got down in the first tunnel, on what is called the 77 ft. vein, to a depth of 140 ft. on the vein, or a perpendicular depth of 70 ft. towards the second tunnel below, and are in very rich ore, so that there is every indication (apart from the telegram we have from Capt. Plummer this morning) that we shall get the whole of the vein series, which we know all about, above the Voschay tunnel, also at the lower levels. It will be necessary to consider the question of attacking the veins at a lower depth, and then the point will be, whether we should make another tunnel at a lower level still, or whether we should sink upon the vein from the lower tunnel, and in that way reach the lower bodies. That is not a practical question at the present moment, and I only mention it. One peculiarity about this mine is that we have not only this crushing ore, averaging, so far, $30 to $32 per ton net value, but we get a considerable quantity of shipping ore as well, and the peculiarity about the mine is this, that across these veins, which have been so far developed, there runs what is called a "clay dyke," and at the point of contact between the "clay dyke" and these ore veins we get very rich pieces of silver ore. We have samples on the table which, no doubt, will interest some of the shareholders. Here (holding it up) is what is called "horn" silver, picked off the point of contact between the dyke and the vein. You will observe in the returns of the month we refer to the quantity of ore crushed, and also to the quantity shipped, and the produce therefrom. In passing, I may mention that the proportion of gold to silver is about 60 per cent. in the milling ore and 40 per cent. silver. As to the results, since we took possession on Apl. 4 you have had two returns sent you.

RETURNS EXCEED PROSPECTUS ESTIMATES.

The first referred to Apl. (25 days), when we crushed 1,250 tons, and shipped of bullion $38,000, which equalled about $30.40 per ton. In May (29 days) we crushed 1,360 tons, yielding $47,000, an average of $34.56. The average of the two months is $32½ per ton, and I may just say that that is something considerably in excess of any figures that were foreshadowed in either the reports or prospectus. (Cheers.) Of course, having only two months' working to judge by. We do not feel at liberty to say that anything less may never be expected, but I simply mention it to show that working in the ordinary way, the returns so far are ahead of anything shadowed forth in the prospectus. (Cheers.) The shipping ore in Apl. was $10,000, and in May $11,000, and Capt. Plummer adds in his telegram to-day that the selected ore this month will be quite equal to the production of last month. I think you may reckon that, apart from what the mill may do, there will be a production of shipping ore of from $10,000 to $12,000 a month. To show the richness of this ore to which I refer, taken from the clay dyke, there is some on the table here which is worth 4,000*l*. per ton. I wish to say this before passing on, that just now we are doing as much in the way of production as we are likely to do, or can do until our milling power is increased. Those of you who are familar with the prospectus, and still more so with the reports, will understand that the milling power (20 stamps) was stated by those who knew the property to be quite insufficient for its size as developed to that time, and we have now seriously to consider how this milling power is to be enlarged. I may just say that only the day before yester-

day we had a batch of letters from Capt. Plummer on this subject, which we meet this afternoon to consider; but whatever is done, we cannot, until some addition be made to the stamping power, expect the returns to be augmented, and that will be a matter of six, and perhaps 12 months, as it depends very much on the weather and how we get on. I am authorised by the board to say that there are two proposals from Capt. Plummer, one with reference to the 20-stamp mill, which includes the addition of 10 stamps Capt. De Lamar had purchased and which now are on the grouud—a work which can be done in 60 to 80 days. But supposing we say three months, and this, if carried out as he suggests, will probably add to the earning power of the mill about $20,000 to $25,000 a month. The probability is that we will accede to that at once before deciding on the addition of a larger new mill, and the effect of that will be that in the course of about three months we shall be able to increase our outturn from the mill from $45,000 to $60,000 or $65,000 a month, but it will be probably necessary to shut down the present mill for a time in order that the proposed addition may be properly made; and before getting this addition which we hope for, you will have to be prepared for a small falling off. Of course, in such a matter as this the board have been guided largely by experts, and it was suggested by Capt. Plummer and Mr. Bratnober, and cordially acquiesced in by the board, that Capt. Plummer should pay a visit to some of the Nevada properties with a view to seeing how similar ores were treated. He spent a fortnight in these journeyings, and went also to San Francisco, where he visited the large machine shops, where possibly the order will be placed, and engaged the services of Mr. Eckert, the "mill architect." Mr. Eckert made a survey of the property, and is preparing plans of such additions as may be necessary, and these will be submitted to the board, who will have to decide as to what is wise and prudent, and to act accordingly. What we want to do is this—to hit the happy medium of providing sufficient mill power, and at the same time avoiding the mistake, not at all infrequent, of having milling power in excess of our ore developments. (Cheers.) You are aware that, as stated in the prospectus, the ore reserves at the time the prospectus was issued, in the three principal veins to which I have referred, were estimated at from 60,000 to 80,000 tons. There was no estimate of two other veins which had not been put under attack, nor of the low-grade ore, which it will be our object to use in the new mill. Without any further estimate from Capt. Plummer we are quite able to say, with confidence, that since we took possession of the property the

RESERVES HAVE BEEN IN NO WAY DIMINISHED

—they have, in fact, been increased, and I cau say, on the testimony of experts, whom I have talked a great deal with, that supposing, as is quite likely—so likely as to be almost a certainty—we strike the vein, to which Capt. Plummer refers, at this lower depth, we may expect that our ore reserves will be doubled, or even more. You will see, as the developments are going on, that it is the absolute duty of the board to provide such milling power as may seem reasonable and right for them to do the work required. What we want is, as I said, to keep up a steady rate of production, and to make this, as far as any mining venture can be, a certainty, by preserving a given amount of stability and regularity in the returns. It is hardly necessary to mention that all mining is a venture, and we do not wish to raise hopes which may not be fulfilled. We propose to give the shareholders as frequent information as possible at present, probably about once a month, and we also hope, if our returns continue as we have every reason to expect they will, to declare quarterly dividends. You are aware of the returns of the last two months. We have no reason to suppose the returns for the present month will be any less, and at the eud of that month we have every reason to believe we shall be in a position to

DECLARE OUR FIRST QUARTERLY DIVIDEND.

We have here to-day three gentlemen who are familiar with the mine from inspection. First of all, we have Capt. De Lamar, the vendor of the mine, a gentleman to whose extraordinary foresight and sagacity in "locating" (as they say in America) the different properties, and placing them together, with all their advantages, geographical and otherwise, mining experts bear the highest testimony. They speak in the highest terms of Capt. De Lamar's foresight and sagacity; and his knowledge of the mine is greater certainly than that of any other man living. He can tell you more about it than anyone else, and he shows his confidence in it by the stake he has insisted upon retaining in this company. I think I do not betray any secret when I say there was some question as to the number of shares he should be allowed to retain. He wanted to retain more than we were able to allow him to have, but the fact of his holding half the capital may be taken in itself as a proof of what he thinks this property is likely to be in the future. We have Mr. Bennett here also—(cheers)—and Mr. Bratnober—(renewed cheers)—two gentlemen who spent a considerable time in the mine, whose reports you have seen, and whom you know a great deal about. If any shareholder has any questions to address to these gentlemen, which you could not expect me to answer, they will be glad to do so. I conclude these remarks by quoting from the close of Capt. Plummer's report. I do not believe many shareholders have seen all the reports or studied them, but I can assure them that any time they may devote to the subject will be well repaid. If the property is to be as big as we fully expect it to be, a knowledge of the mine, from its inception, as set out in these reports, will be necessary if any shareholder wants to know what is actually being done, and to follow the operations intelligently. Capt. Plummer says:—

"Looking at this property from every standpoint, it does not require any special gift of prophecy to predict for it a bright and successful future."

I must say that so far as their information and observation go that is an opinion which the directors fully share. (Loud cheers.)

Mr. BALDWIN expressed the view that Capt. Plummer did not, and could not do justice to both properties, and that he ought to devote himself to one or the other. Good mining engineers surely could not be scarce, so that whilst Capt. Plummer took charge of one concern, they might get someone else to take charge of the other.

The CHAIRMAN: As regards the De Lamar Mine—Capt. Plummer is to give by far the largest proportiou of his time to De Lamar, but as my colleague, Mr. Brand, is chairman of Elkhorn, I will ask him to speak to you from the Elkhorn point of view.

The Hon. J. G. BRAND (director): With regard to Mr. Baldwin's remark, I cannot quite agree with him that good mining engineers of the description of Capt. Plummer are plentiful—I imagine that they are exceedingly scarce. (Cheers.) As chairman of the Elkhorn Mine, I was placed in this position—that after Capt. Plummer had gone to inspect De Lamar, and before we had placed our names on the prospects, he expressed himself so favourably impressed with the prospectus that he desired to become the manager. Now, we could not insist upon his remaining with us, and, therefore, we made on behalf of the two mines the best arrangemeut we could, under which both will be conducted by the able advice and assistance that he can give. (Cheers.)

Mr. BENNETT: May we have a few words from Capt. De Lamar?

VIEWS OF THE VENDOR.

Capt. DE LAMAR, on rising, said: I am very willing to give the shareholders my views on the De Lamar group of mines, but they should be received as my honest views only. The man is not born yet who can see one inch further in the ground than the rest of us. But I have lived nearly five years in that camp, made the camp in fact, aud as I am a fairly able scholar, and close observer of all that pertains to the mysteries of exploring the great unknown resources of this earth, and guide the miuer in the right direction, and as thus far my predictions about that property have been more than verified, I am somewhat bolder in putting myself on record as to what I expect of this property; and why? I am a bull on the De Lamar Mines, and I am going to tell you, gentlemen, why, and let you judge whether this bullish feeling (?) is without cause. For three years I travelled all over the mining states and territories of the United States hunting for a good gold mine. I had learned what to leave alone, and gentlemen, when you ouce have learned that in mining or in mining shares everything is bound to go your way, and there is no business that will make money so fast for you as mining, but I assure you It is a very difficult problem to master. A man often starts out determined to stick religiously to all the rules he has laid down to guide him. He is going to buy a gold miue, nothing else will do, and after all he comes home with a lead, copper or zinc mine. When I arrived at what is now called De Lamar, I made up my mind I had struck fine mineral ground, and as in order to catch fish you must first get on to fishing ground, in order to find mines you must get on to good mining ground, and this I had found. Now, I am not going to detain you, gentlemen, by taking you from step to step, showing you how I accumulated this large and maguificent group of mines, and what I did next; I will simply say that when I bought up every prospect in that camp, the miners congratulated themselves that all the fools had not been gathered in, and I congratulated myself that they took this view, as it answered my purpose in obtaining all I needed to complete this group. I will now turn to the prospectus in which Mr. Bennett gives the amount of ore in sight in three veins only, as 60,000 to 80,000 tons. Taking Mr. Bennett's figures as a basis, we have five years' milling ore in sight, at the rate we are milling now, *i.e.*, 45 tons per day, or 15,750 tons per annum, but this estimate attains the depth of only 250 ft., which we miners call grass roots. It is quite significant that other veins not included in the estimates of ore reserves, have since become producers; for instance the Anchor vein, and the 5 ft. vein. The oue was found in the road near the surface, and the other some 50 ft. south-west from the big vein. Then we have the 18 ft. wide Summercamp vein, all brown sugary quartz, running only $8 to $10 per ton, where it was cut, but right there at its hanging wall a car load of $600 ore was sorted out, and I am satisfied this vein soon will be amongst the producers. Then we have the Crown Prince vein, 5 ft. wide; the Hope vein, 4 ft. wide; the St. Clair vein, which was worked to a depth of 125 ft., producing the best ore of that camp, aud was stopped because hoisting with the bucket became unremunerative, and a tunnel was started to reach this lead, but never realised as it was a long way to run, and Mr. Summercamp, its former owner, died before he reached it, and when I bought it, my first work was to connect this tunnel with the Voschay tunnel, which I had driven in the mountain to obtain purer air, there were only a few feet to be driven when I left De Lamar, and Capt. Plummer has since informed us that he has made connection. Then we had the Zulu, which produced ore in small lots, running as high as $35 per lb. of rock. This has three open drifts or adits run in on it, one below the other, aud up to, say, 90 or 100 ft. in depth that ore was all hauled away and worked. I tell you, gentlemen, it is a good sign when you fiud a large space stoped in a mine and hardly any waste dumps, it simply means that it was all good enough to mill. Then, we still have the Voschay vein, and the Idaho, which produced in a small way about $10,000 each summer season for some five years that Mr. Wilson owned it, and last, but not least, the 100 ft. ledge, which is a solid quartz ledge 100 ft. wide, and crops out boldly, showing some 50 ft. high at the bluff, as you will notice by the lithographs of the property at the company's office.

PAID ITS OWN WAY.

This group has paid for its own developments, and its own plant and supplies on hand, which was estimated by your experts at $300,000, besides that I paid for the opening of the property, and some $500,000, for which I purchased my associates' interest. Now, gentlemen, all this money I took out of these mines, without calling on working capital for assistance. How many mines do you know of that have done likewise? I know of less than half a dozen iu the whole United States. How mauy acres have we worked? We are working within a radius of only 5 acres, and we own 250 acres on this mother lode. How much more ore will the level now being driven from the Louis Wahl tunnel put in sight? Capt. Plummer cabled us to-day—we have reached the veiu formation with Louis Wahl Tunnel level. Now we must know how wide, how long, and how rich the veins are at that depth before we can state accurately how much ore there will be opened up; but knowing how permanent the veins arc in our neighbourhood, Silver City, only 4 miles from us in an air line, where they went down to a depth of 1,400 ft., with good paying ore bodies all the way, and the ore remaining unchanged; as free milling as ever. With this as a guide, I expect, at least, 100,000 tous more to be put in sight in these three veins between these two levels, the depth of which is 208 ft., but according to the pitch of the veins we will have 250 ft. at least on these veins.

VIEWS OF CLARENCE KING.

What did Clarence King, our foremost geologist in America, think of this group? He told me almost anything was possible there. He said bonanzas were never encountered in galena mines, copper mines,

carbonate mines, or hard gold quartz mines, but only in mines containing a soft sugary quartz and talc, and possessing a blue iron clay dyke, interspersed with pyrites, which dykes are of volcanic origin, and the bodies of soft quartz and talc are forced from under this dyke. On such a contract the rich old Mexican mines, that have records of $500,000,000 each, and the Great Comstock lode, with a record of over $300,000,000, found their bonanzas, aud the De Lamar formation, which is identical, but far more broad gauge, will be sure to strike it big, and he expected between our present two levels, as that is the depth at which the Consolidated Virginia encountered her first bonanza, when for quite a period she took out $100,000 per day. Now, gentlemen, we have a very long-lived dividend paying property. We can, if we choose, part with an undeveloped area of our ground to a new company, and get in this way all we put in back; we have the strongest probability of running into a bonanza at any time. We have War Eagle Mountain as a guide before us that the veins went down to a depth of 1,400 ft., and plenty of ore in the bottom there. That hill produced over $28,000,000. The question is, Have I given you sufficient reasons for being a bull on this property? In Capt. Plummer, whose report ou these mines I have never seen, we have one of the very best mine managers that we could secure in the whole United States. He is a man with long mining and milling and administrative experience, cool, yet decisive, and he knows the value of money and will not fool it away. We have a board of directors that are all business men, which I am pleased to note, for out of a business man you can make almost anything, while out of almost anything you cannot make a successful business man. I will not ask your indulgence any longer, but simply express my apprcciation for the attention given me. (Cheers.)

The CHAIRMAN: We are very much indebted to Capt. De Lamar, and can quite understand his enthusiasm for his child. If only a small part of what he predicts comes true we shall be very well satisfied. You know from the prospectus that 50,000*l.* was set aside for the purposes of the mill. We have that money intact, and have every reason to believe it will be sufficient for our purposes.

On the motion of Mr. BENNETT, a cordial vote of thanks to the chairman closed a satisfactory meeting.

EAST SHEBA REEF MINING CO., LIMITED.

THE OLD COMPANY SUCCESSFULLY RE-CONSTRUCTED—PROSPECTS OF STRIKING SHEBA LODE—BOARD RE-ELECTED UNANIMOUSLY.

A SPECIAL MEETING of this company was held ou Monday, for the purpose of electing a board of directors for the ensuing year.

Mr. Robert Elliott-Cooper

(chairman of the company) presided.

Mr. ALICK R. RAMSAY, A.C.A. (secretary) read the notice of meeting.

POSITION OF THE COMPANY ON RE-CONSTRUCTION AND NOW.

The CHAIRMAN: Gentlemen, I am sorry there are so few here to-day, because I had hoped that this would really have been a representative meeting, but I know there is one consolation, which is that, as a rule, wheu there are few shareholders present it rather means that they have not anythiug in their minds specially to find fault with. I always find when there is anything that very much rankles in the minds of proprietors they come to the meetings, whereas on other occasious they rarely present themselves. (Laughter.) When we last met (Dec. 3) I stated that the present board were quite willing to sign the articles of association for the new company, which, in fact, would mean that they would be the directors of the new company up to the time, at any rate, of holding the first statutory meeting. I mentioned at the time that I, for one, was not disposed to continue as a director simply from being put upon the board by reason of having signed the articles of association. I, personally, think that very often companies would go more smoothly if the shareholders felt that not merely had they nominated, but had they really elected their own board, and that, in fact, they were true representatives themselves, and not, as is so often the case, simply gentlemen, who by force of circumstances become directors, and then it is nobody's interest to turn them off. As that was my view then, so it is my view now, and thus it was that I said at the commencement I was sorry this was such a small meeting, because I had hoped that the shareholders would have come either with the names of other gentlemen that they would have preferred puttiug on the board, or, at any rate, if the present board were continued, that they would have been elected by a really representative meeting. However, as this is a small meeting (the attendance improved as it went on) that cannot be helped.

SHAREHOLDERS FREE TO ELECT THEIR OWN BOARD.

I need scarcely say that no proxies of any description have been sent out. The directors are quite willing to remaiu on the board simply by the vote of those present, or to be turned off by that vote, and will not rely upon various friends who hold a large uumber of proxies, but who, if they do not think it worth while to attend personally, I never think it worth while to ask for their proxies. Therefore, having said so much, I will now tell you a little upon the past history of the company during its short life, and what we expect of it in the future. As I said just now, the last meeting was held on Dec. 3, 1890, which was the final mceting of the old company, out of the ashes of which the East Sheba Reef has sprung. Three days after that (Dec. 6) the new company was registered, and the statutory meeting was held on Apl. 2. As at that time no shares had been allotted, it was purely a formal meeting, simply attended by the signatories to the articles. Since that date

THE APPLICATIONS FOR SHARES

have come in in a fairly satisfactory manner, and including the 50,000 shares fully-paid, which, *pro rata*, all the shareholders received, the number of their shares taken was 207,950, which was 7,950 more than the minimum stipulated for as the least on which we should go to allotment. The amount when fully-paid up will realise 7,897*l.* 10s., and the total liabilities of the old company do not exceed 3,000*l.*, leaving upwards of 5,000*l.* working capital, so that not only have we materially reduced the nominal capital of the company, but we start with a clean slate, and

WITH 5,000*l.* TO THE GOOD,

and with, at any rate, the most expensive part of the prospecting work already accomplished. Of course we cannot tell you any more than you know yourselves as to what the prospects may be, but we have this great advantage—we have nothing to pay to a vendor whose claim is always the first and chief drain on a new company. We have nothing to pay for the start we have, which in a concern of this kind is always a costly part of the work. Therefore we are actually working, and we have 5,000*l.* to go on with, but in addition we have 192,050 shares, which still remain unapplied for, in the hands of the liquidator, and in the event of their being applied for will realise a further sum of 9,602*l.* 10s. As to our present expenditure, and what we are doing, I can tell you in a very few words. When I last met you I said that we had decided to adhere to the plan in the first instance of seeing what the result would be of driving the low level drift to meet the shaft that had been sunk on the Standard Block. That went on to Nov. 8, at which date, as the old company was then on the point of liquidation, all work was stopped.

WORK DONE.

It was re-commenced on Feb. 21, and we now, out of a total distance of 150 ft., have accomplished something like 120 ft. to 125 ft., so that in another two months, assuming all goes well, we ought to have struck the bottom of the shaft, which, of course, will immediately result in clearing away the water which has stopped all the work of driving from the shaft itself, and then we shall see what reliability there is in the predictions that we have had, not only from our late manager, Mr. Bunkell, but everybody I have met with who knows anything about the Sheba Valley, that we shall

STRIKE THE SHEBA LODE.

We have talked about doing so from the commencement, and if it were not for the belief that this, along with other lodes that have formed the richness of the Sheba property, would be fouud in all reasonable probability in this one, we might just as well have shut up at once. But, believing, as we have every reason to believe, from what we have heard that there is a reasonable prospect of striking this lode, it seemed to us, and I hope it will seem to you, unwise, having spent the amount of money we have done, not to have endeavoured by means of a small extra outlay to prove whether or not that Sheba lode runs through our property. Of course, as you know, it leaves the Sheba property immediately adjoining ours. It goes somewhere, in all human probability, and we cannot see that it goes anywhere except through our property. That is the belief upon which we have acted, and we only hope that it is well founded, and that we shall all be repaid for our faith in the property by after all sharing in its success. (Cheers.) I do not know whether it will be of any interest to give you particulars of the works that are now going on, but I may mention that from Sept. 15 to Nov. 8 we drove 11! ft. During the last month we have struck some very hard quartz, which rather delayed the driving. Only about 18 ins. were done in a week, which was a very poor rate of progress; but wheu we get through this hard baud then we hope to go on at the ordinary average of 3 or 4 ft., at any rate, per week. I may say that Mr. Bunkell has left us to take up a more lucrative position with the Oriental Co., but we still have his good will. We have parted perfect friends, but he had a much better offer from the Oriental Co. than we could make him, and therefore he has left us. We have now made what seems to me, at any rate, temporarily, a very good arrangement. We have arranged with a mining engineer, having work in the district, to visit the mine two or three times a month, at the comparatively low rate of 8*l.* per month. He visits the mine simply as consulting engineer till we strike the lode. Then, if we find our hopes have not deceived us, and that there is a reasonable probability of getting profitably to work, we shall have to consider the desirability of sending out someone from home to take charge of the mine. Of course, when I speak like that my reason for saying so is this:—The amount of work that is going on in the Transvaal, you will readily understand, has absorbed all the good men, whilst of those that are left many have but a superficial knowledge of mining, and some have no such knowledge whatever. They are drafted from other occupations—schoolmasters, sailors—anything, in fact, that makes them fairly sharp and able to call themselves "mining engineers." But their real knowledge is absolutely *nil* in a great many cases. Hence, as we cannot hope to get a good mining engineer out there at anything like a reasonable price, we shall have to see if we cannot get some comparatively young man, with mining knowledge acquired at home, to go out and take charge. I do not know that there is much more to say, except that the conduct of the company now rests entirely in your hands. Be the numbers present great or small, you are here to-day with a perfect liberty to choose your board for the coming year. There is nothing in the articles—certainly there is nothing in our wishes—that will in any way prevent your exercising that right the same as if you had given notice in the ordinary way. It was distinctly understood that we were all to vacate our office on this occasion, and, therefore, if any one has come prepared with any new names, or if you on the spot think of any, you are perfectly justified in supplanting us, and I hope will not hesitate to supplant us, by anybody else or any of our number as you think fit. I shall be glad to answer any questions if there is any further informatiou I can give. (Cheers.)

DIRECTORS RE-ELECTED.

Mr. PARRY: I have great pleasure in proposing "That the present board of directors be requested to remain in office until the next general meeting of the company, at the remuneration of 250*l.* for the first year, such remuneration to date from the date of the confirmatory meeting of the Great She Gold Mining Co., namely, Dec. 3, 1890."

Mr. LEAN: I am sure, gentlemen, you must be all aware that the present directors have had a great deal of responsibility thrown on their shoulders in this matter, and that they have done their duty as men and gentlemen I think we must allow. (Cheers.) I have very much pleasure in seconding the resolution that they retain their seats.

The motion was carried by acclamation.

The CHAIRMAN, in returning thanks, said: Personally, I do not know Mr. Parry, who has been good enough to propose the resolution, but, at the same time, I am very much obliged to you all for the way in which you have responded. I hope that the absent shareholders will be equally satisfied with the resolution you have come to, but if they are not it will not be our fault, and I hope, therefore, that they will quite understand the matter in that sense.

SATISFACTION EXPRESSED.

Mr. BESLEY: I cannot help expressing my deep satisfaction, although I have only a small interest in the company, at the decision that has been come to to retain in their places the directors who have represented the undertaking so far. No board of directors could better do so than those who have so far been with us, and who are perfectly familiar with the company's previous history. Strangers coming in would be anything but an advantage to the concern.

Mr. RUMMENS: I beg to propose a vote of thanks to the chairman and directors, and am pleased to be able to endorse the remarks of former speakers as to the capability and good intentions of the board.

Mr. THEOBALD seconded the motion, which was carried unanimously.

IDENTITY OF INTEREST.

The CHAIRMAN, in returning thanks, said: All our interests are exactly the same—those of the directors, their friends, and the shareholders. We are all in precisely the same boat. We have but one interest, which is that the property shall be a success. I need scarcely say that, in common with my colleagues, I will do my utmost to ensure that, at any rate, the money we spend shall be, so far as we are able to control it, laid out judiciously, and this after all is the utmost we can do. Six thousand miles away from the scene of operations it is utterly impossible to have that personal touch with the property that we could have if we were able to go and see what our managers were doing, but taking it as it is, all we can do is to consider and give such instructions as that the money shall not be squandered, because, I believe, many of the Transvaal companies would be in an infinitely better position if it were not that such enormous sums have been squandered without anything being shown for the outlay. Our endeavour will be that that shall not be so here, and we feel that at present we are getting as much as we can expect for our money. Whether that expenditure results, as I said before, in permanent good, it is beyond our power to say; but we will exercise such control and supervision that it, at all events, shall have a fair and reasonable chance of doing so.

THE KETCHAU (PAHANG) CORPORATION, LIMITED.

POSITION OF THE PROPERTY GREATLY IMPROVED SINCE THE LAST MEETING—IMPORTANT DISCOVERIES, PARTICULARLY ON MOUNT SIAM—MR. BECHER INSPECTS AND LOCATES SEVEN OTHER DISTINCT GOLD-BEARING REEFS—FINANCIAL POSITION STRONG.—THE MANAGEMENT.

AN extraordinary general meeting of the members was held at Winchester House, yesterday, "to receive a statement from the directors of the operations of the company since the ordinary general meeting, held on Dec. 31 last."

Genl. Barwell, C.B.

(chairman of the company), presided.

Mr. E. B. WOODFORD (secretary) read the notice of meeting.

FULL STATEMENT OF THE POSITION.

The CHAIRMAN: Gentlemen, on the last occasion when we met together here I expressed to you the pleasure which I had in meeting you, as it was the desire of the directors to lay before you fully the exact position of the company, its operations, and its prospects. But if I had pleasure in meeting you then, when those operations had practically but just commenced, and the prospects were only just opening, I and my co-directors have very much more pleasure in meeting you here to-day, when we can inform you of the vigorous operations which have been prosecuted since our last meeting, and of what I will venture to call, and what you, I believe, will concur with me in describing, as the very extraordinary and satisfactory results which we have achieved since we then met. On the former occasion I was able to inform you of the arrangements which the directors had made for the expenditure upon the property of a limited sum proportionate to the capital which they knew they had at command, and that the maximum of this expenditure had been fixed at 3,000*l.* for the first year. Of this sum to that date a considerable portion remained unexpended, and yet with the slight outlay which had thus been made, I was able to report to you that in our operations upon one of the mountains on our estate, called Mount Siam (which is called in the native language Bukit Siam), a rich strike had been made, from which specimens had been sent to Singapore, which specimens, according to the telegram which I read to you at that meeting, had produced from 25 lbs. 8 ozs. of ore, 24 ozs. of retorted gold. I was also able to inform you then that all the assays which had been made of ore from the known reefs proved them to be auriferous; of these known reefs there were then seven distinct and separate, but beyond this large number several new discoveries had been made from time to time which promised to give rich and satisfactory results to the corporation,

REPORTS CONFIRMED.

Well, gentlemen, immediately after our last meeting we received advices from Singapore informing us that in consequence of the nature of the reports received from the resident-manager, Mr. Becher had himself gone from Singapore to Ketchau to make a personal examination and inspection of our vast property, with the result that on Jan. 15 we received a telegram from him personally, confirming the reports which had been made to us, and stating that the vein then discovered, and in work, contained a streak of very rich free gold, and that a stope had been started above the level to test this great deposit. I should also mention that as soon as the news of the important discovery on the Mount Siam lode reached Singapore, and previously to proceeding to the property himself, Mr. Becher had despatched to Ketchau an experienced Australian miner, who is now the resident manager there. I refer to Mr. Hone, from whom have come the various reports which the directors have recently been forwarding to you. Of course, the first thing Mr. Hone did was to inspect the strike which had been made, and he, writing at once to Mr. Becher, stated that he had only, up to the date of his letter, seen that part of the concession where the operations were being carried on, namely, Mount Siam, but that, *that* one reef discovered *there* was (in his opinion *good enough for anything*, that the rich gold was, as he expected, in shoots, or chimneys, but that throughout the reef, where no gold showed in the rock, and where the rich shoots did not exist, gold was obtainable by crushing and panning. This shows, gentlemen, that the deposit which had been struck was a solid gold bearing reef, and not a mere isolated rich shoot or pocket, and with regard to this, anticipating a little here, I may state that in the month of Feb. or Mar. last a parcel of this poorer ore from this reef was sent to a mill on an adjoining property and was there crushed, with the result that the assays of the pulp, as it passed through the battery screens, gave the extremely satisfactory return of 5½ ozs. of gold per ton of ore. Now, gentlemen, I want you to distinctly understand that this parcel of ore so crushed did not include any of the rich streak found in the reef, but was taken from about 120 tons of the general body of the reef, which had been got out in driving on the lode in the ordinary course of the company's development operations. This was, of course, a very satisfactory result indeed, both to Mr. Hone and to the directors, because the result of the pannings of this ore made by Mr. Hone had caused him to estimate the yield of the general body of the reef at about 2 ozs. to the ton, whereas it turned out in actual milling nearly three times this value.

NO DOUBT ABOUT RICHNESS OF MINE.

It is not necessary for me to take you through all the work which has been done upon the property, and the reports which we have from time to time received concerning it. We have endeavoured, as we have received reports from our manager, to make you fully acquainted, in the circulars which we have sent to you, with the extraordinary information which has come to our hands, and I will give you a summary of the results which have been achieved presently. At any rate, gentlemen, the large amount of work done, as shown on the map before you, leaves not the slightest doubt that the property which the corporation possesses is immensely rich. I have already mentioned that Mr. Becher, in his original report, stated that he had found and located seven distinct gold bearing reefs. I should mention again that the reef which we are working at the Mount Siam Mine is not one of these seven reefs, none of which have as yet been attacked. It is clear, from such explorations as we have been able to make, that there are gold reefs all over this part of the property. During the month of Apl. last, whilst one of the main drives of the Mount Siam Mine was being further extended, an extremely important discovery was made, being that of a new reef, crossing at right angles the one upon which the operations up to that time had been carried on. Mr. Hone states, with regard to this, that it is a fine strong lode, 5 ft. in width, panning gold throughout, and giving us an unlimited supply of good milling stone from this lode alone. To show how true is my statement that gold seems to exist all over this part of the property, I may mention incidentally that not long since the directors received a report to the effect that whilst Mr. Hone was cutting a new track from the mine to the river he discovered a new lode giving 2-oz. prospects, and situated about ¼ mile from the present workings. This we have not yet attempted further to develop. Now, gentlemen, all the work which has been executed up to the present time has been simply development.

RICH STRIKE ON MOUNT SIAM.

A small amount of stoping was done when the rich strike in the Mount Siam was first made, but this was simply to test the extent of the rich shoot which was then discovered. As soon as sufficient ore had been taken out to thoroughly prove this shoot, the stoping was discontinued and the development works were vigorously pushed on again. Of course, there exists no machinery upon the property, for your directors thought it best to prove that they had a mine, and satisfy themselves and you distinctly on that point before they expended money in providing machinery. The time has now come when this very important matter is under their serious consideration, for Mr. Becher advises very strongly that proper machinery shall be erected without delay, and they are now only waiting a detailed report from him as to the machinery most suitable for the property in order to at once enter into arrangements for its supply and erection. In this respect also, gentlemen, we have been very much favoured by nature, for our works at the Mount Siam Mine are within a mile of the Pahang river—the principal waterway of the Peninsula, navigable from its mouth to our property, and which, we are advised, gives at all seasons of the year ample water power for whatever machinery we may erect, and, in addition, should we require it, which is not likely, there is a most abundant, I may say inexhaustible, supply of timber, belonging to us, for all mining and fuel purposes, in case we should in any future operations on our great estate find ourselves at an inconvenient distance from our unfailing water supplies. And this brings me to another very important question. On the last occasion when we met together I told you what was our financial position, and that the directors had retained in hand, with the consent of the vendors, 40,000 of the fully-paid shares, forming part of the purchase price, to enable them to secure a further 10,000*l.* of working capital, if necessary. Gentlemen, it is a very great pleasure to me to be able to inform you that those 10,000 shares have since our last meeting been subscribed for in full at par, and that the directors have been able to release to the vendors their 40,000 shares. This in itself would be satisfactory, but I am sure you will agree with me that the satisfaction is enhanced by the fact that the subscription for these shares has introduced a new and powerful body of shareholders to

the company, whose representative we have admitted to the board in the person of a gentleman who now sits by my side. I have the pleasure to introduce you to our new director, Genl. George de la Poer Beresford, a director of the Goldfields of Mysore. (Cheers.) I am sure with his experienced assistance in successful gold mining in the East, and your hearty co-operation, we shall succeed in making the most of this great property. Now, you see at once that we are thus placed in possession of ample funds for all our development operations, and for all the machinery which may be necessary to enable us to produce from the enormous quantity of ore which we are told exists there the gold which it contains. It is not often that a chairman, addressing shareholders, has such a record of success to tell you as I have. Although we have had no machinery upon the property, and, although we have been undertaking nothing but development operations, yet we have produced from our mine since we last met a very considerable quantity of bullion.

HOW THE GOLD HAS BEEN WON.

The greater part of this has been got by crushing the stones of ore obtained from the rich shoot of gold found on one side of the reef, all this crushing being done by hand by a Malay labourer, and the gold being got by the simple process of washing. The following is a statement of the bullion which we have produced and sold. On Jan. 15, we were credited with rather over 24 ozs., that gave us over 100*l*. In Feb., 56 ozs. 7 dwts., which gave us 225*l*. During the month of Mar. we were credited with about 72 ozs., which gave us 290*l*., and for the month of Apl., we were credited with 204 ozs., which gave us about 830*l*., making a total of cash received from bullion to the end of Apl. of 1,444*l*. 16s. 9d., without a particle of machinery of any kind. Gentlemen, this is no fairy tale, or anything of that sort. *We have been credited* with the *hard sovereigns in our banking account*, and the price realised is perhaps the highest of any gold brought into the market. For instance, the last parcel of 204 ozs. realised 4*l*. 1s. per oz. I think you will agree with me, gentlemen, that this record of our operations and success is remarkable, as we describe it in our circular, and that your directors were justified in calling you together to tell you to-day what is the actual position of your property, what are the extraordinary results which have been achieved with the small outlay which has been made, and what are the splendid prospects before you. The successes which I have related to you have been achieved upon a very small portion of your estate, perhaps not exceeding 1 square mile in extent out of the 100 square miles which your property comprises. With regard to the remainder of your large property, your successes already obtained have apparently caused such an excitement among the miners in Pahang, that we have received definite offers from Australian and other miners to be allowed to prospect our property, and to locate and work plots of 100 acres. This they will be allowed to do (subject to the approval of our energetic manager) to our very great benefit. I have no resolution to propose to you to-day. This is a sort of extra meeting, convened by us to enable us to meet you, and tell our extraordinary story to you face to face instead of communicating it by circular. We shall continue to advise you from time to time of our further operations, being convinced that you will follow these with intelligent and appreciative interest, whilst we also feel sure that further and greater successes are yet to come. Gentlemen, the State of Pahang has given birth to many companies, which have had amongst them varied and, in some instances, somewhat chequered fortunes. Many of them have been much talked about and belauded upon mere reports and promises; but if you will search through the entire history of all or any of them, I challenge you or anyone else to find amongst them all — and I may almost repeat the challenge as to any other company in any other part of the world— anyone of them which, upon so small a capital outlay, has produced such extraordiuary and such splendidly satisfactory results. It is not necessary for me to add anything further, except to congratulate you all, as I most sincerely do, upon the possession of the great Ketchau Estate, and upon the unique success which has attended your operations there. I shall be pleased to answer any questions you may think proper to put to me. (Loud cheers.)

VIEWS OF THE NEW DIRECTOR.

Genl. BERESFORD: Gentlemen, I rise to thank you for the kind way in which you took the announcement of my being appointed to the board of this company. My friends and myself saw the report, and we saw also that money was wanted. Having some little experience in mines we thought it was a good thing, and we have gone in for it. The directors have received me kindly, aud now, gentlemen, you have done the same. The management out there seems good. Mr. Hone seems energetic. He is an Australian of experience, and appears to have done his work well. Mr. Becher — I know nothing about, but believe he is a good man, and he, too, has done his work well, I am informed. There is one point I should like to touch upon. Experience in mining is not born in anybody. Knowledge of mining is not enough. We want a consulting engineer, who will advise the board. No doubt without a consulting engineer the board, let them be ever so careful and clever, are bound to make mistakes, and even consulting engineers do so. The thing is to find the men who make the fewest mistakes, and I think we ought to have such a man as consulting engineer in London. At an informal meeting nothing can be passed, but the sense of a meeting like this can be taken, and I am quite certain there is no board will go against that expression of opinion, whatever it may be. I believe most seriously that we gentlemen who have our money at stake in this business should see, in the interests of ourselves as shareholders, that we are in the best hands, and, therefore, I think we ought to put the management of this company into the hands of Messrs. John Taylor and Sons. That is the wish of a large body of shareholders who have a large stake in the company. The Messrs. Taylor have experience in the management of companies, and it is their belief that with proper direction this company can be made a great success, but, gentlemen, the management must be right.

Capt. MCTAGGART: Nobody in this room desires to offer his congratulations to the directors more than I do on the success which has attended them so far. I am one of those who have recently joined you with friends. We have done so after considerable investigation. We have looked carefully into the reports and believe that you have perhaps one of the finest properties in the world. Though unknown to most of you, I speak with some little knowledge of mining, for I happen to be

VICE-CHAIRMAN OF THE MYSORE CO. AND CHAIRMAN OF THE NUNDYDROOG,

and have been associated with both ever since their formation some 12 years ago, and this is the only mine that I have ever (with Genl. Beresford) gone into since I went into the Mysore field. (Cheers.) We have only done this because it is the solitary one we have seen outside the Mysore field that seemed worth going into. I believe you have a magnificent and extraordinary property, from which you may look for dividends not of 10 or 20 per cent., but of 100 or 200 per cent. The key of the situation is, however, proper management. Your present board, as far as I know them, are estimable and worthy gentlemen in every respect, and I daresay very good men of business, but with one exception none of them can lay claim to special mining experience, and even if they could I would most strongly recommend them to place themselves in the hands of Messrs. John Taylor and Sons, and I will tell you why. A board of directors meets casually once a week and in holiday times once a fortnight, but if you go into the Messrs. Taylor's offices one of the partners is constantly there with a trained staff of mining assistants, who watch every report and every detail. A telegram comes as to some details of machinery required, and immediately the order is put in hand, and executed with the utmost despatch. There is no summoning of the members of a board—one from Scotland—and another from Jericho; but it is a question of careful watchfulness on the spot. They have Mysore and Nundydroog under their charge, and I go so far as to say this, that their management in London is absolutely perfect, and, personally, I would decline to join any board, unless the technical management were in their hands. Every detail is watched with the minutest care, with the aid of the highest trained and scientific knowledge of this country. Not only do they provide this mining knowledge, and do the secretarial work, but they do it for a very small sum, comparatively, and I may tell you it is a very great honour to be allowed to get into their offices at all, for no company can do so unless it has excellent prospects of success. Personally, I have been in negotiation with them with regard to the management of this company, which they are prepared to undertake for the very reasonable sum (considering what you get) of 750*l*. a year which includes secretarial and all other items. This proposition has been before your board for the last three weeks or more, and I am bound to say

THEY HAVE STRENUOUSLY OPPOSED IT.

They seem to think it would interefere with them, and that other directors might be nominated in their places. but allow me to say that the traditions of the Messrs. Taylors' office warrant no such assumption. They will take the board as they come, and they do not wish to interfere with the management abroad. That being so, I think it is our bounden duty to look after our own interests and see that this company's affairs are put into their offices. (Cheers.) If ever you should want a rearrangement of your capital, their names would be of great assistance to you. They are satisfied you have a magnificent property, and are willing to accept its management, and why should we refuse what nine companies out of ten would give their eyes to possess I do not know. With my knowledge of mining, which is considerable, I believe we have one of the finest properties in the world, and to make it the brilliant success which I spoke of in the opening of my remarks, and which, I believe, is assured, it only requires management. (Cheers.)

A SHAREHOLDER: If we have any confidence in our directors do not you think that is a question that ought to be left to them. (Hear, hear.)

A SHAREHOLDER: I think after the addresses we have heard it would be carrying our confidence rather too far to leave this question unvoted upon. (No.) The best thing for the directors to do would be to say they are willing to accede to the suggestion. I do not think there can be a doubt that if the Messrs. Taylor undertake the management, the company will be greatly benefited. I am a small shareholder in Nundydroog, and the chairman of that company who has just spoken is a competent authority on that point.

VIEWS OF THE BOARD.

Mr. ALFRED THOMPSON (director): We cannot accept any resolution under the terms of the notice which has convened this meeting. We are rigidly confined to its terms in the character and quantity of business we are able to transact. Therefore, unfortunately, it would not be in our power to accept the suggestion of the last speaker. I would like to put Capt. McTaggart and the rest of the shareholders right as to the view of the board upon this important question. The board, so far from having any objection to the Messrs. Taylor, have welcomed the suggestion very warmly. They said they thought highly of it. They did not see any objection to their being under such managers, and the board would receive their valuable assistance with pleasure, as it would lighten their own duties and responsibilities. The question is simply one of money. Considering the capital of the company and the expenses it is under at present, the board would not think the terms proposed were such as they could accept in the interests of the shareholders solely, because that is the single eye with which the board have viewed the question. (Cheers.) They have not been thinking of themselves, and the whole action they have taken from the inception of the company down to this very moment speaks eloquently of the single eye with which they have worked for the shareholders. (Cheers.) What have the board done? This board has got a solid grip upon this concession, and in spite of great efforts to shake them off they have retained it, because they have believed in the great value of the concession, and that belief is endorsed by the reports laid before you to-day. I think this matter should be allowed to stand over for future consideration and discussion. The board do not wish to do anything inimical to the wishes of the gentlemen who have recently come in.

Capt. MCTAGGART: We are all shareholders, and wish only that done which is for the mutual benefit of us all.

Mr. THOMPSON: I am very glad to accept that assurance from Capt. McTaggart, and am sure he will support me when I say that we should be allowed further time to consider the proposal, and I have no doubt we shall arrive at an amicable arrangement.

A SHAREHOLDER: As the board have done so well for us up to the present, let us let well alone.

General BERESFORD: Now comes the crux of the position. We have to provide machinery, and think seriously of what sort of machinery we will send to this property, 8,000 or 9,000 miles away. Now comes the time when mining knowledge is really required.

Mr. TARN (solicitor to the company): I should not like to intervene in this discussion, because, as legal adviser to the board, it would be hardly proper to do so; but I am also a shareholder, and would suggest whether it would be

PRUDENT TO FORCE THE HANDS OF THE DIRECTORS

by getting a resolution passed, such as that which has been suggested, particularly when negotiations are on foot. Such a resolution would force the hands of the directors if the Messrs. Taylor knew that a resolution has been passed expressing the wish of the shareholders that they should be appointed to consulting engineers. It would also be a slur upon our engineer, Mr. Becher, who at the present time has engineered the company into success, and has achieved any success already obtained. No success has been obtained except through him, and are we to displace him, and make other people his masters?

Capt. MCTAGGART: No one asked you to do anything of the kind.

Mr. TARN: Viewing it from the market standpoint, you should give the Messrs. Taylor the management; but you will be playing false with your engineer over there—("hear, hear," and "no, no")—your directors here who have steered you through all the difficulties, out of which these people who have lately come in never helped you. They only come in when they see success in view and the reports, whereas you found the money originally. Support the directors, and leave it to them to decide who shall be the managers, and to make such arrangements as they think best.

Genl. BERESFORD: Negotiations are not proceeding. The Messrs. Taylor made an offer, from which they would not go back, and we have refused it.

A SHAREHOLDER: I think that to take the sense of the meeting would be to show a want of confidence in the directors.

THIS FRICTION ON THE BOARD IS UNSATISFACTORY,

and I strongly suggest that the hands of the directors should be left untied.

The CHAIRMAN: The feeling of the board is that they have already a satisfactory consulting engineer in Mr. Becher, who has not led them astray, and in Mr. Hone, who is acting under him. All their statements have been more than verified. Therefore, I say that we are thoroughly satisfied, but at the same time are willing to do what we can to meet the views of the gentlemen who have recently come in. My solitary feeling against the Messrs. Taylor is on the score of expense. We wished to arrange with them for a consulting fee at any time we desired to take their advice, which we should like to do when we receive Mr. Becher's report on the machinery that will be required. It would be satisfactory then to pay them a good fee, and obtain their views on the question of the plant to be sent out. The Messrs. Taylor have an excellent name and will be a great help to us, and if the shareholders wish to spend more money it is in their hands. I wish to have the best advice, and more especially with regard to the machinery which we ought to get thoroughly sifted so as to avoid mistakes. We have developed the mine and brought it to the stage when its success is beyond doubt. We have that term used by our engineer, who says "it will be hard if I am to be superseded by one of Messrs. John Taylor's men, when I have brought the property from nothing into an assured success." (Cheers.) A short time ago he sent us an offer that he would, at his own expense, erect machinery, and work the mine if we would agree to let him have the mine for 12 months on those terms, and give him one-third of the profits. Though we did not fall into the arrangement, that was confirmatory of his opinion.

ONLY ONE INTEREST.

Capt. MCTAGGART: The only interest we all have is to make this the biggest success it can be. The solicitor overlooked what I said that the Messrs. Taylor have not the slightest wish to interfere with Mr. Becher. We do not wish to coerce the board but to bring things to their natural conclusion. As to the expense—while you get double value.

A SHAREHOLDER: The person on the spot is likely best to know the machinery that is wanted.

A SHAREHOLDER: With a certain amount of experience in the Malay Peninsula, I can say that the number of mistakes made there have been by engineers in charge on the spot, because they have not been advised from this side.

Mr. DROUGHT: I know that part of the country well, and can endorse every word uttered by the gentleman who has just sat down.

Capt. MCTAGGART proposed a cordial vote of thanks to the chairman and directors.

Mr. DROUGHT seconded the motion, and it was carried by acclamation.

ST. JOHN DEL REY MINING CO., LIMITED.

RAPID PROGRESS OF THE TWO SHAFTS—SURFACE WORKS—FINANCIAL POSITION — THE HOPEFUL POSITION OF THE COMPANY CLEARLY SHOWN.

THE half-yearly meeting of the company was held on Thursday at the City Terminus Hotel.

Mr. John Hockin

(chairman of the company) presided.

Mr. POOLE (secretary) read the notice of meeting.

DIFFICULTIES MET AND OVERCOME.

The chairman's speech was read on his behalf by Mr. POOLE as follows:—In addressing you this time last year I spoke of the difficulties of many kinds to be overcome on undertaking such a work as we had commenced, so far away from the source of our supplies of men and materials. At the half-yearly meeting I dwelt at some length on the particular difficulties we had to contend with. The table on the first page of the report, showing the steady progress month by month in sinking the shafts, gives, I think, the best assurance that those difficulties have been successfully met; and you will also, I trust, consider that the average rate of sinking has been one of which all who have contributed to it may be congratulated.

MINING MEN SURPRISED AT THE RATE OF PROGRESS.

I have heard of but one expression, and that one of surprise, from mining men, that the hard rock so well known to their profession could have been passed through at such a rate; and it will be seen that the average of the year has been considerably exceeded during Apl. and May, when the total number of fathoms sunk in both shafts was 69—or 414 ft.—that is, these two shafts, 12 ft. in diameter, were advanced during two months to a depth equal to (taking for comparison an object familiar to us all) one half of the height of St. Paul's. In addition to the figures showing the rate of progress during the year, we have given you in the report the figures showing the entire work from the commencement of sinking—a period of 22 months—and the entire depth to reach the lode; and these, with the help of a very clear plan, which is also in your hands, will enable any shareholder to grasp the position as to the mining operations completed, and still to be carried out. As regards

THE SURFACE WORKS,

they have been advanced at a satisfactory rate during the year. The superintendent, in his able report, classes them under two heads, viz., those directly and those indirectly connected with the mining operations. The former include the machinery and appliances requisite for the rapid removal of the *débris* after blasting the rock, the ventilation of the shafts, and lowering the water in the old mine down to the bottom of the shaft B; the latter, the equally important work of perfecting the water-power for driving the new and improved machinery for working the mine when re-opened in all its numerous departments. Most of the photographs which we here show you have reference to one or other of these works, and as regards the former, will make plain to you what creditable work we can now turn out on the spot. One engine for baling the water from the old mine, made entirely on the spot, and principally from old materials otherwise useless, Mr. Chalmers, in a letter received last week, speaks of as follows:—"I am pleased to state the baler is now working at full swing. This machine and plant have given me an immense amount of trouble, and taken up a good deal of my time to bring it into proper working order. In the first place the machine is the first of the kind to suit the particular work it has to perform; secondly, the greater part of it is made out of old machinery; and, thirdly, the only available site for it is a deep gully, most inconveuient for erecting. The balers are of original design so as to save time in discharging, and are of unusual size. The whole thing is now going well; the buckets rise to the launder in the adit, instantly discharge themselves, and away again to the water. They are bringing up in 24 hours close on 2,000 tons of water." We are able to turn out too, you will see, castings of considerable size, equal in quality to any we could obtain in this country; and as they are made from old iron, their chief cost is the labour and fuel. The ability to turn out such work on the spot has long been desired as a means of saving time, when a breakage occurs, not to mention the saving of the heavy charges for freight, duties, and inland carriage; and now, with so much new machinery, the ability to repair it at ouce in case of accident becomes all important. In the working of wood, too, by machinery, ample provision has been made by providing sawing and shaping machiues of the newest kind. These will

TEND GREATLY TO REDUCE FUTURE WORKING EXPENSES,

and indeed have become indispensable for the future economical working of the establishment, under the great changes that have taken place in the country as regards labour, and the entire difference there will be between the old and new machinery. The old machinery, constructed of wood in the early days of the company when transport from Rio to the mines (a distance of 300 miles) was wholly on mule's backs, and not practicable for heavy machinery, had become unequal to the working of the mine in 1886. It was neither economic nor effective, and could not be made so for efficiently working the mine at its increased depth. The new machinery will be for the most part of iron, and of much greater power, being worked by high pressure engines. These, though entailing a large capital outlay, will ensure efficiency, and diminish working expenses to an enormous extent. I may mention that we have now the Government Central

RAILWAY TO WITHIN 4 MILES OF THE MINE,

which greatly facilitates transport. I wish you particularly to notice those photographs which show the heavy cuttings, in progress, and completed, for perfecting the water power—more like what we are accustomed to see in this country in railway than in mine work—for they show very clearly what a heavy work the re-arranging and adding to our water-power has been; and you will easily understand the labour of constructing a 6-mile water-course in such a hilly country. But when it is remembered that water is our only source of power, it will be seen how all important it is that we should be able to command a sufficient amount of this power. The proportion of expenditure between surface works and sinking the shafts up to Feb. 28 has been, as you will see stated in the balance-sheet, for surface works, 63,414*l.* For sinking the shafts, including cross-cuts connecting the shafts every 50 fms., 33,916*l.*

EXPENDITURE AT SURFACE.

The surface expenditure up to Feb., 1890, amounting to 48,163*l.*, was given in detail in last year's report, so that during the year the expenditure on surface works has averaged 1,250*l.* monthly. The average cost of sinking the shafts, including, as said, the cross-cuts, and all timbering or bricking where required, has been, during the 22 months it has been in progress, 84*l.* per fm. This average, since the cost of timbering and bricking, and all trouble regarding water have ceased, has been considerably reduced, and during Apl., owing to the greater progress, was only 58*l.* a fm.

DUTY OF SHAREHOLDERS.

As regards the paragraph in the report referring to the issue of debentures, to enable the directors to order the reduction machinery,

we hope those gentlemen who have not yet taken any debentures—and there are a good many in that position—will respond to the circular we have issued. They may be either paid up in full or in four quarterly instalments. The directors have already done their part, and are willing to continue to do so. If all will assist, the burden will not be heavy on anyone, and the object is a most important one in the shareholders' own interests. I have only two remarks to make on the financial statement, and they are, that as regards the debts in Brazil, they have now been reduced to about one-half of what they stood at on Feb. 28, to which that statement applies, and that the uow existing debts are little, if anything, above the usual business debts of the company; and as regards calls in arrear, they have been reduced to 672*l*. The payment of these will now be insisted on. We have felt it an agreeable duty, as well as an act of justice, to speak at each of our late meetings of

THE GREAT VALUE WE PLACE ON MR. CHALMERS' SERVICES.

I can now refer to another pleasing circumstance which shows his absolute faith in the future success of the work he is doing so much to promote. Before he sent us the statement laid before you at Christmas, showing the insufficiency of the share capital to complete the work of re-opening the mine, he became a large shareholder, and he has since taken up rather more than his proportion of debentures. A considerable number of shares too, and some debentures are held by other officers. (Cheers.)

The CHAIRMAN: I have now the pleasure of moving "That the report and statement of accounts be received and adopted."

Sir JOHN SWINBURNE, M.P. (director): I beg to second the motion.

VIEWS OF A SHAREHOLDER WHO UNDERSTANDS MINING.

Mr. SPENCER: I am comparatively a small shareholder, though I represent a good many friends who are interested. It has been sometimes remarked to me that we go to unnecessary expense in sending out these frequent circulars to the shareholders, which must cost money. I feel myself bound to acknowledge the candour that prompts these communications, and, speaking as a mining man, I do consider the progress made with the shafts month by month most satisfactory. At the same time, many people do not consider it necessary to receive these reminders of that progress, but that is not the most important point which I, as a mining engineer of large experience, although not in Brazil, and not in gold mines, wish to bring before you. It may be in the recollection of the chairman that some months ago I wrote to him a letter, stating a few ideas that I had conceived. I do not know whether that letter ever reached him, but at any rate I have never had a reply. I have been accustomed, like other miniug engineers, to make money go as far as possible, and now that we have not enough to carry out what was proposed, the suggestion I made was this—Why was it necessary to proceed with the sinking of two shafts, and why not finish one at a considerably less expense first, and why, at this stage, seek to complete the reduction works? Anything I may now say must be taken as uttered purely in the interests of the concern, and as coming from one who is speaking with mining knowledge. (Hear, hear.) We seem to have plenty of money in hand to complete one shaft, and unless there is anything in the laws of Brazil, of which I am not aware, to prevent us from working with only one shaft, a considerable quantity of mineral can be worked from thence, and it is not necessary, I presume, that we should reduce the ore on the spot. In other kinds of mining, we sink one shaft, work away the valuable mineral, send it elsewhere to be treated, and never have to put up reduction works at all.

REPLY OF THE BOARD.

Mr. TENDRON: I have the permission of the chairman to reply. It is suggested that expense might be saved if circulars were not sent round. My feeling in connection with mining compauies is that one of the best things to be said in their favour is that they give very full and frequeut information. To be a shareholder in a mining company and only have information twice a year is not satisfactory. (Hear, hear.) There is a certain expense attached to sending out these circulars, but I am sure the satisfaction they give far more than compensates for that outlay. (Hear, hear.) The worst evil that can befall them is that some gentlemen may put them in the waste-paper basket. Auother remark by Mr. Spencer was that a letter addressed by him to the office was not replied to. That is a very unusual thing for a letter to be addressed to the St. John del Rey office without it receiving a reply. I think Mr. Poole will make a note of that and probably write to you on the subject, and it may turn out that the reply was sent but somehow miscarried. (Hear, hear.)

OBJECTIONS TO ONLY ONE SHAFT.

With regard to going on with only one shaft, of course that is a matter that has had our consideration, and we have talked about it time after time. We have considered it in this light—that if you go down to the lode with one shaft, and show that it is there and what it is like, there would be no difficulty in getting any amount of money to complete the works, and we have often suggested to Mr. Chalmers that he should hurry on one shaft as much as possible, so as to get speedily to the lode, but we must take into consideration (and so must he) that there are pumping, hauling and ventilation to be provided, and that the ventilation is greatly aided by the cross-cutting from one shaft to another, and also that when you get down to the lode in only one shaft it will be practically of no avail. As to money being saved by shipping ore, that is quite impossible. We only get 2*l*. in a tou weight of mineral, and just fancy endeavouring to transport mineral of that class! It is out of the question. I hope you will be satisfied that the whole subject is being fully considered both in Loudon and Brazil, and that it has been found impossible to do as you suggest. Even now we should be glad enough to get dowu to the lode in one of the shafts, and we calculate that we shall get to a horizon in which we can with safety pass a diamond borc into the lode sufficiently beneath the bottom of the old workings, where the water has accumulated, to be able to give you the assurance that the lode is there. (Cheers.) We have no doubt it is in our own minds, but I think it will be a great satisfaction to the shareholders to know for a certainty, and we have pressed upon Mr. Chalmers (as he is going to have diamond boring machinery) that he might be able to make this test. There is, however, a certain danger in connection with it, and we must leave this matter entirely with him; for the satisfaction of knowing that the lode is there is not sufficient compensation for running the risk of tapping the water. With all Mr. Chalmers' efforts and this baling machinery he can only get the water down within a few feet of a certain level. With this diamond borer we may tap the water, and then by its own weight, acting as a syphon, it will be passed up as high as the levels in the old excavations will carry it, and so lessen the amount of pumping necessary. To put down the new pumping arraugements to a large amount will mean a large expenditure of money and time. We have by no means exhausted the whole of our difficulties when we get to the level of the lode. There is that work to be done, and afterwards the time must be allowed to open up the lode and extract the mineral on such a scale as will make it meet the expenses and give a reasonable profit. Hence our work is nothing like complete yet. We still have to go on, and at times we should have lost heart had it not been for the praiseworthy manner in which the shareholders have come forward and provided us with money. (Cheers.)

Mr. ROGERS (director) here introduced a subject in regard to which he considers he has a grievance against his colleagues, and with the acquiesence of all concerned, a committee was appointed to investigate into it and decide, and the matter by mutual consent was allowed to drop.

The report was unanimously adopted.

The CHAIRMAN, having expressed regret at the absence of Mr. Illingworth through ill-health, was thanked for presiding, and the meeting ended.

TOCOPILLA COPPER MINING AND SMELTING CO., LIMITED.

THE WINDING-UP OF THE COMPANY COMPLETED.

A GENERAL MEETING of the shareholders in this company was held yesterday, at No. 9 Queen Street Place, E.C., for the purpose of showing the manner in which the property had been disposed of, and receiving the accounts.

Mr. E. C. Leaver

(liquidator) presided.

The CHAIRMAN said: Gentlemen, at the meeting held on June 2, 1890, it was resolved to wind up this company, and I was appointed liquidator. Prompt endeavours were made with the view to finding the best mode of disposing of the property. After careful enquiries through competent sources, it became evident that any attempt to gradually dispose of the property in Tocopilla and collect the debts there, would be very costly and take a considerable period. The liabilities in South America amounted to over 2,000*l*., the actual recoverable value of the debts to the company, when it should cease to be a going concern, being merely nominal. An offer was, however, received from Mr. W. H. Williams, a gentleman at Tocopilla, who was at one time the company's local manager, but who is now a merchant there. After considerable negotiation, and with the approval of the late directors of the company, I closed with him on the terms that he should pay off all the debts in South America, and

PAY THE COMPANY A SUM OF 3,300*l*.

for all the property and assets there. At the general meeting a wish was expressed that counsel's opinion should be taken as to the liability of the vendors to the company for misrepresentation. A case was prepared under the directions of the shareholder who made the proposal for the inquiry, and was put before Mr. Shebbeare, an emineut counsel in company matters. His opinion was that there was nothing to justify my attempting to set up any such claim. The case and opinion are on the table.

The CHAIRMAN concluded by moving the adoption of the accounts.

Mr. J. C. LEAVER seconded the motion, which was carried unanimously.

The CHAIRMAN then proposed, "That the books and accounts be left in the hands of the liquidator, he undertaking to destroy the same on the dissolution of the company." This was, he said, the usual method of disposing of the books of a defunct compauy, and the solicitor had advised the passing of this resolution.

Mr. J. C. LEAVER seconded the motion, which was carried unanimously.

The proceedings then terminated.

BONNIE DUNDEE GOLD MINING CO., LIMITED.

THE report of the directors in anticipation of the general meeting to be held on June 29, states that the quartz raised during the year 1891 yielded 512 ozs., 4 dwts., 6 grs., of the net value of 1,679*l*. 1s. 11d. The mill has made a profit of 818*l*. 12s. 9d. by crushing outside ores. The underground operations of the year have been continued on a limited scale consequent on the want of working capital, but the result of the development work, so far as it has been carried on, has been satisfactory. It is a matter of regret to the directors that, having, at great expense, sunk thc new vertical and main underlie shafts, and having thoroughly equipped them with new and powerful machinery, they should be compelled, from want of capital, to discontinue work in connection with them, and be obliged to let this large expenditure lie idle at a time when the mines in the immediate vicinity are doing so well, and when there seems to be every probability that with a further outlay this expenditure would soon become remunerative. The directors suggest the carrying out of certain works for the effectual development of the company's property, which would probably involve an expenditure of upwards of 20,000*l*. But without committing themselves to all they think it most desirable that the remainder of the preference shares (12,732) should be placed so that some of the most important should be carried on without further delay.

THE YURUARI CO., LIMITED.

IMPORTANT ANNOUNCEMENT.

THE secretary advises us that the directors have come to an agreement with Messrs. John Taylor and Sons to act as consulting engineers and managers of the company in England from July 1, 1891.

London: Printed for the Proprietors by Straker Brothers and Co., and Published at the Offices, 234, 5, & 6, Gresham House, Old Broad St., E.C., Saturday, June 27, 1891

REPORTS OF MEETINGS.

THE MYSORE REEFS CO., LIMITED.

THE LODE CUT AS CAPT. GILBERT'S REPORT FORESHADOWS—ENCOURAGING OUTLOOK — RE-CONSTRUCTION UNANIMOUSLY AGREED TO.

THE fourth ordinary general meeting was held at the Cannon Street Hotel on Thursday, to receive the report and balance-sheet; to elect directors and auditors in place of those retiring; and for other general business.

Mr. John Harvey

(chairman of the company) presided.

Mr. John GARLAND (secretary) read the notice of meeting.

PROGRESS OF THE WORKINGS.

The CHAIRMAN: Gentlemen, those of you who have followed the fortnightly reports, which have been regularly sent to the papers, will, no doubt, be not altogether surprised at the tenour of the one the directors have just presented. Personally, I must confess to feeling disappointed that the anticipations which I held out last year, and which at the time seemed quite warranted, have not been fully realised, and that our property has so far not got into a dividend-paying position. After that meeting we issued, with the sanction of the shareholders, a limited number of debentures to provide the necessary funds for erecting machinery which all the experts deemed it advisable to put up at that time. Amongst them was Mr. Bell Davies, who, I regret to say, has since passed away, and who had a very high opinion of this property. (Hear, hear.) It was considered advisable then to put up stamping machinery, especially as at that time, in the 300-ft. level, there was a large quantity of quartz which, according to assay value, seemed to us to be good enough not only to crush and sufficient to pay expenses, but to leave a small profit. The debentures were taken up, but I must say not many by shareholders. However, the plant was erected and crushings were commenced, the result of which you will see in the report of Capt. Scantlebury. I regret to say that instead of yielding from 7 to 8 dwts., the average, after passing quite a considerable quantity through the mill, was only 3 dwts. of gold. That is not sufficient to pay expenses, although the cost of raising and crushing the ore from that high level was not so great. I ought here to mention, what we put in the report, that it has been proved at the Mysore Mine that poor ore, which will not pay to mill by itself, yields well when crushed with richer ore, so we look forward to the time when

THIS LARGE MASS OF QUARTZ MAY YET PROVE A VALUABLE ASSET

to the company. When we found that crushing the ore did not pay, we concentrated our energies on sinking the shaft. As is usual in these cases, we found considerably more difficulty in sinking below the 460-ft. level than we did in any of the ground above. The rock was altogether harder and entailed greater expense. The general opinion of experts seems to be proved by our experience that the deeper you go the richer and the more consolidated does the lode become. When we found that our resources were running out, it became necessary to see what was to be done in regard to the further exploration of the mine, and the only plan which seemed to us feasible was to recommend

RE-CONSTRUCTION UPON REASONABLE TERMS.

We have sent along with the report of the directors and the other documents a sketch of the proposed re-construction scheme. That will be dealt with in detail at the special meeting which will follow this one, so beyond simply saying that we have already, from some absent shareholders, received promises of considerable support, which lead us to infer that this scheme is generally liked, I shall content myself by keeping to the ordinary business. I may, however, say that I shall subscribe my full proportion, and even more if the necessity arises to do so. (Cheers.) I, as a member of the board presenting a report like this, am prepared for criticism when directed into a proper channel. I cannot, however, see that we, as a executive, are to be held responsible for the poverty of the quartz. That no man can be accountable for; but what we are responsible for is the efficient and economical working of the mine. I should like you to turn to Capt. Scantlebury's report, page 16, where you will see that of the total number of hands in this mine, there are only six Europeans. Following that I will read an extract from Capt. Scantlebury's report to the directors, dated June 2, which he did not know was going to be produced to this meeting.

"In the 400-ft. levels the average cost of driving the both ends for the month of May is Rs-18.8 per ft., and had we been able to work a rock-drill in the south end continuously, it would not have been more than Rs-16 per ft. These ends have been driven by natives, no one but myself and John James having anything to do with them. In Sept., 1888, I find the average cost per ft. for driving levels in Harvey's shaft, with Englishmen running the rock-drills, was Rs-57.5.9 per ft., whilst the speed is very much in excess by the natives than what it was by the Englishmen. I have also compared the quantity of dynamite consumed per ft.:—Sept., 1888: Englishmen extended in levels 79 ft., with 1,200 lbs. of dynamite, an average of 15 lbs. per ft. May, 1891: Natives extended 58 ft. 9 ins., with 345 lbs. dynamite, an average, or hardly 6 lbs. per ft. I may add that the rock at the 400-ft. level, if anything, is harder, and more difficult to blast than what it is at the 250-ft. level, where the Englishmen were working in Sept., 1888."

Now, gentlemen, I think you must admit that the working of this mine is economically as well as efficiently carried out. As regards its efficiency, I can refer you to the report of Capt. Gilbert, the concluding paragraph of which refers to that very point. We thought it advisable, with the sanction of the board of the Mysore Co., to get a thoroughly independent report on this property to place in your hands, before asking you to consider any scheme of re-construction. If you have studied

CAPT. GILBERT'S REPORT

you will see that, though it is couched in guarded language, he still considers that the property is valuable, and that, in the eveut of certain of these suggestions being carried out, we will come yet into richer ground. Before I sit down I will (if you wish me to do so) read you a telegram which we have received under these circumstances—we sent two days ago a message to Capt. Scantlebury, and received a reply. Shall I read both? (Hear, hear.) The only thing with respect to the reply is that it is so good that some might think it is specially manufactured for the occasion—(no)—but we have always considered it advisable, in view of a meeting, to ask for the latest news. (Hear, hear.) This telegram was not shown to me until half-past 11 this morning. Our telegram was—

"Annual general meeting will be held June 25; if anything new, telegraph."

THE LODE CUT.

The reply is—

"Have cut lode in cross-cut west at the bottom of the mine to-day; pieces of rock containing visib e gold."

(Cheers.) That is exactly the place where Capt. Gilbert expected to find a good discovery. I think that with the prospects this mine offers, and the reasonable terms upon which we propose to re-construct the company, this scheme is entirely in your interests, and is one which will enable you to retain the property in your own hands. I beg to move the adoption of the report and accounts. (Cheers.)

MR. JOHN TAYLOR ENCOURAGES THE SHAREHOLDERS.

Mr. JOHN TAYLOR, who was heartily received, said: I beg to second the resolution. These reports have been placed before you fully, and although they are not as satisfactory as we should desire, yet I think they may be looked upon as encouraging—especially giving, as they do, the opinion not only of our own agent, Capt. Scantlebury, under whose charge the mine has been from the commencement of the present company's operations, but also the opinion of Capt. Gilbert, who, for some time past, has had the management of the Mysore Mine. This report of Capt. Gilbert I think you will have read with special satisfaction, as its sets forth the experience of a man of large experience in mining all over the world, who has brought a fresh eye and an unbiassed mind to bear upon this question which has so much interest for us all. (Cheers.) Capt. Gilbert, it will be observed, makes two very definite and important suggestions. One is that the cross-cut should be driven west at the bottom of Harvey shaft, to prove whether the main and best part of the lode is not standing in that direction, and another is that exploratory levels should be driven at greater distances both north and south. For some time past, as you are aware, the

OPERATIONS HAVE BEEN CONFINED TO THE WORKING ON HARVEY SHAFT,

which has now reached a depth of 520 ft. This shaft was originally commenced on apparently what had been extensive old workings at the surface. The shaft proved the existence in the upper levels, and for a considerable distance down, of a most powerful vein — the widest and the most powerful yet found on the Colar Goldfield. In some places it was 40 and even more feet wide. We also found what we have not found in other parts of the Colar Goldfield, that it has been practically auriferous throughout, but at a depth below the 400 ft. the vein became poor, and Capt. Gilbert draws attention in his report to the fact of the sinking below that point being more upright—not of so flat an inclination as above. He also points out that this is altogether con-

trary to our experience of the veins (and particularly of the Champion Reef) in other parts of this goldfield, and especially so in the Mysore Mine, of which he has charge. The lode there throughout as far as we have gone in depth becomes flatter, and as it does so it increases in richness. He tells you that the large body of quartz discovered and driven through in the different upper levels may have divided in going down, and that a part of the lode may be still standing to the west in the bottom of the mine, and, by inference, very probably the best part, and therefore he recommends you to drive a cross-cut at the bottom of the shaft, which was then down 510 ft., but which we have since sunk to 520 ft., and that cross-cut is being driven at the latter depth.

IMPORTANCE OF CUTTING THE VEIN.

The report of June 2, from which the chairman has read an extract, shows that it has already been driven 26 ft. from the shaft, and now you have the very important information given in the telegram the chairman has just read, that the vein which Capt. Gilbert—or rather the portion of the vein that has gone to the west—so definitely tells you will be found at a distance of from 10 to 12 fms. has actually not only been intersected, but contains pieces of rock with visible gold. (Cheers.) The importance of that it is difficult, at this stage, to judge, but the next and following mails will be extremely interesting. (Cheers.) It is what we have thought possible, and what Capt. Gilbert definitely thought was a certainty, or he would not have recommended us to drive 60 or 70 ft. through hard and unproductive rock. You will have also noticed in the report that Capt. Gilbert says the rock at the depth of 510 ft. is getting more disjointed, and is letting out a large stream of water, and he considers that there is every indication of getting into a congenial strata. Altogether we may look upon that news as most important. Capt. Gilbert's other recommendation is that levels be driven further north and south. I consider this suggestion valuable, as a glance at the section will show that the levels have been extended north and south to but a very moderate distance beyond the point at which they passed out of this body of auriferous quartz. I have no doubt the reason for that is that Capt. Scautlebury was so impressed by the magnitude of this mass of quartz, that he did not consider it necessary to drive as the works went on any considerable distance laterally. That must now be done. The 400-ft. level will be pushed on as rapidly as possible north and south, and Capt. Gilbert says near the end of his report, "I fully believe that further developments will lead to other and richer deposits of quartz." With regard to this large vein, it has been suggested to me by a shareholder in a letter, that as the lode is so much wider than in the mines to the north, gold may be found so widely disseminated as not to be worth the cost of extraction.

A FEAR DISPELLED.

You know that almost anything may be looked upon as possible in mining, but I do not think we have anything before us at present to lead us to fear that this will be so, or that it is likely to be the case. You must not forget the immense advantage of a wide lode over a narrow one in economical working. That is a point of very great importance, for you know that some of the best gold mines in the world are making very large profits by the extraction of quartz of very low grade from very wide lodes. I think that is not a condition of things that we need trouble ourselves at present about, from the fact that in this very wide lode we have a considerable amount of rich rock. We have not only had this brought to our knowledge by assays, but also by mill returns. I am not going to pretend that I am other than disappointed that we have not better news to give you; but I do think that with the examples before us of other well-known mines on the field

WE OUGHT NOT TO FEEL DISHEARTENED

at the absence of success. A close examination into the position of our affairs. as compared with those of the Mysore Co., the Ooregum, and the Nundydroog will make it very clear that not one of these companies in the days of their hard struggles, which appeared almost insurmountable (there are gentlemen present who attended the meetings and know the facts as well as I do)—I say, I do not think they had before them such solid or substantial reasons for continuing the fight as this company has at the present time. We have this large aud well-defined lode containing gold practically throughout, and in various places producing this rich stuff—sufficiently rich to leave a good profit on the working. We have also now before us the clearly expressed opinion of Capt. Gilbert. One part of his opinion has been curiously confirmed by the telegram read to you to-day, and we have last, but not least, the very greatly increased knowledge of mining generally, and the direction of veins on the Colar field, which was not known in the early days of the companies I have mentioned, as well as the happy examples of those concerns, and the fact that they are now taking rank amongst the best gold mines of the world. (Applause.)

DISCUSSION.

Mr. WALLIS asked if the opinion of Capt. Plummer had been ascertained about the mine?

The CHAIRMAN replied that to his knowledge Capt. Plummer had never expressed it, and certainly he had never reported officially on the property.

The report was unanimously adopted.

Mr. EVANS (director) proposed the re-election of Mr. John Harvey and Mr. John Taylor as directors.

Mr. J. C. BARCLAY-HARVEY, J.P. (director), seconded the motion, which was carried.

The CHAIRMAN: I am afraid that as directors of the present company we are not likely to remain long in office, but I accept our re-election as a mark of your confidence in our management. If we have not succeeded so far in bringing this mine to a successful issue it has been more through ill luck than anything else. We have put our money into it both in shares and debentures, and therefore it is as much our interest as it can be that of any of the shareholders to bring it to a success, if that be possible, and we believe it is. (Cheers.)

Mr. BROUGHAM proposed the re-election of the auditors, Messrs. H. Swaffield and J. W. Jepps.

Mr. WALLIS seconded the motion, which was carried unanimously.

EXTRAORDINARY MEETING.

Mr. GARLAND then read the notice of the extraordinary general meeting, for the purpose of considering, and if approved, passing the following resolutions as special resolutions:—

RESOLUTIONS.

1. "That the company be wound up voluntarily under the provisions of the Companies' Acts, 1862 to 1890, and that John Harvey, Esq., and Lewis Henry Evans, Esq., be and they are hereby appointed liquidators for the purposes of such winding up." 2. "That the said liquidators be and they are hereby authorised to consent to the registration of a new company to be named the Mysore Reefs, Limited, or other suitable name, the memorandum and articles of association having been previously approved by the members of this company at an extraordinary general meeting." (3.) "That the draft agreement submitted to this meeting and expressed to be made between the liquidators of the first part, this company of the second part, and the new company of the third part (the draft being also signed by the chairman of the meeting for the purpose of identification), be and the same is hereby approved, and that the liquidators be and they are hereby authorised in accordance with section 161 of the Companies Act, 1862, to enter into an agreement in accordance with such draft or as near thereto as may be."

The CHAIRMAN: I will now ask you to turn to page 26 of the report, where you will see set forth the scheme of re-construction already sent you. You must remember that these are only the bases of re-construction, and that we are quite prepared to accept any modifications or suggestions which may emanate from shareholders to-day, so long as they are practical. We thought it advisable to put the whole scheme before you, so that you might know what we propose to do. You will see that the capital of the company is to be fixed at 150,000*l*., and that there is to be issued 135,000*l*., whilst the other 15,000*l*. is to be retained to enable the debenture-holders to exchange under the terms of their bond if they wish to do so. The sum advanced upon debentures is 13,120*l*., and the holders of 10,000*l*. have signified their intention of taking debentures in the new company, and no doubt others will do the same. Hence, as far as the debentures are concerned, I do not think there will be any difficulty in carrying out the re-construction scheme. The debenture capital will be 15,000*l*., in 750 10*l*. 10 per cent. debentures of 20*l*. each.

Mr. BROUGHAM: I suppose you intend to offer the shares first to the shareholders?

The CHAIRMAN: That is part of the scheme.

Mr. BROUGHAM: What will you do if any should not be taken up?

CLAUSES EXPLAINED AND RESOLUTIONS CARRIED UNANIMOUSLY.

The CHAIRMAN: We will be guided by circumstances. The existing company will be wound up voluntarily. Clause 2 means that each shareholder subscribing for the shares will receive, as a certainty, the number to which he is entitled, with 15s. credited as paid up and a liability of 5s. per share. As to No. 3, it is absolutely necessary to fix a date upon which the shareholders are bound to come in. It would be very unfair to those who come in at once to allow others to wait behind and see whether the lode turns out as rich as we all hope it will do. In regard to clause 4, the debenture interest due on July 1 has been provided for. Clause 5 merits special attention, for the calls will be made exceedingly light, and it is a grave question whether more than 1s. or 1s. 6d. will be required, but of course it is impossible for anyone to say.

Mr. BROUGHAM: Supposing the old shareholders do not take up the new shares; what then?

The CHAIRMAN: They lose all interest in the company.

The CHAIRMAN then moved the first of the re-construction resolutions as given above, and it was seconded by Mr. BARCLAY HARVEY; the CHAIRMAN proposed, and Mr. EVANS seconded, resolution No. 2; the CHAIRMAN proposed, and Mr. EVANS seconded, resolution No. 3, all of which were carried unanimously.

The CHAIRMAN: Mr. Francis, our solicitor, will now read the resolution and explain the agreement.

MR. FRANCIS EXPLAINS THE AGREEMENT.

Mr. FRANCIS (of the firm of Messrs. Francis and Johnson, of Austin Friars): This agreement will appear to you, gentlemen, very much a reiteratiou of what has gone before. It is, in fact, producing in short and concise terms the scheme which appears in the report before you, and is intended to give effect to the resolutions which have been proposed and carried, and which will be submitted to a subsequent meeting for confirmation. The agreement is proposed to be made between the liquidators, whom you have appointed, of the old company and the new company, which you have authorised them to form. It recites the affairs of the company up to date, and in this rather anticipates the confirmatory meeting. It then goes on to state the following clauses, which provide for the old company purchasing the assets of the new company. The second clause is that the consideration to be given to debenture-holders shall be debentures in the new company necessary to satisfy the sum of 13,120*l*. now secured by these debentures, but the old company is to pay the interest for the half-year to July, which you have heard has been provided. All the debts and liabilities and obligations of the old company are to be taken over by the new, so that the old company is wiped out and the new stands in its place. The new debentures issued are 15,000*l*., repayable on July 1, 1895, with a bonus of 25 per cent., as provided by the present debentures. The holders are to have the right, at any time during their continuance, upon giving one month's notice to turn the debentures into shares, and hence the provision of 15,000 shares for the purpose as already explained. The 135,000 shares are to be issued 15s. credited as paid, and having a liability of 5s. on the terms set forth, and if the members do not apply within three months the shares become the property of the company. The remainder of the agreement consists of the usual classes and a schedule of the property.

DUTY OF SHAREHOLDERS.

The CHAIRMAN: That concludes the business, but I should like to impress upon you the advisability of applying for your shares as soon as the notice forms go out. We have received letters from shareholders, one saying that he will take an additional 2,000, and another 1,400, and it is evident they mean business. Many people will not only want their holdings but to increase them. The confirmatory meeting will be held on July 10, and on that occasion the

articles and memorandum of association of the new company will be submitted.

DIRECTORS AND OFFICERS THANKED.

Mr. SWAFFIELD: It is not a very enlivening proceeding to be attending the funeral ceremony of a company, and hence the rather mournful air that has pervaded this meeting; but it does seem to me that we may fairly take heart at the prospects before us. There are few in this room who have had a longer experience of mining enterprises than I have had, and I have been especially observant of the progress of this industry in India. I well remember the early struggles of the Mysore Co. to which Mr. Taylor referred, and also the utter hopelessness apparently of the prospects of the Ooregum some years ago; but it has been quite remarkable how great the change has been in regard to those companies, and I am delighted to find that there is on the part of my brother shareholders a determination, and a certain amount of John Bull pluck to proceed with the works of the company. I consider that our prospects here are far more cheering than they were in the companies to which I have referred, and seeing we have a report from so able a man as Capt. Gilbert (whom I well know), I think that in itself is what should encourage us very much, and as lending additional force to his opinion and what he has suggested there comes the news we have had to-day. (Hear, hear.) I beg to move "That our best thanks be tendered to the chairman and directors, to our managers at home and abroad, and to our secretary, for the able services they have rendered in connection with this company."

Mr. BROUGHAM: I second the resolution with very great pleasure. Carried unanimously.

ALL INTERESTS IDENTICAL.

The CHAIRMAN: I wish all these complimentary remarks had been made after we had been more successful. However, they give us heart and hope to do our best in the future. Our interests are identical, and we never give any glowing accounts, for which we have not chapter or verse. I would not even read this telegram until I had asked the permission of the meeting to do so, and told them exactly the circumstances under which it was sent. (Hear, hear.)

ENGLISH AND AUSTRALIAN COPPER CO., LIMITED.

A VARIETY OF CAUSES CONSPIRE TO MAKE THE YEAR UNPROFITABLE—AN AMENDMENT, SUBSEQUENTLY WITHDRAWN, LEADS TO A FULL DISCUSSION OF THE COMPANY'S POSITION.

THE ordinary general meeting of the shareholders was held at Winchester House, on Wednesday.

Mr. John Harvey

(chairman of the company) presided.

Mr. W. R. CALDWELL MOORE (secretary) read the notice of meeting.

SILVER SMELTING UNPROFITABLE.

The CHAIRMAN: Gentlemen, I express the views of the board when I say that we are sorry the accounts are not more satisfactory, for we certainly hoped that instead of a debit there would have been a profit on this half-year's work. As regards copper, it would appear that there is no revival on the other side, and that the stagnation existing here is reflected there. There is no further development of copper mines, and we do not see, with copper even at its present price, that there is likely to be any great increase in the quantity of ores supplied to the company. Notwithstanding the small amount of copper smelted, that branch of the business has done fairly well, because the market has been steady, and we have been able to sell the bulk of our copper either afloat, or to be shipped. The serious loss arises on the silver smelting, and I daresay you have been as much annoyed as we have to find that one cause of it has been

THE MISTAKE MADE IN STOCKTAKING.

That mistake was made in a very stupid, but simple way. Mr. Dunstan, who has charge of the smelting works, and is joint manager with Mr. Chaney, in accordance with his duty, measured up the ore, but he gave square yards instead of cubic yards, and, no doubt, is to blame for that serious mistake. With reference to the further loss, you must bear in mind that silver, which was 54d., declined steadily, without any revival whatsoever, to 3s. 11d. per oz.—that is to say, 7d. per oz. less, which does not seem large at first sight, but it is nearly 800*l.* a ton. Now, if the market, whether for silver or copper, remains fairly steady, or if it falls or recovers, we can always work to a profit, but when the market goes down steadily without any rehabilitation whatever, it is quite impossible to make a profit. You will see in the six months we refined nearly as much as we did in the previous 12, and, of course, even in this case it has operated against us. Another matter is that the purchase of silver ores is a great deal different from copper. There are few copper mines, and the quality is mostly the same, but with silver it is quite different, and we are very much afraid that the manager has not shown sufficient discretion in his purchases. There are a great many small silver mines, and we find that the ore taken from them varies very much in its component parts, possibly requiring different treatment which has not been sufficiently attended to. I might mention that the mistake for which Mr. Dunstan was primarily responsible, and the loss in silver smelting, have led us to make further enquiries, and unless these are satisfactorily answered we shall have to dispense with that gentleman's services. Of course, it takes considerable time to make those enquiries and get replies, and I presume, as you are business men, you will see that it would be injudicious for us to jump to conclusions. It will take at least four months to send out enquiries and have them satisfactorily answered. I think I have sufficiently explained the various causes which have led to the loss on silver smelting. These, and allowing for the loss in the over-valuation of the stock, show a profit on the previous year's smelting, but from thence the market steadily declined, and, of course, over that we have no control. The

WHARF HAS MOST CERTAINLY DONE VERY MUCH BETTER

than either the copper or the silver, and I think we may take some credit to ourselves for our foresight in having deepened it, and made it fit for receiving vessels of almost any size that go to Australia. The wharf combination was not entered into afresh chiefly on account of our refusing to join it on the old terms. It would have been silly on our part to have done so, as we are doing a larger business, and we felt sure that, with the accommodation we were able to offer shippers, we could fairly hold our own. How long the great improvement will last it is impossible to say, but you may rest assured that we will do all we possibly can to keep the trade together. We are as well able to offer inducements to shippers as any other wharf in Port Adelaide, and so far we have done uncommonly well. In three months we show more profit than we did during the whole of the rest of the year under the "Pool." The coal contract has been referred to arbitration, and decided that it is to expire in Sept. of this year. Many of you who have read Australian papers have seen that coal has been discovered in South Australia, and if it proves to be of value it will materially improve the prospects of the company at Port Augusta, but that is in the future. I now beg to move the adoption of the report and accounts.

Mr. W. O. ROBINSON (deputy chairman) seconded the motion.

AN AMENDMENT.

Mr. COLEMAN moved an amendment, adjourning the meeting for four weeks, and requested the directors to take into consideration the question of the disposal of the company's property in Australia, by private treaty or otherwise. I have (he said) gone carefully through the balance-sheet and assets, and compared them with the accounts presented on June 30, 1885, the last report and balance-sheet submitted to the shareholders by the old board. It may be true that an interval elapsed before the present board took office, in which things might have occurred of not a very favourable character in Australia, or the reverse; but I have compared the assets of the company as they were on June 30, 1885, and as they stood on Dec. 31, 1890, and find there is a diminution of 90,941*l.* (Oh.) That does not include the writing off from the capital of 1*l.* per share in the report of 1887, and the auditor there tells you how the 70,000*l.* thus represented was written off. He tells you that 64,219*l.* was written off depreciation of properties in Australia. By your accounts now, the property there is valued at only 21,890*l.* less than it was on June 30, 1885, so that 43,060*l.* has been added during the present *régime*, in some form or other, to capital for new works or improvements. If you take off that 21,890*l.*, and say nothing about the 70,000*l.* written off capital, you still have an actual loss, in round numbers, of 70,000*l.*, as compared with June, 1885. I will check that in another way. The assets on Dec. 31, 1890, consisted of properties in Australia, 141,432*l.*; metals in transit, 25,450*l.*; cash at bank, 1,305*l.*; sundry debtors, 4,540*l.*, and office furniture, 50*l.*; total, 172,777*l.* Deduct from this, debentures, 35,000*l.*; sundry creditors, 7,142*l.*, and bills payable, 19,480*l.*; together, 61,222*l.*, and you have a balance of assets of 111,155*l.* Now, if you look at the assets on June 30, 1885—property in Australia then stood at 163,322*l.* Upwards of 64,000*l.* has been written off, so that taking that as the figure, it would be 99,000*l.*, supposing nothing had been added, but as we find that it is now 141,432*l.*, it follows that nearly 43,000*l.* has been added to that item of assets in South Australia. There was a reserve fund on June 30, 1885, of 6,000*l.*, which has been swept away. There is copper on hand, 30,871*l.*, and smaller items, making together, 204,094*l.* Deduct from that, advances on copper, 21,900*l.*, bills payable, 9,615*l.*, book debts, &c., you have 31,675*l.*, leaving the net assets at that time 172,419*l.*, as against what they now stand at, 111,155*l.*, and we find there is a net loss of 61,000*l.* It appears to me, the longer you go on the greater will be your losses, notwithstanding the encouraging reports we have had from time to time, and even so late as six months ago, in which the directors said, "substantial improvement may be looked for from silver smelting as the result of the half-year's operations." If the error of the clerk had not been made it would not have affected the result, and, personally, I can scarcely bring myself to see how the manager could have made such a mistake at all. I do not blame the board for the result, which is this, that the money is being lost very fast indeed, and the loss has been increased year after year. (No.) I say

THE TIME HAS COME TO STOP THESE LOSSES.

One of the reasons given why they occur is that the men work on the eight hour system, and you have three shifts a day, so that it comes to this, that your workpeople are really receiving the capital of the company. There may also be a limited labour market, and you may have competition with America, where the labour market is unlimited, and where there is more control over it, but, whatever the causes, the results are the same. I have been 20 years a shareholder and without a dividend. I move the amendment.

NO LOSSES MADE BY THIS BOARD.

The CHAIRMAN: I was quite unable to follow the mass of figures which was poured upon us by Mr. Coleman, but I dispute the result he arrived at, because I can safely say that since this board took office, if you take the profits and losses we have made and allow for the interest paid for debentures, you will find the result is to the good. (Cheers.) We have not lost one shilling in trading. (Cheers.) As to managers, it is very difficult to find those who are competent, and men in business know that full well. We have done our best to secure them, though not always with the results expected. I am not going to argue that the position of the company is satisfactory, for I feel it is not, but we cannot forecast the future of metals, and I do not think that any other board of directors could do so either. As to adjourning the meeting for four weeks, I should like Mr. Coleman to tell us what he expects us to be able to do or say then that we are not able to do or say now.

"IF."

Mr. COLEMAN: If my figures are correct——

The CHAIRMAN: They are totally incorrect, as one of the directors will presently be able to show you.

Mr. ROBINSON: I am not the director alluded to, but should like to point out that when we took office we had the properties re-valued and found they were greatly over-estimated. When you, Mr. Coleman, in your figures, talk of a loss of 70,000*l.* or 90,000*l.*, to begin with, and then, I think, bring it down to 40,000*l.*, the real fact of the case is that all these properties were over-valued, and we have written them down to their real approximate value, as far as we can arrive at it, and that accounts for the mistake you have made. (Cheers.) We

have not lost 70,000*l.*, or 90,000*l.*, or even 40,000*l.* (I could not follow you in the amounts you relied on eventually), and we have not reduced the assets of the company. If you have a house and you choose to put it down on paper as worth 2,000*l.*, and then you have it valued by a respectable auctioneer, and he puts it down at 800*l.*, that is your fault. That is a parallel to the case of which you are making so much. (Cheers.)

Mr. PRYCE (auditor) said there had been no writing up whatever of the assets of the company, but they included stocks of metal, &c., which varied at different periods. He admitted the report was a disappointment, and was inclined to think that silver smelting was a mistake.

MR. CUFF'S REPLY FOR THE BOARD.

Mr. W. S. CUFF (director): The figures Mr. Coleman has put before us came under my notice in a casual way yesterday morning, and I saw at once one most serious error to which Mr. Robinson has already called attention to. I pointed it out to Mr. Coleman yesterday, but apparently without effect. People say that figures can be made to prove anything, but I deny it. People *try* to prove things by figures, and I am sorry Mr. Coleman has been trying to prove something, and in the attempt has gone very far astray. The explanation about the 90,000*l.*, when comparing June, 1885, accounts with those to the end of last Sept. is, that in the former year you were 70,000*l.* to the bad—a large slice of the 90,000*l.* already gone by that single explanation. The 90,000*l.* to the bad at the present moment is the over-valuation of stocks in 1885, or that is the basis of it. If the stocks were then valued at 70,000*l.* more than they were worth that amount comes off the 90,000*l.* Then Mr. Coleman talks of 6,000*l.* reserve fund which appeared in the figures at that time and in that report, but I have the 1885 report here, and will read from it how ths 6,000*l.* was disposed of.

MR. COLEMAN OMITS TO READ THE 1885 REPORT.

The directors say: "The profit and loss account for the year ending June 30, 1885, shows a balance to the debit of 7,393*l.*, to which has to be added 1,884*l.*, the balance to the debit on July 1, 1884, making together 8,578*l.* to the bad. In reduction of this amount the directors have taken the 6,000*l.* at the credit of the reserve fund, and have instructed their manager in Australia to place the wharf reserve, 3,000*l.*, to the credit of profit and loss account." You thus see that the reserve fund was cleared off to provide for losses. (Cheers.)

Mr. COLEMAN (who had many times interrupted the speaker): I do not admit your figures. (Oh! and laughter.)

A PROTEST.

Mr. NEWTON: I protest against the constant interruptions to which Mr. Cuff is being subjected in his very clear explanation. (Loud cheers.)

The CHAIRMAN: Mr. Coleman had a fair opportunity of speaking, and I only hope he will allow the same chance to a member of the board. (Cheers.)

Mr. CUFF: I have now dealt with Mr. Coleman's figures as to our being 90,000*l.* to the bad, but whilst making that statement he made another equally remarkable—"You have largely increased the value of our assets." Mr. Coleman did not see that he was cutting the ground from beneath his own feet. He, first of all, says there is this enormous loss, and then he says we have added so much to the asset. (Laughter.) He blows hot and cold at the same time. If the meeting is agreeable, I will give an explanation of

WHAT WE HAVE DONE AS A BOARD SINCE WE CAME INTO OFFICE.

(Cheers.) I have not gone back to 1885 because I can hardly draw the line there, as we did not come into office till 15 or 16 months afterwards, and then you must consider we have had to look after the business at the other side of the world. I have taken June, 1886, though even then we practically did not come into office for three or four months afterwards. You will find in June, 1886, in the Australian accounts, the assets including metal in transit, book debts, &c., 7,773*l.* I take simply the smelting materials that we deal with in trading as the assets against the floating debts. At that time we owed to the bank and creditors 28,887*l.*—the difference being to the bad, 21,114*l.* I have, in fact, to show you what has become of 61,000*l.* we received from you, that is, 35,000*l.* in debentures and 26,000*l.* in calls. Then if you take the balance-sheet of that same year, you have in metal, furniture and cash, &c., 30,659*l.*, and on the debit side you had advances from the bank, bills payable, and debts, 26,291*l.*, and there is on that account a surplus of 4,363*l.* That you have to deduct from the 21,114*l.*, the loss on the Australian accounts, leaving 16,746*l.* deficit. That is dealing with the 1886 account, but I now come to that of this year. Our metal stock in Australia, book debts, &c., amount to 28,721*l.*, and our liabilities to 24,967*l.*, showing a surplus in Australia in floating assets of 3,745*l.* Then, turning to the balance-sheet, you will find you have metal, furniture, cash, &c., 31,346*l.*, and liabilities for advances from the bank, bills payable, and debts, 26,632*l.* There is a surplus of 4,724*l.* in the balance-sheet. Those two balances put together are 8,469*l.* surplus to the good in 1890. (Cheers.) Now we come to our works—the real capital account. In 1886 the works, &c., stood at 176,280*l.*, which was 70,000*l.* more than they were worth, and they were written down to that extent, leaving them at 106,280*l.* At the present moment our works stand at 122,265*l.*—a difference of 15,985*l.*, provided out of the funds you have supplied us with. Now, take the plant which in 1885 was 6,519*l.* and is now 15,422*l.*—an increase of 8,903*l.* We now come to profit and loss. In 1887 there was a loss of 4,133*l.*; in 1888, up to the present time, I deal with figures directly under our own control. In that year we showed a profit of 11,419*l.*, not actually made, for

THE MANAGER PLAYED US FALSE,

and showed an excess. Still, as a matter of book-keeping, there it is, because against it we have part of the loss in the next year (1889), which was 17,544*l.* In June, 1890, there was a profit of 5,562*l.*, and in Dec. (our last report) there is a loss of 6,254*l.*, the difference between those four balance-sheets being 6,827*l.* loss. That is the loss for which the present board is responsible, but a good part of it is accounted for by debenture interest. (Hear, hear.) If you take these amounts as I have given them to you you will find you get exactly 61,063*l.* extra that we have had to deal with. That is exactly the position of the company, and

IT IS A PHANTOM TO ASSERT THAT YOU ARE 90,000*l.* TO THE BAD.

I will prove my figures to be correct to any number of gentlemen who will make an appointment with me to go quietly and calmly into them with the books before us. (Cheers.) At the same time, I must own the report is a bitter disappointment to me after the trouble I have taken with my colleagues to pull the company round.

I ACTUALLY WENT TO AUSTRALIA

to our works, and overhauled everything, and tried to make the company a success. (Loud cheers.) I have been buoyed up by the hope that we should have been in a flourishing position, and that you would then have acknowledged my services, but that has disappeared, and my disappointment is very great. (Hear, hear.) We lose our capital as well as yours, but the most serious business of all would be to try and act precipitately in the matter of disposing of the properties, particularly in Australia, where there is not a market for large concerns as there is here. Other people are, like ourselves, waiting for better times in which to realise their properties. Some of those we hold are of great speculative value, particularly at Port Augusta. If the projected line should be made that property will be greatly advanced in value. We have had offers from certain people to treat our slag dumps, and if these come to anything we shall have a royalty, and meanwhile we are waiting for the replies for which we have asked relative to the silver smelting business. I may tell you I look upon the wharf as a very valuable asset. In conclusion, I have only to say that I will stand by the figures I put before you, and that the actual loss this board has made is under 7,000*l.*, and even that includes a large sum in debenture interest. In fact, as named by our chairman, we have paid more than that on this item alone, and

ON PURE TRADING WE HAVE MADE NO LOSS WHATEVER.

(Loud cheers.)

In response to the unanimous wish of the meeting, Mr. COLEMAN withdrew his amendment, and thereupon the report was unanimously adopted.

Mr. ROBINSON proposed the re-election of Mr. Harvey and Mr. Cuff, whose services he extolled—particularly those of Mr. Cuff, who went to the other end of the world on the company's business.

On the motion of Mr. FREESE, seconded by a SHAREHOLDER, the auditors were re-elected, and a cordial vote of thanks to Mr. Harvey for presiding closed the meeting.

FRASER AND CHALMERS, LIMITED, AND HARNEY PEAK.

IMPORTANT CONTRACT.

A CONTRACT has been let to Fraser and Chalmers, Limited, by the Harney Peak Tin Mining Co., Limited, for a large concentration mill, to be erected at their mines in Dakota, for the dressing of tin ores. The company, from all accounts, has a large number of very promising properties which it has been developing in advance of building a mill. There is railroad communication now to the mines, and a cheap supply of coal and coke available for smelting the dressed tin. The present opinion in the United States is more favourable to the chances of commercial success of this company than in the past, owing to the many properties acquired and since developed in the neighbourhood of Harney Peak. This will be the first attempt at commercial production of tin in the United States, as the Californian operations are, so far, on a small scale, and the first mill built by the Harney Peak Co. was of very imperfect design, involving unproved machinery, and was erected in advance of the proper development of the mines.

June 26, 1891.

In the High Court of Justice (1891) No. 182), Chancery Division.—Mr. Justice Stirling.

In the Matter of the NINE REEFS (Limited and Reduced), and in the Matter of the Companies Act, 1867, and in the Matter of the Companies Act, 1877.

NOTICE IS HEREBY GIVEN, that a petition presented to the High Court of Justice, Chancery Division, on the 13th day of May, 1891, for confirming a special resolution reducing the capital of the above-mentioned Company from £150,000 to £75,000, is directed to be heard before his Lordship on Saturday, the 4th day of July, 1891. Any creditor or shareholder of the Company desiring to oppose the making of an Order for the reduction of the capital of the said company under the above Acts should appear at the time of hearing, by himself or his counsel, for that purpose; and a copy of the petition may be seen by any creditor or shareholder of the Company at the Office of the Company, or the undermentioned solicitors, and on payment of the regulated charges for the same a copy will be supplied by the said solicitors.

Dated this 22nd day of June, 1891.

H. F. CHURCH, Chief Clerk,

FRANCIS and JOHNSON, 5, Austin Friars, E.C., Solicitors for the Company.
